The federation voted down a resolution to support the Stratton bill to admit 100,000 displaced persons a year for 4 years. It did so after it had heard there were unemployed in this country and that the arrival of this number of people from Europe would deprive our own of jobs.

The supporters of the resolution, and they were numerous, presented all the important arguments for the bill, but if they had had time they might have asked a few questions. They might have inquired whether there ever was a time before the war when we had fewer unemployed in proportion to the size of the country than we have today. Or whether there had ever been a day when there was not some unemployment, with immigration or not. Or whether it was not true that the greatest unemployment we ever had in America occurred after we had cut down our immigration.

If there is a connection between employment and immigration it could just as easily be argued on the favorable side. There's no getting around the fact our great industrial prosperity dates from the arrival of millions of immigrants, or that the collapse, in the 1930's, followed by 6 years the passage of the present legislation.

But the fundamental error in the lump-of-work idea is hundreds of years old, and history and statistics can seldom prevail against it.

In any case the admission of as small a number as 100,000 persons a year, many of them women and children, can have no noticeable unfavorable effect upon employment.

The best of the arguments in favor of the Stratton bill is that by agreeing to accept 400,000 of the homeless, this country would be taking a substantial share of the nearly 1,000,000 for whom no homes can be found in Europe, and that by so doing, we would be in a position to urge other countries to accept the remainder on a quota basis.

There appears to be little doubt that relatives, friends, and institutions in this country would arrange to house these people, most of them Roman Catholics. There is no doubt whatever that those immigrants who were willing to take common labor jobs could find them readily, or that those who were skilled in certain types of work would have no trouble getting employment.

In a country which is maturing as rapidly as ours is, wherein the children of the laborers are going into skilled jobs or to college, and the children of the skilled seem to be trying to get into professions, there is certainly room for people who would be willing to work at anything just to live in America. A mere 400,000 by 1951, however, would go only a small way toward solving the distortions in our labor supply.

There are disturbing phenomena in our changing population, and one of them is the advancing age of the people in it. The numbers of young and vigorous are not increasing as they should be—if the figures didn't show it we would know it from the growing interest in pension plans. We need more providers in this country. The greatest criticism it seems to me can be made of the Stratton bil' is that it would revise the quotas for only 4 years, but by that time the change in the make-up of America will be evident to many more than it now is.

Yet 4 years is about as long as we can be sure the routes will be open for any kind of travel. Unless Europe can be rehabilitated and the prospects of peace made stronger, then the one nation which has everything may find itself without friends, the object of universal envy.

If the Stratton bill were defeated, and if it at the same time the proposal made by some of the Republicans to cut down the shipments of grain to Europe were to carry, then we would indeed be turning our backs upon the misery of the Old World. The effect of decisions of that sort would be profound, but the nation which made them might lack the imagination to prepare for what lay ahead.

A Salute to Wayne Township, N. J., a Friendly Community, on Its One Hundredth Anniversary

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 8, 1947

Mr. CANFIELD. Mr. Speaker, last Sunday afternoon the people of Wayne Township, N. J., concluded a 3-day centennial celebration. I was privileged to make a brief address in tribute to this friendly community, speaking as follows:

Historians record that hospitality has ever been a Jerseyman's concern. Wildes, in his entertaining history, "Twin Rivers, the Raritan and Passaic," points out that in 1609 when Hendrick Hudson first entered Newark Bay, the Indian tribesmen lined the shores holding out gifts of corn and beans and squash, calling out "Scheyichbi," the Raritan Indian word for "welcome." Believing that the natives were calling out the name of the land the Dutch sailors called the lands west of the Hudson, now northern New Jersey, "Scheyichbi," or "Welcome."

While that title has disappeared, the tradition is still retained in Wayne Township. When it was known as the "welcome" country it was then, as now, rich and scenic farm land, and it was crisscrossed by Indian trails over which the Indian from west of the Delaware traveled to reach the coast, to which they made an annual pilgrimage for the purpose of gathering and eating oysters and other shellfish, considered even by the early Indians as rare delicacies.

This was then a hospitable area and it so continued to be through George Washington's day for we are all familiar with the stories of the general's visits to Wayne and Preakness and his headquarters at the Dey mansion. Probably in no other camping area was the Continental Army so well supplied with food by the neighboring farmers as it was while in this valley. There had been great changes in many things between 1609 and 1780 but hospitality was still a chief concern as attested by the records of General Washington and his troops.

Undoubtedly visitors 60 years later, in 1847, when Wayne was formed, were given just as hearty a welcome as they are today and as they had been given 238 years previously. There must have been many visitors in that year, for the country was just beginning to develop. Communications were improving. Just a month before, the first postage stamps had been placed on sale by the Federal Government. The telegraph was only 3 years old. The Morris Canal had brought to this section increasing commercial activity in the 15 years it had been open. The Morris and Essex railroad served the area, and plans were being drawn for the Lackawanna and for expanding the Erie through northern

Jersey. Popular and busy stage-coach routes bisected the new township. Paterson, which did not become a city until 4 years later and was then an independent township, was a popular market center for the farmers not only from Passaic County but also from Bergen and Essex. It was then known as the Strawberry City of the World. Although the first factory in Paterson had been opened under the Society for Useful Manufactures in 1794, it was not until 1840 that the silk industry got its first start and by 1847 Paterson's reputation as a silk center was just beginning to spread. Building of locomotives there had started 10 years earlier. Iron mining in 1847 was a major industry in this area.

There was a spirit of progress in the air not only in the commercial world of the day but also in the political and social fields. Passaic County had been an independent unit only 10 years when Wayne Township was brought into being and the present New Jersey Constitution was then only 3 years old. Slavery had not been abolished in New Jersey until 1846 and in that year the first taxes for a public school system were levied against townships. In 1847, as in 1947, the effects of a war unsettled the country; the Mexican War was adding great territories to the United States. There was industrial strife in those days, too, and during the 10 years that preceded the establishment of Wayne Township the State and this section were troubled with a series of great strikes. Workers in Paterson, Newark, Morristown, and New Brunswick, as well as in other communities, struck during the late thirties and early forties for higher wages and a 10-hour day, but it was not until 1851 that the 10-hour day was secured by legislation throughout the State.

This congressional district, when Wayne Township was created, was represented in the House of Representatives, in which Abraham Lincoln was then serving, by a Whig, William Wright, of Newark later a United States Senator and in 1847 an unsuccessful candidate for Governor of New Jersey. Serving New Jersey in the United States Senate in that Thirtieth Congress were Jacob Miller, of Morristown, and William L. Dayton, of Freehold, who 9 years later became the candidate for Vice President of the United States on the first national ticket of the Republican Party.

In those days it took my congressional predecessors at least 4 days, traveling by train, coach, and boat, to reach Washington. There they met in a Capitol much different from the one we know today. Just a quarter of a century earlier the building had been burned by British troops in the War of 1812. The dome had not yet been built, nor the two wings added. James K. Polk was President, and the two issues of paramount national importance were slavery and expansion of the Nation to the Pacific, which were accentuated by the Mexican War. Gen. Zachary Taylor was the hero of the hour. John Tyler had only 2 years before retired as President of the United States, and it was interesting to note just this week in the papers that the last surviving daughter of President Tyler had died at the age of 87 in her home in Virginia. President Tyler was born in 1790, and the lives of him and his daughter have covered the entire span of our country's history from the administrations of President George Washington to the present day.

In the first election in which the people of the newly formed Wayne Township voted for a State Senator from Passaic County, I have been interested to learn that they elected one Silas D. Canfield, who served as president of the State senate in 1851. He was an ancestor of mine.

In those days, without our rapid means of transportation and communication, without modern schools and hospitals, without electric lights and so many of the other conveniences on which we depend today, I believe there was a far greater spirit of friendliness, of hospitality, of neighborliness, locally, nationally, and throughout the world than we find today.

In this respect, Wayne has not retrogressed. It has been found one of the friendliest communities in our land. Characterful and patriotic, its citizens have kept faith in peace and in war with the best traditions of America and the ever-inspiring spirit of Wayne's founders.

We speak today of the good-neighbor policy. America cannot be a good neighbor among nations unless it has that attitude and spirit at home. It must be a land whose communities live happily together, exalting good will and casting aside those things that tend to feed the germs of hatred and intolerance.

In this turbulent world in which day after day we read in the press and hear recounted over the air the failures of statesmen to effect a meeting of the minds looking to world peace, we cannot afford to "toss up the sponge" and say it cannot be done. American morale is the most important element of the hour. It can be sustained in thousands of communities by the spirit of Wayne.

I remember how my distinguished predecessor, the late Mr. Seger, liked to visit among your people. "Wayne is so friendly" he used to say.

And I recall several years back an incident emphasing this spirit. I was scheduled to make an address before your Republican Club at Donohues. With Wayne hospitality and good will, several Democratic friends attended. One learned the following morning his name had been called at a bank night in a neighboring town theater and his absence had cost him some $300. While he took his loss with a smile, he never did tell me my speech compensated him.

Today, as I salute Wayne on its centennial anniversary, I can picture one of the early settlers philosophically referring to other difficult days with the expression, "they say the first 100 years are the hardest." May this be so of Wayne, the friendly community, where the open door, the helping hand, and the smiling face, are not lost in "times that try men's souls."

New Glory for Old Glory

EXTENSION OF REMARKS
OF
HON. HARLEY M. KILGORE
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Thursday, July 10, 1947

Mr. KILGORE. Mr. President, I ask unanimous consent to place in the Appendix of the RECORD, a sermon delivered on Sunday, June 29, by Dr. Peter Marshall, pastor of the New York Avenue Presbyterian Church of Washington, and Chaplain of the Senate. I have read this sermon several times and, in my opinion, it is a work of deep religious significance—a message of guidance not only for those of us who have the great honor to serve in the United States Senate, but, also for all the people of this great land. The Nation as well as the Senate should indeed be proud of Dr. Peter Marshall.

There being no objection, the sermon was ordered to be printed in the RECORD, as follows:

NEW GLORY FOR OLD GLORY

Text: Acts 22: 28: "And the chief captain answered, With a great sum obtained I this freedom. And Paul said, But I was free born."

The proud boast of the captain who held Paul prisoner, that he had paid for his political freedom with big money, reflects the ancient and mistaken idea that freedom can be bought or sold, conferred or withdrawn.

Paul's confident reply that he was free born, that his freedom was a matter of birthright, shows an understanding that rests on much higher principles.

In a few days, all over this country, there will be celebrated the one hundred and seventy-first anniversary of the Declaration of Independence. The celebration will be marked as usual with holidays, special sports events, picnics, orations, and fireworks. And yet I wonder how many of those who celebrate the Fourth of July will understand the meaning of what they celebrate.

Perhaps in the noise, in the explosion of fireworks, in the music of the bands, and the shouting of the people, whispers from the past will be totally unheard.

There will be voices from Valley Forge whispering, "With a great sum obtained I this freedom."

There will be whispers from Lexington, Concord, and Bunker Hill, from Trenton and Princeton, aye, and from Mount Vernon and Monticello, "We paid a great price for this freedom."

Perhaps these whispers will never be heard. If they were, it would be amazing how many voices would join in and from what widely scattered parts of the country and from what distant lands the message would come.

One thing is clear—the freedom that was purchased 171 years ago was not paid for in one down payment. Installments have been kept up for more than two lifetimes, for this is one possession that exacts a perpetual price.

There is a danger then in your sitting back smugly applauding when the flag is thrown upon the movie screen, puffing yourself up with pride, as you boast of America. For you were free born.

Unless you have lived in other lands, unless you have known hunger and persecution, unless you have come as an immigrant to this good land, you have absolutely no idea how good it is. You cannot fully appreciate its blessings. Nor can you truly be grateful, since you have no conception of what it means to be without all the things you take for granted.

You have never known anything else. It is because they who went before you were willing to stake their lives, their fortunes, and their sacred honor, that you have what you now enjoy.

But you forget how bitterly it was won. You forget how great a price was paid. This is, indeed, a land of plenty. But that does not mean that we have a right to waste our resources.

The story of the waste of this country's riches is a sad story of greed and selfishness. It has been estimated that there were not less than 75,000,000 head of buffalo roaming this continent at the time the white man was making the first colonies. Today there are only about 4,000 left.

The wildlife of this Nation has long been exploited to satisfy the greed and the so-called sporting instincts of free Americans.

Many species of native American wildlife have been exterminated, such as the great auk, the Pallas cormorant, the Labrador duck, the passenger pigeon, the heath hen, the Eskimo curlew, and the Carolina paroquet.

Of the mammals, the giant mink has gone. The grizzly bear has been nearly exterminated. The trumpeter swan, the canvas back duck, the redhead, the upland plover, the whooping crane, and the ivory-billed woodpecker may in a few years be completely wiped out, all because some people said, "This is a free country. I have a right to hunt, shoot, and kill."

So the patriot enjoyed himself killing birds, killing more than he could give away, so that the next year there were fewer birds, and at last there were none at all.

The same kind of greed and selfishness was shown in our treatment of the land. It was good land, but we were greedy. We wanted money crops, and the slogan was "Plow and plant, plow and plant."

Well, we plowed. For 50 years we chopped cotton and moved West when the land gave out. For 50 years we plowed for corn, and moved on when the land gave out.

Corn and wheat; wheat and cotton—we planted and plowed with no regard for the future. And 400,000,000 tons of our most valuable natural resources have been washed into the Gulf of Mexico every year. Three hundred thousand acres of good topsoil dumped into the ocean.

Our reckless stripping away of the vegetable cover of the soil has driven out the animals and invited the forces of erosion, which are now exacting the terrific toll of 300,000 acres of land every year. This is equivalent to dumping into the ocean each year 1,875 farms of 160 acres each.

It has made red clay gullies in the Southland, it has made dust bowl storms in the Middle West, it has made prairies and deserts, and more than half of our total land surface has been damaged by erosion.

When the white colonists first came to this continent this kind of erosion was unknown. It can be traced directly to the wholesale removal of the original vegetable cover, to the destruction of forests, and the plowing of prairies and plains.

Surely freedom does not mean that people can do as they like with the country's resources.

The same wanton waste and disregard for the future is to be seen in the almost criminal waste of oil, thousands of barrels of oil wasted every month; in the deforestation of our country, when the slogan seemed to be "Cut and sell, cut and sell," with never a thought of planting young trees, never a thought of preserving the timberland, as if there were a supply that would never be exhausted.

The natural resources of America are the heritage of the whole Nation, and should be conserved and utilized for the benefit of all our people.

There is, however, a higher concept of freedom, higher than something that can be conferred or withdrawn, higher than something that is an accident of birth, and that is that freedom is an endowment of every human soul.

This was the great idea that nurtured the young Republic struggling to be born in 1776.

It seems to be forgotten or ignored today, but history proves that the inspiration of this fundamental idea of our democratic faith came from the deep spiritual reservoirs of our religious heritage.

The source of democracy is Christianity, and liberty comes from God. This teaching is as old as the Bible. The word of God declares that if a nation is to live it must depend on God; and if it refuses, it will die.

Our Pilgrim forefathers believed this truth, for the first thing they did in America was to dedicate their venture to God. The Mayflower Compact, the first civil document drawn up on our shores, acknowledges God in these words:

"In the name of God, amen.

"We, having undertaken, for the glory of God and advancement of the Christian faith, do by these presents solemnly and mutually, in the presence of God and one another, covenant and combine ourselves together into a civil body politic."

Later, we find the compacts and charters of all the early colonies giving a very definite place to God. No better statement of the relationship of God to government is found anywhere than in the Great Law of Pennsylvania, which was passed December 7, 1682. This document said:

"Whereas the glory of Almighty God, and the good of mankind, is the reason and end of government, and, therefore, government in itself is a venerable ordinance of God."

Notice these two ideals: Government is for God's glory and is ordained by Him. Is it not true that we as a nation have largely forgotten these ideals today? We have government "of the people, by the people, for the people." But we lack a government of the people of God by God.

Many examples might be cited from colonial history to show the close relationship which existed between God and the Government of that day.

In the Declaration of Independence, the framers of that noble document three times emphasized God's part in their struggle for independence. The Declaration closed, "With a firm reliance upon the protection of Divine Providence."

This was a statement of the firm conviction that prevailed in the minds and hearts of the founding fathers.

It is strange, and I believe tragic, that the Constitution makes no reference to God. It was not a perfect document, as all the amendments prove.

It took 19 years to insert the first 10 amendments, which are known as the Bill of Rights. Public criticism and the grumbling of the men who had fought for freedom finally forced the Congress to make constitutional provision for the rights of men, but no amendment has yet acknowledged the rights of God.

Many efforts have been made at different times to introduce such an amendment, but there has been opposition and indifference, so to this good day the Constitution of our country ignores the principles upon which our country was founded.

Forty-three of our States have already written into their constitutions vague religious acknowledgments. All make some reference to a higher power, but not one State honors Jesus Christ.

Christ said: "He that honoureth not the Son honoureth not the Father which hath sent Him." Christ said again: "All authority has been given unto Me in heaven and earth."

God can be honored only through His Son, the Lord Jesus Christ. All pious, vague affirmations about God as the Supreme Being, etc., are vain unless supreme honor is specifically given to Jesus Christ.

The classic lines of J. G. Holland were never more challenging than now:

"God give us men. A time like this demands
Strong minds, great hearts, true faith, and ready hands;
Men whom the lust of office does not kill;
Men whom the spoils of office cannot buy;
Men who have honor—men who will not lie;
Men who can stand before a demagog
And scorn his treacherous flattering without winking;
Tall men, sun-crowned, who live above the fog
In public duty and in private thinking."

Yes, we need men like this, but our greatest need is for men who know and believe God's Word; men who will rule in the fear of God.

The first question about all candidates for public office should be: "Do these men know their God, and will they rule in the fear of God?"

Christian rulers need to know their Bible better than any other book. Large portions of the Bible are filled with instructions for nations and rulers; what they are to do, and how they are to serve.

For the most part, this instruction is discarded by statesmen of the world today. It is time we put the Bible back into our Government; time that our statesmen began to make their decisions on all moral questions on the basis of the authority of God's Holy Word.

In his book, The Christ of the American Road, Dr. E. Stanley Jones speaks of the fading of Christianity from our national life. He tells of a cartoon in which Uncle Sam, standing on the ship of state, turns and says to the representatives of the Christian faith, "It is your business to keep off from the ship of state the barnacles of greed, selfishness, and dishonesty."

"And that was supposed to be a compliment to religion," says Jones. "It was to keep off the barnacles, but was to have nothing to say about the directing of the ship."

This is the common attitude today in America toward Christ and the civil government. Christ is useful to help keep barnacles off the ship of state, but it would never do to let Him take over the helm.

But, of course, Christ cannot direct the ship of state until He is permitted to direct the lives of the people. Were He permitted to do that, great changes would come about in our national life.

All religious practices, all church services and pious observances mean nothing at all unless they result in the willingness of individuals like you and me to surrender their lives to Christ, to let Him guide them in decisions, to let Him lead them in action, and to look to Him for the power to do His will.

There is a shoe manufacturer named Johnson who has no trouble whatsoever in his factory. His relations with labor are excellent. Strikes are unheard of.

And why? Because he determined in his business to do what was right and to treat his employees as Christ directed.

That spirit in his business is a model and an example to the Nation.

The same thing could happen in a coal mine if the owner thoroughly surrendered to Christ, began to run his coal mine according to Christ's guidance; if the owner determined that in his mine every invention and device of modern science would make the mine as safe as is humanly possible; if he determined that for the comfort of the miners bathing facilities would be provided on the premises; if he made up his mind that the miners' homes would be equipped with all modern conveniences, and that the commissary would be stocked with goods at the price levels existing elsewhere; if he felt a concern for the welfare of his men and their families, in seeing that hospitals and schools were available.

I am not suggesting that the whole responsibility for labor unrest lies upon employers, but I do say without fear of contradiction that where employers are God-guided men, where they are filled with the spirit of Christ, and where they are willing to run their businesses as Christ runs them, then I say that labor troubles would vanish.

But it has been proved that where labor union leaders come face to face with such a spirit, their own spirit of rebellion and hostility and suspicion, their unreasonable attitudes and the hatred in their hearts are melted and broken down.

"It is a beautiful theory," you may say, "and it would be fine if that were so. But it isn't so; human nature being what it is."

But I am here to say that human nature can be changed and human nature must be changed if this Nation is to survive, and if she is to become what the founding fathers intended her to become.

But I know perfectly well that there can never be a new spirit in America until it begins with you and me—in our homes, in our business, in our friendships, and in our relations with other people.

And so I would focus my plea first to myself and then to you who are listening to me now: "Is Christ the head of your home?" "Does He guide your decisions?" "Do you consult Him about your problems?" "Are you honestly trying every day to do what Christ wants you to do?" You must answer those questions for yourself.

But not until your answer is yes is there much hope that this Nation can become God's own country.

It is only by God-guided lives, it is only by applying Christ's solutions to the problems that plague us, it is only by living under His blessing and guidance that we can ever hope to add any new glory to Old Glory.

The Challenge to Christian Civilization

EXTENSION OF REMARKS
OF
HON. JOHN W. BYRNES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 10, 1947

Mr. BYRNES of Wisconsin. Mr. Speaker, under authorization to extend my remarks, I call the attention of the membership of the House of Representatives to the commencement address of Dr. Edward A. Fitzpatrick, president of Mount Mary College. This speech, although addressed to the 1947 graduating class of Mount Mary College, is worthy of earnest consideration by all of us.

THE CHALLENGE TO CHRISTIAN CIVILIZATION

(Mount Mary College commencement speech 1947 by Edward A. Fitzpatrick, president, Mount Mary College)

(To the school sisters of Notre Dame on the centenary of the American Foundation, 1847-1947)

THE CHALLENGE TO CHRISTIAN CIVILIZATION

I. The main problem and challenge.
II. The Union of Soviet Socialist Republics and communism.
III. The world of the machine of force and of propaganda.
IV. The schism of man's soul and social life.
V. The betrayal of the intellectuals.
VI. The decentralization of government.
VII. The problem of statism.
VIII. The universality of the moral law.
IX. Spiritual renewal and renovation.

I

The socially conscious Catholic graduate must be concerned with the major intellectual and moral problems of the age or its major intellectual and moral challenge. In a commencement address some description and evaluation of that problem is necessary and some method of meeting it must be suggested. In the confused and contrary currents of contemporary life the main problem is communism and the main challenge is Russia, the self-styled "center of world revolution." Communism is not necessarily associated with Russia but in the present world situation it is. Russia is, as the Third Communist International says, the "international driving force of the proletarian revolution that impels the proletariat of all countries to seize power." What seems on the surface to be involved is merely an economic revolution or even a social or political revolution, but what is really involved is a moral, spiritual, and religious revolution—a new world—the one world of communism.

II

In a free world the interchange and exchange of ideas, even revolutionary ideas, in all fields would not be of such tragic concern to men unless there were in back of these ideas not reason but brute force—the force of the most ruthless and powerful nation in the world at the present time, ready by every subterfuge, device, and technique to use legal and illegal means in every country to make over the world in its evil design, but the preliminary and decisive skirmishes or battles must be won in the area of ideology—and that is the opportunity of the educated man. The nation we call Russia should be more properly referred to as the Union of Soviet Socialist Republics. It is a great Eurasian empire covering almost 9,000,000 square miles, called in geopolitics the heartland, with over 200,000,000 people primarily Slavs with almost inexhaustible resources in the tundra, in the forests, and in the steppes. These people are an amazingly gifted people in art, in literature, in music, in science, and even in technology, and fundamentally a religious people.

A free Russia would be a good neighbor and contribute much to the well-being and welfare of the world, but unfortunately the Union of Soviet Socialist Republics is at the moment the embodiment of every evil force loose in the world—atheism, imperialism, materialism, and exaggerated nationalism, in spite of its international program to include world wide political and economic revolution.

We saw in Germany how uncertain and how unstable is political power, particularly in a highly centralized government. We saw what could be done by a technique of refined usurpation by a group of gangsters like Hitler, Goering, and Goebbels in misdirecting the energies of the people. This is very much the situation in Russia today. It is dominated by a group of doctrinaire Communists who have control of the political organs of the state. The dominant ideology of this ruling group is destructive of all human values and of democratic processes. This politically immature nation passing from an agrarianism to a forced industrialization in a short period of time is the victim of what we saw in Germany—the four horsemen of the apocalypse getting ready to put out the lights of reason and good will on the highways of the world in order to let its plundering bands loose in the interest of a predatory imperialism seeking world dominion. Its agents are now operating both openly and subversively in the victim nations, i. e., the rest of the world. That the Soviet leadership is more subtle, more practical, more cunning, and less impatient in promoting its program of expropriation and dominion, makes it even more dangerous than the Hitler regime.

We have seen on the world stage in the meeting of the Foreign Ministers of the Great Powers, the effrontery, the insolence, the contumacy of the Soviet's representatives in their stalling maneuvers, with their self-contradiction, their false accusations, and their delaying counterproposals. They are willing, as General Marshall says, to let the patient—Europe or Germany, the world or Christian civilization, as you choose to put it—die while the doctors consult. The Russian delay tactics are, as Generalissimo Stalin says, merely reconnaissance expeditions as a basis of compromise, or the tactics of exhaustion and attrition hoping for concessions out of hopelessness. But meanwhile the world drifts more and more into confusion, uncertainty, starvation, conflict—which is the seedbed of world revolution. It is the Soviet's gain either way.

III

Things are in the saddle, said Emerson, and the progressive deterioration of our society before our very eyes is the evolving result. It has been going on for four centuries but with greater momentum in the last century.

The machine has extended its range, its cunning and it automatism and has produced the amazing comforts and conveniences which we know and enjoy, and praise highly for what they are not—intellectual, moral, or spiritual gains. The sociologists were deceived and so were the educators. The sociologists rationalized these gains of industrialism into the now bankrupt theory of inevitable progress. It remains a casualty of man's reason as a part of the sociological mythology of the later nineteenth and earlier twentieth century. Our science has gone forward with leaps and bounds in its discoveries of the innermost forces and energies of matter of the universe revealing on the one hand God's amazing designs, and on the other, man's incapacity—to use these discovered forces and energies for benevolence rather than for destruction, for civilization rather than for barbarism, for life rather than for death, for peace among the nations of the world rather than as a means of world destruction.

In a free world, freedom of speech and freedom of thought are possible and desirable—they help make a free world, a necessary condition of a dynamic civilization aiming at a fuller, richer life. But in the world in which we live we have the loaded dice of perverted propaganda and organization, and the manipulators cry loudly for freedom in order to destroy the very freedom they invoke. It is pleasant to quote and to be elevated in spirit as we hear such lines as Bryant's quoted:

"Truth crushed to earth shall rise again;
Th' eternal years of God are hers;
But Error, wounded, writhes in pain
And dies among his worshippers."

Admirable as is the sentiment such statements are likely to be narcotic. In World War II we came too dangerously near seeing every genuinely human value of our civilization lost in the barbarism of what was probably the most schooled nation of the world. In the infamy of barbarism and the perversion of government there will have been no blacker crime against civilization than Oscewin, Buchenwald, Dachau, and Lidice.

In every country Communists with the loaded dice of infiltration and propaganda are destroying the very things they claim they aspire to achieve by their use as shibboleth of the great moving terms of modern life, humanity, liberty, freedom, and democracy, by their amazingly efficient techniques as well as by their cunning and ruthlessness. Only as things happen and are thus past correction will the dupes know that they have been duped and will there stand revealed the duplicity of their leaders and guides now convulsed in mocking laughter at the success of their deceit and their hypocrisy. How carefully planned, how adroitly managed, how simple the first steps of the process of betrayal are is spelt out in all the planned cunning of the Soviet spy ring in Ottawa, Canada, so well documented through the heroism and intelligence of the code-clerk Ignor Gouzenko. It is no wonder that governments in self-protection are outlawing Communist parties and forbidding the employment of Communists as public employees, though as political typhoid Marys they are loose in the community.

IV

The fundamental difficulty has come about in modern society in a major degree by the central place which economics, including technology, has taken in our thinking and in our lives. The older agricultural economy with its dispersed population, its individualism, its relatively simple life, laissez faire and a state aiming principally at order was adequate. An overall moral and spiritual order was accepted or acquiesced in and was central in the social order—sometimes unconsciously using the spiritual capital of the past.

With the political revolutions of the late eighteenth century and the industrial revolution, the relation of a moral and spiritual order and the economic and social order began to change and a sharp line of separation—even of divorce—resulted. This was the accentuation of forces that had been gathering momentum for four centuries. It was further intensified by the World Wars

in the twentieth century. Now they have reached the period of explosive confusion and disintegration. Depressions, strikes, and wars were the unexpected fulfillment of rosy dreams of the days of liberalism. The whole problem of civilization has to be faced, no mere patchwork will do to meet the fragmentations of man's life and, what has been aptly called, by Toynbee, an internal schism of the soul.

The menace of atheistic communism engineered by the cunning plotting of the Third International as the agent of the new Soviet Russia with its enormous world prestige and extraordinary military power is great. This is so, not because of the wisdom or insight of their ideology, nor because of their pretense of service to humanity, nor because of their program for the dictatorship of the proletariat as the most decisive and revolutionary form of the class struggle. It is because of the confusion of the economic order, the creation of the bogies of capitalism, as well as the admitted evils of an exploiting capitalism, the promotion of the class struggle as against cooperation, that the contemporary situation is such a fertile seed ground for the diabolic designs of the communistic leadership.

Social change or economic change in itself is not an evil, it may be the necessary release from old oppressions, exploitations, or limitations. We the beneficiaries of the American Revolution cannot regard revolution as an evil or taboo, particularly as we assert in the Declaration of Independence:

"We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain inalienable rights, that among these are life, liberty, and the pursuit of happiness. That to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed. That whenever any form of government becomes destructive of these ends, it is the right of the people to alter or to abolish it, and to institute new government, laying its foundation on such principles and organizing its powers in such form, as to them shall seem most likely to effect their safety and happiness."

We need the reassertion of the universality of the moral law—the law of God—over all the affairs of men, particularly the economic affairs. We need to unify man's outlook on life—individual life, social life, and the life of nations.

We need today a revolution in our values, our purposes, and our meanings. We need a reassertion of the spiritual nature of man, the achievements of new personality, a fresh view of life. We need moral and spiritual revolution renouncing our materialism, our racialisms, and man's inhumanity to man. We need spiritual renewal and spiritual renovation.

V

One of the strange things that develops in a crisis is what has been called the betrayal of the intellectuals—la trahison des clercs. The manifesto of the German intellectuals in World War I is an illustration of this. How readily the body of professors of the great German universities—with notable exceptions—succumbed to the blandishments—and ultimately terror—of the Nazis is another illustration. Still another illustration is the success of the Communists among university teachers, as shown notably in the Canadian spy ring, and too frequently on our college campuses. These are all illustrations of what is meant by the betrayal of the intellectuals. This is the group from whom we should expect the most ready perception of the errors and wiles, deceits and hypocrisies, of the pseudo science, pseudo history, ersatz philosophy and religion of those who would undermine civilization, but instead we find as a matter of fact they are the most gullible promoters. The intellectual minute men of our social destiny fail us. It is, therefore, of special interest that college people properly trained should play their part in the defense and development of their country and their civilization. Reason is not enough, without discipline, without responsibility, without character.

VI

There are some things in the present situation that we might very well look to the college graduate who has been properly trained to defend. There is one very obvious tendency in government that furnishes a ready means for betrayal and usurpation and a dubious paternalism. It is the increasing power of its central government, its widening scope, its remoteness from effective popular control, its intoxication of power, and its means of control through subsidization, and the development of the executive branch at the expense of the legislative.

It would seem the part of wisdom in a democratic government that the situs of political power should be as near to people as possible—the more remote it is the more easily possible it is of manipulation and the more complete is the control once subversive agencies take over. The simple wisdom of the maximum, do not put all your eggs in one basket, is good political practice. This is still the basis of our educational organization. It has been the pride of America that its education was primarily a State function, but a State function largely delegated to local government. It is the economic factor here that is the basis of the dangerous tendencies to increase centralization of power and of control. If we would stop turning inevitably to government to solve all our social problems and to find in ourselves the capacity for organization outside of government as well as in such movements as the cooperative agricultural movement with its one-man-one-vote policy, we could keep the problem of government within its proper sphere, and make popular control possible. This is typical of some of the practical measures that the college graduate could take if he has been prepared for his social responsibilities even on the merely social level.

VII

However, the college graduate's interest must go deeper. He must understand the very nature of government itself and particularly of the social instrument of government called the state. The propaganda of the Communist is definitely to make the state central in life. There is a whole lot of diffused opinion which, whatever its philosophy, has the practical result of doing the same thing. The state is conceived of as an end—not a means. The state develops a paternalistic attitude and presumably takes care of all the troubles of the individual citizen. The citizen gets into the habit of turning to the state in his economic and social difficulties. The officials of the state whom we were wont to call public servants discard such a word as "servants" and develop into the familiar bureaucracies that we know not only in Europe but in this country as well. There is a legitimate field for the operation of the state—the common welfare of the citizens. It must have every support of the good citizen when it operates in its legitimate field. The danger comes when there is conceived or assumed an attitude of omnipotence and the state is expected to take the place of Providence of God and religion in the life of the people. The educated man must always keep in mind that the state is a means to an end. The end is the welfare of the individual citizen. It should operate with the consent of the governed. Its ultimate justification is what happens in the quality of the life of the individual citizen. The building of great public structures of any kind—dams, bridges, highways, theaters, social centers—the establishment of great public policies or principles of law, have significance only in their effect on the actual life of the individual citizen. The state is not, as some think, a mystic entity calling for a religious fanaticism of its own. It is merely a piece of practical political machinery that may be changed whenever the will of the people wish it and is expressed through the regular channels for decision.

VIII

The problem of the State raises a more fundamental issue: the need for an assertion of the universality of the moral law over all individuals and over all nations and over every sphere of life. One of the commonest dangers of the modern state is its disavowal of moral responsibility. Its acts are, presumably, its own justification and a philosophy called "stateism," has been elaborated which justifies this conception of the state. The great need in connection with the theory of the state is, to put it most simply, the effective assertion that politics is subordinate to ethics. In the actual operation of the economic, political, and social activities there is need for a binding acceptance by the actors of their responsibility to the moral law and to spiritual values. It is part of the technique for the advancement of science to make the fields of economics, politics, and sociology self-contained and complete within themselves. But this is true only for the purposes of study and only as an instrument for the intellectual advancement of the science. The moment a science is to be translated into the practical fields of human life the intellectual organization needs reinstatement into experience or else its limited vision may be dangerous to human welfare. To talk about the "economic man" in the study of economics is all right so long as you keep your assumptions clear, but the moment you get into the field of human life there is no such thing as an "economic man." Man may be, as Aristotle said, a political animal but he is not merely a political animal in his life as a citizen. The conception of the totality or completeness of human life needs to replace the divisive and partial views which the blinders of science reveal regarding man. He is essentially and primarily a moral being—a son of God. He is concerned with the meaning of life, its values, its purpose. These are the things that must be central in his actual living as well as in his practical thinking about his relations to himself, to his neighbor, to his God.

You will be tested. Think not that the temptations of Christ in the desert are not your temptations. They will be part of your life in the world every day. And the old Satan will offer in its most enticing form for you all the kingdoms of the world and the glory of them if falling down you will worship him. The avarice and the pride and the concupiscence of men are falling for the satanic temptations, but you must remember the great principle of life—the Lord thy God shalt thou adore and Him only shalt thou worship.

It is your part in the active participation of the life of the community—as well as in every phase of your individual life to assert that the life is more than the meat and the body more than the raiment. The supremacy and universality of the moral law must be affirmed in the economic and political life and we must denounce betrayal of trust, in the political life or greed or exploitation in the economic life of Catholics as we would anyone else. We must not remain neutral, or silent on moral issues. The great need is for spiritual renewal, for a new affirmation of spiritual values, for meaning and significance in life. The test of your education in all its aspects, intellectual, moral, and religious, will be the revelation in your life of this educational insight: If you would understand the doctrine you must live the life.

How you live is the test of whether you were taught in these hallowed halls how to live. I wish you Godspeed as you go forth to the test.

Do the Russian People Share the Beliefs of Their Leaders?

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 10, 1947

Mr. SMATHERS. Mr. Speaker, John Knight, the owner and editor of the Miami Herald and other newspapers, writes every Sunday excellent editorials dealing with the problems of the day insofar as the Nation and the world are concerned. While I do not agree with all of them, they are, nevertheless, pertinent and provocative and do a lot of good down in our section of the country.

Under leave to extend my remarks I wish to introduce his editorial for Sunday, July 6, which is entitled "Do the Russian People Share the Beliefs of Their Leaders?" To my way of thinking this is an excellent editorial on the relationship—present and future—between Russia and the United States. I am confident that a consideration of it will help clear up the thought of many of us on the problem of what our present international situation is and what we might expect:

DO THE RUSSIAN PEOPLE SHARE THE BELIEFS OF THEIR LEADERS?

One wonders what line the Russia Firsters in this country will adopt following the tragic collapse of the European Big Three conference at Paris.

For a time Henry Wallace and Senator CLAUDE PEPPER had a good many people believing that it was all our fault whenever Russia refused to cooperate with other world powers.

Foreign Minister Molotov's sharp refusal to participate in the Marshall plan for European reconstruction must be disillusioning indeed to followers of the Wallace-Pepper appeasement school.

Ever since the end of the war, the Russian record has been one of noncooperation, obstruction, evasion, and defiance.

Yet we have tried every possible approach to the Russians and made every concession in an earnest endeavor to find the basis upon which the United States, Great Britain, France, and Russia could work together to guarantee a lasting peace and assure the economic recovery of a stricken Europe.

Now Mr. Molotov tells us that our proposals for rebuilding Europe "have nothing in common with the real interest of the peoples of Europe."

In Mr. Molotov's mind, their real interest would lie in the direction of a communized Europe and bringing the peoples of that unhappy continent under Soviet domination.

For the first time, Russia has been forced by Secretary of State Marshall to show her true colors. Even before any definite proposals for European rehabilitation were submitted, which probably would have been attacked as American imperialism, Russia had declared herself out.

That should end the farcical play acting at cooperating with Russia.

You can't cooperate with a bear who wants to crush the breath from your body.

So we enter a new and terribly important phase of our foreign policy. The so-called "white war" is on. This will determine whether the United States, Great Britain and France can build a western Europe bloc of nations in opposition to Russian domination of the continent.

The stakes are high but, sooner or later, years of diplomatic bluffing had to come to a showdown.

William McGaffin of the Chicago Daily News foreign service cites two pressing questions which the future must answer:

1. On whose side is time? Molotov, obviously, believes it's on Russia's side. The more Russia can delay and hamper the recovery of western Europe, the better are the chances that communism will sprout out of the mess.

Others are not so sure. They say: "If the Marshall program succeeds, there will be, as time goes on, less need for American intervention and less opportunity for Russian intervention."

2. Will Congress appropriate the huge sums required by the Marshall program? The suggested sum of $6,000,000,000 a year is equivalent to the cost of World War II, for 1 month.

Writing from London, Mr. McGaffin says the British observers believe Secretary Marshall would never have submitted his program without first having sounded out enough key figures in Congress to make sure the program had a reasonable chance of approval.

Still, our British friends may be surprised at the amount of opposition that develops to the Marshall plan in Congress although, ironically enough, the program's chances of success have been materially improved by Molotov's actions at Paris.

The Miami Herald has consistently opposed the theory communism can be stopped with dollars alone. Simply pouring out dollars buys off Communists only so long as the dollars last. The United States must continue to furnish substantial aid to western Europe but what Europe needs most of all is the will and the desire to help itself.

The St. Louis Post-Dispatch suggests a number of interesting commercial possibilities if enterprise and imagination are not entirely dead in Europe. Among them are revival of the Ruhr, development of the mineral and agricultural resources of the British, French, and Dutch colonies, basic steel from Australia and India, low-cost pig iron from New South Wales, nickel from Canada and New Caledonia, bauxite from British Guiana, Surinam, South Africa and Malaya and gold to prime the pump from South Africa, Canada, and New Guinea.

Europe can find herself only if the will exists to rebuild and reshape her destinies. Simply absorbing American loans without any permanent accomplishments to show for them is a slow form of economic death.

Congress is finally on the verge of making this discovery.

The thought must have occurred to many Americans as it has to me. What of the Russian people? Do they share their leaders' beliefs? How much do they know?

The current issue of Time carries a remarkably good article on the Russian people by their correspondent, Samuel Welles.

"When you write about Russia," a woman interpreter told Welles, "you will have your own opinions but write with the heart. We don't want any more war. We had enough. Remember the terrible destruction we suffered and the pale faces of our children. Write with the heart."

Welles says that to consider Russia "with the heart" means to sense two stories—the story of her great warm people, and the story of the cold bureaucracy of lies and murder which grips the people's lives.

Welles' article leaves the impression of a friendly, docile people living a drab, rather listless existence under the thumb of political bureaucracy and the secret police.

They are told what the government believes they should hear and their lives are regulated by government edict.

Things haven't changed a great deal in Russia since Lenin said: "One would like to caress the people, but one cannot; they bite."

We hear a great deal of uninformed twaddle in this country about the capitalistic system being on trial.

On trial for what? For making possible the best living standards in the world? For guaranteeing civil liberties and free speech? For preserving individual opportunity?

Can the communistic system provide something more attractive? Are people happier living the regimented life required of all Russian citizens?

High as prices are in the United States of America, a suit of clothes in the Union of Soviet Socialist Republics costs a Russian 7 weeks' pay as against 1 week's pay for a worker in the United States.

A pair of shoes costs a Russian about 3 weeks' pay, while an American worker can buy six or eight pairs of shoes with 1 week's pay.

All foodstuffs show an even greater disparity. According to the United States News, workers in Russia are about half as well off as they were in prewar days, while United States workers are better off than before the war.

What, then, is communism's appeal in this country, especially to the young?

One can conclude only that, excluding the doctrinaires and those stimulated by the intellectual excitement of the cause, it offers a form of leadership to a confused and somewhat bewildered portion of our population who no longer want to think for themselves.

The Communists know exactly what they want, whereas democratic action is neither sustained nor consistent.

Of course, Hitler offered the same kind of absolute leadership. It exists today in some of our most powerful labor unions.

The tip-off on communism's relationship to individual freedom is contained in Lenin's remark: "One would like to caress the people, but one cannot; they bite."

And so they do, and will again, in Russia.

JOHN S. KNIGHT.

Control of Pollution of the Waters of the New England States

EXTENSION OF REMARKS
OF
HON. HORACE SEELY-BROWN, JR.
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 10, 1947

Mr. SEELY-BROWN. Mr. Speaker, some days ago I introduced a bill, H. R. 3875, granting the consent and approval of Congress to an interstate compact relating to the control of pollution of the waters of the New England States.

I have been informed that the authorized officials of Massachusetts, Rhode Island, and Connecticut have executed the compact and that the Governors of these States are prepared to make their appointments to the interstate commission established by these compacts as soon as Congress sees fit to grant its consent to this compact.

I believe it would be a wise policy for this Congress to encourage the States to handle problems of this type rather than

seek a solution through Federal authority. The Council of State Governments has long urged the States to set up proper agencies, whether they be on a regional basis or otherwise, to handle problems of this type. As a result, in recent years we have seen the creation by interstate compact or reciprocal legislation of the Potomac River Compact Commission, the Interstate Commission on the Delaware River, and the Interstate Sanitation Commission in the New York area.

The New England interstate water-pollution compact has been approved by representatives of all the New England States and has been endorsed by New York State insofar as that State would be affected.

The interstate commission will classify interstate streams in accordance with the present and proposed highest use of their waters and will establish reasonable physical, chemical, and bacteriological standards of water quality deemed satisfactory for each classification of use. Interstate agreement on these matters will permit each State to require that municipal sewage and industrial wastes originating within its boundaries be treated to the degree necessary for the protection of the neighboring State without putting any of its municipalities or industries to the expense of providing a higher degree of treatment than is necessary.

It is my hope that speedy and favorable action will be taken on this bill, H R. 3875.

Hoover Dam

EXTENSION OF REMARKS
OF
HON. ALBERT W. HAWKES
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Thursday, July 10, 1947

Mr. HAWKES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD, a communication on the subject of the Hoover Dam from Mr. Northcutt Ely to the editor of the Washington Post, which appeared in that newspaper on June 9, 1947.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

HOOVER DAM
A COMMUNICATION

Mr. Ickes (communication published May 19) attacked your fine editorial of May 4 commending the restoration of the name of Hoover Dam. His letter concedes that "no one could properly dispute the legal power of the Congress to change the name of Boulder Dam. * * *" But when, in 1933, Secretary Ickes changed the name of Hoover Dam he apparently felt otherwise, because there were at that time five acts of Congress on the books so designating it. See the statement of Chairman-elect TAYLOR of the House Appropriations Committee, December 12, 1930 (CONGRESSIONAL RECORD, vol. 74, p. 646):

"So that the dam is now officially named by both the Secretary of the Interior and by Congress."

The last four of these acts were enacted when the Democrats controlled Congress. All five are recited on the face of the act of April 30, 1947, restoring the name to that used in those statutes.

Mr. Ickes' defense is that a bill by Senator Smoot, introduced prior to enactment of these five laws, did not pass. The fact is that Secretary Wilbur on January 13, 1930, reported to the committee: "I believe that action on the bill might well be deferred until construction has commenced, or at least until an appropriation has been provided by Congress."

Accordingly the bill was never brought up for hearings in committee, being overtaken and superseded by the act of February 14, 1931, the first appropriation act to name Hoover Dam.

Attorney General Cummings reminded Mr. Ickes of these statutes on January 21, 1935, when, in reply to Mr. Ickes' protest against the use of the name "Hoover Dam" in the pleadings in *United States* v. *Arizona* (295 U. S. 174), he wrote:

"The difficulty in this particular instance seems to grow out of the fact that, while the term 'Boulder Dam' is used as often as possible and scattered somewhat promiscuously in strategic places in the bill of complaint, nevertheless the draftsmen of that document seemed to feel it necessary in describing the dam to use the title employed by the Congress in the acts appropriating money for its construction. I believe these acts refer to the dam as 'Hoover Dam.'"

Mr. Ickes' letter says that Commissioner of Reclamation Elwood Mead reported "that there was great confusion as to the name of the dam," and asked him "to determine which name should be official." It does not profit Mr. Ickes to cast the responsibility on Dr. Mead. Actually, Commissioner Mead, on January 10, 1930, had advised Secretary Wilbur: "President Hoover's influence in shaping the Boulder Dam project makes it fitting that the dam should have his name, and the public would approve the change."

In April 1933 Commissioner Mead sent Secretary Ickes a pamphlet describing the dam for the Century of Progress Exposition, calling it Hoover Dam. Mr. Ickes sent it back with a note May 8, 1933, saying: "I would be glad if you will refer to the dam as 'Boulder Dam' in this pamphlet, as well as in correspondence and other references to the dam you may have occasion to make in the future."

Signing this memorandum was apparently all that Mr. Ickes did about the name. Although his letter to the Post says: "I decided upon 'Boulder'," and "I gave orders with reference to the name," on May 17, 1935, he wrote Congressman Treadway: "There was no Executive or administrative order issued. Therefore, I cannot supply you with one."

Mr. Ickes says that the Colorado River compact was a "mere futile and as yet unaccomplished attempt to peddle waters as between claimant States."

This compact did not peddle waters.

On December 15, 1922, Delph E. Carpenter, Colorado's commissioner, reported to the Colorado Legislature: "It (the Colorado River compact) protects our development from adverse claims on account of any great reservoir or other construction on the lower river. It removes all excuses for embargoes upon our future development and leaves us free to develop our territory in the manner and at the times our necessities may require.

The compact thus made it possible to build Hoover Dam, in the lower basin, without foreclosing the upper basin's right to put water to use decades later.

The compact designedly left to the States of each basin the internal allocation of that basin's share. The Boulder Canyon Project Act directed the Secretary of the Interior to formulate a comprehensive scheme of river development, as the basis for these local subcompacts. Mr. Ickes was Secretary of the Interior for over 12 years.

In December 1946 the State of Colorado, formally commenting on the plan prepared under Mr. Ickes' administration (released under Mr. Krug's), said:

"It (the Interior Department plan) ignores the allocations of water made by the Colorado River compact, the provisions of the Boulder Canyon Project Act, and the California Self-Limitation Act, and contemplates increased uses of water by existing projects and additional uses of water by projects yet to be constructed, contrary to the provisions of the compact and the above-mentioned statutes."

These two official comments from Colorado, coupled with Mr. Ickes' notion that the compact was supposed to peddle waters as between claimant States, tell their own story.

As to Mr. Ickes' general discontent, the House committee report (No. 87, 80th Cong.) on the Hoover Dam resolution, March 4, 1947, answers him:

"Herbert Hoover, while Secretary of Commerce, in 1922 presided as the representative of the Federal Government over two score meetings of the Representatives of Arizona, California, Colorado, Nevada, New Mexico, Utah, and Wyoming, for the formulation of the Colorado River compact. He had a major part in bringing the States into agreement.

"This compact, signed November 24, 1922, made construction of the dam possible by allocating the waters of the river system, between the upper and lower Colorado River basins, settling a 25-year-old controversy. The Boulder Canyon Project Act, enacted December 21, 1928, when Mr. Hoover was President-elect, ratified the compact and authorized construction of a dam in Black Canyon or Boulder Canyon, leaving to the Secretary of the Interior the choice of sites. It also laid upon him and the Secretary of the Interior extraordinary responsibilities.

"As President, Herbert Hoover took an active part in settling the engineering problems and location of the dam in Black Canyon; was required by the project act to obtain power and water contracts adequate to assure some $200,000,000 of revenues before construction was begun; settled the difficult and controversial questions involved in the allocation of the power, and make the revenue contracts which Congress required; and proclaimed the Boulder Canyon Project Act to be in effect on June 25, 1929.

"This act ratified the Colorado River compact, which Mr. Hoover had signed 7 years before, and subjected all operations of the Boulder Canyon project to that compact. He subsequently reported to Congress, through Secretary Wilbur, compliance with its mandate that this project be built on a self-liquidating basis; Congress made the necessary appropriations (in acts which five times named the dam in his honor); the construction contracts were signed under his administration, and when he left office construction had been pushed to a point where it was more than a year ahead of schedule."

Let the record say whether Mr. Ickes, on the one hand, or the American Congress and President Truman on the other, have been right in their appraisal of Mr. Hoover's services.

NORTHCUTT ELY.

WASHINGTON.

Pensions for Postmen

EXTENSION OF REMARKS
OF
HON. JOHN J. DELANEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 10, 1947

Mr. DELANEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from today's New York Times:

PENSIONS FOR POSTMEN

Caught in the log-jam that always piles up in Congress toward the end of a session, the Langer-Chavez-Stevenson postal retirement bill is still help up on the calendars of both Houses. As a matter of simple justice it should be voted into law.

Here in New York City some 700 retired letter carriers are eagerly hoping it will pass. It would prove a godsend to a group of forgotten men who have given Uncle Sam the best years of their lives in faithful service. If it fails, they and their families may somehow continue to exist on $23 a week, though none of them can figure how. If it passes, their annuity will be raised to $1,500 a year.

Nobody seems to have any objection to the bill. It has been favorably reported by both committees. For the first time it provides some benefits for widows and survivors. It should encourage the retirement of many superannuated postal employees who simply can't afford to quit now. It won't cost the Government anything since the working postmen themselves will pay for it with an additional 1 percent deduction from their pay checks. Civil service actuaries figure that this will more than take care of the slight pension increase. If Congress greases its wheels a little the bill will pass at this session.

Citizenship for Alien Seamen With War Service

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 10, 1947

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

CELLER PROPOSES CITIZENSHIP FOR ALIEN SEAMEN WITH WAR SERVICE

WASHINGTON, D. C.—Representative EMANUEL CELLER, Democrat, New York, introduced a bill today providing citizenship for aliens with 3 years of war service in the American merchant marine. Representative CELLER said the bill would enable our Nation to honor its wartime promises and pay its debts to a small but heroic group of men who bring vitally needed skills to our economy.

Aliens who served in the armed forces became eligible for naturalization after 3 months of service. Up to the present no reduction has been made in the 5-year period required for naturalization of an alien seaman, despite the fact that service under wartime conditions was extremely hazardous.

The Celler bill proposes that 3 years of maritime wartime service shall be accepted in lieu of 5 years of peacetime service. Maritime wartime service is strictly defined so that only a few hundred alien war-service seamen who saw continued service in the war theaters will be eligible for naturalization.

"It is doubtful if our rapidly expanding merchant fleet could have been manned without the skilled alien seamen recruited for service in our merchant marine," Representative CELLER said. "In addition to demonstrating great heroism and great devotion to our cause in manning vessels, many of them in the early days of the war unarmed, these skilled alien seamen helped to train and carried the additional burden of the thousands of unskilled men poured into the merchant marine during the war.

"The aliens which this bill will aid in most cases made application for immigration visas which were denied solely on the grounds that their services were needed in the United States merchant marine and that once granted they could come ashore and work. The official letters from the State Department answering these applications promised consideration after the war. However, with the cessation of hostilities quotas were immediately filled with first- and second-preference applicants and the priority given alien war-service seamen in the nonpreference group is but a pretense at honoring our wartime pledge.

"The group which my bill would aid is very small in number but its contribution to our victory was great. It is a group which will bring valuable skills to our economy. It is a proven, trustworthy group."

God Guide America

EXTENSION OF REMARKS
OF
HON. LEONARD W. HALL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 10, 1947

Mr. LEONARD W. HALL. Mr. Speaker, it is a privilege for me, at this time, to bring to the notice of the House of Representatives, the prayer, God Guide America.

This prayer was the high-point of the ceremonial exercises held on the eve of Independence Day under the auspices of the United Freeport Observance, at Freeport, Long Island.

On this occasion, all segments of the people of Freeport—religious, veterans, civic, and business—joined in an unusual observance of our birth of freedom.

God Guide America is a prayer of great inspiration, of rededication of America to the moral, religious, and spiritual concepts upon which our Nation was founded.

You, Mr. Speaker, together with the President of the United States and the President pro tempore of the United States Senate, have also received this prayer, and of course it will become a part of the records of the United States House of Representatives. For all of us here, it is a reminder that as a Nation and a people we must continue to turn to God for guidance and wisdom in setting our country's course and in taking our responsible part to achieve lasting peace.

The prayer, God Guide America, and the program of ceremonies mentioned follow:

TOWARD LASTING PEACE AT HOME, ABROAD, AND IN OUR HEARTS

(Program, hymns, and prayer, united Freeport observance of Independence Day, Municipal Building, Thursday evening, July 3, 8 p. m.)

THE POWER OF PRAYER

Nobody knows the power of prayer,
But Somebody must be listening there
With a friendly ear for the heart that calls;
Someone who knows when a sparrow falls.

Miracles lie in the power of prayer;
Faith that can banish the soul's despair!
Hope that can shine like a holy light
And brighten the spirit's darkest night!

When earthly help is of no avail
There is one Friend who will never fail;
Just lift your eyes—the answer is there—
For nobody knows the power of prayer!

—*Nick Kenny.*

THE VOICES OF THE PAST SPEAK TO US TODAY, LISTEN

"We hold these truths to be self-evident, that all men are created equal.

"Prudence, indeed, will dictate that governments long established should not be changed for light and transient causes.

"And for the support of this declaration, with a firm reliance on the protection of Divine Providence, we mutually pledge to each other our lives, our fortunes, and our sacred honor." (Declaration of Independence.)

"How has it happened, sir (to Washington), that we have not once hitherto thought of humbly applying to the Father of Lights to illuminate our understandings * * * the longer I live the more convincing proof I see of this truth; God governs in the affairs of men. And if a sparrow cannot fall to the ground without His notice, is it probable that an empire can rise without His aid?" (Bejamin Franklin at the Constitutional Convention.)

"It is for us the living, rather, to be dedicated here to the unfinished work which they who fought here have thus far so nobly advanced; that we here highly resolve that these dead shall not have died in vain; that this Nation, under God, shall have a new birth of freedom and that government of the people, by the people, for the people, shall not perish from the earth." (Abraham Lincoln's Gettysburg Address.)

PROGRAM

Star-Spangled Banner.
Invocation---------- Rev. R. G. Harris
President, Inter-Faith Clergy Council; pastor Second Baptist Church
Program opening------ Mayor Cyril C. Ryan
The conception and purpose of the program.
Horace E. DeLisser
Chairman, United Freeport Observance Committee
Excerpts from the Delaration of Independence---------- Lester H. Baumann
American Legion, William Clinton Story Post
Historical interpretation of the Declaration of Independence--------- C. Oliver Moore
God Bless America--- Young People's Choir
Holy Reedeemer Church and assemblage
God Guide America... Martin M. Mansperger
Organizing president, Long Island Chapter, Sons of the American Revolution
Freeport's gift to the Nation----------
Rev. Wesley Haines
President, Freeport Community Council presents the prayer God Guide America to President Truman
American the Beautiful----------
Young People's Choir and assemblage
Benediction---------- Rev. John F. Drab

Thoughts to remember as we rededicate ourselves to the fundamental, moral, spiritual, and religious concepts upon which our Nation was founded, and because of which it grew great:

"I think the greatest discovery will be along spiritual lines * * * some day people will learn that material things do not bring happiness and are of little use in making men and women creative and powerful." (Charles Steinmetz.)

"I expect to pass through life but once. If therefore there be any kindness I can show, or any good thing I can do to any fellow being, let me do it now, and not defer or neglect it, for I shall not pass this way again." (William Penn.)

GOD BLESS AMERICA

God bless America, land that I love,
Stand beside her and guide her
Through the night with the light from above.

From the mountains, to the prairies,
To the ocean white with foam;
God bless America, my home sweet home.
God bless America, my home sweet home.

—*Irving Berlin.*

AMERICA THE BEAUTIFUL

O beautiful for spacious skies, for amber waves of grain,
For purple mountains majesties above the fruited plain!
America! America! God shed His grace on thee,
And crown thy good with brotherhood, from sea to shining sea.

O beautiful for pilgrim feet whose stern impassioned stress,
A thoroughfare for freedom beat, across the wilderness.
America! America! God mend thine ev'ry flaw,
Confirm thy soul in self-control, thy liberty in law.

O beautiful for patriot dream that sees beyond the years,
Thine alabaster cities gleam undimmed by human tears;
America! America! God shed His grace on thee,
And crown thy good with brotherhood from sea to shining sea.

—*Catherine Lee Bates, Samuel A. Ward.*

UNITED FREEPORT OBSERVANCE COMMITTEE

Inter-Faith Clergy Council: Rev. John F. Drab, Rev. R. G. Harris, Rev. Charles Hogle, Rev. Pournelle Pitts, Rabbi Simon Noveck.

The Community Council: Rev. Wesley N. Haines, Mrs. H. W. Battin.

The Board of Education: Clifton B. Smith, Harold E. Pearson.

The Village Board: Martin W. Weyrauch.

The American Legion: William H. McCloskey, Austin Montross.

Veterans of Foreign Wars: Dominic Pellicio, Theodore Allegra, Edward Gregg.

Chamber of Commerce: Horace E. DeLisser, Mrs. William J. Martin, Walter Green, Mr. William J. Martin, Harry Carman.

The committee wishes to express its appreciation to all whose interest and cooperation made this program possible.

For ourselves, the great joy, the closer friendships have already amply repaid us for anything which we might have done in producing what we hope and pray may become a pattern for future observances of our greatest of national holidays.

FREEPORT'S GIFT TO THE NATION: A PRAYER FOR LASTING PEACE

God guide America

Almighty God, from Whom cometh all human understanding, in this hour of national confusion and international disquietude, open wide, we pray Thee, the hearts and minds of all Thy people. Let not our human frailties and material longings hinder the fruits of peace. Let not our age-old lusts and cravings raise again their ugly heads above the true greatness of the Divine Spirit that is in all men. Drive out from the thoughts of each of us every last vestige of intolerance toward our fellow men, no matter what their color or creed.

Let the heart of everyone of us be filled with the realization that peace is more than just a relationship of nations; that peace is a condition of mind brought about by a serenity of soul; that lasting peace can come only to peaceful people.

Awaken all men to the desire for this inner peace, the peace that passeth all understanding; the peace that comes to all who truly turn to Thee and love Thee and to all who seek to serve their fellow men even as they serve themselves.

Reveal to us, we pray Thee, that we are all a part and an important part of this mystic universe which Thou hast created and into which Thou hast caused us to be born. Make clear to us that no man is here because Thou didst not have good reason for his being; that no man would be rich were it not for the willingness of less able men to work for him; that no laborer would find his hire were it not for the enterprise of his employer; that each of us has been equipped to serve one another according to our needs and according to our respective abilities and understanding.

Finally, dear Father, as the statesmen of the world seek the solutions of our problems in the councils of the United Nations; as we in this blessed country of ours struggle with our difficulties and our differences; as the minds and hearts and souls of mankind everywhere cry out for peace, lasting peace, teach us, we pray Thee, to seek and discern those things in which we all agree and to forego and forget those things in which we do not agree. Amen.

Re Tax Reduction

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 8, 1947

Mr. SMATHERS. Mr. Speaker, today I voted against H. R. 3950, the Knutson bill, for the following reasons:

First, as was stated by the distinguished gentleman from North Carolina [Mr. CLARK]:

If politics were stricken from this bill, there would be nothing left in it but the enacting clause.

Second, yesterday we voted to cash the terminal-leave pay bonds of enlisted men. That will cost the Government $2,000,000,000. Today the House of Representatives has passed this tax bill and thereby reduced Government revenue by another $5,000,000,000. In 2 days time $7,000,000,000 has been taken from the Federal Treasury. Yet we still do not know what the budget figures for 1948 are, nor do we know how much revenue will be forthcoming in 1948. We do not know what our domestic or foreign commitments are. We have been asked to pass a universal military training bill, and it is estimated that will cost the Government $2,000,000,000 annually. We will be called upon to pass, and we know that we will pass, a bill to subsidize our merchant marine in order to keep it on the high seas. That will cost the Government many more millions of dollars. We are asked to subsidize various farm programs, all of which will cost many millions of dollars. We have a war debt of $258,000,000,000, and no plan has been presented whereby it will be paid off or whereby a start will be made to pay it off.

Therefore, I voted against this bill because to have voted for it would have been, in my opinion, unsound business practice and would have jeopardized our Federal economy. Of course, it would have been easy to vote for it. It is always easy and popular to vote for every appropriation and against all taxes.

Third, the bill is admittedly a hastily drawn measure, designed to give temporary tax relief until such time as our entire tax structure can be worked over and its inequities and obsolete provisions changed. This bill does not become effective until January 1, 1948, over 5 months from today. It does not make good sense to me to pass, and thereby freeze into our tax structure, an allegedly temporary measure, which is basically unfair and inequitable in that it gives great tax relief to those in high income brackets and practically no tax relief to those in low income brackets. It puts the scale of taxation for those in high income brackets back to the 1939 level but does not restore the 1939 levels for those in low-income brackets. We all admit that Federal taxes insofar as they pertain to community property States and non-community property States should be equalized. It is admitted by all the tax experts here in the Congress that the present tax system insofar as estate, gift, and corporation taxes are concerned should be changed. All agree that dependency exemptions should be raised. Yet none of this has been done in this bill H. R. 3950.

Therefore, because we have 5 months remaining between now and January 1, 1948, I think it would be wise for this Congress to stay in session and devote its energies for the next 5 months toward reworking the entire tax structure so that as of January 1, 1948, we could embark upon an intelligent, fair, and workable tax system, having some better idea of what our commitments and responsibilities are going to be. I, for one, am in favor of staying on and doing that job.

Federal Taxation

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, July 11, 1947

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks, I am inserting highly informative testimony on Federal taxation presented to the Ways and Means Committee by Mr. Don G. Mitchell, chairman, taxation committee, National Association of Manufacturers:

PROGRAM FOR FEDERAL TAX REVISION

My name is Don G. Mitchell. I am president of Sylvania Electric Products, Inc. I am also chairman of the taxation committee of the National Association of Manufacturers. This statement is made in exposition of the association's program for Federal tax revision.

My remarks will be divided in two parts. First, I will present an economic analysis of the Nation's requirements for capital formation in the immediate and the long-range future. Then, I will present the specific recommendations for tax revision to implement the findings of the preceding economic analysis. These recommendations were developed by the taxation and tax administration committees of NAM and adopted by the board of directors on June 24, 1947. A more extensive exposition and supporting statistical data in support of these recommendations are included in the full brief filed with the committee yesterday.

Four major purposes are emphasized in my statement. They are:

I. Adjustment of tax rates and tax burdens to permit needed capital formation: Our economic analysis demonstrates that the maintenance of a healthy, vigorous economy with full employment and full production requires an amount of funds for venture capital formation materially beyond

what is now possible under existing tax rates. This necessary supply of capital funds cannot be forthcoming without a thorough revision of the income-tax rates upon all individual incomes, large and small.

II. Tax relief for those with small and moderate incomes: In addition to making sure that the material basis of a strong and vigorous economy be provided by making possible a larger volume of saving and investment, it is necessary to sustain and improve the morale and the incentives of workers, investors, and managers. This can be most effectively accomplished by increasing the proportion of every income, small or large, over which the recipient has control for spending and saving. The most deadening effect upon the willingness to work, or to save and invest, is to have left, as a reward for economic effort, a trifling and inadequate reward. The present tax burdens compel everyone, regardless of the amount of income, to work a disproportionate amount of each year for the Government. A fair and reasonable program of tax reduction is one which will leave with all taxpayers a larger share of the income which they receive for their economic effort, whatever its character may be.

III. Various technical adjustments in the tax laws: The general objective of such technical adjustments as NAM would emphasize is that of securing greater recognition, in the tax law and in its administration, for the results of business accounting and for the decisions of business management. Illustrations are the treatment, for tax purposes, of depreciation, obsolescence, and some other classes of deductions from gross income, and the decisions of management with respect to the amount of earnings to be retained.

IV. Equitable adjustments in the tax laws: Illustrations of the kind of adjustment referred to here are the double taxation of dividends and the disparity of tax burden between married taxpayers in community and noncommunity property States. These and similar matters are important but in the NAM program they are relegated to a minor position by comparison with the subjects which are regarded as of primary importance. Eventually, with budget stabilization at a much lower level than at present, and with a larger need for venture capital funds, these and related topics must receive serious consideration. For the present, the relief to all taxpayers through a revision of the income tax rate scale should be the primary subject of tax revision by the Congress.

For the present, the need for additional capital formation and the promotion of individual incentives will be adequately served by a revision of the individual income tax rate scale to a rate of 12 percent on the first bracket of taxable income $0–$2,000, and a rate of 50 percent applicable at the taxable income level of $100,000 and above, together with additional deductions for insurance premiums and medical expense. Eventually, in order to assure availability of larger sums for capital formation and to provide still greater stimulus to economic motives and incentives, the rates of tax on individual incomes should be reduced below the rates proposed above.

At the time we began preparation for this appearance, there seemed no likelihood of tax legislation in 1947. Now that there is greater prospect of such an outcome, as indicated by the action on H. R. 3950, it should be pointed out that this bill, if enacted into law, would provide for those with low and moderate incomes, a substantial proportion of the tax relief which is advocated in our brief. It would not, however, go as far as we consider it necessary to go in releasing income for saving and capital formation throughout the individual income scale. The correct view to take with regard to H. R. 3950, in our opinion, is to accept it as a step in the proper direction, but to recognize that it is only a transition phase in the movement toward a more thorough revision and readjustment of individual income tax burdens such as we recommend in the accompanying tax program.

CAPITAL FORMATION AND TAXES

It is customary to approach the problem of taxes from the point of view of how much the government proposes to spend and, then, when this is determined, devise ways and means to collect the needed amount from the taxpayers of the Nation.

When the amount is small—either in dollars or as a percent of the national income—such an approach to the tax problem is economically sound. In these circumstances, the total amount collected in taxes is not enough to disrupt the economic system, and consequently the primary consideration is simply that of distributing the tax burden equitably.

But today the potential demand for funds on the part of the government has become so great and the tax burden in this nation has become so heavy, that it no longer is safe from the point of view of the future welfare of our nation and our people to think only in terms of the distribution of the tax burden.

Today the first and primary consideration must be, not how to collect so many billions of dollars, but how many billions can we afford to collect in taxes if the country is to continue to progress; if we are to continue to have full employment and full production; if our people are to continue to enjoy a steadily higher standard of living.

The tax problem of this country, we submit, therefore becomes one now of substantial relief for all the people from the crushing burden of wartime taxes, plus the maximum of assurance that this relief will be so planned as to promote the continuation of industrial and agricultural growth, prosperity for all, security for the individual, and the national strength which will mean so much to world peace in the years to come. That is why we are here proposing both a new approach to the tax problem and specific measures to implement this approach—all to the end of providing: The maximum of tax relief now to all citizens; and, the maximum of protection for all citizens against unemployment, distress and national weakness in the years immediately ahead.

To answer the question of how much this country can afford to pay in taxes, it is necessary to keep one fact constantly in mind: When government collects taxes from the people it does not reduce the total volume of buying power in the country. What happens when government takes away part of the people's income is simply that government, instead of individuals or private organizations, spends the money. In other words, taxation is, in its immediate impact, a problem, not of how much buying power there is in the economic system, but of who is to use this buying power and in what ways.

In view of this irrefutable fact is there any possible answer to the question of how much taxation our Nation can stand and still prosper?

If we are to answer the question of how much taxation we can afford, we must find some way to distinguish between that taxation which represents merely the transfer of an inescapable burden and that taxation which undermines the economic progress of the Nation. We must find some bench mark without which the Nation and our people cannot continue to progress. This bench mark must be one which would remain the same regardless of whether the Federal Government proposes to spend twenty, thirty, or forty billion dollars, and regardless of whether our national income is one hundred fifty, one hundred seventy-five, or two hundred billions dollars. In others words, we must have a bench mark which is definitive in the sense that we can say with positiveness that unless such and such is done the Nation cannot continue to grow and prosper, regardless of what else may be done.

Fortunately, there is such a bench mark. It is the amount, on the average, of each dollar of goods and services produced which, instead of being consumed, is saved and through investment is used for further production. In technical terms, this is known as "capital formation." It includes, not only machines and factories, but everything used in the productive process.

We have data on the amount of such capital formation from 1869 to the present. The data from 1869 through 1939 were compiled by the National Bureau of Economic Research. From 1909 through 1946 similar data have been compiled by the United States Department of Commerce. These two organizations have used somewhat different definitions in their studies, but when allowance is made for the differences, the results are so nearly identical as to remove any doubt as to their fundamental accuracy.

Specifically, as the following table shows, just about one-fifth of the Nation's total production must be devoted to capital formation.

Percent of gross national product devoted to capital formation

Period:	
1869–78	18.9
1874–83	18.9
1879–88	19.3
1884–93	20.8
1889–98	21.3
1894–1903	21.1
1899–1908	20.1
1904–13	19.7
1909–18	20.7
1914–23	21.7
1919–28	20.8

Source: National Bureau of Economic Research.

This capital formation has been accompanied by growth in production as shown by the following figures:

Gross national product

[In billions of dollars of 1929 purchasing power]

Period:	
1869–78	10.3
1874–83	14.8
1879–88	19.5
1884–93	23.1
1889–98	26.7
1894–1903	32.9
1899–1908	41.2
1904–13	49.8
1909–18	56.5
1914–23	64.5
1919–28	77.8

Source: National Bureau of Economic Research.

Not only has total output increased, but the product per man-hour of labor has also grown phenomenally.

This increase in productivity is a direct result of the worker being given more and better machinery and tools with which to work; that is, of capital formation.

The record of the product per man-hour in manufacturing industries since 1899 is shown in the following table:

Product per man-hour in manufacturing

[1899=100]

1899	100
1909	118
1914	137
1919	135
1921	164
1923	179
1925	200
1927	213
1929	238

Source: National Bureau of Economic Research.

Because of the increase of productivity resulting from capital formation, real wages have risen in this manner:

Real hourly earnings in manufacturing, 1869–1929

	Cents
1869	21.9
1870	23.2
1871	24.0
1872	24.1
1873	24.6
1874	24.0

1924	44.8
1925	43.6
1926	43.4
1927	44.4
1928	45.8
1929	46.2

Source: Based on data from the Bureau of Labor Statistics and Paul H. Douglas' Real Wages in the United States, 1890–1926.

During this 60-year period, 1869–1929, the Nation, by devoting approximately one-fifth of its output to capital formation, has been able to increase its production at an average rate of 3.8 percent per year. This is a record of achievement without equal in the history of any other nation in the world.

The record of the decade, 1929 through 1938, is equally impressive—in reverse. This was the first 10-year period in our history when the Nation did not reach a new high level of production. This also was the first 10-year period since the Civil War when capital formation fell substantially below the historical percentage previously noted.

Specifically, the record of capital formation from 1929 through 1938, as compared to what would have been necessary if the Nation had progressed at its historic rate, was as follows:

Capital deficiency: 1930 through 1938

[In billions of dollars]

Year	Private gross capital formation		Deficiency in private gross capital formation
	Actual	Required	
1929	17.6	16.9	(1)
1930	12.1	15.0	2.9
1931	6.4	12.2	5.8
1932	2.2	9.4	7.2
1933	3.3	9.3	6.0
1934	5.3	10.9	5.6
1935	6.7	12.0	5.3
1936	10.0	13.9	3.9
1937	11.6	14.9	3.3
1938	7.7	13.7	6.0

[1] Required less than actual capital formation.

Source: Computed from data of U. S. Department of Commerce.

Such a record does not mean that it was the absence of capital formation which caused the depression of the 1930's. But this record, in combination with that of the preceding 60 years, does prove beyond reasonable doubt that when there is a deficiency of capital formation the Nation neither progresses nor prospers. Or to put this conclusion in positive terms: Unless we have an adequate volume of capital formation, neither the Nation nor its people can progress and prosper; moreover, if the rate of progress is to be that enjoyed for the 60 years from 1869 through 1928, the rate of capital formation must be a certain ascertainable proportion of the gross national product.

This means that we have an excellent tool with which to approach the problem of taxation, both from the point of view of the amount which the Nation can afford, and equally the extent to which various types of taxes may safely be levied, because, as will be explained later, different types of taxes have widely different effects upon capital formation.

The first step in such an approach is to determine the amount—in dollars—of the capital formation necessary to keep the Nation moving forward at its traditional rate. In other words, how much capital formation is necessary to enable our Nation to resume its forward progress of 3.8 percent a year?

Two elements are involved in arriving at an answer to this question.

Our economic system today is not in good working order. At numerous places, in some cases because of inadequate capital replacement in past years and in other cases because of shortages and intensive operation during the war, our productive organization is in need of extensive rehabilitation. If we are to have an accurate idea of the amount of capital formation needed from here on, allowance must be made for this rehabilitation.

This is not an easy problem. The best that anyone can do is to make an intelligent estimate. And the best means for doing this is to start with the fact that, according to Department of Commerce figures, the capital formation deficiency during the past 10 years has amounted, in the aggregate, to $125,000,000,000. This $125,000,000,000 in other words, is the additional amount which would have had to be devoted to capital uses if the Nation had progressed during these years at the predepression rate.

It is not to be expected that this entire deficiency will be made up. And neither is it necessary. The mere passage of time means that, had such capital been created during the 10-year period, much of it—machines, for example—would already be worn out or obsolete. Therefore, to be on the conservative side, from the point of view of future capital needs, let us assume this passage of time eliminates the need for restoring half of the accumulated deficiency, reducing the total to some $62,500,000,000.

But making up even this amount of deficiency will take time, and again this will reduce the amount necessary. So, to allow for this, let us again be conservative and once more cut the total in about half, or to $30,000,000,000.

This, then, gives us a fair and reasonable over-all rehabilitation figure. But it leaves the question of how rapidly the capital formation for this purpose can, or will, take place.

From the point of view of the American public, the more quickly this rehabilitation is completed, the better it will be because it will mean that the Nation and our standard of living will get back on the up-trend just that much sooner. But it takes more than mere wishing to bring about such a result. It involves the whole problem of the adequacy and character of savings, the availability of supplies and the general outlook for investment. So, once again, let us be conservative and assume that this necessary rehabilitation process is extended over a 5-year period at the rate of $6,000,000,000 a year.

In making this assumption it is imperative to keep in mind that it is conservative—that it probably should be considered as the absolute minimum, and that the American people would be served well if steps could be taken to speed up this rehabilitation process.

What of the other aspect of the need for capital—the amount, aside from that for rehabilitation, which is necessary if the Nation is to resume its upward trend? This is relatively simple to determine.

As explained before, the record shows that this must be a definite percentage of the gross national product. Applying this percentage as developed by the Department of Commerce—in order to have up-to-date figures on an annual basis—we find that for this purpose we would need $36,000,000,000. This, added to the conservatively estimated need of $6,000,000,000 for rehabilitation, means that, at the minimum, it is necessary to have $42,000,000,000 of capital formation in 1947 if the Nation is to move forward at its historic rate of progress.

We can assume that in 1948 the need for rehabilitation will remain the same; which also will be true for the following 3 years. But granting we resume our forward march at the rate of 3.8 percent per year, so will the need for capital formation increase at this rate. This would mean that, while $42,000,000,000 is the minimum necessary for 1947, we must have a minimum of $43,400,000,000 in 1948. And year by year thereafter the amount will increase. Specifically, with allowance made for the completion of the rehabilitation process in 5 years, the need for capital formation over the next 10 years will be as follows:

[In billions of dollars]

1947	[1] 42
1948	[1] 43.4
1949	[1] 44.8
1950	[1] 46.3
1951	[1] 47.8
1952	43.4
1953	45.0
1954	46.7
1955	48.5
1956	50.3

[1] Years of rehabilitation.

The next step is to examine the possibility of our actually getting such a volume of capital formation. For this purpose we need to analyze four segments of the economy—because there are only four sources from which capital formation can come.

The first of these four sources is business reserves. Every year, of necessity, business

sets aside from its revenues large sums to provide for the wearing out of its productive facilities. According to the data compiled by the Department of Commerce, business thus set aside $9,600,000,000 in 1946. This provides a basis for estimating how much in the way of funds for capital formation will be provided from business reserves in future years.

Were it not for one complicating factor, we would be justified in assuming that this will be the amount of capital formation provided from this source from now on (with proper allowance, of course, for the 3.8 percent annual increase). This complicating factor is that, because of the rise of prices as compared with prewar, the machines which are bought today cost substantially more than did the machines which they replace. In estimating the future of capital formation from this source, therefore, it is imperative to make allowance for this price change—for the fact that it may cost $75,000 to replace a machine which originally cost $50,000.

Since business reserves are computed by amortizing original cost rather than replacement cost, they will be greater in future years as present assets are replaced by more expensive ones. What the difference will amount to in terms of dollars depends upon both the amount of the price increase and the speed with which replacements take place. On the basis of available data, it appears that, on the average, it is reasonable to assume a 50-percent increase for this type of item. If we allow 5 years for this increase to be fully worked into the cost of capital replacements, then we can estimate that the capital formation derived from business reserves will be as follows:

[In billions of dollars]

1947	10.8
1948	12.1
1949	13.3
1950	14.6
1951	15.9
1952	16.5
1953	17.1
1954	17.7
1955	18.4
1956	19.1

The second source of capital formation is Government. This occurs when tax collections exceed the current expenditures of Government for goods and services. The process may be viewed as one by which Government takes away from the disposable income of individuals an amount which the Government itself does not spend. As such, these excess tax collections of Government become available as a source of capital formation, and, as the data are compiled by the Department of Commerce, must be so considered.

What such excess tax collections will amount to in future years will depend, first, upon how much Government pays out in such items as financial aid to farmers or business, and, second, upon how rapidly the public debt is retired. In 1946 it appears from the national budget figures of the Department of Commerce that Government, largely through subsidies and loans, made a contribution to capital formation of $2,400,000,000.

Because of commitments already on the statute books, it would take considerable time to eliminate this source of capital formation, even should improved conditions throughout the economy convince Congress that elimination of direct Government aid is wise public policy. In view of this, it appears reasonable to assume that for a period of 5 years, Government will continue to be a source of capital formation through such activities at a gradually declining rate. If we add to this another $2,500,000,000 for annual debt retirement—compounded annually for the assumed growth of production—then government would provide the following capital formation:

[In billions of dollars]

1947	4.5
1948	4.1
1949	3.7
1950	3.3
1951	2.9
1952	3.0
1953	3.1
1954	3.2
1955	3.3
1956	3.4

If the above assumptions in regard to government as a source of savings for capital formation are to be realized, the Government must not only pursue a salutary tax policy; it must also live within the revenue provided by that tax system.

The third source of funds for capital formation is the retained earnings of corporations. To arrive at an estimate on this item, it is necessary to make assumptions on the amount of corporation profits, the volume of taxes which corporations will pay, and the amount which corporations will pay out as dividends.

The easiest of these assumptions is that on taxes. Since the purpose of this analysis is to determine how much, and what type of taxes the Nation can afford to pay, we must start with the assumption that corporation taxes will remain at present levels. Only by doing this can we carry through the analysis in such a way as to have a sound basis upon which to say what changes should be made in taxes.

The assumption on the volume of corporation profits is more tenuous, but not exceptionally so. In 1946, total corporate profits before taxes were $21,100,000,000. This was distributed: $8,600,000,000 for taxes, $6,900,000,000 for retained earnings, and $5,600,000,000 for dividends.

But in at least two particulars this $21,000,000,000 figure must be modified in thinking of the future. In the first place, according to official estimates, some $4,500,000,000 of these profits were the result of inventory appreciation, leaving only $2,500,000,000 for capital formation out of the $6,900,000,000 of retained earnings. Granting the price level remains steady from here on (as we are assuming throughout this analysis), there will not be a recurrence of such inventory appreciation profits.

The other modification which must be made in this $21,000,000,000 figure, in thinking of the future, is to allow for the increased charges for capital replacement, as noted before in the discussion on business reserves. It may be said that this is merely a matter of corporation accounting; a question of which pocket the money is put into—and that is correct. But obviously it cannot be put in both pockets. Consequently since this increase was allowed for as a source of capital formation under business reserves, it cannot also be included in corporate profits.

It is thus possible to assume (and it probably is as optimistic an estimate as anyone would care to make) that corporate profits will continue at the 1946 rate, less the two factors just mentioned, plus the accretion which would occur from the projected increase of 3.8 percent a year in production.

The final assumption, which must be made in determining what contribution to capital formation will be possible from the retained earning of corporations, is the amount of earnings which corporations may be expected to pay out in dividends. In 1946, as stated above, dividend payments amounted to $5,600,000,000. In view of the level of profits in that year it might appear reasonable to conclude that this sum, with allowance for the projected growth of production, is a generous estimate to make for the years ahead. Actually, this is far from the case.

The reason such an assumption would be quite unrealistic is that the 1946 volume of of dividends was exceptionally low, both as a percentage of the total earnings of corporations and as a share of the national income. To be specific, corporations in 1946 paid out in dividends only 42.5 percent of their earnings as against a customary average of about 80 percent during the 1920's.

The relation of dividends to national income is even more significant. During the decade of the 1920's, and again during the depressed decade of the 1930's, dividends amounted to 6 percent of the national income. In 1946 they amounted to only 3.4 percent of the national income.

Dividends are a source of income, and a payment for a contribution to the productive process, just as truly as are the wages of labor or the income of farmers. It is not reasonable, therefore, to expect the millions of stockholders in this country to settle for half of their traditional proportion of the national income any more than it is reasonable to assume that labor or farmers would settle for half of their historic share of the national income.

Instead it is only fair to assume that, in time, dividends will be restored to the prewar proportion of the national income; that, if this is not done, there will simply be a drying up of investment on the part of stockholders. Obviously such a restoration does not have to be made immediately, but unless some progress is made along this path it is probable that stockholders will become more and more wary of equity investments. So again let us be moderate and assume that, although as stated above, corporation profits stay high, the total of dividend payments will be gradually restored over a five-year period to their historic proportion of the national income.

Such, then, are what appear to us to be the reasonable assumptions to make in connection with the retained earnings of corporations as a source of capital formation.

Put together—the elimination of inventory profits, the assumed increase in dividends, and the continuation of the present corporate tax rate—these conclusions would lead to a drastic shrinkage in corporate retained earnings as indicated below:

[In billions of dollars]

1947	2.9
1948	2.0
1949	2.1
1950	.2
1951	−.6
1952	−.7
1953	−.7
1954	−.7
1955	−.7
1956	−.7

It should be repeated (since we are attempting to determine what should be done in connection with taxes) that in these estimates we have assumed that corporation taxes continue to take the same proportion of corporate income as in 1946. Should corporation taxes continue at the present rate, dividends could not be restored to their historic relation to the national income.

The final source of capital formation is individual savings. In 1946 individual savings amounted to $19,000,000,000. This amount bore approximately the same relationship to the disposable income of individuals—disposable income being total income less taxes—that the prewar record indicates is customary. As the shortages of consumer goods are eliminated it is probable that the public at large may draw somewhat more heavily upon its income and thus reduce the percent saved. On the other hand, if dividends are increased to their prewar relation to the national income, as we have assumed, this will increase the volume of savings.

It would appear reasonable to assume, therefore, that these two tendencies may pretty generally offset each other and thereby result in savings amounting to their tradi-

tional proportion of the disposable incomes of individuals. This would give us individual savings as a source of capital in the following amounts:

[In billions of dollars]

1947	19.3
1948	20.1
1949	20.6
1950	21.6
1951	22.3
1952	23.0
1953	23.8
1954	24.9
1955	25.9
1956	26.8

We are now in a position to make a direct comparison between the need for capital formation over the next several years with the sources from which such capital formation may be derived, granting present tax rates are maintained. By adding together the potential sources of capital formation—business reserves, excess tax collections by government, retained earnings of corporations, and individual savings—we get the total capital formation which would be possible under existing tax laws. By comparing this with the amount of capital formation necessary for the continued progress and prosperity of the Nation, we have a basis for saying how much additional capital formation must be provided by changes in the tax laws. This over-all comparison is as follows (in billions of dollars):

	Capital formation necessary	Amount in sight	Deficiency
1947	42.0	37.5	−4.5
1948	43.4	38.3	−5.1
1949	44.8	39.7	−5.1
1950	46.3	39.7	−6.6
1951	47.8	40.5	−7.3
1952	43.4	41.8	−1.6
1953	45.0	43.3	−1.7
1954	46.7	45.1	−1.6
1955	48.5	46.9	−1.6
1956	50.3	48.6	−1.7

At first glance this table would appear to indicate that, even without tax reform, the inadequacy of savings with which to provide our needed capital formation is a question of only the next few years. But the problem of savings in relation to capital formation is not only a matter of whether there is a sufficient volume of saving, but equally whether the savings are of the proper character to meet the particular type of capital formation needed. The above table, therefore, is only half of the story. We must now look at the character of savings in relation to the needed capital formation.

This is a problem of the distribution of those savings which their owners are willing to put only in what may be termed risk-free investments, and those savings which their owners are willing to put in more venturesome types of investment. The risk-free investments include government bonds, deposits in savings banks, insurance, and so forth, and it will be convenient to refer to the savings which are used for these purposes as nonventure savings. The other type of savings includes those put in corporate securities and unincorporated business undertakings. We shall designate these as venture savings, and our immediate task is to determine what the volume of such venture savings will be in the coming years in relation to the need for this type of capital formation.

First, let us examine the need for venture savings. At an earlier point in this analysis, we indicated what the aggregate need for capital formation will be in the coming years. We followed that with estimates of what might be obtained, under existing tax laws, from business reserves, from the excess tax collections of government, from retained earnings of corporations, and from individual savings. From the point of view of taxes in relation to the volume of venture savings the first two of these need cause no concern. The volume of business reserves is not controlled by tax rates. The amount we have assigned to excess tax collections represents a mere shift from individuals to government, and then back again, and, granting we are going to maintain a balanced budget and make a moderate regular payment on the public debt, we may assume the amounts we have given are reasonably minimum.

If we deduct these two items from the total of required capital formation, as stated earlier, we get the following amounts:

[In billions of dollars]

1947	26.7
1948	27.2
1949	27.8
1950	28.4
1951	29.0
1952	23.9
1953	24.8
1954	25.8
1955	26.8
1956	27.8

The question which we must answer is, to repeat, how much of this needed capital formation can be provided out of venture savings, and will there be enough venture savings and for this purpose?

Offhand, it might appear that the proper way to answer this question is to classify all the needed capital formation according to whether it requires venture or nonventure savings, and then to match this classification with the savings of the Nation. But a moment's thought will make it obvious that the question cannot be answered in this way. The economic system does not divide itself into such neat categories insofar as capital formation is concerned.

From the point of view of the managers of business every dollar invested in business is a "venture" and involves risk. The only difference between one dollar and another is the priority of loss, should the venture prove unsuccessful. Thus, the dollar put in through common stock is less "safe," at least theoretically, than the dollar represented by preferred stock, and so forth, through the whole gamut of possible corporation securities. In other words, the problem of analyzing the need for capital formation in terms of the adequacy of venture savings is purely a question of determining whether the needed capital formation can be converted into instruments which appeal to the holders of savings as suitable for nonventure savings or as suitable only for venture savings. The problem of matching the need for capital formation against the adequacy of venture and nonventure savings, therefore, is not a question of the use to which funds are put; it is a question of the means by which savings find their way into capital formation. When so conceived the problem which confronts us becomes comparatively simple and we have ample statistics upon which to base conclusions.

We may well start with the item of the volume of savings converted into capital formation through institutional investments—savings banks, insurance companies, and so forth. In 1946, about $5,000,000,000 of individual savings were converted into capital formation in this manner. We may assume that this rate will continue, with allowance for the projected increase of production and the national income.

Second, in 1946, individuals made a further contribution of about $4,000,000,000 to capital formation out of their savings by accepting the additional deposits created by bank loans extended to business. We may also assume that this process will be continued with the normal rate of growth.

In both these instances, although the funds received may have been used in most venturesome ways, the funds were attracted by means of instruments which are suitable for nonventure savings. Since we assume this volume of funds will continue to be attracted in this way from nonventure savings, we may properly subtract these amounts from the total of capital formation which must be related to venture savings. This reduces the totals to the following:

[In billions of dollars]

1947	17.3
1948	17.5
1949	17.7
1950	18.0
1951	18.2
1952	12.7
1953	13.2
1954	13.8
1955	14.3
1956	14.9

It is now necessary to bring in another factor. During the war business organizations piled up an enormous volume of liquid assets. With the end of hostilities, and an increasing supply of materials for private capital uses, business began to draw down these liquid assets and convert them to capital purposes. In 1946, this process was carried on to the extent of about $9,000,000,000. This again was a case of business being able to attract private savings for capital purposes through offering the holders of such savings various instruments—Government bonds, for example—which were suitable for nonventure savings.

How long can this process continue? Only for a relatively short time. Because of the rise in the price level and the increased dollar volume of sales, it may be assumed that business will find it necessary to hold twice the volume of liquid assets that it did before the war. This means that, as of the first of 1947, business only had about $30,000,000,000 of such liquid assets that it can safely dispose of. At the rate of $9,000,000,000 a year (the 1946 figure), it follows that this method of attracting nonventure savings would exhaust these liquid assets in less than 4 years. After that business will have to replace this source of funds by attracting direct investments, i. e., by venture savings of individuals or by retained earnings of corporations.

When allowance is made for the amounts of capital formation which will be provided out of nonventure savings through this reduction of liquid assets, we reduce our totals to the following—and this is the amount of capital formation which in the years ahead must be provided from venture savings and retained earnings of corporations:

[In billions of dollars]

1947	8.3
1948	8.5
1949	8.7
1950	18.0
1951	18.2
1952	12.7
1953	13.2
1954	13.8
1955	14.3
1956	14.9

With these totals established, the next question we need to face is whether there will be, under existing tax laws, enough venture savings to meet this need. This, again, is a relatively simple problem.

From two studies made by the Bureau of Labor Statistics (one for 1941 and the other for 1944) on the spending and saving habits of American families, it is evident that, by and large, venture savings come only from those with incomes of $10,000 and above. Individuals with incomes less than this have savings—in the aggregate, comparatively large savings—but they are of the nonventure type.

This means that if we are to have the venture savings necessary to meet the required capital formation they must come, insofar as individual savings are concerned, largely from the savings of those with

incomes of $10,000 or more and from the retained earnings of corporations. The volume of such savings will be as follows:

[In billions of dollars]

1947	4.2
1948	4.4
1949	4.5
1950	4.8
1951	4.9
1952	5.0
1953	5.2
1954	5.4
1955	5.6
1956	5.8

All retained earnings of corporations are, by their nature, venture savings. At an earlier point we already have estimated what these retained earnings will be, if present taxes are continued. Adding these to the venture savings of individuals as just given results in the following as the total of venture savings which the Nation would have under existing tax laws:

[In billions of dollars]

1947	7.1
1948	6.4
1949	6.6
1950	5.0
1951	4.3
1952	4.3
1953	4.5
1954	4.7
1955	4.9
1956	5.1

By comparing these totals with the volume of capital formation which must be financed out of venture savings, we arrive at a conclusion on the magnitude of the problem which confronts the Nation from the point of view of assuring an adequacy of venture savings. This comparison is as follows:

[In billions of dollars]

	Capital formation to be financed from venture savings	Venture savings under present taxes	Deficiency
1947	8.3	7.1	1.2
1948	8.5	6.4	2.1
1949	8.7	6.6	2.1
1950	18.0	5.0	13.0
1951	18.2	4.3	13.9
1952	12.7	4.3	8.4
1953	13.2	4.5	8.7
1954	13.8	4.7	9.1
1955	14.3	4.9	9.4
1956	14.9	5.1	9.8

This completes the second half of the problem of capital formation and savings. The first half, it will be recalled, was a comparison of the necessary capital formation with overall savings. This second half has carried the analysis to the point of determining whether, regardless of the total, we would have enough venture savings to provide for the continued growth of the Nation and assure "a better tomorrow for everybody."

Putting these two halves together gives the following as the deficiency, first in total savings, and second in venture savings, which would confront the Nation if no changes were made in present tax laws:

[In billions of dollars]

	Deficiency in total savings	Deficiency in venture savings
1947	4.5	1.2
1948	5.1	2.1
1949	5.1	2.1
1950	6.6	13.0
1951	7.3	13.9
1952	1.6	8.4
1953	1.7	8.7
1954	1.6	9.1
1955	1.6	9.4
1956	1.7	9.8

To summarize this table in words, the tax problem, as it relates to savings and capital formation, is for the next 3 years primarily a question of making possible an adequate over-all volume of savings. After 3 years, or starting in 1950, the major problem will be one of making possible an adequate volume of venture savings.

One final point needs to be analyzed for the completion of this approach to the tax problem. This is to appraise the effects of various types of taxes on savings and capital formation.

It will be sufficient for the present purpose to consider three general types of taxes: (1) Individual income taxes; (2) excise taxes; (3) corporation income taxes. In each case the question we must answer is how much of such a tax comes out of money which otherwise would have been spent for consumption and how much comes out of what otherwise would have been saved? or, to state the question another way: If each of these taxes were reduced by, say, $1,000,000,000, how much of the billion will be spent for consumption and how much will be saved, and hence available for capital formation?

First, individual income taxes: Our conclusion here is based upon the two studies, which we previously mentioned, made by the Bureau of Labor Statistics of the spending and saving habits of American families of various income groups. These statistics are much less complete than one might wish, and a substantial amount of interpolation is necessary to convert them to the present purpose. Nonetheless, on the basis of these studies, it is our judgment that—

On incomes below $5,000 the personal income-tax dollar represents 80 cents that would otherwise be spent on consumption and 20 cents that would otherwise be saved;

On incomes from $5,000 to $10,000 the tax dollar represents 40 cents of consumption and 60 cents of savings; and

On incomes above $10,000 the tax dollar represents 20 cents of consumption and 80 cents of savings.

In drawing such conclusions it is not our contention that these percentages apply to every person within the indicated income bracket. These are merely general averages for the various groups which, on the basis of the Bureau of Labor Statistics studies, are reasonably accurate and hence provide a basis for appraising the effect upon capital formation of any proposed changes in the individual income tax.

Excise taxes are a different type of problem. Excise taxes are levied on each unit of the taxed item. Thus, in general, they have the effect of increasing the price of the article by the amount of the tax. In order to estimate the effects of excise taxes on spending and saving it is necessary to arrive at a conclusion as to the amount of the taxed articles bought by different income groups. We must then determine what this amounts to on the basis of the distribution of incomes within these groups as between spending and saving.

To make a thorough analysis of this kind would be an enormous statistical undertaking, and we have not attempted it. Rather, we have drawn a conclusion on the basis of various established generalities. This conclusion is that excise taxes as a whole come 75 percent from funds that otherwise would be spent and 25 percent from funds that otherwise would be saved.

Corporation income taxes offer still a third type of complexity. This is because of the question as to what degree, if any, such taxes are passed on to consumers in the form of higher prices.

Looked at from a purely theoretical point of view one would say that no part of such corporation taxes are passed on to consumers. The reasoning leading to this conclusion is that since the price of an article is fixed by the cost of production of the marginal producer, and since the marginal producer does not pay a corporation income tax for the simple reason that he has no income, then clearly the price is no higher than it would be if the more efficient producers did not have to pay a tax on their profits.

That is the theoretical view. It has the support of probably the majority of experts in this field. But it is proper to note that not all competent students of this problem accept this view. Some go to the opposite extreme and maintain that corporation income taxes are virtually all shifted to consumers. They say that if corporation income taxes were removed it would be only a matter of time until the aggregate price of the products of corporations would be reduced by the amount of the tax reduction.

Since this problem does not lend itself to statistical determination, we will not attempt to resolve this controversy. Rather, it seems to us that, for the present purpose, the wise course is to accept the argument that such taxes are, in the final analysis, a burden on corporation profits, rather than assume that they are a hidden tax which is paid by consumers. Such a conclusion necessitates the minimum of tax reduction to provide a given volume of capital formation. In other words, by assuming that corporation income taxes are in reality a burden on corporation profits, we need reduce such taxes only $1,000,000,000 to provide $1,000,000,000 of capital formation (granting the corporation retains the billion rather than paying it out in dividends). By comparison, were we to assume that 50 percent of such corporation income taxes are shifted to consumers, we would have to reduce these taxes by $2,000,000,000 in order to realize $1,000,000,000 of capital formation.

By relating these conclusions to what we have explained earlier as to the source of venture savings, we get the following conclusions:

	From spending	From saving	
		Nonventure	Venture
Tax on individual income of below $5,000	80	20	0
$5,000 to $10,000	40	60	0
$10,000 and above	20	0	80
Excise taxes	75	22	3
Corporation income taxes	0	0	100

To interpret this table in terms of savings and capital formation, if taxes were reduced by $1,000,000,000 it would have the following effect upon the volume of nonventure and venture savings:

[In billions of dollars]

	Increase from $1,000,000,000 tax reduction on saving	
	Nonventure	Venture
Tax on individual income of—		
Below $5,000	200,000	0
$5,000 to $10,000	600,000	0
$10,000 and above	0	800,000
Excise taxes	220,000	30,000
Corporation income taxes	0	1,000,000

There is one final point which we feel it is important to emphasize. This is that, although we have been quite specific in giving figures, we do not claim definitive accuracy for our estimates. In such an analysis as this, dealing exclusively with future developments, the best that anyone can do is to use the authoritative data which are available and, on the basis of this, make what appear to be the most reasonable estimates as to the future.

That has been the procedure we have followed throughout this study, and at every point we have attempted to explain fully the assumptions we have made and the reasons for making them. Because of this we are convinced that the conclusions we have drawn are as accurate as are possible today.

We are further convinced that only by such an approach as we have made in this study is it possible to have a sound basis upon which to make those changes in the tax structure which are imperative for the continued prosperity and growing welfare of the people of this Nation. In spite of the obvious risks involved in attempting to make such predictions as we have given, therefore, we urge that Congress carefully weight the conclusions we have presented, in order that we truly may have a better tomorrow for everybody.

NAM PROGRAM FOR SPECIFIC FEDERAL TAX REVISION

The National Association of Manufacturers has approached the problem of specific changes in the Federal tax law from the viewpoint that there are two major objectives to be served by such revision. One is the introduction of tax changes which will be of greatest significance for the smooth operation of the economy at high levels of employment, production, and income in the years to come as set forth in the prepared statement before you and as I have just explained by means of the key charts you have seen. The other is the maintenance of budgetary balance, to be established at as low a level as can be achieved through the practice of rigorous economy in the operation of the Federal services.

With respect to our first major objective, NAM recognizes that tax rates and tax burdens are too heavy throughout the Federal tax system. These rates represent the extreme exactions from the people that were necessary during the peak of the war effort. It would be invigorating if sweeping reductions could be made throughout the entire area of Federal taxation. The budgetary requirements are such, however, as to preclude widespread tax reduction at the present time.

Consistent with the second of these objectives—the maintenance of a budgetary balance—NAM recommends that there should be a diversified, flexible, Federal tax system. It is essential that the present extreme emphasis upon the net income taxes, individual and corporate, be modified in favor of a broader tax base, including a substantial contribution from excise or other taxes based upon consumption, for the reason that the sharp shrinkage of the yield from net income taxes under recession or depression conditions would tend to make renewed deficit financing necessary otherwise. NAM favors a regular and consistent policy of debt reduction, but there is little to be gained from a general fiscal policy so badly designed and so badly managed as to lead to the loss, during a depression, of all the ground gained in debt reduction during prosperous years.

In formulating recommendations for early consideration by your committee, it was necessary, therefore, to make a choice among the various major fields of Federal taxation. Our decision is that the individual income tax should be given first priority, for the following reasons.

First, the individual income tax affects more income recipients than any other Federal tax, and it affects them directly and inexorably, insofar as they have taxable income. They are permitted no choice, such as is available under the excise taxes, as to whether or not they will pay the tax.

Second, the individual income tax diminishes directly and, at present rates, severely, the income which the people can take home after their economic effort as workers, or managers, or investors. Hence it has a direct and serious effect upon economic motives and incentives which constitute the driving force in our economy. It is our judgment that there will be a greater release of productive energy by reducing the individual income tax than can be developed by the reduction of any other Federal tax.

As the representatives of American industry, we are convinced that the present corporation tax rate is too high, and that it should eventually be brought down. We hold a similar view with regard to many of the excise taxes. But we recognize that neither the corporation tax nor the excise taxes impinge as directly or as forcibly upon the economic attitudes of the citizens—their willingness to work, to save and invest, to take risks—as does the individual income tax. Therefore we are proposing first priority for this tax in the coming revision, because of a conviction that the general good will be most effectively promoted by such action.

Third, because of its serious effect upon the individual economic motives and incentives, a lightening of the individual income-tax burden will accomplish most for the smooth operation of the economy at high levels of employment, production, and income.

We emphasize, therefore, that the tax burden must be adequately reduced throughout the income range in order to achieve the best results both for capital formation and for private rather than public consumption. The tax load is too heavy upon the small income; it is also too heavy upon the large income.

The specific program which has been developed by the taxation committee and the tax administration committee of NAM has been designed, according to our best judgment, to recognize these facts. The major provisions of this program are the following:

1. The tax-rate scale (normal tax and surtax combined) should be revised throughout so as to establish, for the present, a maximum rate of 50 percent, and a minimum rate of 12 percent, the latter being the rate applicable to the first bracket ($0–$2,000) of taxable income. Also, for the present, the maximum rate of 50 percent should apply at the taxable-income level of $100,000 and above. Eventually, with a further reduction of the Federal budget to a reasonable postwar level, it will become necessary to reduce this scale of rates still more if we are to obtain out of individual incomes the amount of savings that will be required to assure adequate capital formation.

The logic of this recommendation is that the economic incentive to gain income through any form of economic effort is definitely impaired by the fact that more than half of any portion of income must be paid in taxes. To argue that taxation in excess of 50 percent does not involve such impairment leads to the conclusion that at some point the tax rate could be 100 percent without diminishing the effort that individuals would make to push their income beyond that point.

2. The present exemptions should be retained. The reason for this position is that any increase in the exemptions, even as moderate an increase as $100, exempts large numbers of persons entirely from income-tax liability, and excludes large amounts of income from the taxable-income base. Although we have criticized the present extreme reliance that is placed upon the income taxes, it is clear that they will continue to be a significant element in the Federal tax system. Under such conditions it is important that the base of the individual income tax remain broad. The amount of tax burden placed upon the lower and moderate incomes should be reduced, and this is provided for by our proposal that the first bracket rate be lowered to 12 percent. In our opinion, however, there should not be such extensive, complete exemption from tax as there would be if the personal exemptions were increased.

3. As a further relief provision, beneficial mainly to persons with small and moderate incomes, we recommend two aditional deductions from adjusted gross income. These are:

(a) An allowance for life-insurance premiums actually paid during the taxable year by the taxpayer on his own life, to a maximum of $500;

(b) An allowance for medical expenses actually paid during the taxable year for the taxpayer, his spouse, or a dependent, to a maximum of $1,250 for a single person and $2,500 for a married person, without regard to the relation of such expense to net income.

These deductions would benefit those who incur such expenses. They would constitute recognition of the voluntary effort which many make to provide for their own, or their family's future, and for their health. The proposed restrictions upon the amounts deductible would assure that the major benefit derived therefrom would inure to persons with small and moderate incomes. At a time when there is strong pressure to extend compulsory old-age insurance and compulsory health insurance, we deem it fitting and proper that this degree of recognition be given to those who are carrying their own load of insurance and health care.

Our estimates of the amount of tax reduction that would be provided under the foregoing plan are as follows, by comparison with the estimated tax liability at 1945 rates. These calculations have been made on an assumed national income of $166,000,000,000.

Distribution by net income classes of the tax reduction provided by a 12–50 percent rate scale below the estimated tax liability at 1945 rates

[In billions of dollars]

Net income classes	Tax liability at—		Tax savings at 12–50 rates
	1945 rates	12–50 rates	
0 to $5,000	9.44	5.97	3.47
$5,000 to $10,000	1.32	.86	.46
Over $10,000	6.25	3.91	2.34
Total	17.01	10.94	6.27

Tax liability at 1945 rates is estimated by the Treasury in hearings before the Senate Finance Committee on H. R. 1, page 30.

No data are available whereby a distribution might be made of the additional tax savings resulting from the proposed deductions for insurance premiums and medical expenses. We estimate the total of such savings at $645,000,000, the bulk of which would inure to persons with small and moderate incomes.

In formulating this portion of our recommendations, we have aimed at an objective treatment designed to promote the general good rather than the special good of any group or section. We do not seek to favor either the rich or the poor, as such. Our concern is to lessen the repressive effects of heavy taxation throughout the income range, and to make it possible for everyone, regardless of his income, to have the control over a larger portion of it for his own purposes, whatever they may be. We would emphasize, however, that no permanent advantage can be established for the persons with small incomes by concentrating all tax relief at the lower end of the income scale and allowing little or none at the upper end of this scale.

Insofar as severe taxation does affect incentives—and of this there can be no doubt—the effects extend far beyond the persons who must pay the taxes. Actually, the jobs and the incomes of thousands who get only small incomes are jeopardized. The great bulk of the workers cannot create their own job opportunities. These are dependent upon decisions made and actions taken by others. When the tax load becomes so heavy as to

interfere with the decisions and actions upon which jobs depend, the burden will fall upon thousands, even millions, of persons with small incomes. It would be a short-sighted policy, affording only a short-lived advantage, to neglect the effects of heavy taxation throughout the income range.

4. The NAM program recognizes certain other matters which are important from the standpoint of equity as among individual taxpayers. One of these matters is the double taxation of dividend income, another is the situation of married taxpayers in the community-property States and the noncommunity-property States. Both of these situations should be corrected. In the program which we now place before you, they have been given a secondary place, however, for the reason that neither is a comprehensive method of tax relief which is applicable to all taxpayers. This does not diminish such inequity as may be present in the existing practices. In our view it does, however, warrant placing them lower in the priority scale than the changes which we have just outlined.

Nothing can transcend in importance the obligation to provide adequate tax relief to all taxpayers. There is no way of doing this except by a thorough revision of the tax rate scale. Therefore, while we approve, in principle, of steps which would correct such inequities as may result from the present treatment of dividend income and from the operation of the community property rule in certain States, we conclude that these matters should be deferred until further reduction of the budget will permit the additional loss of revenue that would be involved.

We estimate that, at the proposed rate scale of 12 percent to 50 percent, the division of incomes would cost $500,000,000, and a credit for the tax on dividends at the first bracket rate would cost $764,000,000, or a total of $1,264,000,000. Since this relief would go principally to persons with the larger incomes, we are unable to justify the additional revenue loss for the present in view of the amount of tax saving that it is now possible to accord to those with small and moderate incomes.

5. The NAM tax program also deals with certain matters of corporation income taxation. The subject of most concern to business men, namely the rate of tax is not pressed for the present, but emphasis is laid on the obvious proposition that as the Federal budget is brought down, this rate should be reduced. We do recommend the elimination of tax on any part of intercorporate dividends, and the removal of the 2-percent-penalty tax on consolidated returns. Neither of these changes would affect the total revenues materially.

Our recommendation of greatest significance in the corporation area of Federal taxation is a change of policy with respect to the interpretation and application of section 102 of the Internal Revenue Code. We share the view that has been expressed by other groups to the effect that, except for the closely-held companies, family corporations, and the like, the decisions of management should be accorded greater recognition and weight as to the amount of earnings to be retained. We do not agree that in the case of the corporations with widely distributed stock ownership, there is any general disposition on the part of management to withhold earnings with a view to shielding stockholders from surtax. We recognize the need of retaining the authority which the Bureau now has to investigate suspicious cases, but we hold that there should be a definite burden on the Bureau to establish an improper motive.

We recommend that some plan be devised whereby the notch provision for the taxation of corporate incomes between $25,000 and $50,000 be smoothed out so as to remove the barrier of the 53 percent rate. The present arrangement is mathematically correct, but it is definitely not convincing to a business manager who must face the hurdle of the 53 percent rate as the income of his company rises from $25,000 toward $50,000.

We have also recommended that steps be taken to restore the stock options as a useful means of enlisting and retaining competent managerial personnel.

Finally, we have proposed that where a nonprofit corporation such as a foundation or a research laboratory goes beyond the purposes which originally justified exemption from Federal tax and engages in the actual operation or management of a business enterprise which results in a profit, the exemption would not apply to the income so obtained.

There are also, in the NAM program, certain recommendations affecting both corporate and individual income taxpayers. One of these is that greater recognition be given to the results of business accounting in the determination of business net income. The difficulties which many taxpayers have had over differences of procedure with respect to depreciation, obsolescence, promotional expenditures, salary and pension determination are thoroughly familiar to the members of your committee. We believe that much could be accomplished in establishing better relations between the Government and the taxpayers by greater acceptance of the results of some standard, generally accepted accounting practice in these matters.

A second matter of general concern to all taxpayers is the treatment of business net losses. We recommend a 6 year carry-forward of net losses in lieu of the present rule. Our reason is that carry-backs involve refunds, which may be embarrassing from a budgetary standpoint, and are very likely to be troublesome in other ways for both the Treasury and the taxpayer.

We recommend that the existing tax treatment of capital gains and losses be continued, but with a substantially lower rate on long-term capital gains. Such an adjustment would be logical if our recommendation for a first bracket rate of 12 percent be adopted, for the only basis by which to determine what would be a proper rate of tax on such gains is by reference to the tax rate scale applicable to income in general. If the present rate of 25 percent is reasonable when the first bracket rate has ranged from 20 percent to 23 percent, then at a 12 percent rate there is a case for reduction.

With respect to the excise taxes, our general position is that there should be a substantial degree of reliance upon such taxes in order to assure greater stability for the Federal revenues, particularly in those periods in which the net income taxes tend to disintegrate. The existing system of excise rates is a product of the strain of war financing, and there is general recognition of the disparities that were unavoidable during the emergency. We recommend that there should be some adjustment of excise rates in order to diminish these inequalities and discriminations, and further, that if a broadening of the excise system should become necessary in order to sustain the Federal revenues and protect the budget, care should be taken to assure reasonable equality of treatment among producers of competing products and among the consumers of different products. Minor classes of taxable objects, yielding only a negligible revenue, would be eliminated except where police control or regulation warrants retention of the tax.

Our principal recommendation with respect to the estate and gift taxes is that eventually the Federal Government retire from this field of taxation, leaving it to the States. This tax was developed by the States, and for some of them it is an important source of revenue. Federal relinquishment would be a step toward solution of the Federal-State problem of duplicate and overlapping taxation. In the meantime, the rates of tax should be eased and exemptions increased, in order to diminish the emphasis which the present rates unavoidably give to the nonfiscal, social purpose of equalizing wealth in this tax.

The NAM program concludes with a brief recommendation regarding the procedure to be followed in drafting and promulgating interpretative regulations. Again our concern is with the promotion of better feeling and better relations between the Government and the taxpayers. It is well known that in the past, regulations have been drafted and enforced which, in the opinion of many taxpayers, constitute an interpretation of the tax law not intended by the Congress. We believe that a review of such regulations, before promulgation, by the Joint Committee on Internal Revenue Taxation, would assure more faithful interpretation of the tax laws and make for better relations all around in the administration of our complicated tax system.

A Program for Federal Tax Revision

(Adopted on June 24, 1947, by the board of directors, National Association of Manufacturers, on joint recommendation of the association's committees on taxation and tax administration)

I. General principles of tax policy

1. Unified fiscal policy: Both Federal taxes and Federal expenditures should be directly related to the needs of a healthy national economy. Tax planning must occur within the budget framework. This requires close congressional control of a unified fiscal policy as provided in the Legislation Reorganization Act of 1946.

2. Scope and flexibility of tax system: The Federal tax system should be broad in scope and flexible in application. Breadth means the use of various taxes, without undue reliance upon any one tax, both to assure revenue stability under different economic conditions and to avoid the necessity of excessive rates of tax at any point. Flexibility means capacity and readiness to shift the revenue emphasis from one tax to another as economic conditions vary.

3. Economic guides: In reducing the tax burden, primary attention should be directed to those changes which will be of greatest significance for the smooth operation of the economy at high levels of employment, production, and income. This means tax changes that will:

(a) Enable adequate capital facilities to be provided out of current income whereby employment, production, and income can be sustained at high levels;

(b) Encourage the investment of savings in capital facilities rather than being held in idleness.

4. Priority in tax revision: Reduction of the burden of individual income taxes should be a matter of first priority in Federal tax revision.

II. Detailed recommendations on tax revision

1. The individual income tax: (a) The tax burden on individual incomes should be reduced by a thorough revision of the scale of tax rates in order to:

(1) Enable all taxpayers to save more out of their incomes and thus contribute more to the fund for capital formation;

(2) Permit all taxpayers to keep and spend a greater share of their respective incomes.

(b) Tax rate revision and reduction of tax burdens must depend upon firm congressional control of the public expenditures. Assuming a conservative national income estimate of $166,000,000,000 a net Federal budget (exclusive of transfers and refunds) of $30,000,000,000, and the revenue effects of other parts of this program, it would be possible to make the following changes in the individual income tax:

(1) Reduction of the maximum tax rate (normal tax and surtax combined) to 50

percent, applicable at the taxable income level of $100,000 and above;

(2) Revision of the entire tax rate scale downward from the 50 percent maximum rate to a rate of 12 percent on the first bracket ($0–$2,000) of taxable income, and allowance of the following additional deductions from adjusted gross income:

(A) A deduction for life insurance premiums paid by the taxpayer during the taxable year on his own life to a maximum of $500;

(B) A deduction for medical expenses actually paid by the taxpayer for himself, his spouse, or a dependent, during the taxable year, up to $1,250 for a single person and $2,500 for a married person, without regard to the relation of such expense to net income.

(c) With future progress in the further reduction and stabilization of the Federal budget at a level materially less than $30,000,000,000, consideration should be given to a reduction of the individual income-tax scale below the rates proposed in paragraph b. Such reduction will become increasingly important with time in order to make available in the future a larger volume of funds for venture capital formation out of individual incomes as the present sources of business capital formation, largely liquid assets, are exhausted.

(d) No consideration should be given at this time to an increase of personal exemptions as a means of providing tax relief to individuals. The individual income tax must be levied upon a broad base because at the present and prospective level of Government expenditures it must remain an important element in the Federal fiscal system. Increased exemptions would defeat this necessity, for even at the most moderate increases over the present allowances, large numbers of persons would be exempt from tax liability and large amounts of taxable income would be excluded from the Federal income-tax base. An increase of exemptions would concentrate virtually all of the tax reduction in the lower and moderate incomes, and thus compel the retention of such high tax rates upon the remaining taxable income as to largely prevent additional saving for capital formation.

(e) Further important revisions: The following equitable adjustments also should be made as soon as budget levels permit:

(1) Dividend income: A credit against tax on dividend income at the rate paid by the corporation, such credit being subject to the limitation that it shall not reduce the individual's tax below that which would be payable on his taxable income exclusive of dividends. In the event that this provision cannot be immediately fitted into the budget framework, consideration should be given to a step in that direction by initially allowing the credit at the first bracket rate of the individual income tax (normal tax and surtax combined).

(2) Division of income: Authorization for general use of a division of income between husband and wife for reporting income and computing individual income tax.

2. The corporation income tax—(a) Nonprofit corporations: In the case of corporations not organized for profit and no part of the net earnings of which inures to the benefit of any private shareholder or individual, the Federal income-tax exemption privilege should be eliminated with respect to that part of their net income which is derived from the actual operation or management of business enterprise.

(b) Rate revision: As the Federal budget is brought down to a stable postwar level, the corporation tax rate should be reduced.

(c) Rates on smaller corporate income: A differential between the taxation of corporate net incomes under and over $50,000 should be continued, but the present arrangement for the adjustment of rates on incomes under $50,000, whereby a rate of 53 percent is applicable to the net income between $25,000 and $50,000, should be changed to provide a smoother transition between the lowest rate and the standard corporation rate (now 21 percent and 38 percent respectively).

(d) Intercorporate dividends: The credit for dividends received from corporations subject to the Federal income tax should be increased from 85 percent to 100 percent.

(e) Consolidated returns: The additional tax of 2 percent on the net income reported in consolidated returns should be eliminated.

(f) Undistributed earnings (sec. 102): The policy with respect to retained earnings should be changed so as to accept the decisions of management regarding the proportion of earnings to be retained. In any event, the burden should be upon the Government to establish an improper motive as to the specific amounts retained.

(g) Stock options: The usefulness of stock options as a means of securing and retaining executive personnel having been nullified by court decision and Treasury rulings, explicit statutory provisions should be adopted to cover the following points:

(1) An employee realizes no income from the purchase of stock from his employer, provided the purchase is effected or the option is granted at prices not appreciably less than the fair market value of the stock, and in no event until the stock or option is sold.

(2) An employer is not entitled to deduction for compensation paid, on account of his employee's purchase of stock under a stock purchase or stock option plan.

(3) The tax basis of the stock purchased by an employee is its actual cost to him.

3. Reforms affecting all income taxpayers.—(a) Business net income: Greater recognition should be given to the results of business accounting in determination of business net income. Examples of the areas in which managerial policy should be accorded greater weight than at present are:

(1) Depreciation and obsolescence.
(2) Expenditures for intangibles.
(3) Salary determination.
(4) Pension determination.

(b) Business net losses: Business net losses should be carried forward over a 6-year period instead of a 2-year carry-back and a 2-year carry-forward.

(c) Capital gains and losses: The tax treatment of capital gains and losses, as now provided in section 117, Internal Revenue Code, should be continued, but the rates on long-term capital gains should be substantially reduced.

4. The excises.—(a) Rate adjustment: There should be some adjustment of excise rates in order to diminish the discrimination and inequities of tax among different classes of goods. Any broadening of the system should be carefully worked out so as to establish equity between producers of competing products and as between consumers of different classes of products.

(b) Minor excises: Classes of taxable objects which produce only small receipts should be eliminated.

5. Estate and gift taxes.—(a) The ultimate goal: Estate and gift taxes ultimately should be returned to the jurisdiction of the States in order to support State revenues and as a step in the solution of the Federal-State tax problem.

(b) Interim revisions: For the present, exemptions under Federal Law should be increased, rates of tax reduced, and taxation on transfers between spouses eliminated.

(c) Survivor annuities under pension plans: The following rules with respect to survivors' annuities under pension plans should be adopted:

(1) The value of pension benefits and any death benefits paid to a survivor-beneficiary through exercise of a joint and survivor annuity option should not be subject to estate tax.

(2) There should be no gift tax by reason of the employee exercising his right under a plan to choose a joint and survivor option.

III. THE ADMINISTRATION OF THE TAX LAWS

Positive steps should be taken to insure that the Treasury interpretative regulations accord with congressional purpose and intent. Such regulations should be submitted, before promulgation, to the Joint Committee on Internal Revenue Taxation for comment and criticism, in order to prevent regulations widely at variance with the spirit and purpose of the law, to give them greater weight in court, and to encourage readier acceptance of them by the taxpayers.

Cooperation on Flood Control

EXTENSION OF REMARKS
OF
HON. ALBERT L. REEVES, JR.
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Friday, July 11, 1947

Mr. REEVES. Mr. Speaker, the terrible devastation and destruction caused by the raging floodwaters of untamed rivers throughout the Nation—and especially the Missouri and Mississippi in the Midwest—demands the immediate attention of the Congress and a high order of cooperation between the executive and legislative branches of the Federal Government. Year after year we permit the waste of flood damage to continue without action to prevent it; year after year we bury the dead, take inventory of the losses in livestock, crops, property and industry, and give relief to those who have been made destitute by floodwaters.

This year's disastrous experience with floods makes it imperative that we immediately reexamine the entire problem of river development and control and proceed to appropriate funds sufficient to permit orderly and speedy progress toward completion of plans already authorized by the Congress.

I trust that every Member of the House will read an editorial appearing in the Kansas City Star on July 9, 1947, which is as follows:

PARTY FLOOD RESPONSIBILITY

The one clear flood control need right now is appropriations from this Congress. To get these appropriations President Truman's personal hand should be extremely important.

The President has demanded an over-all flood-control program. Since he called General Pick to Washington for a conference it shouldn't take long to put together into one program the existing but separate plans for the Missouri and Mississippi Basins.

The big thing is to get Congress to appropriate the money for the Missouri Basin program that is ready to go full speed ahead.

As the leader of the Democratic Party the President should be able to bring the MVA Senators and Congressmen to the support of adequate appropriations—now. Most of the MVA Members of Congress are Democrats and they make up one of the two main groups that are doing everything possible to obstruct flood-control appropriations.

Given the money the Army engineers can build the whole vast system of dams, flood walls, and levees within the next 7 years. Then we can laugh at the floods. On an appeal from the President the MVA advocates should be willing to support flood-control appropriations now and take a chance on

getting their form of MVA administration later. The Missouri and all its tributaries can be completely protected before anyone could reasonably hope to get an MVA bill through Congress and turn the first shovel of dirt under a new authority.

The active participation of the President should also aid the Republican Congressmen who want all-out flood control. From the Republican side the main opposition is among the Senators and Representatives who serve the private power interests. It also happens that many Congressmen who are remote from the Missouri Valley are little interested in our floods.

The Republican leadership is just as deeply involved with the party responsible as the President. It is in great regional problems of this kind that party responsibility counts.

If this part of the country is literally sold down the river it is going to find out which Members of Congress do the selling.

Most issues can be argued honestly from both sides. This one can't. The only public attempt to justify these wickedly low appropriations is the argument of economy. To see the absurdity of trying to economize with floods you need only read the report of damage made by the Midwest Research Institute.

Its survey of damage was taken over river valleys that in some places showed nothing but water for a width of 10 miles. Highways and railroads were under water so deep that the observers could see nothing but the crossbars of the telegraph poles. Rich croplands were doomed to inundation for so long that there is no hope of a late crop this year. Houses, barns, villages, and towns were under water.

Out of this survey the institute produced a conservative estimate of $127,000,000 damage in the Missouri Basin. Because it had access to existing detail maps of all these valleys it was able to measure the lost crops almost to the acre. It leaned over backward to be conservative, estimating the corn loss at 55 bushels an acre on land that, year in and year out, has averaged 75 bushels to the acre. It took no account of related losses that will be felt for the next 2 or 3 years.

Yet on this conservative basis the loss in 1 year stands at $127,000,000—enough money to have gone a long way toward permanent flood protection. Congress can stop these floods and there is no argument about it.

Purchase by RFC of Veterans' Mortgage Paper

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 2, 1947

Mr. BROOKS. Mr. Speaker, in extending the life of the Reconstruction Finance Corporation recently, the Congress failed to grant it the authority to continue the purchase of veterans' mortgage paper. As a result of this fact, the RFC no longer buys mortgage paper on veterans' homes from local banks and other financial institutions, and in turn the repercussions of this action is being felt throughout the country.

I have been informed by long-distance telephone from my own State that the financing of veterans' homes has almost reached a standstill. I am satisfied that a great blow has been dealt the program of veterans' housing as a result of this action.

To make matters even more inexplicable, this action by Congress was taken in the face of the recommendation of General Bradley, Administrator of the Veterans' Administration; urging the continuation of RFC authority to purchase veterans' mortgage paper. It was taken in the face of the recommendation of the American Legion and other great patriotic organizations which realize the vital importance of RFC in all veterans' housing programs and the need for this continuation. In fact, to show the vigor of the position of veterans' organizations, I desire to read at this point a letter written by the national housing committee chairman of the American Legion, the Honorable Richard C. Cadwallader, written to me on June 29, regarding this very matter.

BATON ROUGE, LA., *June 29, 1947.*
Representative OVERTON BROOKS,
House Office Building,
Washington, D. C.

DEAR OVERTON: Gen. Omar Bradley, Administrator of the Veterans' Administration, has urged that the powers of the RFC to purchase veterans' mortgage paper be continued; however, the House Committee on Banking and Currency has refused to continue this power, despite General Bradley's plea.

American Legion posts all over the country report that this will seriously endanger the chances of thousands of veterans to get a decent place to live, since no other market for the purchase of such paper seems to exist.

We will appreciate your support and advocacy of immediate extension of the RFC's power to purchase such mortgages, at least until some other Government agency can be vested with such power.

Very truly yours,
RICHARD C. CADWALLADER,
Chairman, National Housing Committee, The American Legion.

Mr. Speaker, when the bill extending the life of the RFC was before the House, I voted for a motion which would have continued the authority to purchase veterans' mortgage paper. Unfortunately, this motion was defeated by a rather heavy vote and, in doing so, the Congress dealt the veterans' housing program a very heavy blow. I hope before this Congress is adjourned action may be taken looking toward rectifying this situation and granting the power which General Bradley says is needed badly now.

Appeal for the Displaced

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 10, 1947

Mr. SABATH. Mr. Speaker, during the course of the hearings on the Stratton bill, H. R. 2910, I made a statement to the committee which I am inserting in the CONGRESSIONAL RECORD, under leave granted me, together with an editorial from the Chicago Sun of recent date on the same subject.

My own statement was made, of course, before the President made his persuasive and well-timed appeal for favorable consideration of the bill; while the editorial followed the President's message.

I am indeed pleased that President Truman has again urged favorable action, and I hope that the Congress will heed his humanitarian message and complete favorable action on the bill before adjournment.

The statement follows:

STATEMENT OF THE HONORABLE A. J. SABATH, REPRESENTATIVE IN CONGRESS FROM ILLINOIS, BEFORE THE SUBCOMMITTEE ON IMMIGRATION AND NATURALIZATION OF THE HOUSE COMMITTEE ON THE JUDICIARY

Mr. Chairman, as you are aware, I am, myself, the author of H. R. 464, a bill to provide for the admission of certain displaced persons to the United States for permanent residence, which I introduced on January 6, 1947.

My bill provides that a number of displaced persons equal to the total number of unused immigration quotas for all nationalities for the fiscal years ending June 30, 1947 and June 30, 1948, shall be admitted to the United States for permanent residence at any time prior to December 31, 1948.

The effect of this bill would be, of course, to open quotas for two current years to the tragic victims of Nazi aggression and horror in Europe and speed the task of mankind to help these frightened, starving people to build new lives.

Since my main interest is, however, in supporting any practicable and acceptable means of aiding the victims of Hitler, without regard to race, religion, or nationality, I wish to express my full support of the Stratton bill, H. R. 2910, and to urge its favorable report.

At the same time, recognizing that much of the opposition to the Stratton bill is based upon the fact that under its provision the quota is more or less set aside for the benefit of 400,000 displaced persons, I should like to point out that my bill might well prove an acceptable substitute, since it would provide only for the use of unused quotas for the 2 years in the immediate future

Let me recall that for 24 years of my 41 years in Congress I was a member of the Committee on Immigration and Naturalization of this House. Most of the present immigration laws were adopted during my service on that committee.

My attitude has been consistent. I have recognized the necessity in the modern complex world of providing some restrictions on the free flow of human migration. I have believed that criminals, the insane, public charges, and other categories of definitely undesirable immigrants should be screened out.

But I have also insisted and urged and pleaded that restrictions apply equally to all people without any discrimination based upon national or racial derivation, and that the restrictions be the minimum required for national security and international comity.

Because the entire world was the intended victim of the madman Hitler, and because the helpless, defenseless people of Germany and the European areas conquered by the Hitler armies and the Hitler ideologies were sacrificed to the benefit of the rest of the world, it is now a world responsibility to do everything within human capacity to help restore these tragic victims to useful and productive lives.

The record of these hearings has been filled with statistics, so I shall not burden you with further recapitulations of facts already known to you.

I address myself rather to the humanitarian aspects of the problem.

Traditionally, the Western Hemisphere has been the refuge of all people fleeing from religious persecution, political repression, or economic desperation. Every nation in the world, every religious cult, every racial stock, has contributed to the greatness of the United States and its sister nations in North and South America.

Immigrants have developed and made great this land. It has been the common task and the common glory of mankind. We are not crowded in this country. There are still frontiers—frontiers of land, frontiers of the mind. We can absorb easily those human beings who dream of coming to this free land from the oppression and misery they have known in Europe.

These helpless people, deprived of every opportunity of rebuilding their lives, originated in practically every one of the war-torn nations of Europe. In religious faith they are predominantly Roman Catholic; some are Greek Orthodox; some are Russian Orthodox; some are Mohammedan; between one-fifth and one-sixth are Jews. Slavic and Teutonic people predominate overwhelmingly.

Many of the refugees are women and children. I should like to remind you of the Christian invitation, "Suffer little children to come unto me, for of such is the kingdom of heaven."

The women and children and elderly men will, of course, go to the homes of relatives, or friends, or to the residence halls of welfare agencies which have sponsored and guaranteed their maintenance. They cannot conceivably affect the housing shortage, nor can they "threaten the employment" of American workingmen. Let me remind the committee that the stupendous total of 58,000,000 persons are gainfully employed in the United States today, and that there is no indication of a slowing up of demand for many years to come. We actually need the labor and industrial experience of the relatively few able-bodied men who would be able to come over here. The children will be received with open arms and fully supported by blood or foster relatives.

Mr. Chairman, there is a pathetic malady to which human flesh is heir. It is commonly called xenophobia. It means an irrational fear of what is strange or unknown. I suppose there is no real cure for xenophobia; but it is possible to expose to the reasonable and informed members of this committee some of the curious misconceptions of the xenophobes.

There have appeared before you in the course of these hearings some gentlemen who have been long known to me and perhaps to you. Their morbid dread of the new and the unknown is so obvious it scarcely needs my pointing up. However, I must point out to you that this dread has given rise to the most amazing misstatements or distortions of facts. This is nothing new. As far back as 1790, when the population of the United States was only three to four million souls, there was strong agitation to bar all further immigration lest those here first should be crowded out and foreign ideas brought in.

I can recollect reading, many years ago, the report of the Commission on Restriction of Immigration appointed in 1790, and reconstituted in 1810, and can, I think, recall the exact words with which the report began: "We look with apprehension on the great influx of undesirables who are filling our poorhouses and our penal institutions, overcrowding our cities, and overflowing our maritime borders."

We realize now that the findings of that commission and its fears were unjustified. The country was never harmed by immigration. On the other hand, it is conceded by every authority that immigration developed our resources, enriched our history, added vastly to our wealth, and contributed to our culture.' In every war, and especially the two World Wars, immigrants and the sons of immigrants proved their loyalty and devotion to the last full measure.

You have had before you John B. Trevor, a perennial witness before congressional committees, who has been chewing this soiled rag of xenophobia and anti-Semitism and anti-Catholicism for some 40 years. You have heard the badly-mixed-up Merwyn K. Hart, who fears all things foreign except the Spanish despot, Franco, and Mussolini's corporate state. You have heard a few others of the same ilk who deal in reckless and unfounded misstatements and exaggerations to which no credence should be given by the thoughtful and unprejudiced members of your committee.

You have, from the other side, heard in support of the bill such distinguished Americans as Gen. John H. Hilldring; Justice Owen Roberts of the United States Supreme Court; William Green, the president of the American Federation of Labor; the Reverend Samuel McCrea Cavert of the Federal Council of Churches of Christ in America, speaking for the united voice of most Protestant Churches; Bishop William T. Mulloy for the Roman Catholic Church in America; my friend, Charles Rozmarek of the Polish Congress; and the Honorable Ugo Carusi, Commissioner of Immigration and spokesman for the national administration. Ten Members of Congress, including myself, have formally urged favorable consideration.

Against the statements of this great weight of authority and enlightenment, I do not believe the committee can or will give serious consideration to the narrow selfishness of the opponents.

There are no new arguments to be advanced on this subject. The question must be and will be decided on the basis of selfishness and self-defeat, or it will be decided in the beneficent light of progress and selflessness which, in the brief span of 170 years, has made this Nation the greatest power on earth.

I hope sincerely that this committee will be swayed by noble humanitarianism, supported by the facts of history.

The Stratton bill has been endorsed and recommended and urged by scores of outstanding American leaders and organizations; it is opposed only by the misguided and professional opponents of immigration, still reciting the same misstatements of a century ago. I am confident, and I hope that the committee will favorably report this bill, or an acceptable substitute which will be directed toward the same end.

I include as part of my remarks the following splendid editorial from the Chicago Sun, which speaks for itself:

APPEAL FOR THE DISPLACED

President Truman in a special message on Monday asked Congress to authorize the admission of a substantial number of Europe's displaced persons into this country. These are the 850,000 people now huddled in concentration camps in Germany, Austria, and Italy.

They are homeless without prospect of homes; they are the helpless without prospect of help. They are people, as the President said, who "because of their burning faith in the principles of freedom and democracy have suffered untold privation and hardship." They are people who for 6 years were subjected to the inhumanity of the Nazis and who never will be able to return home for fear of persecution in areas now dominated by the Communists. Their present plight suggests that they would be firmly opposed to dictatorships both of the right and of the left. Of their number 80 percent are Christians and 20 percent are Jews. More than 50 percent are women and children of whom 170,000 are below the age of 17. There are many workers in this group to fill our manpower shortages on the farm and in the factory.

At present the International Refugee Organization is assuming responsibility for these victims of the war in Europe. Our share of IRO's first-year budget of $160,000,000 has been fixed at $75,000,000. This is a stiff price to pay for the temporary expedient of maintaining refugees in internment camps. We cannot continue indefinitely on such a futile basis. It would be far cheaper for the American taxpayer if the problem were solved once and for all by resettlement of the displaced persons in new homes. This is the only possible enduring solution.

A bill now pending before Congress, introduced by WILLIAM G. STRATTON, Congressman at Large from Illinois, would accomplish this much-needed assimilation. The bill provides that refugees should be admitted at the rate of 100,000 a year for the next 4 years. The bill does not propose any fundamental change in our immigration policy. It merely proposes to make use of existing quotas which were not used during the war years.

There are now 1,000,000 unused visas which accumulated during that period. The Stratton bill asks that only 400,000 immigrants—less than one-half of this million—be permitted to enter. In most cases they would be coming to the homes of friends and relatives.

Perhaps Americans really don't care at all about the tired, the poor, and the huddled masses that the Statue of Liberty beckons. But let us remember that this country was founded and built by immigrants. Let us also remember that we are all immigrants or descendants of immigrants. And let us finally remember that only recently an immigrant by the name of Lise Meitner, who fled from Adolf Hitler, brought to these shores a vital secret of atomic fission which is capable of making refugees of all of us.

A Congress which remembers these things will act on the President's appeal before the present session ends.

Lincoln as He Was

EXTENSION OF REMARKS
OF
HON. WILLIAM LEMKE
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 11, 1947

Mr. LEMKE. Mr. Speaker, on February 12, of this year, the Chicago Daily Tribune reprinted its editorial dated May 23, 1860, 5 days after Lincoln's nomination. This editorial gives a true description of the living Abraham Lincoln, destined to become immortal—the greatest of all American statesmen. I am sure no one can read this editorial without increased respect for the living, human Lincoln.

Since 1860 a great deal of water has gone under the bridge. Our Nation, since then, has become the greatest and most powerful of all nations. Since then, we underwrote, entered and won two European wars. Our entry made them world wars. Whether for better or for worse no one knows.

Let us hope, in spite of doubts, that the vision of World War III on the distant horizon can yet be avoided. Let us hope, in spite of doubts, that there will arise among our own leaders, a true statesman of the integrity, the courage, and the vision of Abraham Lincoln. A

statesman who will get us out of the foreign entanglements that now threaten to engulf us.

It is with sincere appreciation and pleasure that I here include among my remarks the reprint of the Chicago Daily Tribune's editorial:

LINCOLN AS HE IS

(The editorial which follows is taken from the Tribune of May 23, 1860, 5 days after Lincoln's nomination. Joseph Medill, the editor, and his associates had striven for this result with unflagging energy for many months. The Tribune's profile of the candidate was widely reprinted at the time, for it was recognized as the work of a man who knew Lincoln as only an intimate and devoted friend could know him.)

Ten thousand inquiries will be made as to the looks, the habits, tastes, and other characteristics of Honest Old Abe. We anticipate a few of them.

Mr. Lincoln stands 6 feet and 4 inches high in his stockings. His frame is not muscular, but gaunt and wiry; his arms are long, but not unreasonably so for a person of his height; his lower limbs are not disproportionate to his body. In walking, his gait though firm is never brisk. He steps slowly and deliberately, almost always with his head inclined forward and his hands clasped behind his back. In matters of dress he is by no means precise. Always clean, he is never fashionable; he is careless but not slovenly.

In manner he is remarkably cordial and, at the same time, simple. His politeness is always sincere but never elaborate and oppressive. A warm shake of the hand and a warmer smile of recognition are his methods of greeting his friends. At rest his features, though those of a man of mark, are not such as belong to a handsome man; but when his fine dark gray eyes are lighted up by any emotion, and his features begin their play, he would be chosen from among a crowd as one who had in him not only the kindly sentiments which women love, but the heavier metal of which full grown men and Presidents are made.

His hair is black, and though thin is wiry. His head sits well on his shoulders, but beyond that it defies description. It nearer resembles that of Clay than that of Webster; but is unlike either. It is very large and phrenologically, well proportioned, betokening power in all its developments. A slightly Roman nose, a wide-cut mouth, and a dark complexion, with the appearance of having been weatherbeaten, complete the description.

In his personal habits Mr. Lincoln is as simple as a child. He loves a good dinner and eats with the appetite which goes with a great brain; but his food is plain and nutritious. He never drinks intoxicating liquors of any sort, not even a glass of wine. He is not addicted to tobacco in any of its shapes. He never was accused of a licentious act in all his life. He never uses profane language. A friend says that once, when in a towering rage in consequence of the efforts of certain parties to perpetrate a fraud on the State, he was heard to say, "They shan't do it, d——n 'em!" but beyond an expression of that kind, his bitterest feelings never carry him. He never gambles; we doubt if he ever indulges in any game of chance.

He is particulary cautious about incurring pecuniary obligations for any purpose whatever, and in debt he is never content until the score is discharged. We presume he owes no man a dollar. He never speculates. The rage for the sudden acquisition of wealth never took hold of him. His gains from his profession have been moderate, but sufficient for his purposes. While others have dreamed of gold, he has been in pursuit of knowledge.

In all his dealings he has the reputation of being generous but exact and, above all, religiously honest. He would be a bold man who would say that Abraham Lincoln ever wronged any one out of a cent or ever spent a dollar that he had not honestly earned. His struggles in early life have made him careful of money; but his generosity with his own is proverbial. He is a regular attendant upon religious worship, and tho not a communicant, is a pewholder and liberal supporter of the Presbyterian church in Springfield to which Mrs. Lincoln belongs.

He is a scrupulous teller of the truth—too exact in his notions to suit the atmosphere of Washington as it now is. His enemies may say that he tells black Republican lies; but no man ever charged that, in a professional capacity or as a citizen dealing with his neighbors, he would depart from the scriptural command. At home he lives like a gentleman of modest means and simple tastes. A good-sized house of wood, simply but tastefully furnished, surrounded by trees and flowers, is his own, and there he lives, at peace with himself, the idol of his family, and for his honesty, ability, and patriotism, the admiration of his countrymen.

If Mr. Lincoln is elected President he will carry but little that is ornamental to the White House. The country must accept his sincerity, his ability, and his honesty in the mold in which they are cast. He will not be able to make as polite a bow as Frank Pierce, but he will not commence anew the agitation of the slavery question by recommending to Congress any Kansas-Nebraska bills. He may not preside at the Presidential dinners with the ease and grace which distinguish the venerable public functionary, Mr. Buchanan; but he will not create the necessity for a Covode committee and the disgraceful revelations of Cornelius Wendell. He will take to the Presidential chair just the qualities which the country now demands to save it from impending destruction—ability that no man can question, firmness that nothing can overbear, honesty that never has been impeached, and patriotism that never despairs.

Coequal Status of Services Under Single Department

EXTENSION OF REMARKS
OF
HON. CHARLES K. FLETCHER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 11, 1947

Mr. FLETCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

RESERVE OFFICERS ASSOCIATION IN ANNUAL CONVENTION, JUNE 18–21, 1947, MIAMI, FLA., URGE UNIFICATION AT THIS SESSION OF CONGRESS

COEQUAL STATUS OF SERVICES UNDER SINGLE DEPARTMENT

Whereas the President of the United States has heretofore recommended to Congress integration of the Armed Forces of the United States to include Army, Navy, and Air Forces under a single department of national defense; and

Whereas the various departments have not been able to agree on a plan implementing such recommendation; and

Whereas it is the unanimous recommendation of the Reserve Officers' Association of the United States that such a single department will effect unity of command, simplify personnel requirements, facilitate combined operations, economize supply procurement, and realize the maximum employment of all potentials to insure national security: Now, therefore, be it

Resolved, That the Reserve Officers' Association of the United States in convention assembled at Miami, Fla., June 18–21, 1947, urge the Eightieth General Congress to enact legislation carrying out the recommendation of the President of the United States for the unification of the Armed Forces of the United States with coequal status of our Army, Navy, and Air Corps under a single department of national defense.

New Coal Contract

EXTENSION OF REMARKS
OF
HON. JOHN McDOWELL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 11, 1947

Mr. McDOWELL. Mr. Speaker, I place in the RECORD today the remarks made on Station WOL yesterday morning by my old friend, George E. Reedy. George Reedy is probably known to more Members of Congress than any other man in the newspaper world. As a newspaper man myself, it is flattering to the profession to hear the remarks made regarding his pin-point accuracies in presenting the news to his great radio audience. His discussion yesterday, although heard by a great number of Congressmen and Senators, should have been heard by all of them; therefore, I have secured a copy from Mr. Reedy and present it herewith:

The always amazing John L. Lewis has presented the southern coal operators with one of the most fantastic choices in American history. Either they must break a law—clearly spelled out by Congress—or they must close down their mines.

He is allowing no ifs, ands, or buts. Halfway measures are not enough for the shaggy-browed boss of the United Mine Workers. Either they capitulate or they go under. And he is indicating that he does not particularly care which course they follow.

The law that he is asking them to violate is the recently enacted Taft-Hartley labor bill. That measure specifically says that State laws banning closed or union shops will take precedence over any Federal statute.

Lewis insists that all the operators sign a contract which includes a closed-shop agreement. The law worries him not in the slightest. To quote one of his lieutenants: "The quicker we get that law into the courts and get it tossed out—the better."

Most of the operators, of course, do not have to worry about this situation. It is in only a few States where anti-closed-shop laws prevail that it is a problem. But there, it is keeping the operators up late at nights trying to figure out an answer.

If they sign—they are in clear violation of a law that has all the sanctity of a two-thirds vote of Congress. If they don't sign—they run the risk of a headlong clash with one of the most strong-willed men of modern times.

Apparently, no compromise is possible. The operators will be compelled to sign the contract and take it into the courts. How they will fare is something that no one can predict. It is not a pleasant prospect under any circumstances.

If this were the only question involved, some solution might be found. Apparently, however, Lewis has already found ways of making the operators break the Taft-Hartley bill. One of the most interesting has already been pointed out by HARTLEY himself.

The New Jersey Republican says that the contract between the United Mine Workers and the coal operators violates one provision of the law without any question. It is the section relating to the check-off of miners' wages for union dues.

The Taft-Hartley Act, he says, permits a check-off for dues and dues only. Yet, the coal contract permits it for assessments and initiation fees. Signing such a contract lays the mine operators open to both fine and imprisonment, he says.

It is a strange situation where men can be forced to sign legal contracts that clearly break the law. It is one which could well make the founding fathers of our Republic rub their eyes in amazement and ask themselves how well they had wrought.

Should we stop at that point, we would actually have said very little. It would be merely a question or belaboring the obvious—of beating a dead horse with a stick. We must go further to find a solution of an extremely serious problem.

It is apparent that the Taft-Hartley Act goes either too far or not far enough. No kinder interpretation can be made. Either it is a law that violates too many basic human concepts to be enforced or it is a law without enough teeth to put in a bite.

HARTLEY himself thinks it does not have enough teeth. He believes that an adequate labor law should completely ban industry-wide bargaining. On the other hand, the unions are banking on the belief that it is too much and cannot be enforced.

At the moment, it does not matter which side is right. The important thing is that the public will receive a stiff jolt in increased steel and coal prices that will be felt all along the line. Obviously, our national labor-management problems have not been solved.

That must be left to the next session of Congress. It will be faced with the problem of determining whether we took a step in the right direction or a step in the wrong direction. In either case, the task of following through is one that nobody can envy.

Nomination of Robert Franklin Jones—Editorial Comment

EXTENSION OF REMARKS
OF
HON. JOHN W. BRICKER
OF OHIO
IN THE SENATE OF THE UNITED STATES
Friday, July 11 (legislative day of Thursday, July 10), 1947

Mr. BRICKER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial in this morning's Times-Herald, and also an editorial from the weekly newspaper called Labor, in connection with the nomination of Representative ROBERT FRANKLIN JONES to be a Member of the Federal Communications Commission.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

LIARS AND THEIR SPONSORS

Establishment by a Senate committee that Drew Pearson, a columnist and radio commentator, is a lying scoundrel will hardly come as a surprise. Pearson has been caught in falsehoods before and his victims have proved him a liar. His current conspiracy to blacken the name of Representative JONES of Ohio, whose nomination to the Federal Communications Commission yesterday was unanimously approved by the Senate Commerce Committee, was a particularly vicious one.

Pearson had obvious selfish motives for opposing the nomination, inasmuch as he is a member of a group trying to get control of a valuable radio license in Baltimore which the FCC had the power to give him. He confessed before the Senate committee that he thought JONES would act unfavorably on his application.

Through his column and on the radio he launched a campaign of libel against JONES, asserting that the Ohio Representative had been a member of the Black Legion, a sort of revival of the Ku Klux Klan which flourished in Michigan and Ohio some years ago. As a matter of fact, JONES had fought the Black Legion and as a county prosecutor waged a long and successful fight to extradite one of its leaders on a charge of murder.

When Pearson was required to produce proof of his allegations, he brought three witnesses before the Senate committee. One was a former inmate of an insane asylum, who had been committed there for homicidal tendencies. The second was so senile that he could not remember how he got to Washington the day before he appeared as a witness. He had served a jail term as a perjurer. The third, a CIO official and political opponent of Jones, was a confessed forger.

No court would give the slightest weight to the testimony of any one of the three. No reputable newspaper reporter would think of basing a news story on their authority. Pearson not only hunted them up in Ohio and had them brought to Washington, but also put one of them on his radio program. This witness, the former insane-asylum inmate, couldn't remember what he said on the radio except that he had read a statement given him by Pearson.

Pearson has long been notorious as a member of the smear brigade in Washington. This time he found himself caught, tried to lie out of it, and instead got himself inextricably tangled in his own falsehoods. Jones has announced that he will take action against Pearson. The Senate may also wish to have him prosecuted for perjury and the presentation of perjuring witnesses.

Pearson, however, has involved others than himself and his immediate agents. He has involved all those who have lent newspaper or radio facilities to the dissemination of his lies. These persons can hardly plead that they were caught unawares in this case. The Blue Network and the hat manufacturer who sponsored his program knew that he was a liar when they put him on the air. They apparently were willing to accept that risk in order to profit by his lies.

The same goes for the newspapers that print his column. They cannot escape responsibility for his falsehoods. As their lawyers will advise them, they have a legal responsibility, but they likewise have a moral responsibility.

A newspaper that prints Pearson's lies is just as conscienceless as Pearson.

[From Labor of July 12, 1947]

SOLON DENOUNCES PEARSON CHARGES AS LIES

Congress originates a good many queer stories, but one of the strangest broke out this week. It started when Drew Pearson, Washington columnist and radio broadcaster, and his former partner, Colonel "Bob" Allen, who lost an arm in the war, decided they should have a broadcasting station of their own.

They believed a former member of the commission, Ray C. Wakefield, of California, was favorable to them and, naturally, were pleased when President Truman nominated him for another term.

Wakefield was originally named as a Republican, but it seems he was not satisfactory to GOP leaders and the President was induced to withdraw his name and substitute Congressman ROBERT F. JONES, of Ohio, Republican.

Pearson promptly turned his guns on JONES, in radio broadcasts, in his column, and eventually before the Senate Interstate Commerce Commission, which is considering the appointment.

DECLARES PEARSON IS A LIAR

Pearson charged that JONES' father was a member of the Ku Klux Klan and that JONES himself was a member of the Black Legion, an anti-Semitic, anti-Catholic group, which has been outlawed in Michigan and other States.

Letters from CIO officials, with whom Pearson appears to be on friendly terms, were presented to the committee in support of these charges.

JONES says Pearson is a liar; that he never had anything to do with the organizations named, and that Pearson is prompted by a desire to get his hands on broadcasting rights probably worth $1,000,000.

The committee is also skeptical of Pearson's testimony. Its chairman, Senator HOMER E. CAPEHART, of Indiana, Republican, insists that affidavits of Ohioans submitted by Pearson are phony.

It developed that the three who signed the affidavits were an admitted forger, a former inmate of a hospital for the insane, and a convicted perjurer.

Facing the Export Crisis

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, July 11, 1947

Mrs. BOLTON. Mr. Speaker, in accordance with the permission granted me at the request of our majority leader, I am including as a part of my remarks the following article from the Washington Post of July 10 entitled "Facing the Export Crisis":

FACING THE EXPORT CRISIS

(By Malvina Lindsay)

TRADE STRIKES HOME

Current whipping boy in American griping is this country's export trade. If a housewife has to pay too much for meat, if her husband can't find a certain kind of screwdriver at a store, it's all because "we're sending all our stuff to foreigners."

How are millions of such families to be set right on this widespread misconception? How are they to understand clearly the great issue this country soon must face in relation to export-import trade balance?

The very words "exports," "imports," "tariffs" cause many Americans to run to the nearest movie or soap opera. Unlike Europeans, they have not been brought up to think of world trade in connection with their bread and butter. But now, within 6 months or a year, they may find their jobs and dollars getting scarcer—not because "stuff is being sent to foreigners" but because it is not.

It may soon be even less easy to blame Europe for what we pay the butcher. For the paltry 2.3 percent of our meat supplies being purchased abroad will be cut much further by foreign countries, especially England, as their dollars dwindle.

Britain has just halted a scheduled purchase of 10,000,000 pounds of beef. Curtailed foreign purchasing leads to dwindling dollars also in the United States, the world's emporium.

The trade facts of life are pushing in on the average American family. Here are some of the stark economic realities it must consider in its future budgeting:

That the United States this year is selling abroad about twice as much as it is buying—$16,000,000,000 worth of exports, as food, machinery, coal, cotton, tools, against $8,000,000,000 (or probably less) worth of imports, as wool, clothing, food products, watches, wines.

That Europe is running out of dollars with which to buy from us the goods she needs, and we want to sell, because she has lagged in her expected recovery from war's devastation (partly because of droughts and extreme cold), and because our inflated prices are exhausting more quickly than was counted on the American dollars available to her.

That Britain will have used up its loan by some time next winter; that France, Italy, and the Netherlands will reach the bottom of their pocketbooks by January 1; that even South American countries are feeling the pinch of dollar exchange.

That this will mean sharply cut buying from abroad and a drop in our exports—followed by a drop in production and employment as ships become idle, seamen are laid off, farmers curtail crops, factories lay off men, purchasing power diminishes, other businesses draw in their horns.

That we are now sending about 10 percent of our production abroad, and that economists say a drop of even 2 to 3 percent in this would markedly affect our production, employment, prosperity. That in the boom 1920's our exports were 10 to 12 percent of total products, in the depression thirties about 6 percent.

That the poorer the rest of the world gets, the less chance we have of getting future customers for our goods; that if we expect to keep our factories, mines, and farms operating at full production we shall have to develop markets abroad—otherwise goods will pile up, we'll have a crash and Russia will say, "I told you so—a boom-and-bust nation."

That there are two ways we can bridge the gap between our exports and imports. One is by increasing our imports, by lowering tariffs and buying more foreign goods we need and don't produce successfully here. The other is by getting our sick customers back on their feet by economic aid so they can produce more, sell more, and thus earn the dollars to pay for the increasing amounts of goods we will want to export.

That good business sense, not altruism, demands that we build up a dollar exchange abroad so we may hold up our own living standards and also prevent a European drift to chaos, totalitarianism, and probably the next war.

The Free State Versus the Police State

EXTENSION OF REMARKS

OF

HON. H. ALEXANDER SMITH

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Friday, July 11 (legislative day of Thursday, July 10), 1947

Mr. SMITH. Mr. President, in light of the present confused and threatening world situation, it is distinctly helpful for us all to have expressions from public men of prominence helping us to define what we mean when we speak of the present war of ideas.

In a recent commencement address at Northwestern University, delivered by the Honorable John Foster Dulles, at Evanston, Ill., on June 18, 1947, Mr. Dulles points out clearly that the big issue in the world today is the moral issue of the free state as against the police state. He says that this moral issue must be clarified. He states:

That issue is not the issue of economic communism against capitalism or state socialism against free enterprise. It is not an issue of relative national power. Those are not moral issues. The moral issue is the issue of the free state as against the police state.

Mr. President, in view of what I believe to be the importance of this address, I ask unanimous consent that it be published in the RECORD in full.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Today's problems are not insoluble; they are only hard to solve. I shall speak of the international problem. The crux of that is the effort of Soviet leaders to impose widely their system of government. There is no reason to believe that that effort will stop of its own accord. If it stops, it will be only because something stops it. That something will be either violent resistance or a moral resistance so solid that to oppose it would evidently be futile. Clearly, Americans must see to it that there is a peaceful stoppage. However, the United States is in an awkward position to organize that, because, at the moment, our motives are suspect. That suspicion is found even among such historic and understanding friends as the British and French.

Soviet propaganda, endorsed by a few Americans, persistently says that we have become an aggressive nation; that we are taking advantage of the weakness of others to impose on them our own particular way of life. That propaganda is plausible because most Americans are truly proud of their country and do not hide that feeling. Our Nation has shown for 160 years, and is still showing, that a society of freedom bears good fruit—spiritual, intellectual, and material. It is America's unique productivity which today fends off death from millions throughout the world.

Because our society is so powerful and because most of us believe in it so completely, it is easy for hostile propaganda to spread fear that we will use our power to coerce others. That weakens our influence. Most of the peoples of the world feel too weak and impoverished to adopt our example, much as they may admire it. I have seen in Moscow, Berlin, Paris, and London the long lines of patient, weary people standing in queues to get the food and clothing which barely suffice to keep life going. That has been going on for about 8 years throughout much of the world. The cumulative result is a great mass of humanity which is sick, nigh unto death. To them, our country seems like a stadium where healthy people play rugged, competitive games. That may be the best way to develop physique and discipline and sharpen the faculties. But the finest athletic contests will not tempt sick people into the arena. They want to be taken care of, and in their present weakened condition they would rather have some measure of state socialism than our system of free enterprise.

Since that is so, a first phase of our quest for peace must be to restore our moral influence. The United States must make it clear, clear beyond a doubt, that it has no thought of using economic or military might to impose on others its particular way of life. Unless we do make that clear, we shall not be able to assume moral leadership in the world. Rather, we shall be shunned and dangerously isolated.

Fortunately, there should be no difficulty in making our position clear. Our society is a society of difference and of experimentation. It encourages individuals to think and believe as their minds, conscience, and circumstances dictate. Many Americans have deep-seated convictions, religious and social. But none of us, whether as private groups or as Government, wants to impose those beliefs by force, intimidation, or other methods of intolerance. It would be a flagrant violation of our most cherished traditions were the United States to try to compel other nations to conform to our way. We can, and I hope we shall, continue to set the example of a good way of life. We shall, I hope, continue to be imbued with a righteous faith and a sense of mission in the world. We shall, I hope, use enlightened judgment in applying our resources and our resourcefulness to help others to help themselves. But whether others adopt our particular economic system is for them freely to decide. Never will our system be extended by force or duress. That is the positive will of the American people and of their Government. On that, all the people of the world can rely utterly.

Once that is clear, we can, without fear of being misunderstood, take leadership in consolidating world-wide opinion. That is the second phase of our quest for peace. It requires that the moral issue be clarified. That issue is not the issue of economic communism against capitalism or state socialism against free enterprise. It is not an issue of relative national power. Those are not moral issues. The moral issue is the issue of the free state as against the police state.

A police state is a state where a few who control the police power proclaim a pattern of political, social, and economic life and then use the police power to perpetuate it, detecting and crushing all who do not conform to their pattern.

A free state is a state where the police power is used to protect the right of individuals to think, believe and persuade in accordance with the dictates of their mind and conscience.

The philosophy back of the police state is materialistic, that men will be more peaceful and secure if, like domesticated animals, they are cared for, herded and driven in accordance with some superior human will.

Back of the free state is belief in a God who endows men with certain inalienable rights which none can justly take away and which none should want to take away because cooperation which admits of diversity produces richness far beyond that of enforced conformity.

The Soviet Union is today a police state. Its rulers believe in that system and they believe that it should prevail generally. They are effectively translating that belief into reality. Their recent action in Hungary adds one more to the number of European countries with police state governments. There are now ten. In other countries, Soviet leaders have great influence through labor unions and political parties and, in several of these countries, they are close to being able to duplicate their Hungarian performance.

The efforts of Soviet leaders to spawn police states throughout the world would, if persisted in, lead to widespread violence, even war. The overwhelming majority of mankind does not want to be subjected, in perpetuity, to the dictation of a small minority. Even the Russian people are not all happy about that, as shown by the generally accepted fact that for every member of the Communist Party in Russia, there are at least two political prisoners. Russian Communist circles discreetly suggest that the time has come for that "withering away" of dictatorship which Marx forecast. In other countries, where freedom has long prevailed, imposition of the police state system would inevitably lead to underground resistance movements and long and bloody struggles.

The future must not unfold in that way. It need not if, while most of the world is still free, the issue is clarified. Then there

will develop a world opinion strong enough to stop a program which otherwise will be stopped by violence. I do not doubt that world opinion can do this. Why should not moral forces be as powerful in peace, to preserve peace, as they are powerful in war, to promote victory? They would be if, during peace, the issues were clear. Actually, the issues are usually kept blurred in the hope that that will keep peace. Thus, it is left for war itself to be the precipitant of international issues. When that happens, the peoples of the world show the power of their moral judgment. President Wilson, after the beginning of World War I, and President Roosevelt, after the beginning of World War II, did much to consolidate and marshal world sentiment to insure Germany's defeat. Thereby, they became great war Presidents. They confirmed Napoleon's statement that "In war, moral considerations make up three-fourths of the game." But if that moral power which won the war could have been used to prevent the war, Mr. Wilson and Mr. Roosevelt would have been great peace Presidents. That is what we want for the future. We cannot afford any more great war Presidents.

If world opinion is brought into being, its quality and quantity must be made evident at a time and place conducive to peace. That is a third phase of our quest for peace. Opinion is not effective merely in the form of inchoate individual aspirations for peace. It must reflect a strong will and a steadfast purpose. There must be willingness to accept discipline and sacrifice. Most of all, world opinion must be focused. In this respect, we should use the United Nations.

The United Nations was never designed mechanistically to keep the peace. It was designed to provide a place where international differences could be aired and where every nation's international acts and purposes could be subjected to the pressure of public opinion. The General Assembly was designed to be a town meeting of the world. It is time to use it in relation to what really matters. There are a number of issues which could impair friendly relations among nations. Most of them involve no great principle and they could be compromised in the interest of peace. There are some issues which involve principles that cannot be compromised. The moral judgment of the world could be relied on to make clear which those principles were and that assault on them would lead only to disaster. The issue of the police state versus a free society cannot, I believe, be compromised. On that, the Assembly would pronounce. Certainly, if we intend to settle that issue by peaceful processes, we should give the Assembly a chance to talk about it. It is, in fact, being discussed everywhere else. It ought to be discussed in the place which was especially designed to make discussion productive of peace.

Lay-Off of Internal Revenue Agents at Jacksonville, Fla.

EXTENSION OF REMARKS
OF
HON. EMORY H. PRICE
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 11, 1947

Mr. PRICE of Florida. Mr. Speaker, recently in the Jacksonville, Fla., office 14 internal-revenue agents received notices of temporary lay-off, effective July 15. The amount of the deficiencies in income tax and excess-profit taxes recovered in a 12 months' period ending March 31, 1947, was $1,121,005.30. The combined salaries of the 14 agents involved amount to approximately $56,600.

I do not mean to imply that without the services of these 14 agents the revenue received by the Jacksonville office would have been reduced by $1,121,005.30, but it is true that it would be necessary to accept the returns as made by the taxpayer, which have heretofore been checked by these agents; and the statement I am enclosing will go into detail regarding the subject.

It is safe to say, however, that the salaries of the 14 men, who have received notice of temporary release, would be paid many times over by the increased revenue effected through their activities as agents. Thus, to me, it is penny-wise and pound-foolish to cut off these revenue-producing employees of the Government.

I am heartily in favor of reducing the number of Federal employees where their services are no longer needed, but I cannot understand why agents in the Internal Revenue Department should be released.

The amount of deficiencies in income tax and excess-profits tax set up by Internal Revenue agents, Jacksonville division, who receive notice of temporary layoff effective July 15, 1947. These figures represent a period of 12 months ending March 31, 1947.

CAF–8

1	$99,565.14
2	47,294.50
3	64,610.84
4	167,834.66
5 (less than 12 months)	8,962.33
6 (less than 12 months)	25,625.83
7	156,088.44
	569,981.74

Salary for grade 7: Minimum, $3,397.20; maximum, $4,149.60. Approximate average salary of group is $3,800.

CAF–9

8	$49,751.62
9	102,533.91
10	160,054.27
11	160,354.94
12	90,983.70
13	66,001.69
14	491,325.17
	1,121,005.30

Salary of grade 9: Minimum, $4,149.60; maximum, $4,920; approximate average of group, $4,400.

The above deficiencies include ordinary adjustments and fraud adjustments.

The release of agents will make it necessary to accept returns which have heretofore been checked by agents. The returns which have smaller tax and small adjustments will have to be accepted as filed as it will not be possible to examine the number of returns which are now being examined. These small returns cannot be held until such time as the Department can find time to check them since the law provides that the statute of limitations shall run—toll—3 years after the filing date of the return, or 2 years after the last payment of tax, whichever is the later.

This office has obtained waivers—form 872—which extends the above statute of limitations 1 year on a large number of cases since it was not possible to complete examination of these returns with the number of agents employed before the reduction which is effective July 15, 1947. If the Department cannot complete these returns in the 3 years as set forth by Congress with the number of agents employed prior to the reduction, it is impossible to complete such examinations in the 3-year period or ever get on a current basis with the force of agents reduced and still examine the type and number of returns which have been examined in the past.

Admission of Displaced Persons to the United States

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 11, 1947

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Robert L. Norton from the Boston Post of July 9, 1947:

ROBERT L. NORTON COMMENTS ON THE DISPLACED PEOPLES

WASHINGTON, July 8.—The message of President Truman favoring the admission of displaced persons to the United States of America has a real human appeal. It should overcome the narrowness and the intolerance of small but powerful groups which up to date have blocked that passage of the Stratton bill, permitting 100,000 of these unfortunate people to enter this country a year, for the period of 4 years.

STATUTES REMAIN

As the President pointed out, an amendment to the present laws does not change the fabric of our immigration statutes. More than 95 percent of these people would be taken care of in the homes of their friends and relatives. They are not Communists, else they would return to the countries dominated by the Soviets, and risk death or slave labor.

Quoting from Prof. William S. Bernard, of Yale, in Survey Graphic, who has made the best study of the situation we have observed: "They come from no single economic group, no one race or religion—Poles, Latvians, Lithuanians, Yugoslavs, and Estonians, make up the largest single nationality groups, but all told some 15 or 20 different nationalities are included in their numbers. All major religions are represented, with Christians (Roman Catholic, Protestant, Greek Orthodox, and others) comprising 80 percent and Jews about 20 percent. Before the war a majority of them were agricultural workers, but there were also shopkeepers, artisans, skilled workmen, professionals, students, and homemakers.

"This remaining group of displaced persons is the hard core of nonrepatriables. Today the towns, cities, and farms of their homelands are, for all practical purposes, closed to them. They cannot go home because they have grounds in which to fear religious or political persecution; or to fear that if they do return they will lose their liberties, perhaps their lives. In a very real sense they gave up their right to a familiar homeland when they chose the hope of freedom. If they return today, even that hope may be forfeited."

In the course of our history we have received more than 38,000,000 immigrants. Better than a quarter of our population is

still made up of people of foreign birth or mixed parentage. With this heritage we cannot longer ignore our international responsibilities, or our moral obligations.

NINE HUNDRED FOURTEEN THOUSAND SEVEN HUNDRED AND SIXTY-TWO QUOTA NUMBERS UNUSED

The facts are that from 1940 through 1946, allowable quotas, if completely filled, would have given us 1,076,733 immigrants—153,774 a year for 1940 through 1943 and 153,879 for 1944-46. We actually received 161,971. Thus 914,762 quota numbers were never used. Even if we set our fair share of displaced persons at 400,000, this would make up less than 50 percent of this wartime loss—would welcome less than half of the number of immigrants Congress and the people of the United States of America had been ready to admit from 1940 through 1946. If we were willing to borrow extensively from the future it would take an average of 15 years to allow 433,500 persons to come in.

"In a very real sense," says Mr. Bernard, "we, the people of America, will decide the fate of those men, women, and children waiting patiently for us to welcome them or to turn our faces from them. Perhaps it does not matter whether our help stems from our own self-interest or from sympathy and understanding. Only the action that we take counts now—and few among us would let that action damn the war's displaced persons to a useless, wasteful life, without homes and without hope. For in our hearts we know too well that there, but for the grace of God, indeed, go we."

Statehood for Hawaii

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Friday, July 11 (legislative day of Thursday, July 10), 1947

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the RECORD excerpts from a letter from Mrs. George Mellen, dated June 17, 1947.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

Senator LANGER wrote me you had talked with him. Thanks. But I understand the difficulty of putting over anything like that at this time, with Congress faced with so many overpowering problems. So I shall not really expect it, but would settle for a good blast from the Senator, calling attention to what should have been done—and thereby puncturing the pure and noble picture of themselves presented by the statehooders!

As ammunition for the blast I'll enclose some figures showing the terrible death rate of the Hawaiians—due to the fact that they are so poor and beaten down. Every effort to help them in the past has been opposed by the moneyed-people here. The CONGRESSIONAL RECORD will show that when the Wilson administration tried to give them back a little of their land as homesteads, the sugar planters here sent their lawyers to Washington to fight it. Just as they tried to take Papakolea away from them here—saved only by practically my dead body!

Queens Hospital now has an income of $100,000 a year—left by Queen Emma to give "free hospital care to poor and indigent Hawaiians," but in spite of all the fight to get it for them not one penny of that goes to Hawaiians.

Just one more item—these figures I enclose are from a booklet gotten out this year by the chamber of commerce. Note the Caucasian population of 173,000—to cover the Japs at 163,000. More propaganda. All Portuguese are included in that Caucasian list—accounting for more than half of it I think.

I'll enclose a picture of what they call a Caucasian.

And thanks for all you've tried to do. I really don't expect it to be done but I would like to force the true story out into the open, and renew the faith of the Hawaiians that Washington is their friend. They have never blamed Washington for their neglect. In spite of all the injustices to them, they still idolize America and are loyal. Senator O'MAHONEY knows that. They still adore him just because he made statements on what he thought should be done for them and when he came out here they showered him with leis.

Labor-Management Relations

EXTENSION OF REMARKS
OF
HON. GLEN H. TAYLOR
OF IDAHO
IN THE SENATE OF THE UNITED STATES

Friday, July 11 (legislative day of Thursday, July 10), 1947

Mr. TAYLOR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter which I have received from a 12-year-old girl in Philadelphia, Pa. She remarks on the fact that she heard her parents talking about the extended speech which I made when the labor bill was under consideration. They were glad that I made the speech, because they were not aware of what was in the bill. It gave them time to look and find out. She writes that she thinks it might be a good idea for the President or Senators, or someone else, to go on the air once in a while and tell the people what is going on in the Congress. I ask that this letter be printed with any misspellings there may be in it, exactly as it came to me.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

PHILADELPHIA, PA., *June 27, 1947.*

DEAR SENATOR TAYLOR: My name is Harriet Liebster. I am twelve years old and attend the Jay Cooke Jr. High School. At dinner this eveing the adults were talking about the Taft Hartley bill. I asked some questions about how a bill was passed. I found out that only you senators and the President knew about the bills that were passed and rejected. I think it is about time that the american people knew why some of these bills were rejected. That's what I'm writing to you about. I have a suggestion for President Truman and all presidents after him. They should take an hour each week to read over the radio parts or all of important bills, for endance, the Taft Hartley bill. I know that in the olden days such a thing was imposable because there were no radioes, but nowadays they can do it. Would you please tell the President and the senators about my idia. I would be very gratful to you if you did.

Your sincere friend,
HARRIET LIEBSTER.

P. S.—My aunt said that you tried to delay the vote on the Taft Hartley bill so people would have a chance to find out what the bill contained. I think that was very good of you, and thats where I got my idia.

HARRIET.

Fascism in Action—Printing of 100,000 Additional Copies Asked For

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Friday, July 11, 1947

Mr. PATMAN. Mr. Speaker, on yesterday, the distinguished gentleman from Pennsylvania [Mr. FULTON] made a speech concerning the booklet, Fascism in Action, in which he criticized the cost of publication.

In this statement, according to the CONGRESSIONAL RECORD of July 10, 1947, page 8619, the gentleman stated:

Yesterday the gentleman from Texas [Mr. PATMAN] introduced House Resolution 277, dated July 9, to print 100,000 of these documents at public expense.

Some of us opposed this a few days ago on the ground of economy, saying it would run into a lot of money later—and now it is evident that it is going to run into a lot of money.

Although the gentleman probably did not intend to leave the impression from this statement, I am afraid the impression might be left nevertheless that this resolution asking for a hundred thousand copies is somewhat of a surprise; that possibly I had withheld from the Members the information that this number of copies would be asked for.

If anyone should have that impression, I desire to invite their attention to the fact that when the Committee on House Administration held hearings on the resolution to print the document, Fascism in Action, as a House document, I stated before that committee more than once that I expected to ask Congress to authorize the printing of at least 100,000 additional copies.

When the resolution was discussed in the House Tuesday last, in a colloquy between the gentleman from Maryland [Mr. MEADE] and myself which appears in the CONGRESSIONAL RECORD of July 8, 1947, page 8471, it was stated:

Mr. MEADE of Maryland. Will the gentleman tell us how many copies he expects to have made of this document and how much it will cost?

Mr. PATMAN. I expect to ask for a hundred thousand at first. If there is a demand for more we will ask for more. It may not be as popular as the book on communism. There were 500,000 of that booklet printed. But the cost is not the important thing. We have just gone through a war against fascism, which cost us three or four hundred billion dollars, so it would not be too much expense to pay a few dollars more to inform the public.

Therefore, it should be no surprise to the gentleman from Pennsylvania [Mr. FULTON], or any other Member of the House that a resolution has been filed by me asking for the printing of an additional 100,000 copies. The fact is, the Committee on House Administration reported the resolution to the House for consideration with that understanding and knowledge. The further fact is, the House of Representatives by a majority vote passed the resolution with that understanding and knowledge. It occurs

to me that there is some obligation on the part of the members of the House Administration Committee to make a favorable report on the resolution to print a hundred thousand additional copies for the reason the House provided for its printing with that understanding.

UNITED STATES CHAMBER OF COMMERCE

The United States Chamber of Commerce widely distributed the booklet on Communism in Action. Doubtless this same organization will want many thousands of copies of the booklet, Fascism in Action, for the same purpose of giving it the same wide distribution that it gave the booklet, Communism in Action.

Many other big organizations like the United States Chamber of Commerce distributed the booklet, Communism in Action. It is presumed that these organizations will be just as interested in warning the people that there is a threat to our Government coming up from the right in the form of fascism, which is just as strong as the threat to our Government that is coming up from the left in the form of communism.

VETERANS' ORGANIZATIONS

Doubtless the veterans' organizations that distributed the booklet, Communism in Action, will also be interested in giving the same wide distribution to this booklet on fascism.

It is my hope that the time is not far distant when everyone in public life, who denounces fascism, will also denounce communism and vice versa.

BOTH SHOULD BE DENOUNCED

It is noticeable that some of our great leaders, when so vigorously opposing either communism or fascism, often confine their denunciations to one and not to both.

Attorney General Tom Clark and the Director of the Federal Bureau of Investigation, Mr. J. Edgar Hoover, are examples of outstanding leaders in our country, who invariably denounce both, not one.

Veterans' Hospitals

EXTENSION OF REMARKS
OF
HON. CARL T. DURHAM
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 11, 1947

Mr. DURHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the High Point (N. C.) Enterprise of July 3, 1947:

VA HOSPITALS

Several years ago the administration of veterans' hospitals was reputedly so poor as to become a national scandal. Then there followed a shake-up from the head of the Veterans' Administration on down. According to reports reaching us, the veterans' hospitals of today should be a source of national pride.

Recently members of the Enterprise staff have had occasion to visit one of these hospitals, located at Roanoke, Va. A member of the staff is a patient there. The reports these visitors brought back—reports of the medical care and personal attention the patients are receiving—were excellent. They were enthusiastic in their praise of the doctors and the staff. Similar reports we have received from veterans who have been to other such hospitals. No doubt there are exceptions to the rule. There usually are. But from all we can learn the average veteran in a Government hospital today is getting the kind of attention he deserves—the best.

Address by Hon. William Langer Before Senator Langer Rally

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Friday, July 11 (legislative day of Thursday, July 10), 1947

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me at Chicago, Ill., on Sunday, May 25, 1947, at a rally under the auspices of the civic committee to welcome Senator LANGER.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Chairman HANS A. FRANKE. It is an honor and privilege for me to introduce to you, ladies and gentlemen, the speaker of the day, Senator WILLIAM LANGER, of North Dakota. I am not going to say very much about the Senator, not because there isn't much to say, but I am going to say two or three words, with your permission.

The Senator has had many outstanding accomplishments which we could take much time to tell you about, in addition to what Dr. Roan already told us. However, I briefly want to say that Senator LANGER was a farmer at one time, a lawyer, and became a member of the State legislature, was a district attorney, he was three times Governor of his State, and now being a Senator, he is a real authority in the United States of America. He is one of the most highly respected men in the Senate. As you will hear, and you may know already, he is a fearless and courageous man. We are proud that he is a man who is of the same parentage as most of us. (Applause.) Senator LANGER's grandfather immigrated to this country from Germany in 1852—that is less than 100 years ago.

There is only one more thing I want to say about the Senator and then, ladies and gentlemen, I will let the Senator come to us. He is one of the men who supported the bill which permits you and me to send 11-pound food packages by mail to the various zones in Europe. (Cheering and applause.) And last of all, among the many other things that we know the Senator will do, he has already introduced a bill to increase the size of these packages to at least 22 pounds (applause), and also make it possible to permit the sending of money to those who need it.

I give you United States Senator WILLIAM LANGER, of North Dakota, your friend and my friend. [Audience rises and applauds.]

Senator WILLIAM LANGER, of North Dakota. Mr. President * * *

(Senator LANGER's opening remarks were in German.)

And now, my friends, I think we are all agreed that the people of the United States want peace. [Applause.] I think we are all agreed that we do not want any World War III of any kind or character. [Applause.] I think we are all agreed that we do not want any part of Germany to go communistic, now or any time in the future. [Applause.] And just as certainly do I feel that we are all agreed on the fourth point, and that is that we do not want German children, women, or the aged of that country to starve to death. [Applause.]

Now, you know, I am sort of an optimist. I like to look at the bright side of everything, and my friends tell me that I am unusually hopeful and optimistic. It reminds me of a story they tell about an old maid. You know she went to the furniture dealer one day and she said, "I want to trade in that old double bed I have for two single ones." The furniture man said, "Well, I will trade with you, but I don't quite see the sense in your trading." "Well," she said, "it is this way: Every night when I go to bed I look under the bed to see whether or not there is a man under there, and you know if I looked under two beds instead of one I've got just twice as good a chance." [Laughter.]

You know, one time I heard a good story about a school teacher. Mrs. Hoff, of the Germanic Society here, heard it last night. She told me she thought it was the best story that she ever heard. She asked me to repeat it to you because she said it exemplified hope. It is the story of a school teacher that said to her little children: "If you lose the hearing in one ear, don't worry any because you can hear twice as well in the other one; if you lose the sight of an eye, don't worry any because you can see just twice as far on the other eye." There was an old Irish janitor in the back of the building, and he said, "B'Gora, I know that is right because whenever I've seen a man with a short leg I notice that the other leg is longer."

Now, today, I come here with a lot of hope. I come here very, very optimistic because the various departments of our United States Government are cooperating together now, at long last, to do everything they can to better conditions over in Europe. It has taken a long time and we Americans here, whether we stem from Spain, Portugal, or whether we come from Denmark or Norway, whether we come from Ireland or Germany or Austria, or Rumania, are good Americans all, and are interested, first, last, and all the time in the welfare of the United States of America. [Applause.] All of us are agreed that there is no room in America for any hyphenated Americanism of any kind or description, whether you call them Anglophiles, or by any other name. And we are all agreed, too, that we are going to back up our Government in every way we possibly can to better conditions over there in Europe. [Applause.]

You know, I've stood upon the Capitol Grounds at Washington, and I have been proud of the fact that that beautiful Capitol, that beautiful building, together with the building dome, was designed and the work on it was supervised by a man of Germanic extraction, Thomas Walter. And when I glance over to the other side of the grounds and I see that beautiful Congressional Library, American as I am, I am nevertheless proud of the fact that that, too, was designed by a man of Germanic extraction, Paul T. Pelz. And then I am proud, too, of the fact, when I go into the Senate and see there upon the walls in that Capitol those beautiful pictures painted by a man of German origin, Emanuel Leutze, Washington Crossing the Delaware, and over on the other wall that magnificent picture that hangs upon the stairway, Westward the Course of Empire Takes Its Way, and when I enter the Chamber itself, when I walk in there as chairman of the Civil Service Committee of the United States Senate, I am proud of the fact that Carl Schurz once upon a time was in the United States Senate, also chairman of the Civil Service Committee, the same committee I am on today, and when upon

that committee, that man made such a marvelous record that today he is still known as the father of civil service of the United States of America. [Applause.]

Well, now, my friends, I come to you today to talk upon a problem that is of vital interest to every American today. I hold in my hand the report of that great ex-President Herbert Hoover [applause] the report that was made public on the 28th day of February 1947 only a few short weeks ago. I am going to read from that report because, unfortunately, I find that even though it has been published for many weeks, that some of the newspapers are not yet familiar with it. I quote from his introduction: "At the time of her surrender, Germany had exhausted all of her reserves and most of her stocks of consumer goods and raw materials. We now know that, driven back into her own borders, she would have blown up in chaos within a short time without further military action."

Herbert Hoover in this report was backing up everything that was said upon the floor of the Senate by such great patriots as Burton K. Wheeler, of the State of Montana [applause], David Walsh, of Massachusetts, Hendrik Shipstead, of Minnesota, [applause], and many more of us who time and time and time again, plead and plead and plead upon that Senate floor that we might make peace with Germany, that unconditional surrender might be so defying that we could have peace without homes being totally destroyed in Germany and her industry absolutely ruined. We plead because we knew that if her industry was ruined that it would mean a tremendous burden upon the taxpayers of our own country. We knew that if her industry was ruined it would mean starvation on the part of millions and millions of the people over there in Europe, and today here we have the corroboration by ex-President Hoover: "Promptly after the surrender, her liquid resources from which she could have been provided with supplies were seized and divided as reparations. The population thus became largely dependent for its life upon the armies of occupation. The changes which have taken place in population profoundly affect all economic problems. The population of the combined zones in 1939 was about 34,200,000. The Germans expelled from the Russian and Polish annexations together with those from Czechoslovakia, Hungary, and Austria, have raised the population in the American and British zones to about 41,700,000. It is estimated that an additional 1,000,000 will come into this area by December 1947.

"One consequence of these distortions is that in the age groups between 20 and 40 there are 6 men to 10 women, and in the age group between 40 and 60, about 7 men to 10 women. Thus there are in these groups between six and seven million more women than men. The results upon productive power are bad enough, but the consequences to morals are appalling. The housing situation in the two zones"—listen to this, and when I read it, remember that there were a group of us fighting upon the Senate floor of the United States to stop it—"The housing situation in the two zones is the worst that modern civilization has ever seen. About 25 percent of the urban housing was destroyed by the war. Therefore 25 percent of the urban population must find roofs from among the remaining 75 percent, in addition to all the destitute 'expellees' and other groups brought in. There has been little repair of damaged houses, due to lack of materials and transportation. The result of all this is that multitudes are living in rubble and basements. The average space among tens of millions is equivalent to between three and four people to a 12-by-12 room."

"The shortage of coal is, next to food, the most serious immediate bottleneck to both living and the revival of exports to pay for food. The coal famine all over western Europe and the unprecedented severity of the winter have produced everywhere the most acute suffering. As an example in Germany, no household coal has been issued in Hamburg since October. Other German cities have been but little better off."

In another place in his report President Hoover says: "Over half of the 6,595,000 children and adolescents, especially in the lower-income groups, are in a deplorable condition. Their situation is better in limited localities where school feeding has been undertaken, but outside these limits stunted growth and delayed development is widespread. In some areas, actual starvation is appearing in the children. A study of groups of boys between the ages of 9 and 16 years showed 5.5 pounds under minimum standard weight, with girls 5.1 pounds below such standard. Other groups studied showed even worse conditions."

In another place he talks about fish and where the Germans are not allowed to go fishing in the Baltic and North Seas because, he says: "There are ample supplies of fish in these seas. It seems a pity that, with this food available, British and American taxpayers are called upon to furnish food in substitution for fish the Germans could catch for themselves."

And then, finally, he says in another place: "Our determination is to establish such a regime in Germany as will prevent forever again the rise of militarism and aggression within these people." Now, mark you, what the former President says: "When you meet someone who still is desirous of starving women and children over in Europe or Austria, or any one of the other countries," the former President says, "but those who believe in vengeance and the punishment of a great mass of Germans not concerned in the Nazi conspiracy can now have no misgivings for all of them—in food, warmth, and shelter—have been sunk to the lowest level known in a hundred years of western history. If western civilization is to survive in Europe, it must also survive in Germany. [Applause.] And it must be built into a cooperative member of that civilization. That, indeed, is the hope of any lasting peace. After all," the President concludes in this report on Germany, "after all, our flag flies over these people. That flag means something besides military power." [Applause.]

And if there be some among us in the audience here who are Democrats and not Republicans, if there be some among you who believe that possibly the former Republican President might be biased, I want to read you a paragraph signed by all 18 members of the House of Representatives committee—Republicans and Democrats alike—who a short time ago were over there under the chairmanship of Representative WILLIAM COLMER, of Mississippi. They were over there and made a personal inspection tour of Germany. Here is one paragraph of their unanimous report:

"If a hard peace requires the elimination of eight to ten million Germans, it would be much more humane to eliminate them at once and not wait for elimination due to starvation."

You know, I like this book, this CONGRESSIONAL RECORD, that I have in my hand here, because some of us saw what was going to happen in Germany over a year ago. A lot of this has taken place, after those in authority have been thoroughly warned. In a speech which I delivered on the Senate floor on March 29, 1946, over a year ago, I quoted Mr. Carl Brandt, the economic adviser to the United States Army, who had been over there and just returned—the man the United States Army relied upon—and here is what he said. This letter was written to Henry C. Taylor, and it was written by Carl Brandt, who is the economic adviser to the United States Army, stationed in Germany. It is entitled "Famine in Germany Over a Year Ago." At that time Mr. Brandt was stationed in Berlin with the Office of Military Government, United States, Food and Agricultural Branch. Henry Taylor said: "The facts in this letter may not be new to you, but to me they are appalling." Here is what Mr. Brandt said. Mind you, this was a year ago last March 26, and I inserted it in the RECORD on March 29, 1946: "The greatest famine catastrophe of recent centuries is upon us in central Europe. Our Government is letting down our military government in the food deliveries it promised. Although Generals Clay, Draper, and Hester have asked for and were promised more, there was the barest minimum for survival of the people. We will be forced to reduce the rations from 1,550 calories to 1,000 calories, or less. The buds of democracy will be burned out in the agony of death of the aged, the women, and the children."

I got up on the floor and I said then: "What has become of those beautiful words we heard from the late President of the United States, when Mr. Roosevelt said, and I quote him, 'The war is not against the German people; the war is against Hitler and his satellites'?" "But," I said, "who is starving in Germany today, Mr. President?" "The economic adviser to our Army in Germany says it is the aged, and the women, and the children, and I have on my desk, if any Senator cares to look at them, pictures showing some results of the starvation now prevalent in Germany, in Austria, and in Poland." Then I kept on reading from Carl Brandt's letter: "The British and we are going on record as the ones who are letting the Germans starve. The Russians will release, at the height of the famine, substantial food stores. They have locked up 300 to 400 tons of sugar and large quantities of potatoes. Aside from the inhumanity involved," Mr. Brandt said, "it is so criminally stupid to give such a performance of incredible fumbling before the eyes of the world. It makes all the many hard-working officers of the Office of Military Government, Food and Agricultural Branch, ashamed." Signed, Carl Brandt.

My friends, that is the record. And you know, it was about that time that a few of us Senators got together and introduced Senate bill 2101, by Senators JAMES EASTLAND and STYLES BRIDGES which permitted the sending of relief packages, not to exceed 11 pounds, from here to private individuals in Germany. It also established mail service. Now, my friends, I am proud of the fact that I was one of the sponsors of that bill. [Applause.] But I am more proud of the United States Senate that passed it. [Applause.] I say, I am more proud of the United States Senate that passed it, in spite of Mr. Morgenthau.

Now, between 7,000,000 and 8,000,000 packages, food packages, have already been sent over there by hundreds and thousands of you people who are here today, but you can't send money, can you? You may have a mother or a brother, or some other relative over there who is starving. You can't send money, You may have some relatives starving over there, and all you can send is this 11 pounds, and that includes all the wrapping, and so for some months our group down there in Washington, headed by my friend, Siegfried Goetze, who is on the platform here today, and who, after World War I, was sent by the relief committee of southern California over to Germany, and who was welcomed over there. That man came before the United States Senate Committee with his credentials, with the credentials signed by every president of the German Republic from the first to the last, testifying to the great work he had done. He brought with him some of the other gentlemen, who are on the platform here today. I don't see one of them. Dr. Claus, I thought he was up here but he isn't. They came to my committee, of which I am chairman, and to the committee that has charge of the

post office, and they said, "We want to increase these packages to 22 pounds, instead of 11." [Applause.] It made me very, very proud indeed that Mr. Goetze and his associates were accompanied by Americans of nearly every extraction under the sun—Irish, British, and Scandinavians, were in there with him backing that committee and to do what it could to get the limit raised from 11 to 22 pounds.

And so my friends, we called a meeting and the Department of War, which has charge of the occupied portion of Germany which the United States controls, and the Department of State, and the Post Office Department, and representatives from these great big Departments of our Government, met jointly with our Civil Service and Post Office Committee and, as a result of these conferences, the Post Office Department decided to send two men who were not members of the Post Office Department, but men whom I could select as chairman of that committee, to attend the Postal Union meeting in Paris, and from there to go to Germany and Austria to meet there with the men in charge, to meet there with post office experts that will be supplied to Dr. Martin W. Roan and to Mr. Anton Rieder, of Los Angeles, Calif., the two men who are going to represent my committee there. Then, face to face, they will work out the problems that I confidently believe will result in the month of June, just a few weeks from now, in permitting the people to send 22-pound packages, instead of 11. [Applause.]

One thing you can be absolutely certain of and that is, after I searched my conscience, under my oath of office, to find two men who would conscientiously and honestly represent the rank and file of the people of America over there. After I looked over the list of all the men I knew in this country, I couldn't think of any two men better qualified, harder working, more honest, than the distinguished gentleman, Dr. Roan, who talked to you a few moments ago, and Mr. Rieder, the president of the Coast Packing Co., of Los Angeles, Calif. [Applause.] Those are men, both of whom have been in Germany many, many times; those are men, both of whom speak the German language; Dr. Roan was in World War I—and World War II—those are men who have been over there time and time again. Mr. Rieder has relatives over there. They are intimately acquainted with conditions, or will be shortly after they arrive. Both of these men are great humanitarians. Both of these men have rendered great service in America, Dr. Roan in the Army. Both of them are men who will not tolerate hate in their hearts, but men who say this war was over 2 years ago. [Applause.]

I hope very much that while those two men are there, they will also, if possible, at first hand get some additional information about slave labor. When they come back they will be able to join ex-President Hoover in his report which tells about that slave labor over there even today. Great Britain still has many she is most reluctant to release. The Russians have between five and six million, but admitting they have 800,000; you are all familiar with the hundreds of thousands over in France; and with the thousands over in Belgium where those Germans are working in the mines. Think of it. In this twentieth century, slave labor, all in violation of international law. [Applause.] I ask you, what would Abraham Lincoln think about it if he were alive today? [Applause.]

So, finally, my friends, in conclusion, I want to thank you for your magnificent welcome to me, for the great kindness shown to me since I have come to the city of Chicago, but in bidding you goodby today, I want to appeal to you and say to you that because food and shelter and public health go hand in hand with the recovery, not only for Germany, but in a greater measure for Europe and the whole world, outside help, your help, must go to the rescue. And it is for this reason that I welcome the creation of the organization, "American Aid to Rebuild Bombed Areas in Germany," a nonprofit, nonpolitical corporation, which has set itself the task to promote and carry on research and aid in a general plan of rehabilitation, rebuilding and developing bombed-out areas in Germany, and to aid and assist the German people through proper channels, to provide the necessary housing facilities for living, and other purposes, and to alleviate suffering from exposure and famine. The Quakers have done an outstanding job up until now [applause] in getting food over to your relatives and to your friends, and to the people of Germany and Austria, but that is only a beginning. If we can get this law changed, this rule or regulation, by the Post Office Department, so that we can send 22-pound packages, and send them not once a week, or once in 2 weeks, but as many as anyone cares to send, because it is costing the American taxpayer nothing. It is being done gladly by the great humanitarian people of America, and which will save a life perhaps, and all that is necessary is to go over to the post office and deposit the package.

And so I say in conclusion, that I don't know of any place in the entire United States of America where I believe the people have come closer to my heart than you people here in Chicago. [Applause.] As I have met you, as I have talked to you, as I have heard the expressions of sympathy for the poor, starving, aged women and children over there in Europe, as I have looked into your eyes, I have gained new faith in America, and I know that God Almighty still reigns supreme.

[The audience arose and there was prolonged applause.]

Rubber Legislation Must Wait Until Next January

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, July 11, 1947

Mr. SHAFER. Mr. Speaker, as chairman of Armed Services Subcommittee on Organization and Mobilization I take this time to make the following statement:

Legislation for a permanent rubber program will be presented to Congress soon after the 1st of January 1948.

On May 8 of this year the Subcommittee on Organization and Mobilization of the Armed Services Committee held an informal meeting to discuss with industry and the Army and Navy Munitions Board a proposed synthetic rubber program for the Nation. At the conclusion of this meeting the Army and Navy Munitions Board was requested to meet with industry to prepare suggested legislation which would establish this program.

It was anticipated that these proposals would be presented to this subcommittee by the 1st of June. However, the problem proved to be one of such a complicated nature that it was not possible for the Army and Navy Munitions Board to present recommendations until Wednesday, July 9. In studying the recommendations that have been made, it now appears that they do not represent the majority view of industry and the Army and Navy Munitions Board but rather represent a majority view of governmental agencies.

The subcommittee met in executive session today. Because of the vast scope of the problems involved and the short period of time remaining before the congressional recess, members attending the session decided that the possibility of conducting public hearings at this time is precluded. However, the subcommittee will hold hearings during the recess. These hearings will not be conducted with respect to any single proposed bill, but will involve the general problems. During the course of these hearings the subcommittee hopes that the industry will present recommendations representing the majority and minority views of the industry. The subcommittee has been advised by several members of the rubber industry that prior to January 1, 1948, industry can present to the subcommittee an outline of legislation acceptable to the majority of the industry. Thus, with the benefit of the Army and Navy Munitions Board proposals and a report accompanying these proposals, plus any recommendations submitted by the industry and information obtained during hearings, the subcommittee is confident that it can present to Congress, in January 1948, legislation with respect to a long-range rubber program acceptable to industry and Government and fully providing for the national defense.

The subcommittee is primarily interested in national defense and must continuously bear that objective in mind as its primary function. On the other hand, the subcommittee recognizes the fact that any legislation as far reaching as that proposed must be reasonably acceptable to industry since industry must live with this legislation.

Members of the subcommittee know that rubber plays a major part in the economy of the world, and they also know that this Nation can no longer be dependent entirely upon a foreign supply of natural rubber to meet the needs of this country in time of national emergency. Therefore, the subcommittee, working with the Government and industry, will during the recess make a complete study of synthetic rubber. In addition, it will make an on-the-spot study of the manufacture of butadiene, styrene, and all other related topics of the rubber industry.

The subcommittee is fully aware of the importance of this proposed legislation. It recognizes the impact that will be felt in world markets when such legislation is finally passed. However, it will probably report a bill to Congress which will provide for a compulsory consumption of a more or less specific amount of synthetic rubber, which will represent the minimum necessary to maintain a technically advanced and rapidly expandable industry. It hopes to present a bill involving the barest minimum of Government controls. It is confident that a bill encompassing the views of industry and the views of governmental agencies can be passed.

The present controls on rubber cease on March 31, 1948, under Public Law 24, and prior to that time the subcommittee believes that Congress will have enacted into law a far-reaching rubber program that will permit rubber manufacturers and natural rubber producers to plan their future with a reasonable degree of certainty.

While the subcommittee has taken no definite action on the Army and Navy Munitions Board recommendations, nor on any specific provision that will be contained in any bill reported to Congress, nevertheless, it was the opinion of members present at today's executive session that any bill reported to Congress must provide for the consumption of a rather substantial amount of synthetic rubber. It is hoped that the administration of this program can be handled simply without the establishment of a Government bureau. Furthermore, the bill must provide a satisfactory plan for plant disposal. The subcommittee realizes that the problem of plant disposals, plus the possible creation of protected monopolies, creates tremendous problems.

Thus, in brief, the subcommittee will plan to conduct hearings this fall; will anticipate receiving suggested legislation from industry, will observe the rubber industry in its actual operation, and will assuredly present a bill to Congress in January 1948 that will, it is hoped, be reasonably acceptable to all concerned and very definitely will provide for the defense of the Nation.

Pensions for Postmen

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Friday, July 11 (legislative day of Thursday, July 10), 1947

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Pensions for Postmen," published in the New York Times of July 10, 1947.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PENSIONS FOR POSTMEN

Caught in the log jam that always piles up in Congress toward the end of a session, the Langer-Chavez-Stevenson postal retirement bill is still held up on the calendars of both Houses. As a matter of simple justice it should be voted into law.

Here in New York City some 700 retired letter carriers are eagerly hoping it will pass. It would prove a godsend to a group of forgotten men who have given Uncle Sam the best years of their lives in faithful service. If it fails, they and their families may somehow continue to exist on $23 a week, though none of them can figure how. If it passes, their annuity will be raised to $1,500 a year.

Nobody seems to have any objection to the bill. It has been favorably reported by both committees. For the first time it provides some benefits for widows and survivors. It should encourage the retirement of many superannuated postal employees who simply can't afford to quit now. It won't cost the Government anything since the working postmen themselves will pay for it with an additional 1 percent deduction from their pay checks. Civil-service actuaries figure that this will more than take care of the slight pension increase. If Congress greases its wheels a little the bill will pass at this session.

Truman's Foreign Policy Since War's End Has Cost $21,058,424,818—Truman's Domestic Policy Since War's End: Not One Cent of Relief From Oppressive Taxes

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 11, 1947

Mr. McDONOUGH. Mr. Speaker, the United States has provided in contributions and advances 21,058,424,818 hard-earned American dollars to the other nations of the world since the surrender of Germany and Japan in May 1945 and September 1945, respectively. This is equal to a contribution of $430 from each of our 49,000,000 income taxpayers.

Think of it! Four hundred and thirty dollars of your hard-earned cash has been used in an attempt to bring about peace and the rehabilitation of the world. The contributions have been made as follows:

Contributions:	
UN	$29,289,349
UNRRA	2,700,000,000
World Bank	3,175,000,000
World Fund	2,750,000,000
Lend-lease	2,163,000,000
Other advances:	
Surplus property	1,148,000,000
Loans to Great Britain and Philippines	4,390,000,000
War Department grants	1,771,926,293
Export-Import Bank	2,931,209,176
Total	21,058,424,818

While President Truman's foreign policy has cost us this tremendous sum of hard-earned American dollars, his domestic policy has been to deny to the average American taxpayer the saving and relief he would receive, if he—Truman had not vetoed the income-tax reduction bill.

We undoubtedly have an obligation to help rehabilitate and encourage the establishment of peace in the world, but we of the Congress as well as the President also have the duty and obligation to relieve our people at home of oppressive and confiscatory taxes.

The United States, the victorious Nation, has used its blood, sweat and tears, its money and its resources to help bring the world out of the sad state of affairs it is in today. We have been doing all this while Russia has been waxing fat at the expense and gullibility of the rest of the world by annexing country after country to her sphere of influence, by adding great territorial gains and millions of people by her communistic imperialism.

Perils of the Veto

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, July 11, 1947

Mr. KEATING. Mr. Speaker, now that the President has announced his intention to veto the tax reduction bill and deny any increase in the take-home pay, not only now but even after January 1, and has taken the unprecedented action of attempting to crack his whip on this issue even before the other body has acted and in the face of the overwhelming vote in this House, he will be confronted with writing another veto message.

At about the same time this bill reaches his desk it is expected that he will also receive a measure to permit enlisted men to convert their terminal-leave pay bonds into cash, already approved unanimously here in the House.

It is hoped that in his message of disapproval of the tax-reduction measure he will frankly concede the obvious error in his earlier message wherein he used as one of the principal arguments against an increase in take-home pay the contention that it would have dangerous inflationary results. He still clung to the basic fallacy of the Government spenders that it is a mistake to let the people have the money to spend, but in some curious way not conducive to the same inflation to make the people pay that same money to the Government so that it can be spent by those in Washington who have become so adept at that pastime through many years of indoctrination and training.

It would be a tragic injustice to the GI's who have already been the victims of discriminatory legislation in the last Congress if the President were to repeat his mistake and again follow the advice of his Treasury Department, which has opposed this measure to permit enlisted men to receive cash for their bonds. True, it will result in payment of some $1,800,000,000 if these veterans should all take advantage of the option afforded them, but every dollar paid to them reduces the Government debt, a legal obligation, by the way, which deserves first consideration. One way out of the dilemma in which the President has placed himself would, of course, be to disapprove the terminal leave pay bill. This compounding of an error, however, would be most unfortunate and unjust. It is preferable for him in the message accompanying his second rebuff, which he has promised to the taxpayers and wage earners of this country, to eliminate from the grounds upon which he seeks to support his case the patently unsound argument based on the inflation threat.

In accordance with leave granted I include an editorial from the New York Times:

PERILS OF THE VETO

The practice of the Presidential veto is fraught with very real political perils for the Executive and his party. This is a lesson that the late President Roosevelt had to learn the hard way; but he did learn it, and in the later years of his administration he rarely employed the veto with respect to measures which came to him with decisive majorities in the two Houses of Congress. The most obvious practical reason for such a course is that an Executive who consistently flouts the will of Congress can hardly expect to rely indefinitely upon the support of that body for his own policies.

But events this week serve as a reminder that the injudicious use of the veto power may boomerang in another way. The Executive may find himself entrapped in the coils of his own veto messages. The House has just voted unanimously in favor of permitting veterans to cash their terminal-leave-pay bonds at any time after next September 1. The 1946 legislation providing remuneration for accrued leave time for the enlisted personnel made it payable in bonds which are nonnegotiable and the principal of which does not become payable until 5 years after date of issue. Whether the Senate will go along with the House in making this back pay available in cash is still to be determined. Should it do so, the issue will then be up to Mr. Truman. The political appeal of the legislation is attested by the fact that it was unopposed in the House. It also can be argued on its behalf that it represents no more than simple justice to the enlisted men, since it is merely extending to them the same treatment accorded officers, who have remained on the service pay rolls on terminal leave after their return to civilian life.

The other side of the argument is that this legislation would represent a potential addition to current purchasing power of some $1,800,000,000. Mr. Truman, in weighing the merits of a veto with respect to this bill, should it pass the Senate, might find it easy to ignore this latter fact were it not that he has already given a hostage to fortune. One of the four major arguments advanced in justification of his veto of the tax-reduction bill was that the economy was already subject to inflationary pressures, and that tax reduction would tend to increase them. If the President should decide to ignore this argument in the case of the terminal-leave measure, this fact will be accepted by many persons as confirmatory evidence that the tax bill veto was essentially a political strategem.

Grapes of Wrath Again?

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 20, 1947

Mrs. DOUGLAS. Mr. Speaker, under permission to revise and extend my remarks, I include an editorial from the St. Louis Star-Times:

GRAPES OF WRATH AGAIN?

Better organization of this country's vast army of migratory agricultural workers would be of direct benefit to the farmers. It would assure them of sufficient help in the planting and harvesting seasons when time is precious and crops can be saved or lost in a matter of days.

It would protect communities from some of the unwholesome conditions which grow up around the shack settlements in which workers tend to congregate when jobs are hard to find and there is no way of transporting them and their families to areas where their services can be utilized.

These are important considerations in a bill which Representative HELEN GAHAGAN DOUGLAS, of California, is sponsoring. Her plan calls for intelligent compilation and dissemination of information relevant to the supply of migratory labor, the availability of work in the different areas. It would also provide for better training of workers, assurance of means of transportation, the furnishing of medical care, and other services that are sadly lacking in some of our most important food- and textile-producing States.

Surely the farmers would appreciate such an effort toward a more efficient organization of their labor force. They are victims of the present haphazard system as much as the workers are. But basic human rights of the workers are an important consideration, too. They and their families deserve greater guaranties of these rights than they now have. Three-fourths of the 550,000 who worked on three or more farms in 1945 had less than 75 days of employment. There can be very little security, very little happiness in such a nomadic existence. And worst of all, their children are subject to undernourishment and disease. Denied access to local schools, many grow up with stunted minds as well as stunted bodies. No better argument for Mrs. DOUGLAS' bill can be made than she makes with these words:

"Let us help the American farmer harvest and market his potatoes, beets, corn, wheat, fruits, and produce without the tears that now stain so much of the clothes we wear and the food we eat."

Temporary National Commission on Veterans' Benefits

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 11, 1947

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

THE AMERICAN LEGION,
NATIONAL HEADQUARTERS,
July 10, 1947.

Hon. EDITH NOURSE ROGERS,
House Office Building,
Washington, D. C.

MY DEAR MRS. ROGERS: I have just had called to my attention Senate Joint Resolution 141 introduced on July 2, 1947, by Senator FLANDERS, together with seven other Senators, the title of which is "To Establish a Temporary National Commission on Veterans Benefits."

In the CONGRESSIONAL RECORD of July 2, on page 8086, appears the statement made on the floor at the time that this resolution was presented to the Senate. This joint resolution would create a temporary national commission on veterans' benefits composed of seven private citizens appointed by the President. The duties of the said commission are then set forth in the statement.

This is very disturbing to me as a national commander of the American Legion, in view of the fact that in many respects it is similar to section 701, title VII, "Provisions Applicable to Veterans," Public Law 212 of the Seventy-second Congress, June 30, 1932, by which there was created a joint congressional committee to carry out practically the same functions as are set forth in this resolution. In particular, "to conduct an investigation of the operation of the laws and regulations relating to the relief of veterans of all wars and persons receiving benefits on account of the service of such veterans and report a national policy with respect to such veterans and their dependents," and "report and recommend such economies as will lessen the cost to the United States Government of the Veterans' Administration." And further, to report "the results of its investigation, together with such recommendations for legislation as it deems advisable."

This resolution, it seems to me, goes somewhat further, in that the commission is composed of seven private citizens who are in no respect responsible to the people, as are Members of the Senate and the House, to carry out the wishes of their constituents.

The fact of the matter, in my opinion, is that this is a serious reflection upon the House Committee on Veterans Affairs, which has been considering this very subject matter for a period of 25 years, and which is composed of members who are skilled in questions of veterans' legislation; and similarly, in the Senate, the Finance Committee, and now, under the Reorganization Act, also by the Labor and Welfare Committee.

The public law of June 20, 1932, which I have referred to above was followed by the iniquitous Economy Act of March 20, 1933, Public Law 2, Seventy-third Congress, provisions of which were repealed by Congress over Presidential veto.

Section 701 of Public Law 212 required that the report be submitted not later than the 1st of January 1933. Senate Joint Resolution 141 requires that the report shall be submitted on or before February 1, 1948, again a period of time during which it would be absolutely impossible to make a fair and impartial study of existing laws and those bills presently pending before the Congress calling for new or amendatory legislation.

On a number of occasions bills and resolutions have been introduced which have been the cause of the utmost disturbance, both mentally and physically, to our disabled men, the wards of the Government. Fourteen million World War II veterans and their dependents, in addition to the veterans of World War I, other wars, and the Regular Establishment, and their dependents, would be directly or indirectly affected—nearly 45 percent of the population of the country.

Speaking as national commander of the American Legion, I regret that legislation of this character has been introduced during this session, and I sincerely hope that it will be rejected by the Congress.

Very truly yours,
PAUL H. GRIFFITH,
National Commander.

Crime and Graft Plague New Philippine Republic

EXTENSION OF REMARKS
OF
HON. GEORGE H. BENDER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 8, 1947

Mr. BENDER. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include herewith an

article by Mr. Ralph Donaldson of the Cleveland Plain Dealer:

CRIME AND GRAFT PLAGUE NEW PHILIPPINE REPUBLIC

Lawlessness and graft are two major problems which President Manuel Roxas of the Philippine Republic is attempting to solve. Lawlessness in particular is an aftermath of the war and the occupation of the Philippines by the Japanese.

Large quantities of arms and ammunition were distributed to Philippine guerrillas, who were encouraged to ambush and kill Japanese soldiers and to steal their supplies. Apparently this pastime became habit forming, as far as some Filipinos are concerned.

Some indication of the number of Filipinos who considered themselves to be guerrilla fighters is shown by the fact that approximately 1,000,000 claims have been filed with American Army authorities for compensation based on guerrilla activities during the war.

All these claims are being investigated. Probably two-thirds will be disallowed because of lack of proof, or because the alleged guerrilla activities were not carried out by regularly organized troops. Those whose claims are proved, however, will be given back pay at the same rate of compensation for members of the Philippine Army.

ARMS COME EASILY

In addition to the weapons of the guerrillas, large quantities of arms and ammunition fell into the hands of other Filipinos. The stuff was lying around and they simply helped themselves. The natural result is a high incidence of crime in Manila and other cities.

In recent speeches and public pronouncements President Roxas has repeatedly stressed the problem of law enforcement. He has insisted that persons not authorized to have arms must surrender them and that graft among minor Filipino officials must be suppressed.

Rigid measures have been taken by the American Army authorities to halt thefts of army property from the huge stocks of surpluses accumulated in the Philippines to support the anticipated invasion of Japan. Although a great deal of this material has been sold or turned over to the Philippine Government, there are still vast stores to be disposed of, quantities of which are rapidly deteriorating, due to the climate.

MANY JEEPS STOLEN

But in spite of great precautions American Army property still disappears and jeeps are still being stolen at the rate of nearly one a day. Since thousands of jeeps were sold to Filipinos and much of the public transportation in Manila is provided by privately operated "jeepneys," it is virtually impossible to detect and recover a stolen army jeep, once a few alterations have been made.

One story going the rounds in Manila is that a couple of American military policemen set a trap for jeep thieves, parking a vehicle equipped with apparatus to sound an alarm if it were tampered with. They watched for 3 hours, but nothing happened. But when they went to get their own jeep, which had been parked a short distance away, it had been stolen.

There is also the case of the gasoline pipe line through which fuel was pumped from Manila Bay to Clark Field, 60 miles north. But only half the gas which went into the pipe line ever reached its destination. So it was decided to discontinue use of the pipe line and transport the gasoline by truck.

EXTENT OF THEFTS REVEALED

One American officer suggested that a large quantity of sugar be pumped into the pipe line, which would gum up the motors in which it was used, and thus punish the thieves who were tapping the pipe line. But security officers vetoed this suggestion, on the ground that it would be necessary to triple the guards around the warehouses in order to prevent thefts of motors and parts to replace those which would be ruined by the sugared gasoline.

Instead of this stratagem, the line was pumped full of water, in order to expel the gasoline and avert the possibility of explosions. On the day this was done, observers reported that more than half of the civilian motor transport in southern Luzon was stalled in midafternoon.

However, many Filipinos have the philosophy that it is perfectly all right to help themselves to government property. This is based on the theory that government property belongs to the people anyhow and they are merely borrowing from themselves.

GRAFT IS OLD CUSTOM

Grafting by public officials has been prevalent in the Far East for thousands of years. So it will take some time before official corruption is regarded with the same disfavor that it is in the United States. Nevertheless, the Roxas administration is doing everything possible to establish high standards of honesty and efficiency in the administrative departments.

In addition to these troubles, the new Republic has an armed rebellion on its hands, the center of which is only 100 miles from Manila. This rebellion is being carried on by the Hukbalahaps, or Huks, a group of people who originally banded together to secure land reforms, but who have been joined since the war by bandits and outlaws.

President Roxas offered the Huks all the land reforms they had demanded. His program, in fact, is more extensive than their original demands, but the Huks refused to end their rebellion. They were more interested in fighting than in reform. So the Philippine constabulary has gone out to hunt them down in their mountain fastnesses.

AMERICAN FREEDOMS PREVAIL

In spite of these troubles of a growing nation, including a recent attempt to assassinate Roxas, Filipinos enjoy the same individual freedoms that Americans have. Freedom of the press, in fact, is sometimes carried to the point of irresponsibility. But no attempt is made to suppress the dissemination of news, no matter how inaccurate or garbled, or how critical of the government it may be.

When all is said and done, it is probable that lawlessness and graft are no more prevalent in the Philippines than they were in the early days of the American Republic.

Moreover, there are more than 7,000 islands in the Philippine Archipelago. Much of the territory is unsettled and some has never even been explored. In many respects, the problems of the new Republic are similar to those of America's wild west frontier days.

Statement of R. N. Buck Made Before the President's Special Board of Inquiry on Air Safety

EXTENSION OF REMARKS

OF

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 11, 1947

Mr. GATHINGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by R. N. Buck made before the President's Special Board of Inquiry on Air Safety:

In 1940 the CAA pointed out, and wisely so, that the true test of the Transport Category would be in the experience gained through its use. As air-line pilots, we feel that enough experience has been gained to enable us to judge the safeness of the Transport Category. Unfortunately this experience has shown that safety has not been accomplished as it could be.

It has always been unfortunate that the pilot, as he flies day in and day out, cannot have each take-off and landing accurately measured so as to be able to present actual figures to engineers and scientific nonflying men who are prone to cast looks of doubt upon the air-line pilots' observations. Or perhaps it is unfortunate that the scientific men and the engineers cannot ride along with the pilots through some of the more harrowing take-offs.

There is not an air-line pilot flying who has not skimmed out over trees or houses or some other obstruction, with a minimum of speed and a sensation that only his wishing and prayer are keeping him above the surrounding hazards. The thought of an engine failing at this critical point gives him a cold chill. And yet this Category we operate under says you can lose an engine and be safe. It is a false belief indeed.

It seems, on close study, that there has been a misinterpretation of the use of the Transport Category as the air-line pilot understands it. It certainly proves out in practice that one of the misinterpretations is temperature! That temperature has not been included as a factor in calculating take-off weight is astounding. We, gentlemen, deal in air. It is our medium; to deal with it properly, we must consider all the things which influence it. The most primary text books tell how air which is hot is less dense than air which is cold. The less dense air is the more difficult it is for an aircraft to lift itself, climb and carry a load. This was very impressively demonstrated recently when it was pointed out that for a C–54 aircraft, each degree of temperature above standard gives the effect of adding 250 pounds of weight. Visualize, then, a pilot taking off with a gross weight of 60,000 pounds, at sea level, with a temperature of 85 degrees. This would give him, in effect, an added load of 6,500 pounds. Or, in a more graphic sense, the airplane might have 50 passengers aboard, but this added temperature would be the same as adding 38 more passengers to the C–54, making a total of 88 passengers. Quite a load for a C–54.

Now the CAA recognizes altitude as a factor; they talk about the sea-level equivalent. This means, simply, that they figure a certain runway on an airport that is above sea level, as being shorter, in effect, because of its altitude, than the actual measured length. So that a runway which actually measures 4,000 feet on a field that is 3,000 feet above sea level, has a shorter effective length than its measured 4,000 feet. This is a step in the right direction. All flying people know that at high altitude an airplane doesn't fly as well as it does down low. In this light, let's look at temperature again. What does warm air do? As everyone knows, it raises the density altitude. So that a sea-level field from which a pilot is about to take off, with the air temperature 85 degrees, isn't really at sea level at all; no, the field has been raised so that it is now at approximately 1,700 feet above sea level. It can be seen that temperature and altitude have the same affect. Therefore, if altitude is considered, temperature must certainly be also. And there are many cases wherein altitude and temperature both affect the flying of an airplane.

Recently, in going through a Constellation and DC–4 manual, it was interesting to note that in all the landing and take-off requirement charts for these airplanes, there never was a mention of temperature as a factor influencing take-off or landing distances. As an aside, but still very important

to the total problem, have you gentlemen studied the charts presented in the pilots' manuals concerning modern aircraft? First of all the charts differ in construction for different type airplanes, and in most cases the explanation of the chart's use is either not made at all or else it is written so poorly that it is most difficult for anyone to understand.

In considering temperature, I have never heard anyone talk about the reported temperature compared with the actual temperature found out on the runway. The temperature reported on the weather report and placed upon the teletype sequences is temperature taken from a thermometer sheltered in the little-white-house-on-stilts-like structure we see at airports. This thermometer is in the shade. Now, what is the actual temperature out on the runway? What is the actual temperature the airplane has to deal with? Well, it is from 10 to 20 degrees more than the reported temperature. Let's not forget that when we talk about runway length, and especially 4,000-foot ones.

Now let us look at wind. If we could constantly count on a steady, known wind, it might be satisfactory to use as a weight-increase factor. But, unfortunately, we can't count on its steadiness, or the accuracy of its velocity.

First, let us consider how wind is measured. Generally, the anemometer cups are on top of the airport administration building. At this level the wind is generally stronger than it is down on the ground. But the airplane is taking off from the ground level. The pilot, however, is interested in the wind on or close to the surface. Any pilot can tell you of experiences wherein he was given a strong wind velocity, then this information led that pilot into believing it was best to use a short runway into the wind. The pilot can further tell you how he almost overshot the runway because when he got close to the ground, ready to land, there wasn't the strong wind, and he landed much faster, in ground speed, than he had anticipated from the wind information. On the same take-off and landing charts mentioned previously and which are found in the DC-4 manual, it actually mentions that the wind, considered in the charts, is measured 6 feet above the surface of the runway; a far distance from the anemometer on top of the administration building.

When you consider that the airplane's load is computed well ahead of the flight from a teletype sequence report of the wind velocity taken from the top of some building, it becomes apparent that the accuracy of wind information, in a practical operational sense, is poor enough not to warrant its use.

To add complication to the use of wind, let us consider the fickleness of its remaining static long enough to compute an airplane's load, load it, start it, get out to the end of the runway, read the check list, run up the engines, and take off. Looking at the official records of the United States Weather Bureau, we find that wind changes in both velocity and direction occur with rapidity. For example, in one case at 1736 hours the wind was south 20—3 minutes later at 1739 it was west-northwest 7. The type recorder the Weather Bureau uses does not get down to the actual moment the shift occurred, but it occurred quickly—somewhere less than 3 minutes, perhaps 10 seconds. Visualize the pilot taking off to the south with a load computed on the basis of a south wind and 20 miles an hour and then actually finding a cross-tail wind of 9 miles an hour. (This was at Washington, D. C., January 7, 1946.) Going through the Weather Bureau records, we find many cases which clearly show that wind is a variable and many times, unpredictable factor. With such a quick and vacillating nature wind should most certainly not be counted upon to allow an increase in airplane weight if we are to be sincere about safety.

In the questions we are considering here, the exception which allows certain factors to be considered in international operation seems strange, indeed. An airplane is not aware of the country it is flying from. Its wings and engines know no difference between foreign air and air of the United States. If a safety rule applies within this country, it should apply anywhere.

Arguments may be brought forth showing the constantness of certain winds. I wish to doubt those arguments. There is nothing in the sea of air that remains static. One might think of the steadiness of trade winds, for example, but they vary in velocity according to the hour of day, and many times they vary in direction. I am reminded of a narrow strip on the island of Cozumel, off the coast of Yucatan. It was my lot to operate from that strip back in 1933. I remember that it was necessary to do all our flying before noon while the wind was down the runway, because during the afternoon the wind shifted and was quite brisk across the runway. Since there was no other runway, flight in the afternoon required a tricky cross-wind landing; that wind was not constant.

I wish to point out the conditions under which tests are made when an aircraft obtains its license. These tests are made after the aircraft has been cleaned up and put in the most perfect operating condition. Factory pilots who have practiced with the airplane are used. The airplane is flown as near its maximum performance as is humanly possible to do so.

In a similar vein, when we talk of runways, I believe most of us visualize a sunny day, dry, well-surfaced runway with a steady and perhaps exhilarating breeze blowing down its length.

Now, let us look at what the pilot may encounter. He is operating out of LaGuardia. He reports to duty an hour before departure. He studies his weather, determines his route altitudes, alternates at his terminating point, and many other items, including the amount of gas needed, and the runway to be used, which will depend on the wind direction and velocity. He advises management of these decisions.

From these decisions, the load is figured for this runway taking into account the gasoline required. The captain does not enter into or have a chance to check these figures as they are computed by ground personnel using the transport category as a basis.

The captain boards his plane and a few seconds before departure he receives his load slip. Due to other duties his only check is to have the first officer call out the load allowable and load abroad. So far he has been at the mercy and accuracy of all the variables that he has been told were accounted for.

At the end of the previously selected runway, let us assume runway 18, he further checks the mechanics of his aircraft, and receives clearance from the tower. What is the wind blowing down the runway? He doesn't know; the only information comes from the tower in a different location. There is no indicator on any runway. Does he have a diminished wind caused by a wind shift? He doesn't know; yet he has been loaded an extra 320 pounds for each 2 miles per hour of wind. Let us assume he has a wind shift so that the wind is zero not to mention a tail wind on some portion of the runway. He would be overloaded at least 3,200 pounds. In case there is a 10-foot gradient that wasn't accounted for, you could figure another 2,500 pounds. If the temperature at the time was 80°, he would have another 5,250 pounds. Assume there was a mistake in figuring the load for that runway in the original computation of another 3,000 pounds.

This all totals up to 13,950 pounds, or the same as placing 131 passengers in a 50-passenger airplane. If he tried to get the same performance that the airplane was designed to meet and found that he couldn't get off this short runway and tried to stop, he would have a minimum of 1,395 feet of runway lacking in which to stop. The pilots are convinced that just such a condition could transpire.

You will note that I have not included many other variables not accounted for in the transport category, namely, rain effect, loss of acceleration due to climbing up hill, engine efficiency due to high service hours, condition of propellers and plane due to nicks, dents, dirt, added passenger weight, as all passengers are figured at 170 regardless of extra wraps and belongings carried into the plane, added drag caused by a cross wind, and other variables too numerous to mention.

Those are things that happen; those are the things the air-line pilot faces. He needs adequate margins to help when all the variables that can cause trouble begin to heap one upon the other during a take-off that was supposed to be routine, but instead turned into a desperate experience. Air-line pilots do not only fly in perfect airplanes, on nice sunny days. They fly in all conditions, with good airplanes, with old airplanes, with badly loaded airplanes. We cannot cut margins close; we must have something to fall back on when things get tough. Only a flying man can appreciate these things.

Considering all factors and remembering that even after the recommendation of you learned gentlemen, temperature is still not considered sufficiently, it is not desirable to change (a) of item 5 in your report to the President. Wind is too variable and unpredictable. Temperature, while not in this particular question, is still a factor which tends to make take-offs marginal. Therefore, on short runways of 4,000 feet or less, figured at the sea-level equivalent, wind component should not be used to increase weight. It is suggested that an addition be made to (a) which would state that full temperature correction be applied to these runways.

2. The exception for international operation be taken out and no exceptions allowed.

3. Part (b) of the interim report should be so worded as to allow the pilot to use his discretion entirely in choosing a runway for landing without any set figures being placed upon any runway.

I am not here to blame any airplane, quite the contrary, these are good airplanes we are speaking of. I am not here to choose sides and argue with anyone. The only adversary here is danger. The pilots believe that one way to attack danger is to use these airplanes wisely. We are not doing this or being conscientious about safety when we attempt to make them fit runways that are too small, with weights that are too large, and against variable factors that are too potent and unstable to count on.

The unfortunate accident at LaGuardia Field on runway 18 demonstrates how the compounding of the factors talked about here can bring about a disaster.

Displaced-Person Legislation

EXTENSION OF REMARKS

OF

HON. JOHN J. ROONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, July 11, 1947

Mr. ROONEY. Mr. Speaker, upon reading the Washington Evening Star of yesterday, July 10, 1947, I found the following letter addressed to the editor by

my good friend and fellow Brooklynite, Mr. Ignatius Nurkiewicz on the subject of the Stratton bill to admit displaced persons into the United States. Under the permission granted me by the House, I include Mr. Nurkiewicz' letter which reads as follows:

SUPPORTS DP LEGISLATION

To the EDITOR OF THE STAR:

Truly democratic people will give the Stratton-MacKinnon bills the active support they deserve, for their opposition only furthers Soviet aggression.

During my recent tour of European DP camps, I learned that these people wished to emigrate to countries in Europe and to South America, but UNRRA sought to coerce them to return to a Soviet-dominated Poland. If permitted to go, some 250,000 to 300,000 Poles might be easily absorbed in Europe and South America, as these countries need them to replace depleted labor ranks and want them.

This eagerness for DP's repudiates the misstatement that the United States is asked to bear the whole burden of responsibility for former slave laborers and soldiers. American resources and opportunities would allow for the admission of 400,000 Polish DP's without disrupting our economy, for more than 200,000 are farmers and the balance trained in trades and professions.

The DP's are victims not only of the war itself but of postwar agreements as well. The war forced them into concentration camps or slave labor. But the peacetime Yalta agreement allowed a Russian sphere of influence in eastern Europe and attempts to oppose the expanding Communist regimes are ruthlessly squashed. The DP's refuse to submit to Communist regimes; they know that slave-labor camps are the fate of those who oppose dictatorial governments.

The homeless Polish DP's were left exposed, it seems to me, in the path of greedy Communist expansion rather than cherished as our democratic allies.

The speedy enactment of the Stratton-MacKinnon bills would legalize the immigration into the United States of some 400,000 Polish displaced persons, including some 20,000 soldiers who fought so valiantly on the side of the Allies and became prisoners of war when Poland was first invaded.

IGNATIUS NURKIEWICZ,
National Vice President of the Polish-American Congress, National Chairman of the Polish Displaced Persons' Committee for the Congress.
BROOKLYN, N. Y.

Radio Address to Constituents

EXTENSION OF REMARKS
OF
HON. EDWIN ARTHUR HALL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, July 11, 1947

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following radio address which I delivered over Station WHBF:

Dear friends of the Triple Cities and my congressional district, for many years, I have made it a rule to see that every family in my district which is blessed with the arrival of a new baby receives a book entitled "Infant Care."

This is a publication of the Children's Bureau of the United States Department of Labor. According to well-informed baby doctors at home, I am told it is the finest book of its kind available.

However, the jump in our birth rate in the Thirty-seventh Congressional District is so tremendous since 1939 that my office is continually running short of these books. We find it necessary to beg, borrow, and grab enough to take care of all the new parents.

I can remember when we started in, there was always a sufficient supply from the quota to which each Congressman is entitled, or 125 baby books per month.

Now, however, my secretary informs me the average monthly birth rate of our area has mounted to from four to six hundred infants, and that means we just can't get along on the present allotment. In order to make out, we have to do a lot of trading.

But to you parents who have not received one of these infant-care books, upon the birth of your son or daughter, I urge you to let me know. I will be happy to send you one immediately and I feel sure it will prove most helpful to you in caring for the new child. Success to you in this wonderful venture!

A few days ago, the House brought out another tax-reduction bill, not too different from the other excepting that it does not take effect until 1948.

I told you before I was not satisfied, any more than I am now, with the exemptions in this measure. I think the big boys get too much of a break. I think the little fellow receives too little consideration and relief. I should have liked to see the exemptions far greater than they were in this bill. Small incomes should be spared so that heads of families will not have to shell out their dollars for heavy taxes when they ought to go for food, shelter, and clothes.

But we were compelled to take what they gave us. I had to vote for tax reduction because I promised you folks I would and I believe that campaign pledges ought not to be broken. Maybe some people consider preelection statements just oratory, but I assure you I don't.

So the tax bill has been passed, and taxes will probably be reduced next year ever so slightly. Better luck next time!

Speaking of taxes, I was told by an expert on the subject recently that if we continue the flow of billions out of this country for one reason or another in the future we will soon be saddled with a tax burden of over half our incomes.

"That's quite a figure," I answered. "It's hard to believe! Besides, Congress never would assess each American 50 percent of his or her income."

The expert thereupon told me that whether or not Congress acted upon the question, the economy of the country would.

"Don't think for a minute we can keep on printing up crisp new dollars and get away with it," he continued. "We'll pay the fiddler either by inflation or bankruptcy, or both."

Well, I agree with him to this extent. We can't do what Hitler did in Germany. We can't turn over our printing presses to exploiters and chiselers to print up money for their own amusement and their own uses.

I am for American relief to foreign countries as I have many times stated. I want to see the people of Europe on their feet. But I want to know how they stand toward America.

I'm through voting any more funds or loans to foreign countries until I know for sure whether they're friend or enemy. I want to call them friends if I can. But why hand over the money that ought to be going to the veteran, to the aged, to the unfortunate right here in our own country? Why hand it over to somebody you know is against America?

I want to have plenty of accurate information at hand the next time I'm called upon to vote for a huge foreign loan. I'll be fair but I refuse to sell America down the river to please a few.

Thank you.

Rural Electrification Week in Texas

EXTENSION OF REMARKS
OF
HON. W. R. POAGE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 11, 1947

Mr. POAGE. Mr. Speaker, the Governor of the State of Texas has proclaimed next week, July 13–19, as Rural Electrification Week in Texas and has called upon all citizens of the State to observe the splendid progress that has been made in electrifying rural areas in that State since the establishment of the Rural Electrification Administration 12 years ago. I think that the people of all America might well give heed to this program that has meant so much for farm people.

The great job of electrifying the rural areas of America is not yet complete, but the farmer-owned REA-financed cooperatives have done far more than the private power companies said was possible. Not only have they proved that rural service is practical and profitable, but they have proved that that service can be just as good as city service and that it can be just as cheap. In most sections of the country the power companies have ceased to fight the efforts of American farmers to provide electric service for rural areas, but they still fight the efforts of these farmers to reduce the price of electrical service. We have, however, gone far enough to make it perfectly clear that wherever we have competition, rate reductions are forthcoming.

If this Congress will but give this program the same support during the next 12 years that it has given it during the past 12 years, I am sure that it will be possible to make electrical service available to every home in America and at reasonable rates.

Mr. Speaker, I insert in the RECORD as a part of my remarks a proclamation by Hon. Beauford H. Jester, Governor of the State of Texas:

PROCLAMATION BY THE GOVERNOR OF THE STATE OF TEXAS

To All to Whom These Presents Shall Come:

Whereas the percentage of farm homes in Texas receiving central station electric service has increased from 2.3 percent to 55 percent during the past 12 years through the stimulation of the Rural Electrification Administration (REA) program; and

Whereas more than 160,000 rural families of Texas now enjoy the benefits of electric lights and power through cooperatives which they themselves own and operate; and

Whereas each of the 75 rural electric cooperatives in Texas is a free and independent, tax-paying business enterprise, chartered under the laws of the State of Texas, and owned and controlled by the farmers and ranchers who receive service along its lines; and

Whereas the money to build rural power lines is loaned, not given, to the cooperatives

by the Federal Government, and is being repaid with interest on or ahead of schedule, thus representing no cost to the taxpayers; and

Whereas no electric cooperative in Texas is delinquent in the repayments of its loans to the Government at this time, while more than a million dollars has been repaid in advance of date due; and

Whereas the availability of electricity has brought about a wholesome revolution in farm methods, production and living standards; has lightened the drudgery of farm tasks and increased farm output and profits; has been instrumental in keeping young people on the land, and has promoted the general welfare not only of rural people, but of urban residents as well whose prosperity and well-being depends upon a sound and prosperous agriculture; and

Whereas the rural electric cooperatives of Texas are holding their annual State-wide meeting in Austin on July 18–19, 1947, at which time several hundred cooperative leaders will gather here to make plans for extending electric service at the earliest practicable date to the approximately 180,000 rural homes in Texas which do not yet have such service;

Now, therefore, I, Beauford H. Jester, Governor of Texas, do hereby proclaim the week of July 13 to 19, inclusive, as Rural Electrification Week in Texas, and call upon all citizens of the State to observe during this week the splendid progress that has been made in electrifying rural areas during the past 12 years, and to resolve anew that the program shall continue to expand until every farm family in the State shall enjoy the blessings of electric lights and power.

In testimony whereof I have hereunto signed my name officially and caused the seal of State to be affixed hereto at Austin, this the 7th day of July A. D. 1947.

BEAUFORD H. JESTER,
Governor of Texas.

By the Governor:

PAUL H. BROWN,
Secretary of State.

Every Member of Congress Should Read the Great Globe Itself, by William C. Bullitt, Former United States Ambassador to Russia

---

EXTENSION OF REMARKS
OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 11, 1947

Mr. McDONOUGH. Mr. Speaker, the prophetic advice, the comprehensive views, and the clear understanding of former United States Ambassador W. C. Bullitt of the future plans and foreign policy of Russia should be a guide, a warning, and an indication to the United States and to the rest of the world of the plans, purposes, and designs that Russia had as far back as 1936 on acquiring and annexing to her sphere of influence all of the countries in Europe which she could influence or dominate with her communistic philosophies.

Mr. Bullitt saw the possibility of Russia's invasion of Turkey long before action was taken by the Congress to prevent that invasion. I quote from page 176 of the Great Globe Itself:

For example, Stalin may order his troops to attack Turkey, relying on war weariness to prevent Great Britain from honoring her agreement to go to war in support of Turkey if Turkey should be attacked, and relying on indifference to prevent the United States from giving aid to Turkey and Great Britain. If, however, we should leave no doubt in Stalin's mind that we would not permit further aggressions by the Soviet Union to succeed, there would be no armed attack by the Soviet Union on Turkey or any other of its neighbors. We can prevent aggressions by the Soviet Union during the period in which we have the atomic bomb and the Soviet Union does not have the atomic bomb, by maintaining the superiority of our Air Force, and by warning the Soviet Union in the politest manner—and meaning it—that new Soviet aggressions will be met by American action.

The communistic imperialism of Russia was also envisioned by Mr. Bullitt when he stated the following. I quote from page 184:

No official of the American Government is justified in defending his failure to act in accord with the vital interests of the American people by the excuse that American public opinion is not yet ready to face the fact of Soviet imperialism, unless he has done his utmost to give the facts with regard to the acts and aims of the Soviet Government to his fellow citizens. Those facts have been coming into our Departments of State, War, and Navy for many years, and still come in every day. There is no reason why they cannot be made available by the White House and the Department of State to the representatives of the American press. The facts speak for themselves. Our Government would not have to issue one word of comment on the facts to make the people of the United States understand that the Soviet Union is not a peace-loving democracy but a predatory totalitarian tyranny which is striving to conquer the earth for Communist dictatorship. Given the facts, the American people would recognize instantly that Soviet imperialism threatens not only peace and liberty in Europe and Asia but also their lives in the United States, and would demand action now to protect their vital interests.

Mr. Bullitt also was conscious of the weakness of the United Nations because of the veto power held by Russia in preventing action of which Russia did not approve because of the possibility that such action would mitigate against her determined foreign policy of communistic imperialism. I quote from pages 185, 186, and 188 of his book:

We know well that the UN under its present constitution has no power to stop wars which involve the interests of any one of the permanent members of its Security Council—the Soviet Union, Great Britain, France, China, and the United States—or of any state supported by one of these great powers, because each permanent member of the Security Council has an absolute veto on any action by the UN.

The Soviet Government was careful to have articles 5 and 6 of chapter 2 of the Charter of the United Nations so drawn that it cannot be expelled from the UN, as it was expelled from the League of Nations in 1940 for its attack on Finland. And so long as the Soviet Union remains a permanent member of the Security Council of the UN, it will have an absolute veto on any official action by the UN. But the other members of the UN cannot sit by and let the Soviet Union swallow weaker nations without rendering the UN a contemptible corpse.

Another vitally important suggestion was made by Mr. Bullitt which actually is being put into practical operation at the present time by Secretary of State Marshall to organize the countries of central and eastern Europe against the advances of Russian communistic imperialism, and I quote from page 191:

The Soviet Union may continue its advance against Iran, or attack Turkey, or Iraq, or some other state, and may use its veto power to prevent action by the UN. We shall then be obliged to improvise action by the democracies to prevent the Soviet Union from carrying its aggression to a successful conclusion. We are the most powerful of nations, but we have neither enough wisdom nor intelligence nor will to carry by ourselves the entire load of preventing aggressions. We need like-minded associates ready to carry their fair share of the load.

The Soviet Union is on the attack. The democracies are in retreat, not because they are weaker than the Soviet Union—we ourselves are stronger—but because they have not clarified their thinking and unified their forces to oppose Soviet aggressions. The more democracies we can gather together to oppose Soviet aggressions—with force if necessary—the more certain we shall be that the Soviet Government will not dare to start new aggressions. Our Government should, therefore, immediately commence conversations with the other democracies of the world designed to insure their united action to prevent Soviet aggression, which are likely, or aggressions by any other power, which are unlikely.

The failure of the United States under the administration of President Roosevelt to come to some understanding with Russia when her very existence depended on her lend-lease aid is also reviewed by Mr. Bullitt in his book, and I quote from pages 192 and 193:

When the Soviet Union was dependent for its life of lend-lease aid, President Roosevelt, as a quid pro quo for lend-lease aid, could have obtained a written guaranty from Stalin that the western limits of the Soviet Union should be those of August 1939, and that the Soviet government would assent to the creation of a European federation. Prime Minister Churchill had often advocated the creation of a European League or Federation, and the President was repeatedly urged to join the Prime Minister in making a bargain of this sort with Stalin. President Roosevelt refused to take this action, not because he was opposed to the idea of a European federation, but because he was hoodwinked into the belief that it was unnecessary for him to obtain any promises from Stalin with regard to Europe, that Stalin had no desire to incorporate in the Soviet Union portions of Europe, or to control independent European states through Soviet puppet governments, and would cooperate with him fully in creating a world of liberty, democracy, and peace.

Few errors more disastrous have ever been made by a President of the United States, and those citizens of the United States who bamboozled the President into acting as if Stalin were a cross between Abraham Lincoln and Woodrow Wilson deserve a high place on an American roll of dishonor.

Our magnanimous gullibility in permitting the Communist Party to function in the United States when it is known to be a foreign arm of Russia to spread the communistic philosophy and the party line in the United States is also stated in the Great Globe Itself—and I quote from page 209:

We permit a branch of the Communist Party to function in the United States. The Soviet government will not permit branches of the Democratic or Republican or Socialist Parties to function in Moscow. We permit the Daily Worker and other Communist publications, whose policies are fixed by the

party line laid down in Moscow, to spread their views in the United States. The Soviet government does not permit any newspapers of any kind in the Soviet Union, except those it controls.

These are but a few of the pertinent paragraphs from The Great Globe Itself, written by W. C. Bullitt, former United States Ambassador to Russia, whose warning and advice has not been followed, or if they were followed, the action we had taken was too late to be of any benefit and as a result we find ourselves in a confused and complex situation insofar as our foreign relations with Russia and the other countries of the world are concerned.

Much of the diplomatic and political losses in world prestige and confusion could have been avoided if we had been as alert to the warning of Mr. Bullitt as we were to the warning of Paul Revere in 1776.

We in the United States must alert ourselves to the future dangers we are facing in order to preserve the liberties, the freedom and the individual dignity which we are guaranteed under our form of constitutional government.

The Labor Board

EXTENSION OF REMARKS
OF
HON. MARY T. NORTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, July 11, 1947

Mrs. NORTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Cincinnati Enquirer of June 26, 1947:

THE LABOR BOARD

Enforcement of the Taft-Hartley bill is not a pleasant assignment for the present members of the National Labor Relations Board. So far as they have expressed themselves publicly in weeks past, they were opposed to many of its provisions. They shared the President's view that it was undesirable. But as NLRB Chairman Paul Herzog said, the bill was merely proposed legislation one day, and the next day it was the law of the land.

That makes a difference, for the qualified representatives of the American people made it the law, and there is no more to be said. The task now is the fair and full enforcement of the law.

This is what Mr. Herzog and his colleagues propose to do, so long as they continue with the responsibility. Actually, their new assignment does not call for such a reversal of behavior as the ugly talk of some embittered labor leaders would suggest. The trend in the Labor Board for 2 years and more has been toward a more judicious interpretation of the Wagner Act, toward a policy of holding unions more closely to their responsibilities. The Taft-Hartley bill carries this somewhat farther.

It is an essential part of our American way of doing things to accept in good spirit any decision of the Congress, which is the primary source of public policy in the United States, just as it is our tradition to accept cheerfully the results of a popular election. The first reaction of the bulk of organized workers unquestionably is to accept the Taft-Hartley Act as unpalatable, perhaps, but as the considered judgment of Congress.

A few headstrong leaders have counseled defiance, and in a few unions there have been ugly repercussions. But organized workers in the main are just Americans like everybody else. They may turn to such political efforts as are open to them, in the hope of electing a different Congress that will revise the labor laws again. But meantime they will try to conform to the law, because that is what the overwhelming majority of Americans in all walks of life habitually do. The good example set by Mr. Herzog and others of the NLRB ought to help us through a difficult period of readjustment with a minimum of friction.

Bomb Theft

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, July 11, 1947

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Frank C. Waldrop from the Washington Times-Herald of July 10, 1947:

BOMB THEFT

(By Frank C. Waldrop)

Don't let anybody kid you. That news the New York Sun broke yesterday about the theft of atom-bomb secrets is a lot bigger than Senator BOURKE B. HICKENLOOPER admits.

For your information it originated with the Government, was checked through three high sources in the Government for accuracy, and was worked on by some of the most careful and serious-minded and responsible reporters in Washington before the first word appeared.

Furthermore, the Sun was warned in advance that HICKENLOOPER and the self-appointed master mind of atomic legislation, Senator BRIEN MCMAHON, Democrat, of Connecticut, would do their level best to knock the news down if it ever got out.

The Sun's Washington bureau and editors in New York were under no illusions that they would be congratulated by MCMAHON or HICKENLOOPER for making public what has been known on the inside of the Government for weeks.

All of the foregoing is just to help any interested American judge for himself the character of the performance that will now be put on by the Atomic Energy Commission of the United States, headed by David E. Lilienthal, and the Joint Congressional Committee on Atomic Energy, of which HICKENLOOPER is chairman and MCMAHON former chairman.

And Senator HICKENLOOPER may be interested to know that when the committee next meets there will be present two Members who have said that if they are not satisfied with the way things go they are going to take the floor of Congress and tell the facts as they know them.

For the New York Sun's news story of yesterday had nothing whatever to do with any souvenir-hunting GI's accidentally carrying off atomic information from the Los Alamos, N. Mex., laboratories.

It had to do specifically with Oak Ridge, Tenn., where a supposedly routine file search is now being carried on.

The search is not routine.

It is a desperate attempt to find out just how much has been carried off, when, and by whom.

It concerns something new that has happened in 1947 since David Lilienthal's Atomic Energy Commission took over the Manhattan project from the United States Army while the Communists and the pinks and the fellow travelers cheered.

It also concerns the survival of the United States.

Therefore, by any test the people of this country have a right to the real facts as to how efficiently and faithfully the Atomic Energy Commission and the President who appointed that Commission and the Senate which confirmed it in office, have guarded the Nation's security.

Before the present sessions of the joint congressional committee have ended there may well have started another investigation comparable to the series concerning Pearl Harbor.

It will depend upon how fully people outside Washington get to know the facts.

Here in the Capital politicians of both parties are committed to upholding the operations of the Atomic Energy Commission so fully that few even think about getting tough on their own.

The smear that was laid on Senator K. D. MCKELLAR, of Tennessee, during his opposition to Lilienthal's appointment as chairman of the AEC has not been forgotten.

When you come right down to it, the full development of what has started will really depend on how hard and faithfully the Washington press corps as a whole works to get at the truth and then works to put that truth on the public record of newspapers around the country.

And so just as a reminder to the press corps, maybe here it is appropriate to recall how the Canadian spy ring was broken back in 1945.

That spy ring, which reached into the United States and stole secrets of atomic energy while we were at war with Germany and Japan, worked for Russia.

That spy ring included Russian diplomats, a professor of Cambridge university in England, a member of the Canadian parliament, and assorted United States, British and Canadian Communists and stooges for Communists.

How was the story broken?

By a member of the Russian embassy staff, Igor Gouzenko.

Gouzenko quit his job because he was revolted by the Reds' behavior toward the nations that had saved Russia's neck from Hitler. He took with him unshakable proof of the facts and offered to give it all to a Canadian newspaper.

He had heard how newspapers over on this side of the world were free, independent and aggressively interested in facts.

But—and this is something for American newspapers to think about today—the Canadian paper told Gouzenko to go somewhere else and peddle his idiotic hooey. Too wild to be true. Impossible.

Only it was. And except for merest chance the Russians would have been able to kill Gouzenko off and get back the evidence. The chance was that a Canadian sergeant had sense enough to call a cop off the beat when the Russians raided Gouzenko's apartment.

The new atom story that broke here yesterday is not all told, yet. Nor will it be until the newspapers force it out.

The Trojan Horse

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 11, 1947

Mr. POULSON. Mr. Speaker, last week the Public Lands Committee, of which I am a member, passed out a resolution,

introduced by the chairman of that committee, requesting the Department of the Interior to investigate the economic feasibility and economic justification of diverting surplus waters from other basins to southern California and the Colorado River Basin and the practicability of exchanges of water.

I, as well as other committee members from adjoining States, protested this resolution, House Resolution 244, and I am now publicly disaffirming any connection therewith, and, in fact, I am opposing it.

Yes, we realize that water is very important to southern California, but we definitely want only that water which belongs to us and that water is in the lower Colorado River Basin.

Just why is such a resolution introduced at this time? Whether or not the author, not a resident of southern California, realizes it, it is timed at the very moment when there are two bills, S. 1175 and S. 483, being pushed in Congress, both of which would take more water from the Colorado River Basin than Arizona is entitled to. This would mean that southern California would naturally have to go to other water basins for their dire needs, would have to abandon their established water rights and abandon the works already constructed to utilize such rights.

Now, let us analyze this resolution. It states that the Secretary of the Interior, through the Bureau of Reclamation, is requested, under and by virtue of the authority conferred upon him by the Federal reclamation laws, to make such an investigation. This resolution was not necessary for the Secretary to do this job. He already had this authority. This resolution is for the sole purpose of exciting and arousing the peoples in these other basins threatened by the resolution.

It is true that it is only an investigatory job, but what it would accomplish if we were to sit idly by would be to combine the forces of such States as Oregon, Washington, Idaho, Wyoming, Montana, Colorado, and Nevada, against this supposedly water-grabbing southern California. These States would rally to the support of Arizona which actually is the State which is definitely and unequivocably attempting through legislation to obtain water far in excess of that which rightfully belongs to her.

At this very moment, the Senators from Arizona are trying to block a resolution requesting the Supreme Court to litigate this problem of water rights in the lower Colorado River Basin.

No, we from southern California are not going to be fooled by this type of psychological red herring. We want you people in the States of Oregon, Washington, Idaho, Wyoming, Montana, Colorado, and Nevada to know that we do not want your water and on the contrary, we pledge ourselves to help you in defending your rights.

All that we want is the water to which we are rightfully and justly entitled in the lower Colorado River Basin.

For that reason, we protest the purpose of House Resolution 244.

To substantiate that this represents the thinking of the leaders in southern California, I am also entering in the RECORD a copy of telegrams sent to Governor Wallgren of Washington, Governor Snell of Oregon, and Governor Robins of Idaho:

JULY 2, 1947.

GOV. MON C. WALLGREN,
Olympia, Wash.,
GOV. EARL SNELL,
Salem, Oreg.,
GOV. C. A. ROBINS,
Boise, Idaho:

Speaking for water users in southern California we desire most emphatically to assure the people of Washington, Oregon, and Idaho that our people do not endorse or support any proposal looking toward the possibility of importing into southern California water from the Columbia River or from any other source in your three States. Southern California communities do not seek or ask for any water rights on the Columbia River. We have our water rights on the Colorado River and we intend to maintain those rights and we intend to use the Colorado River water for which we have contracts and for which we are paying in full. Columbia River water for California, is a red herring being dragged across the way by interests outside southern California. These interests have the idea that such a red herring will divert the attention of Congress away from California's legitimate rights on the Colorado River. This red herring is being tenderly nurtured by those who seek to grab costly, infeasible Colorado River reclamation projects at the expense of United States taxpayers. Southern California people do not covet or seek the water of your northwest rivers but we do seek the support of your United States Senators and Representatives in opposition to Senate bills 1175 and 483. These bills seek to authorize projects for an unspecified quantity of Colorado River water to Arizona lands at an unspecified cost. We ask that passage of such legislation be deferred pending (1) a determination as to the amount of water which would be diverted from the Colorado River by each of the projects proposed to be authorized by Senate bills 1175 and 483, and whether under existing compacts, contracts, and the Mexican treaty, water for such projects is available, and (2) pending a determination binding upon the States of the lower basin of the Colorado River as to the amount of water from the Colorado River available to each State, and (3) pending a determination as to the possibility of repayment of the cost of the proposed projects to the Federal Treasury.

EVAN T. HEWES,
Chairman, Colorado River Board of California, and Chairman, Board of Directors, Imperial Irrigation District, El Centro, Calif.
PRESTON HOTCHKIS,
President, Colorado River Association, Los Angeles, Calif.

United States Forced To Guard Far East Against Communism

EXTENSION OF REMARKS
OF
HON. GEORGE H. BENDER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 8, 1947

Mr. BENDER. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include herewith an article by Mr. Ralph Donaldson, of the Cleveland Plain Dealer:

UNITED STATES FORCED TO GUARD FAR EAST AGAINST COMMUNISM

Now that the United States has established the western frontiers of democracy in Japan, in southern Korea, and in the Philippines, we have an obligation to see that those frontiers are protected, not only from armed attack, but also from the invasion of Communist ideologies.

It will be to our advantage to do this, first, so that the people of the Far East will be able to experience the benefits of free enterprise and representative government, as compared with the tyrannies of totalitarianism, and secondly, to protect our own interests in a part of the world which has vast trade possibilities.

Under Gen. Douglas MacArthur we have made amazing progress in the conversion of Japan from a feudal empire, dominated by military dictatorship, into a democratic state which recognizes the rights of individuals and which has adopted a form of government which is subject to the will of the people.

In Korea, we have had only limited success, due to Russian obstructionism, Communist agitation, and the division of the country into Russian and American occupation zones. But the people of southern Korea are being taught how to govern themselves and the seeds of democracy are being planted in fertile ground.

MAC ARTHUR SEES IT THROUGH

The Philippine Republic is a going concern, and it has bright possibilities for the future, all within the framework of the free-enterprise system, based on the development of its natural resources and its growth as a trading center in the Far East.

No one can foretell how long the military occupation of Japan will continue. General MacArthur believes that military occupation is no longer necessary and that the next step in dealing with Japan should be the negotiation of a peace treaty and the withdrawal of our armed forces. He does not plan to return to the United States until that is done.

But it may take a long time to conclude this phase of the occupation. It depends largely on how many obstacles Russia puts in the way of its accomplishment.

LONG GUIDANCE NECESSARY

The Japanese will need guidance in the ways of democracy for a number of years, probably until the generation now attending school grows to adulthood and provides the leadership of the future. That guidance could safely be provided by a civilian occupation, because no force is needed, even now, to compel the Japanese to carry out the reforms we have instituted.

However, if the world situation remains as uncertain as it is today, Japan may need protection from Communist aggression, for she has no army, no navy, no air force, and only 60,000 unarmed policemen to maintain law and order.

The United States has the primary responsibility of providing Japan with whatever protection may be needed, for when we undertook to bring about a political, social, and economic revolution in Japan, so that Japan never again would be a menace to world security, the 78,000,000 people of Japan became wards of the United States.

We have liberated them from the bondage of the war lords; we cannot in good conscience permit them to become the slaves of commissars.

UN PROOF AWAITED

Thus it may be many years before we can safely withdraw our military forces from Japan and dissolve our guardianship over the Japanese people. It would be foolhardy to do so, at least until the United Nations has demonstrated its ability to halt aggression and to protect nations which are defenseless.

But while we are protecting Japan from the invasion of Communist ideologies from the outside, there is a grave danger that these same ideologies will gain a foothold inside Japan, just as they have in the United States, through Communist domination of some labor unions.

Our policies in Japan, as formulated by the Far Eastern Commission, which sits in the United States, give the Japanese Communists a free rein in the politics and the labor movement of the country. They are aggressively taking advantage of this opportunity.

DEMOCRACY WELL STARTED

We have planted the seeds of democracy in Japan and have given the Japanese the tools with which to till the soil. But until they learn how to use them effectively, there is a serious danger that the Communists, with our permission, if you please, will undermine all our efforts.

The policies of the Far Eastern Commission need to be reexamined. Is is senseless to encourage strikes and to open the door to Communist agitation in Japan at a time when we are trying to stimulate production in an effort to make Japan self-supporting.

This policy simply plays into the hands of the Communists. It will prolong the period during which American taxpayers must contribute to the Japanese food bill and lead to agitation for the withdrawal of American support from Japan. If this should come about, the Japanese would be left to the mercy of the Communists, and that is exactly what the Communists want.

ISLAND AIR BASES VITAL

As long as we have commercial and political interests in the Far East we must retain control of whatever islands we need in the Pacific to supply our forces, to facilitate naval operations, and to maintain air communications between the United States and Asia.

Kwajelein and Midway are indispensable as refueling points on the airways between the Hawaiian Islands and Guam and the Hawaiian Islands and the Philippines. Guam is one of our principal naval and air bases in Far Eastern waters. Saipan, Tinian, and Iwo Jima are stepping stones on the air route from Guam to Japan, while Okinawa is a vital link between Japan and our bases in the Philippines.

MILITARY RULE PREFERABLE

There is controversy now as to whether these and other islands in the Pacific which we acquired as a result of the war should be placed under the jurisdiction of the Navy or the Department of the Interior. It seems peculiar that the Interior Department would want to extend its power to regions so far removed from the boundaries of the United States.

As long as these islands are essential to the defense of the United States, they should be placed under the jurisdiction of the defense agencies. We should not forget the experience prior to Pearl Harbor when the installation of radar equipment on the island of Oahu was delayed by a controversy between the Interior Department and the Army over its proposed location.

PACIFIC FLIGHT SCHEDULE

For those who are contemplating a flight to Tokyo—and there are many constantly en route nowadays—a log of our trip between California and Japan may be interesting:

Left Fairfield Air Base, California, 2:35 p. m. Pacific time, Wednesday, January 22. Arrived Hickman Field, Honolulu, 11:55 p. m. elapsed time, 11 hours, 50 minutes. (Two and a half hour time differential.)

Left Hickman Field 5 p. m. Thursday, January 23. Arrived Kwajalein 2:25 a. m. Saturday, January 25. Elapsed time, 10 hours, 55 minutes. (One and a half hour time differential, and 1 day lost crossing international date line.)

Left Kwajalein 4:05 a. m. Saturday, January 25. Arrived Harmon Field, Guam, 9:20 a. m. Elapsed time, 7 hours, 15 minutes. (Two-hour time differential.)

Left Guam 8:15 a. m. Sunday, January 26. Arrived Tokyo 4 p. m. Elapsed time, 8 hours, 45 minutes. (One hour time differential.)

Thus the actual flying time from California to Japan was 38 hours and 45 minutes. The flying time from Washington, D. C., to Fairfield Air Base, Calif., was 15 hours and 55 minutes, with stops at Omaha and Sacramento, making the total flying time from Washington to Tokyo, 54 hours and 40 minutes.

Air Safety

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 11, 1947

Mr. GATHINGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

JULY 1, 1947.

Hon. JAMES M. LANDIS,
Chairman, Special Board of Inquiry on Air Safety, Washington, D. C.

DEAR MR. CHAIRMAN: Reference is made to the Board's discussion yesterday on item 3 of the agenda "Approach and Landing."

I definitely share the concern expressed by the other members of the Board on the matter of drastic cuts being made in appropriations for landing aids.

Believing that our recommendations to the President on present needs should stress items whereby we can buy the greatest amount of safety for every dollar appropriated, I would like to reemphasize the remarks made, in regard to the relative importance of the various aids, by Mr. Wood and myself.

We consider the installation of adequate approach and runway lighting the No. 1 item which will make the greatest contribution to safety of all the aids presently available.

We recommend that the 97 ILS systems now installed be completed by putting in approach lights, runway lights, and compass locator stations before we spread our funds too thin for experimental items.

Two direction approaches completely implemented should be the minimum installed in each case. If these installations are completed by winter, many lives will be saved that otherwise must almost inevitably be lost.

We also recommend that every effort be made to secure sufficient funds to reinstate the CAA's original program of installing additional ILS systems complete with approach lights, runway lights, and locator stations.

In short our recommendations, as to the order of priority which will accomplish the greatest and quickest return in air safety, are these:

1. Approach, runway lights, and locator stations to complete all presently installed ILS systems.

2. New ILS installations to be installed at all airline airports not covered in one (1) above. If it is impossible to install ILS at all fields, these fields should at least have approach and runway lights installed. These lights are necessary for normal four-course range approaches and also are part of the ILS system when it is installed and will not require additional funds at that time.

3. Fido—experimental basis.
4. Surveillance radar—experimental basis.
5. CCA—installed at nearby military fields.

Sincerely yours,

H. B. COX,
Pilot Representative.

The United States Marine Corps Is Faced With Possible Extinction if the Merger Bill Is Enacted

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 11, 1947

Mr. VAN ZANDT. Mr. Speaker, the people of Pennsylvania, speaking through the Pennsylvania State Senate and General Assembly, have expressed themselves in no uncertain terms concerning the future of the United States Marine Corps should the so-called merger of the Armed Forces become a reality.

This is another case of the absolute need for careful and serious study before hastily merging the armed forces.

I am calling your attention to the following resolution adopted by the Pennsylvania State Senate and General Assembly, evidencing the wishes of the citizens of Pennsylvania:

Resolution 56

Whereas the United States Marine Corps has been a shining example of faithful and efficient service to our Nation for more than 172 years; and

Whereas the United States Marine Corps has been a source of strength whenever our Nation has been threatened; and

Whereas the United States Marine Corps possessed a vision to develop the science of waging amphibious warfare which knowledge permitted our Nation's offensive might to be carried to enemy shores and which proved to be the key to victory in a global war; and

Whereas 50,872 of the young men of this Commonwealth of Pennsylvania have served our Nation during World War II in the United States Marine Corps; and

Whereas the United States Marine Corps is threatened with extinction if the merger bill now pending in the Congress of the United States is passed in its present form; and

Whereas the abolition of the United States Marine Corps would be a disastrous loss to our Nation: Therefore be it

Resolved (*if the senate concurs*), That the existence of the United States Marine Corps be assured by amendment to any merger bill, such amendment specifically providing that the United States Marine Corps shall continue to serve as our Nation's amphibious troops and as a force in instant readiness to protect our Nation; and be it further

Resolved, That the chief clerk of the house of representatives is hereby directed to forward certified copies of this resolution to the President of the United States, the President pro tempore of the United States Senate, the Speaker of the House of Representatives of the United States, the Secretary of the Navy, the Commandant of the United States Marine Corps, and members of the congressional delegation from the Commonwealth of Pennsylvania.

The foregoing is a true and correct copy of the resolution introduced by the Honorable Messrs. Robert F. Kent and Walter F. Layer in the house of representatives the 9th day

of June 1947 and concurred in by the senate the 10th day of June 1947.

FRANKLIN H. LICHTENWALTER,
Speaker, House of Representatives.
W. E. HABBYSHAW,
Chief Clerk, House of Representatives.
W. J. RIDGE,
Chief Clerk, Senate.

New Coal Contract

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, July 11, 1947

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by David Lawrence from the Washington Evening Star of July 10, 1947:

SUBSTANTIAL VICTORY FOR LABOR LAW SEEN IN NEW COAL CONTRACT

(By David Lawrence)

The new coal contract between the miners' unions and the operators represents a substantial victory for the Taft-Hartley law.

Not only is the new statute mentioned by name seven times in the contract, with the specific and avowed purpose to operate within the limits of this law, but there is also a plainly implied obligation in the contract to refrain from concerted work stoppages during the period of the new agreement.

It may be that the days of authorized work stoppages on a large scale in the middle of a contract period are over in America and that a period of real peace in the industrial world has been introduced as a result of the new legislation.

The new coal contract is a conspicuous example of what labor unions mean to do to conform to the new law, despite the murmurings about political reprisals, tests of constitutionality and rumors of plans to evade the provisions by writing contracts purporting to give immunity from the law.

SOME VAGUE PHRASES

The new coal contract contains some vague phrases about the miners working hereafter only when they are able and willing, which merely conforms to the specific statement in the law itself about the right of an individual to quit work. Omission of the no-strike and penalty clauses for illegal suspension of work, which used to be in the contracts between the operators and the miners' unions, has attracted some attention, but it really means that these are not now needed. Two important points in the contract are the key to the whole document. The first point is in the following paragraph:

"The contracting parties agree that as a part of the consideration of this contract, any and all disputes, stoppages, suspensions of work, and any and all claims, demands, or actions growing therefrom or involved therein shall be by the contracting parties settled and determined exclusively by the machinery provided in the settlement of local and district disputes section of this agreement; or, if national in character, by the full use of free collective bargaining as heretofore known and practiced in the industry."

This means that efforts will be made to settle grievances at the local or regional level and by neutral umpires, but if a Nation-wide dispute occurs, the full use of free collective bargaining will be the method employed to arrive at a settlement.

OBLIGATIONS DEFINED

The Taft-Hartley law defines the obligations of collective bargaining and states specifically that anyone who quits work during the life of a contract need not be rehired and also that any concerted work stoppage or slow-down is a violation of the law.

This means that no secret instructions from a union to bring about a so-called spontaneous walk-out can hereafter be issued lawfully and that any interruption by the operators through a lock-out can also be a violation of the law. Hence, there is no further need for no strike clauses in contracts, because the new law forbids a concerted work stoppage during the life of a collective-bargaining contract. Unless there is mutual agreement by both parties to modify such a contract, it cannot be changed until it expires. Even then notice must be given to the Federal Mediation Service and other conditions must be complied with before a strike can really be legal.

The second point of significance in the new coal contract is the clause stating that 30 days' notice can terminate the agreement, but this provision is really nullified by the language that follows immediately:

"The foregoing termination provision shall not be construed to limit or affect in any way the obligation of the parties relating to the termination of contracts under the Labor-Management Relations Act, 1947."

SPECIFIC MENTION

It will be noted that the contract mentions specifically the obligations of the law with reference to termination notice. These require 60 days' notice prior to expiration and the maintenance of existing conditions right up to expiration and under certain circumstances for 60 days thereafter.

The Taft-Hartley law has, therefore, accomplished a great deal, as the text of the new coal contract fully demonstrates. It is regrettable that Representative HARTLEY takes the view that one clause in the coal contract, which authorizes the check-off for initiation fees and assessments, is a violation of the new law. The statute uses the word "dues," to be sure, in authorizing a system of check-off, but it certainly could be construed to mean that assessments and initiation fees are part of the dues.

The point is not really an important one, as the principle of deductions is conceded, and Mr. HARTLEY might better have noted how completely the new coal contract conforms to and accepts the obligations of the new law of which he was coauthor.

National Subsidy Programs

EXTENSION OF REMARKS
OF
HON. T. MILLET HAND
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, July 11, 1947

Mr. HAND. Mr. Speaker, the Atlantic City (N. J.) Daily World has recently published an editorial referring to the large share of Federal funds received by the so-called poorest States, and the small share received by the contributing States, which is a subject which has concerned me greatly for some time. The editorial follows:

WHY DON'T THEY?

When it comes to national subsidy programs, it pays a State to be poor.

This fact is pointed out in a bulletin of the New Jersey Taxpayers' Association, which says: "The lopsided Federal formula for assessing benefits under national subsidy programs severely penalizes New Jersey, which hands over $4 for every $1 it receives in Federal grants-in-aid."

Chief recipients of Federal funds for education, for example, are the Southern States, supposedly the poorest. Yet from 1940 to 1946, individual incomes in Florida increased 184 percent; Mississippi, 180 percent; Tennessee, 179 percent; and Alabama, 165 percent.

Among the rich industrial States comparative figures are 79 percent for New Jersey and New York.

The 10 poorest Southern States have an aggregate of $306,000,000 in treasury balances. Still the industrial States are heavily taxed to improve their educational standards.

The association believes lobbies have a lot to do with this. It thinks the Southern States can pay a bigger and fairer share of supporting their own schools, and asks the pertinent question, "Why don't they do it?"

Labor-Management Bill Protects Rights of Workers

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 11, 1947

Mr. VURSELL. Mr. Speaker, the recent settlement of the coal strike since the Taft-Hartley bill was passed, wherein the coal miners of the Nation have secured the greatest gains they have ever made in wages and working conditions, should prove to everyone how false are all of these charges about the attempt in this act to enslave labor. This satisfactory settlement to the laborers in the coal mines is a dramatic proof of the falsity of the wild and irresponsible charges made against this bill that once it was enacted into law the unions would be busted and powerless to deal with the great corporations. This is the first proof of these false charges on a Nation-wide scale. The charges hurled against this bill by labor leaders and others will continue to be proved false as labor contracts are renegotiated and renewed.

Mr. Speaker, having struggled up from a railroad laborer and later as a newspaper publisher, to the Congress of the United States; because of my close contact with those who work and produce, my keen interest in the welfare of these men and women has remained with me to this day whether they be on the farms, behind the counters, or in the shops and foundries.

We who have recently voted for the labor-management bill are charged by some as voting against the interest of labor, voting to make it more difficult for labor to advance in the future. I brand these charges as false, and I want to take a few minutes today to show that they are false. I propose to mail this analysis of the Taft-Hartley bill to the laboring men of my district. I want them to read it carefully and then decide for

themselves as to the truth or falsity of the charges against this piece of legislation.

There is no finer group of citizens in my entire district than the honest rank and file of labor. If I had believed that this bill, after a close study of it, was unfair to the rank and file of labor, that it would do them a grave injustice, I would not have voted for it. If this bill was vicious and unfair to labor certainly 400 men and women of this Congress would not have voted for it. Remember, only 108 votes were cast against it. May I make this sincere statement: It is my firm belief that 95 percent of the Members of this House are friendly to labor and would not vote to treat labor unjustly.

Mr. Speaker, may I make another statement, and it is this: I predict that when this law has been on the books so that labor may have an opportunity to work under it and to pass judgment on it, that the laboring men of my district and the Nation will say at the expiration of 1 year when it has been tried out, that this law has not taken a necessary, legitimate right away from them, that it has not restricted their opportunity to bargain collectively or to promote their interest through their union activities, and that it has not hurt the laboring man.

We all want labor steadily employed under good working conditions at a high level of wages. I believe that this law will bring about a condition between management and labor that will keep the laboring men more steadily employed on a high-wage basis, that will allow him by reason of keeping steadily employed to earn and take home more money with him at the end of the year than he would have had if this bill had not been enacted into law.

If it proves that I am right, and a year's time will probably tell, then it will prove that the charges hurled against this law as being an attempt to enslave labor, and to do labor an injustice, are false. I ask the laboring men to reserve their judgment and keep an open mind until this matter can be tried out. I do this because I am confident that the results will show that I am right.

Now let us see what worth-while changes this law brings about. It forbids the closed shop. All contracts now existing under the closed-shop agreement remain undisturbed until the end of those contracts. Any closed-shop agreements made within the next 60 days will run to the end of the contract. The union shop is guaranteed. Collective bargaining is guaranteed in this bill. The right to strike is guaranteed. The union shop is permitted when a majority of those employed vote for a union shop.

If the employer refuses a union shop when a majority have voted for it, the men have a right to strike to enforce a union shop. When a union shop is agreed to between the employer and the men in the union, the employer is entitled to hire a nonunion man but within 30 days he must become a member of the union under the union's bylaws. Can there be any objection to this?

Let me remind you that the great railway unions of this Nation work under the open shop and never have worked under the closed shop. These unions have done very well and are most satisfactory to the railway laborers. Of course, every one employed on the railroads are exempted from this act because their labor relations are handled through the Railway Labor Act and a part of this bill follows, so far as mediation and conciliation are concerned, the splendid pattern of the Railway Labor Act which has worked so well for the past number of years.

The check-off can still be maintained if the men working in a union make such a request to their employer. So you see the check-off has not even been banned in this bill. This bill has many provisions in it that give greater democracy and greater protection to the rank and file of the men and women who make up a union. Under this bill any member of a union can rise in the union hall and state his objections and his opposition to any union leader or the way the affairs of the union are being conducted without risking being fired out of the union and an opportunity taken away from him to make a living for his family. Millions of men working in the unions, especially in the big cities, today under the closed-shop agreement have been afraid to voice their opposition to the way their unions have been run for fear they would be thrown out of the union without just cause and the right to work and make a living for his family taken away from him.

This bill provides that a strike cannot be called unless a majority of the men making up the union vote to call such a strike. This is another protection and an extension of democracy to the men and women who make up these unions. Thousands of strikes in the past years have been called by a minority of the votes, and often by the leaders without any sanction by the rank and file. In such cases the rank and file of the union must be out of work with payless pay days, many of them against their will, many of them hoping for the day when the leaders will call off the strike so they can go back to work and have something with which to buy groceries for their families, make payments on their homes or money with which to pay their rent. One of the thousands of illustrations of this abuse, calling men out against their will, was the Allis-Chalmers strike, which lasted nearly a year, in Wisconsin, preventing the farmers from getting new farm machinery. This strike, fomented largely by the Communists, was called off after the Labor Committee went there and made a 4-day investigation, and open hearings, the men on strike voting 15 to 1 to return to work.

Under this bill in the future, when a strike is called, it will be by a majority vote expressing the wish and the will of the men who make up the union. Can there be anything wrong with giving the rank and file in a union who pay their dues to sustain the union the right to control the action of the union? This bill will prevent exorbitant charges for the purpose of joining a union. If the charges are out of reason, the same can be reported to the National Labor Relations Board, which will make an investigation and determine whether the initiation fee to the union is too high. Is there anything wrong with this? This bill will prevent the officers in charge of the union from wasting and giving away as political donations the money in the union treasury that belongs to the rank and file whose dues made the fund possible. This bill compels the officers of a union to make a report to the Government of how much money they have taken in during the year, how much they have left in the treasury, and what they have spent such moneys for as have been expended during the year. And it goes further and provides that a copy of this accounting of expenses be mailed to every man or woman in the union. I know the rank and file who pay the dues will be glad to learn that the officers of all unions must make a just accounting to them, the men and women of the union, as to what they have done with their money.

In the big cities, in the industrial centers, officers of the union have wasted in the past years millions of dollars which the hard-working rank and file have had taken out of their pockets through dues paid by them. In many cases they have grafted and stolen the funds.

Let me cite one instance of waste. In 1941, Abe Goldberg organized a union of produce terminal workers in the freight yard at Philadelphia known as local 929. It has approximately 4,000 dues-paying members. According to the bylaws, 7 members constitute a quorum. Mr. Goldberg and 6 other members picked by him run the union. They have not called an election for new officers since they organized. Working with Mr. Goldberg was Mr. Schlein, who was made president of another union organization known as a Haulers Association, at a salary of $7,800 per year. Goldberg and his gang had the power to organize another union in the produce market known as the Distributors Association. Mr. Schlein was made business manager of that organization, at $7,500 per year. Total, $15,300 for Schlein, and he had another union job paying big fees. Goldberg, Schlein, and his gang have complete control not only of the teamsters and all workers in the produce market there but they have almost complete control of what hours the business or commission men can keep their businesses open and large control over their activities.

To further prove the waste of funds of that union, when Mr. Goldberg went to Florida, spending most of the month of January 1947, their union, controlled by these seven men, voted him $7,000 for the expenses of the trip. Do you need further proof?

Through the manipulations of these unions in the Philadelphia Dock Street Market, when the Pennsylvania Federation of Labor published what was known as a Yearbook of 1946, Goldberg and his crowd collected from the merchants, by putting pressure on them, $100,000 in advertising for this publication. The merchants were not approached by solicitors, but Mr. Goldberg simply billed them for what, in his opinion, would be a proper assessment for the ad. No merchant was asked to approve his ad.

Testimony before the Labor Committee showed that a very close friend of Mr. Goldberg, Mr. Lapenshon, received a kick-back out of these funds of $60,000.

Things got so bad that even a veteran was not permitted to establish himself in business without first contributing to Local 929. Farmers were denied the right to deliver their produce to the market in many instances without joining the union or paying a fee for that privilege.

Naturally, such powerful local union leaders are opposed to their graft and waste of the dues of the members being stopped by a law that would compel them to make a report to the Government and to their members as to how much money they take in and how they spend it. I am sure the rank and file of that local and all union locals will be glad that this protection for them is written into the law.

There are various other provisions written into this act to protect the rank and file of the laboring men of America.

Now, let's see where some of those bad things are that have been talked about in generalities, but have not been pointed out specifically.

Very few, if any, will be pointed out because they do not exist in the bill. This bill seeks to stop some of the abuses which have grown up in labor which are practiced by a very few in labor, but which tend to stir up public sentiment against all labor. May I say that 95 percent or more of labor only want what is fair. Just as you will find in business and in the everyday walk of life there is always a small minority who, through greed and otherwise, carry their activities so far that they must be curbed. That rule holds true with labor the same as it does with business and with the human race in general. If the big labor leaders of the Nation would have stopped these abuses there would have been little reason for writing this law. For years extremely bad abuses have been carried on mostly in the big industrial cities which the labor leaders could have stopped if they would. They did not do it, and because they failed to stop these abuses the people cried out against them to the point where the Congress of the United States tried to reflect the will of the people and at the same time trying to be fair and just to the rank and file of labor saw fit to write this legislation.

With the war over, with the American people and the returning veterans wanting to buy goods of every kind during the year 1946, there were 4,985 strikes involving several million workers, with a total loss of 119,000,000 man-days of work. In the coal industry we were faced with two strikes within a year. In addition to the 119,000,00C man-days of work lost by men who were called out on strike, countless other millions of men were thrown out of work because of the coal and steel strike, automobile strikes, and other strikes. The entire economy of the Nation was seriously threatened and we are still short of steel in the Nation today because of these coal and steel strikes. These strikes punished over 100,000,000 people known as the general public who do not actively belong to either business or labor. This record is a part of the reason why this Congress sought to write a new labor-management bill that would define and protect the rights of the rank and file of labor, that would be fair to business, and that would try to protect over 100,000,000 people who make up the general public.

At a time when the people of the Nation, including millions of veterans who had returned from the defense of their country, wanted to buy clothes, automobiles, trucks, and lumber for houses, I cannot believe the laboring men themselves want to see this country continue in a position where a few groups in nationwide industry can be allowed the high privilege of practically shutting down the business of the Nation, throwing millions of men and women out of work in other craft unions bringing this Nation, if they so desire, to the point of economic chaos. I have more confidence in the good sense and patriotism of the rank and file of labor than to believe that they will insist that a few leaders be allowed to retain such power. I do not believe they want to grant this liberty to any individuals when they understand that a law can be written and enforced, that will protect the men in these big unions in their rights, and at the same time will make it possible for all other union men in the smaller crafts to continue to work at high wages and steady employment.

Mr. Speaker, this law permits industry-wide bargaining, but, at the same time, it tries to prevent the calling and continuing of a strike nationwide, or in any industry so big that it endangers the health and public safety of the Government. This provision is particularly aimed at Nation-wide coal strikes, Nation-wide steel strikes, and could be applied to Nation-wide telephone and telegraph strikes, and probably to some other large unions where a strike might endanger the public health and safety of the Nation. I believe the laboring men generally, as well as everyone else, wants to protect the public health and safety of the Nation.

Mr. Speaker, now, in approaching these big strikes or lock-outs here is what the bill provides. First, it provides for an 80-day cooling-off period, which is to give them time for mediation and conciliation to try to bring the employer and the employee together on a fair and amicable basis in settling the dispute and preventing a strike. When a strike or lock-out is threatened the National Labor Relations Board makes an immediate investigation and reports to the President that there is danger in such a strike. The President is empowered to immediately start an investigation to determine the facts, both with regard to the employer and the employee. An impartial board of conciliation steps in at once and sees to it under the law that an honest attempt at collective bargaining is constantly carried forward between the management and the representatives of labor in an attempt to settle the strike. This board of conciliation is working constantly with both sides attempting to find a basis upon which they can agree. The President's board investigates the claims on both sides, gets all the facts ready, and reports them to the President. At the end of 60 days the best offer made by the employer for a settlement is put up to the rank and file of the union, and the rank and file of the union must decide by a majority vote whether they will accept the last best offer made by the management. If they accept by a majority vote, the contract is written on the offer and there is no strike. If they do not accept, and vote to strike, they have a right, after mediation and conciliation have failed, to strike. Is there anything in this procedure that is unfair or attempts to enslave labor? I ask you that question. Now bear in mind that the public health and safety of the Nation is at stake.

Now bear in mind that through this 80 days of negotiation all these men who want to continue to work will be drawing their pay checks regularly and their families will not have to suffer, while in a decent way under the plan of the Government, the Conciliation Board, the Mediation Board, along with labor's representatives will be trying to get together to see if a strike can be prevented. Is not this a fair and better way?

Now, during these 80 days, any or all of the men on their own volition can quit their jobs if they so desire. If during this 80 days the union leaders did call a strike they would violate the law. Many Members wanted to go further and give this Board of Mediation the power to enforce compulsory arbitration. We Members of Congress thought that this step should not be taken. We believed that when the President made an investigation and everything else failed and a strike or lockout was called, that if the President published the facts, and it would show that the fault was on management—that management would be forced by the power of public opinion to agree to the demands of the men. On the other hand, we felt that if it showed that the strike was not justified and that the men should have accepted the last offer of the company, that the rank and file of the men would go back to work under the pressure of public sentiment. I think that Congress showed great patience, great restraint of its power, and great confidence in their belief in the fairness of the laboring men and in management to leave this street with an open end, where a strike could be called as a last resort.

This law requires a 30- and 60-day cooling off period for lesser strikes which should be helpful. It seeks to prevent jurisdictional strikes and boycotts.

Mr. Speaker, the President, in his message to Congress in January, spoke out against jurisdictional strikes and boycotts. William Green, of the American Federation of Labor, testified, as I recall, that he was opposed to jurisdictional strikes and boycotts. Nearly all of the big labor leaders claim there is no justification for jurisdictional strikes and boycotts, that they are bad for labor, but the trouble is that while they had the power to clean up these abuses they have not done it, and unfortunately the big labor leaders of the Nation made no effort to cooperate with the Congress in writing this bill—they simply were against anything, any corrections whatsoever through the writing of a labor

code. Millions of the rank and file of labor want these jurisdictional strikes and boycotts stopped, and they want many other abuses which have brought the good name of labor into disrepute stopped, but nothing has been done. The people of this Nation who do not belong to either business organizations or labor want these abuses corrected, and they want the economy of the Nation to move forward with greater production, which means greater wealth, which means more hours of work with higher wages for the laboring man, and greater production will mean a great reduction in the cost of living to the laboring men and to all the people of the Nation.

The Congress tried to do this in this act and tried to be fair to all these groups in doing it. This law lists as unfair labor practices those acts which constitute secondary boycotts, jurisdictional strikes, wildcat strikes, featherbedding, and the restraint or coercion of the employees in the exercise of the rights guaranteed in section 7 of the act. An injunction can be used only against jurisdictional strikes and secondary boycotts, and such an injunction cannot issue until the National Labor Relations Board has made an investigation and has determined that the law is being violated to the extent that an injunction should issue. In other words, a Government body is the only one that can call for an injunction, and the employer is prohibited in these two instances from the use of an injunction against jurisdictional strikes and secondary boycotts and other unfair labor practices. Those who are guilty of these practices lose the protection of their union and the company is not required to reemploy them unless they see fit to do so. I think you will agree with me that we ought to be able to trust the Government in requesting an injunction and that the other penalties I refer to are very light. Do you see anything in this that tends to enslave the laboring man?

This law provides that if a union violates those unfair practices, thereby damaging the employer, the employer has a right to sue the union. On the other hand, if the management violates the unfair labor practices which are set out against management, the union has a right to sue management and recover.

These penalties were written into the bill in an effort to compel the employer to keep his contract with the union and to compel the union to keep its contract with the employer. If the company gets a judgment the judgment is against the funds in the union treasury and not against the individuals.

This is a two-way street—the company can sue the union and the union can sue the company if either of them fail to keep their contract, and if either of them thereby damage the other. Of course, these damages must be proved in a court of law. Have we reached the place in this country where the employer can fail to keep a contract or where the employee can fail to keep a contract and that nothing can be done about it? The law provides since the establishment of this Nation that when men make contracts they are legally bound to carry them out and are naturally liable for any damages in not carrying out such contracts. This is a good provision. At times it will help the union officers to control some of the more impetuous members of the union. And at times it will put the unions in a position to demand and sue for their just rights when they are violated by the management.

Mr. Speaker, this bill seeks to prevent any office in a union from being held by a Communist. Certainly labor will be greatly benefited when it can proudly boast that no union in this country has a Communist official in its union, who preaches the overthrow of this Government by force and violence. The American Federation of Labor, I can say to its credit, is strongly against any Communist even being a member of the union, and certainly they would not have any Communists in an official position in the union if they knew it. Men, high in the American Federation of Labor and men high in the CIO union have charged time and again, and have proven that the CIO has officers in some of their locals who are outright Communists.

Mr. Speaker, these Communists in key positions in unions foment strikes, class hatred, and unrest. They would like to see the country plunged into strikes so continuously that they would wreck the economy of the Nation; in fact, that is the big hope of the parent head of communism in Russia who has predicted time and again the downfall of what he terms our capitalist form of free enterprise. The Kremlin is waiting for this to happen and they realize that the greatest chance for stirring up unrest and destroying the economy of this Nation lies in the infiltration of the Communst ideals into the rank and file of labor. The big labor leaders of the Nation are beginning to be fearful of the damage this group is doing not only to their organizations, but also to the cause of labor and the Nation. The Congress has attempted to help the honest labor leaders of the Nation to curb the power of communism in writing into the law that no Communist can hold an official position in a labor union, and retain for such organization the benefits of the act.

Mr. Speaker, most of the rank and file of labor, in the smaller towns where they only want what is fair, may not understand why it was necessary to pass a labor bill. This bill was passed, in most instances, to stop abuses perpetrated against millions of people both in the public and among the rank and file of labor in the big industrial centers.

An investigation of the union in the Philadelphia produce market brought facts to the Labor Committee that would amaze the honest rank and file of labor which should be corrected. Pages of sworn testimony in the record reveal graft, corruption, coercion of the rank and file of labor who pay the dues, coercion of the produce merchants almost taking over their business, coercion of the farmers delivering produce, all adding to the cost of living to all the people in Philadelphia. This is one instance of hundreds in the big industrial centers.

Mr. Speaker, in the State of Michigan and in other States, men and women who run family stores were boycotted and not allowed to have their produce hauled from the produce centers to their stores unless the owners themselves joined the union. In fact, the names of these small outlying stores who hired no help were posted and the union handlers in the produce centers would not allow meat and produce to be loaded on their trucks when the owners came after it. Some food stores and others were boycotted in the same way unless the man and woman who owned the store and the clerks employed joined the teamsters' union. Think that one over for a minute.

Farmers were not allowed to deliver produce to the markets in New York and other cities unless they paid a fee to the union of about $10 for each load. When they refused their milk and produce were overturned and many of the drivers were beaten up.

In California a big dairy farmer was not allowed to deliver his milk in the city and it was turned over in the streets by the teamsters union because in hauling feed from the city to his farm to feed the dairy cows, he had not hired a union hauler but had hauled the feed himself. In the same state a woman on the farm who raised several hundred turkeys was not permitted to sell them to the dealer until she paid a Union man 30 cents a head.

In northern Illinois and Michigan men who owned and operated small filling stations had their supply of gas and oil stopped at the source because they would not join the teamsters union. Such activities were being committed in many states.

In the great limestone producing quarries in Indiana construction unions in New York boycotted the use of Indiana stone for building purposes if it was polished and cut to meet the architect's requirment and such work done at the stone quarries in Indiana. The unions in New York boycotted the use of this stone unless it was shipped in the rough to New York so that the stone cutters in New York could cut and finish it for the building. Testimony showed that on one building which shipped the stone from Indiana and later cut it in New York, it cost the building contractor over $100,000 more than if the stone had been fabricated in Indiana. Of course, this increases the cost of building. In New Jersey, a jurisdictional strike occurred as to which group of men in the same union would carry the lumber 50 feet from the trucks to a certain spot. This strike went on for weeks stopping $50,000,000 worth of building construction.

In testimony before the Labor Committee it is estimated that the jurisdictional and boycott strikes between the American Federation of Labor and the CIO of Washington and Oregon States with work stoppages of approximately 4 months during 1946, prevented the production of sufficient lumber to build 210,000 homes. Is there any wonder we cannot get housing for the veterans and others? There are pages upon pages of sworn testimony before the Labor Committee given by union men, labor leaders, business men, judges of the court, many men in the rank and file of labor citing hundreds of cases showing abuses that

the ordinary rank and file of labor have no idea exist in this country.

These are some of the reasons why the Congress of the United States felt it was duty bound in the interest of labor and all the people to write this legislation. The Congress, in writing this legislation, sought at all times to protect the rank and file of labor, to give fair protection to business as well, and to protect the interest of all of the people of the Nation.

The labor leaders of the Nation will serve the laboring men and the Nation far better if they will stop their unwarranted and unjustified attacks against this bill and join their efforts in cooperating with the Congress and the people in giving this act a fair trial. If they will, it will prove beneficial to labor and to all the people of the Nation.

Statement of Mr. J. E. Wood on Behalf of Air Line Pilots Association

EXTENSION OF REMARKS
OF

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 11, 1947

Mr. GATHINGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of J. E. Wood, Air Line Pilots Association, made before the President's Special Board of Inquiry on Air Safety:

The subject of runway lengths and the interrelated matter of stalling speeds has long been a subject of vital concern to the air-line pilots.

Our fight for safety on these items extends back over many years, and we feel it will be of interest to the Board if we delve into the background briefly.

We have a rather extensive file of correspondence between the Air Line Pilots Association and the CAA and the CAB which very definitely outlines the pilots' stand at the time these regulations were promulgated. We will just quote pertinent parts from this file, as the presentation of all the material available would be a rather lengthy proceeding. We will start by quoting the greater part of a letter dated March 9, 1940, from David L. Behncke, president of the Air Line Pilots Association, to Mr. Charles F. Dycer, Coordinator, Flight Test and Inspection Unit, Civil Aeronautics Authority, Washington, D. C.:

"In further reference to your letter of February 6 and my answer dated February 10, I would like to advise that the air-line pilots' engineering and airworthiness advisory committee recently held a meeting for the purpose of thoroughly going over the CAA's proposed revisions to CAR 04 for the purpose of making final recommendations thereon.

"In short, their final decisions coincide with the views expressed to you in my letter of February 10. So that the engineering units of the Civil Aeronautics Authority will have an unmistakable understanding as to what are the recommendations of the Air Line Pilots Association relative to the proposed changes in question, I will again outline for your information exactly what their final recommendations are:

"I. The committee is against the 85-mile per-hour stalling speed figure in paragraph (b), page 3, of section 04.7000 in the CAA's proposal. They are strongly of the opinion that the figure of 85 miles per hour should be reduced to 80. Before making this decision a thorough discussion was had and all factors affecting this very important part of the question were carefully weighed and thoroughly considered.

"During these deliberations the committee was not unmindful of all the factors involved and discussed the entire situation with open minds. In the first place, the opinion of the line pilots right from the start was that the part of the CAR having to do with landing speeds should be left as written unless equally definite limitations could be substituted. In reviewing the proposed revisions, the committee reached the conclusion that paragraph (b) of section 04.7000 places a definite limit on landing speeds within a reasonable range providing the figure of 85 miles per hour is changed to 80. When it is considered that a stalling speed of 80 miles per hour permits an increase in the present landing speed of 70 miles per hour by approximately 10 miles faster, the reasonableness of the committee's position on this very important part of the question is amply demonstrated.

"In a problem of this kind, regardless of all the arguments, there are certain unalterable facts that, because of their very nature, cannot be brushed aside. In the final analysis, the pilots must fly the equipment that will be built in accordance with the limitations that will be established in the revised regulations. The committee does not agree with the theory that the day has passed when air liners will land only on improved landing areas. They will continue to make unscheduled landings and, therefore, this part of the problem can likewise not be ignored. And, even if it were possible to always land on properly improved flying fields, the fact still remains that under the requirements of paragraph (b), section 04.7000, aircraft can be built that will land at 85 miles per hour which landing speed is considered too high by the committee. It can be argued that the aircraft built under the requirements of the proposed regulations will not land this fast but again the fact remains that there is nothing definite in the proposed regulations to definitely compel slower landing speeds.

"Another very important fact that has an unmistakably important bearing on this entire problem is that, even if an aircraft does land on approved fields, which is certainly not always possible, operating conditions are not always going to be ideal. For example, an airplane that lands at 80 miles per hour will, with a moderately light coat of ice, land at a speed of 90 miles per hour or faster. Similarly, a craft with an 85-mile-per-hour landing speed, which is possible under the proposed regulations as written, would, under similar conditions, land at 95 miles per hour and if a heavier or possibly a rough coat of ice accumulated on the wings and other surfaces, the actual landing speed would mount to a figure in excess of 100 miles per hour. General field and runway conditions must also be considered. It is not uncommon in air-line operation to encounter landing surfaces glazed with ice and on fields where there are no runways, it is not uncommon to encounter conditions where it is impossible to secure proper braking action because of slippage under the tires. For instance, if a field is frozen all but an inch or two on the surface, and such surface is wet, the slippage is so great that the braking action is practically nil.

"Another common condition that renders brakes ineffectual is when a plane lands and runs through a low place in a field where water has accumulated. We have all had experience with wet automobile brakes and the result is much the same in a plane. To forcefully illustrate this last point, your attention is invited to two recent accidents, one on Penn-Central and one on Braniff, involving aircraft being unable to stop because of tire slippage resulting in sliding off fields on which they had effected a landing and into the bordering fences. In the case of the latter company mentioned, the pilot reported that his brakes were rendered ineffectual for a large part of his landing run because of running through low water-covered parts of the field. In this particular instance the plane was on the ground for more than 1,800 feet and yet was unable to stop because of slick field conditions and wet brakes. It was lucky that obstructions in these instances were only fences. What if they were immovable obstructions? No doubt, a number of other accidents were caused by similar reasons, but the two mentioned are recent.

"It is granted that there are a number of other factors that go to make up safe performing air line equipment but the committee is of the opinion that the designing engineers should be caused to realize, through the means of properly limiting regulations, that the speed at which air liners actually make contact with the ground, especially under adverse conditions, is highly important to air safety.

"Landing gear, retracting mechanism failures, malfunctioning of flap actuating mechanism, the failure of tail wheel or steering devices, plus the ever-present possibility of landing gear structure failure, are also factors that must be continuously reckoned with when landing speed limitations are established.

"A rule that cannot be lightly disregarded is that the kinetic energy to be dissipated in landing or perhaps in sliding, tearing, or crushing, is 61 percent greater at 89 miles per hour and 102 percent greater at 100 miles per hour than it is at 70 miles per hour.

"In view of the foregoing and to insure against the dangers that are akin to high landing speeds, the Air Line Pilots Engineering and Airworthiness Advisory Committee sternly instructed me to convey to the Authority the recommendation that a stalling speed of 80 miles per hour should be the maximum allowed in paragraph (b), section 04.7000, and that they were unalterably against allowing this to stand at the figure of 85 miles per hour. They further took the position that because they were actually flying the equipment of today and will be called upon to fly the equipment of tomorrow, and because of their intimate knowledge of the underlying factors involved, they feel that the Authority, whose interest is in the final analysis the same as theirs, would not want to cause the building of equipment that lands faster than the pilots feel is safe at the present stage of the industry's development.

"II. Paragraph (f), section 04.7000, on page 4 of the proposed new regulations was in part objected to by the committee. They recommend that the fraction 10/7 in the fifth line from the top be changed to read 10/6 and that the figure 70 percent in the third line from the bottom be changed to 60 percent. The committee is of the opinion that this part of the proposed regulations has a definite relationship to landing speeds. As I explained at the Kansas City conference, the pilots are definitely of the opinion that landing and approach speeds should be held to reasonable levels in the interest of safety.

"To bring a plane in at a high rate of speed with the idea of getting the wheels on the ground and then depending on excessive use of brakes to dissipate such high speed is, in the opinion of the committee, the wrong way to go about it. In this particular part of the problem there is again that ever-present necessity of reaching a certain balance between all the factors involved that can best be described by the words 'practical' and 'reasonable,' and last but certainly not least 'safety.' An airplane that uses 70 percent of a given landing area is, in the language of the pilots, 'landing rather hot.' In

the first place, under the proposed regulations, there is no definitely established runway length or allowable width of the usable part of a landing area and here again we will not be troubled in actual operating conditions when a field is sufficiently large, but what we must reckon with is the smallest fields into which a given aircraft will be certificated to operate.

"In all the arguments on this particular part of the question, it was brought out that under the new regulations much dependence was placed on good braking facilities. Again the committee wishes to point out that even if the brakes and their actuating mechanism function perfectly, and tail wheel and steering mechanism likewise function perfectly, there is still a very real and often present danger of slippery, ice-glazed, and other slick field conditions that reduce the grip of tires when brakes are applied. For example, if a plane uses 70 percent of a runway in landing on the smallest field approved for the particular plane used in this illustration, and field conditions are such that the effectiveness of brakes is materially reduced, it isn't going to take very long to use up the remaining 30 percent and have trouble. It was argued at the Kansas City conference that a pilot attempting to make a short or emergency landing would come closer to the obstruction than 50 feet when coming into a landing area. This is possibly true, but the committee is of the opinion that no one would recommend that a pilot fly a heavy air-line transport very much closer than this, especially when a ship is performing under conditions of greatly reduced speed, which naturally reduces its controllability because of sluggish response to the controls.

"Everything considered, 50 feet is not a great amount of distance for clearance and because of this it is not reasonable to assume that much dependence can be placed on cutting corners insofar as clearing obstacles by less than 50 feet is concerned. In the interest of safety, the committee is firmly of the opinion that the above-recommended changes should be made a part of the new regulations.

"Summarizing, the committee wishes me to point out to the representatives of the Authority that they are strongly of the opinion that their recommendations as outlined in this letter are reasonable and entirely necessary in the interest of safety in the current stage of air-line equipment development. They further pointed out that in considering and reaching their conclusions they were not unmindful of the economic factors involved and in this regard feel that they have been entirely fair and at the same time strongly feel that the recommendations they have made are paramount to the maintaining of the proper degree of safety in future air-line aircraft development.

"As one of the committeemen put it, the committee reached its conclusion after conscientious and painstaking study of all factors involved, and in the final analysis their desire and that of the Authority is identical, because both the pilots who must fly the equipment and the Authority who is responsible for its safe operation are one and the same, and that is safety first. The adoption of the committee's recommendations on the proposed new regulations is earnestly solicited by the Air Line Pilots Engineering and Airworthiness Advisory Committee."

This gives an idea of the reaction taken by the air-line pilots to the industry effort to establish a high stall-speed limitation.

On April 10, 1940, Mr. Dycer replied as follows:

"1. It is noted from the contents of your letter that, although the recommendation is that the 85 miles per hour stalling speed with flaps in the approach condition be reduced to 80 miles per hour, the discussion following the formal recommendation appears to be primarily concerned with establishing this 80 miles per hour as a limit upon the landing speed. With this in mind we have proposed to and obtained approval from the remainder of the industry that there be instead an 80 miles per hour limit upon the stalling speed with the flaps in the landing condition. This, we believe, will accomplish the objective toward which your recommendation was aimed, and we are therefore recommending this latter for approval by the Authority."

Considerable additional controversial correspondence ensued regarding various flap settings which should be used in figuring the stall speed, but eventually a regulation was written which, although not completely satisfactory, the pilots felt would give them a reasonable ceiling on this critical problem affecting air safety.

As closing remarks in a letter dated July 22, 1940, to Mr. Behncke giving the many arguments in favor of the method used in arriving at the stall-speed limitation, Mr. Dycer stated:

"For all these reasons we suggest that the amendment as written be allowed to stand until experience with airplanes built under the requirements contained therein indicates the possibility that this limitation should be reduced."

Now let's just sum up the implications at this point.

In the face of the pilots' strong objection at the method used in establishing the 80-mile-an-hour limitation and also in the face of the obvious possibility that even this limitation might have to be reduced in the interest of safety, as experience was gained, the manufacturers proceeded to build airplane after airplane that had no possibility of meeting the regulation if any load was carried.

There perhaps was justification for some compromise with safety during the war years. However, the justification for extending this compromise with safety into airline operation, when this equipment returned from the war, has never been conceded by the pilots.

Instead of changing the airplane design to meet the regulation which had been agreed upon for safe air-line operation, the hue and cry immediately became "change the regulation to fit the airplane."

In a letter dated December 31, 1940, to Mr. Behncke from Mr. Edward Warner of the Civil Aeronautics Board, discussing regulations, Mr. Warner states:

"I think everyone will agree with you that it would be very undesirable if regulations were made to fit aircraft, rather than the reverse."

Yet when the war-weary equipment returned in 1945 and could not meet the requirements for airline operation, the procedure which Mr. Warner stated would be "very undesirable" is exactly the action that was taken.

The regulation was changed to fit the airplane. The doors were thrown open. The stall-speed limitation was removed completely and although there were supposedly checks and balances in the requirements which the engineers said gave the necessary safety factor, the pilots nevertheless noted with foreboding that the stall speeds and landing speeds were way above the limitation which they, in full realization of their grave responsibilities, had protested as being too high.

In the spring of 1945, a proposal was received by the Air Line Pilots Association for comments and suggestions which alerted the pilots to the grave realization that complete elimination of a stall-speed requirement was under way.

The pilots and the ALPA engineering department protested vigorously. We were castigated roundly by engineers and other experts as obstructionists. Brilliantly worded newspaper and magazine articles accused us of blindly overlooking the airport expansion program, which would provide enough runways of adequate length, and the landing aids program which was to provide us with lights and facilities for straight-in approaches from more than one direction.

The net result of this campaign was that, in spite of our fight for air safety, we got the high landing speeds and high stalling speeds at that time, but today we still do not have the improved runways or the landing aids we were promised.

We were accused at that time of stifling rapid progress and of having no vision. We regret to say that practically the only rapid progress we have noted, since we were overruled, has been the exceedingly rapid progress of our airplanes through the fences, ditches, and localizer shacks at the boundaries of our inadequate airports. Our vision has also dimmed somewhat, peering for poorly lighted fields with inadequate or incomplete instrument approach facilities.

In a desperate effort to prevent the elimination of the stall-speed limitation, Mr. Behncke wrote a lengthy letter to Mr. Dycer on August 2, 1945, giving in detail the arguments of the pilots against this action. A copy of this letter went to every member of the CAB.

In the light of what has transpired since that time in operating these airplanes, it might be interesting to quote a few of the predictions and objections contained in this letter:

"Our engineering and air-safety department has informed me that on April 2, 1945, you submitted a proposal to the Air Line Pilots Association for comments and suggestions relating to the elimination of the stalling speed of 80 miles per hour in part 04 of the Civil Air Regulations and, in fact, proposed to eliminate the stalling speed entirely as a definite and fixed design, engineering and performance requirements for air-line aircraft. Headlines in magazines are beginning to appear, of which the following is typical: 'Unlimited stalling speed asked by 9 of 11 big plane builders.' It is all very disquieting. I note from our files that Mr. T. G. Linnert, our aeronautical engineer, has been carrying on considerable correspondence with you regarding this proposal."

This definitely indicates that it was pressure from the manufacturers that initiated this fateful action. Again we quote from the letter of August 2, 1945, from Mr. Behncke to Mr. Dycer:

"On February 6, 1942, when part 04 was adopted finally by the Civil Aeronautics Board, it was the missing yardstick and the signal to the engineers of all the manufacturing companies interested in building postwar air line equipment and all the air line companies to proceed with their postwar plans. The CAB's action on February 6, 1942, in adopting part 04 of the CAR gave them all the green light as it gave them all their postwar air line equipment planning, engineering, and building yardstick. The result was that everyone went to work.

"Now it seems that when the whole proposition is well along and in midstream of completion, you, of all people, who should be its greatest stabilizing force, are suggesting that all concerned change horses right in the middle of the stream and start plodding in a new direction."

This clearly illustrates our previously stated point that after the requirements had been established, by all concerned, the manufacturers proceeded to build aircraft which could not possibly meet the rules and then immediately brought pressure to bear to have the rules changed to fit the airplane.

Another quote from Mr. Behncke's letter to Mr. Dycer:

"Very few people give any thought whatever to what the eliminating of the stalling

speed limitation or the raising of the stalling speed for air-line aircraft in the CAA's engineering requirements for the planning, engineering, and building of such aircraft really means to our national and international airport planning and building program. To get right to the point, this is, in itself, a terrifically important question. It can make a billion dollar national and international scheme of airports practically obsolete overnight. Then where is the second billion dollars going to come from? The fact of the matter is that it isn't going to come. Much more can be said on this point—in fact, volumes could be written about this one point alone, but the stalling speed question of air-line equipment and our airport planning and building program both nationally and internationally are so completely geared together and related that they are one and the same. We had better realize this or there will be much wailing when the investigators begin their inquisitions on the lack of proper postwar and other correlated air-line equipment engineering and airport planning by our Federal regulatory agencies that can easily result in losses of many millions upon many more millions of dollars to the taxpayers."

In commenting on this quote regarding lack of correlation between airport design and airplane landing speeds, it is significant to note that American Airlines reportedly will have to curtail operations in approximately 19 of 20 cities when they inaugurate service with their new Convair 240's in the near future. Unless, of course, previous precedent is followed and the regulations are changed to fit the airplane to the inadequate airports. It will be regrettable if this is done, because airplanes do not seem to understand legislation very well; and they land just as fast after a new rule is passed as they did before.

One more quote from Mr. Behncke's letter of August 2, 1945, to Mr. Dycer:

"The peacetime public is terrifically conscious of the fact that human life is very precious and once lost is lost forever. All who are making grand speeches and gazing starry-eyed and too intently in the crystal ball of tomorrow's air-transportation development, failing to understand and realize what air safety really means, will soon—and, in fact, sooner than they expect—be judged by a highly critical public for their actions and the judgment rendered will not be lenient, particularly in regard to the safety factor in postwar air-line-transportation developments which must depend upon the patronage of John Q. Public to exist and go forward."

We have not quoted these predictions from the past merely to be able to say "we told you so." Rather we feel that it will be of benefit to the Board to have an accurate, if brief, background knowledge of what the pilot's position has been throughout these developments up to the present time, so that perhaps a comparative evaluation of many of our practical recommendations, as determined by experience in the past, can be made.

May I summarize the action taken in the past several years by the air carriers and manufacturers and, you might say, collaborated in by the CAB and CAA. First, you need rules to govern designs for the future aircraft. The aircraft did not meet the rules, so the rules were changed to meet the aircraft. The aircraft would not fit into the airports so the airports should be changed to fit the aircraft. This being impossible it is proposed to fit the aircraft to the airport. The answer is in our opinion very obvious.

I shall close by again quoting from Mr. Behncke's letter to Mr. Dycer:

"The air-line pilots of this Nation have said many times in the past and they shall keep saying it over and over, again and again that the CAB and the entire CAA must stand unalterably in opposition to all moves of this kind as stanchly and immovable as the universe itself. Any other course is intolerable, dangerous, unsound, and thoroughly and unmistakably fraught with every conceivable manner of confusion, frustration, and instability for all the air-line industry in all its branches and can only result in a deadly force against a right and proper degree of air safety in air-line transportation, and will prove to be an unforgivable travesty on the inherent right of the public to have human life protected properly in day-after-day, year-in-and-year-out air-line travel."

This, gentleman, was the stand of the air-line pilots in 1940, and again in 1945 and it is our stand in 1947. We have not altered our position in any respect.

Food Prices and Foreign Relief

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Friday, July 11, 1947

Mr. HORAN. Mr. Speaker, as a member of the House Committee on Appropriations, I have naturally become acutely conscious of the inflationary budgets presented to us this year by the administration and their effect upon the national economy. As a fruit rancher, I am also conscious of the publicity and attention given to the rise in food costs which, more than anything else, is attributable to these same inflationary budgets and the purchase of tremendous amounts of foodstuffs for foreign-relief purposes.

In this connection, I think the following editorial from the July 1947 issue of the Washcoegg, publication of the Washington Cooperative Farmers' Association, is worth while as a frank statement of the truth about food prices:

WHO IS SPOOFING WHOM?

Living costs are high as most everyone agrees. But why blame this plight on food producers—the farm families who are now the brunt of an unjust attack by the metropolitan press, periodicals, and other groups?

City folks say food prices are too high. Laboring groups say the same thing—everyone blames the other fellow. And while all of this is going on Government spokesmen on one hand are trying to "talk down" prices, but with the other are carrying out practices which bolster prices.

Why not let's get to the bottom of this business? High living costs as far as foods are concerned are mostly because the Government is purchasing tremendous quantities of foodstuff to help feed the hungry of the world. In effect, this establishes an artificial price structure and throws the law of supply and demand out of kilter. It means the higher costs of food are resulting in continuous demands by labor and other groups for higher wages and salaries to meet these higher living costs. The whole thing is a spiral upwards—and the end result is that every particle of food the farmer manufactures costs him a great deal more to turn out and he must necessarily receive higher prices for it.

Most everyone is humanitarian enough to want to help the less fortunate of the world. If the food we send abroad will alleviate suffering even just a little bit, it is a job well done and will have the support of the general public.

But why not let's have the truth about the whole thing? Why not let's have Government spokesmen come out and say exactly what they're doing—that every time they purchase a lot of food for export it means just that much more competition for remaining supplies at home? And when consumers compete for scarce articles they are bound to bid up prices.

This is not the time to hide the facts under a bushel and let the metropolitan consumer feel that farmers are the big bogies who are taking so much of their pay checks. Instead, it is time for a clear-cut, simple statement by Government spokesmen to tell exactly what is going on. It is time to admit that costs are high—and will remain so until the vast populations throughout the world are able to feed and clothe themselves as they did before the war.

The Marshall Plan

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, July 11, 1947

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by George E. Sokolsky, from the Washington Times-Herald of July 10, 1947:

THESE DAYS

(By George E. Sokolsky)

Much of history is the record of good intentions ending in astounding errors. The Marshall plan gives the appearance, at this stage, of having been conceived in charity and good will, but inevitably having produced a whopper of an historical error, the correction of which may not be possible.

It started with a speech at Harvard on June 5 in which Secretary of State George Marshall said:

"Any assistance that this Government may render in the future should provide a cure rather than a mere palliative.

"Any government that is willing to assist in the task of recovery will find full cooperation, I am sure, on the part of the United States Government. Any government which maneuvers to block the recovery of other countries cannot expect help from us.

"Furthermore, governments, political parties, or groups which seek to perpetuate human misery in order to profit therefrom politically or otherwise will encounter the opposition of the United States."

That is obviously a firm promise. Secretary Marshall is sure, you will note. He does not say how much. He does not describe the nature of the assistance. He merely says that we shall assist a certain type of nation and oppose another type.

So far this is in conformity with the Truman doctrine, although it is a rejection of Tehran, Yalta, and Potsdam, at which the big three made no such fine distinctions.

At that time, we spoke only of "peace-loving" nations, meaning Soviet Russian but not Switzerland.

George Marshall sets up a European modus operandi by saying further:

"* * * It would be neither fitting nor efficacious for this Government to undertake to draw up unilaterally a program designed to place Europe on its feet economically. This is the business of the Europeans. The initiative, I think, must come from Europe.

"The role of this country should consist of friendly aid in the drafting of a European program and of later support of such a program so far as it may be practical for us to do so.

"The program should be a joint one, agreed to by a number, if not all, European nations."

Bevin of England and Bidault of France immediately accepted that as a promise, a guarantee and an invitation to go ahead. They called a conference, and included the Russians. The latter wisely wanted to know precisely what the Americans intended to do, but that no one could say.

The most that the Secretary of State could offer was a proposal to Congress for an appropriation, estimated to be $5,000,000,000 a year, more or less, for a number of years, which Congress might or might not agree to do.

Certainly the present Congress is not likely to make any such appropriation on Mr. Truman's or Mr. Marshall's say-so without further and profound investigation. This the Russians understood and they estimated that it would not go through. The British must grasp at any straw because they are so short of dollars and socialism in that country is inadequately productive.

Now, the good intentions in all this lies in the necessity of aiding Great Britain, France, Italy, and other European countries that are willing to avoid communism at home and subservience to Soviet Russia.

The error lies in the method of doing it.

Instead of determining what this creditor country can and will do and stipulating the terms and conditions of aid, Marshall set up a debtors' conference to gang up on the creditor or to stipulate such conditions as the creditor could not meet which, in the end, will justify their assumption of a promise given and not kept.

Secretary Marshall might have been warned by the history of the relations between this country and Europe since World War I. He chose to assume that he had a device which would work because of Europe's desperation.

Actually, European politicians are never desperate because they can always resort to revolution and communism. Only the United States is desperate because this country wants peace and production.

Europe is prepared to make us pay her price for peace and production—any price we can be got to pay. This lack of understanding of European history got George Marshall into his present trouble.

The New Coal Contract

EXTENSION OF REMARKS

OF

HON. JAY LeFEVRE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, July 11, 1947

Mr. LeFEVRE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article by Mark Sullivan appearing in today's New York Herald Tribune.

Mr. Speaker, I have received from my district several severe criticisms of Congress for remaining silent over the demands made by John L. Lewis and the acceptance by the coal operators of the coal contract. These constituents feel that while Congress is busy with a new tax bill, trying desperately to reduce taxes, along comes John L. Lewis, a private citizen, levying a tax on his own on the American people, which amounts to approximately a dollar a ton on coal. Of course this affects our economy right down the line, especially steel products and for every coal consumer.

This is a sad state of affairs. In trying to look at this situation from the operator's standpoint, I imagine it evolved itself to the point of whether we would have a paralyzing strike or the hope of having a long-time period of production. A strike without a doubt, would have eventually ended with the Government again taking over the mines and I, for one, favor the operators running their own show. From past experience the operators know that the Government would have granted Mr. Lewis his every demand. We cannot be too harsh on the operators and after all it is not the function of Congress to interfere with collective bargaining. Personally, I feel that John L. Lewis is at the height of his power and every time the price of coal advances the industry can expect further inroads of other types of fuel for power and heat.

MINE OWNERS' YIELDING TO LEWIS LIKENED TO MUNICH APPEASEMENT—MARK SULLIVAN CITES THEIR HOPES OF PEACE IN THE COAL INDUSTRY FOR A LONG TIME, BUT HE SEES AN OMINOUS STEP ON THE ROAD TO INFLATION

(By Mark Sullivan)

WASHINGTON, July 10.—The contract made by the coal-mine operators with Mr. John L. Lewis and his United Mine Workers, by which Mr. Lewis got practically all he demanded, has led to an aftermath which includes criticism of the mine owners for making the contract. Much of this focuses upon the United States Steel Corp., a large owner of coal mines, and upon its president, Mr. Benjamin F. Fairless, who was a spokesman in the negotiations with Mr. Lewis. Criticism of Mr. Lewis is passed over, presumably on the assumption, sustained by experience, that Mr. Lewis is immune; he either has developed an induration, or sees advantage in criticism as a thing that strengthens his position with his union following, whichever way you choose to read Mr. Lewis' extraordinary mind.

What went on among the mine owners as they negotiated with Mr. Lewis—while neither this nor anything else can ameliorate the effects of this contract on the public and the country's economy—reveals the reasons the mine owners took the course they did. Their early discussions with Mr. Lewis might justify the term "negotiation"; there was some argument about minor aspects of Mr. Lewis' demands, such as payments to the miners' welfare fund. But what went on toward the end could hardly be called negotiation; it might be more accurately described as an ultimatum by Mr. Lewis: The mine owners could accept or refuse.

BLOW TO THE ECONOMY

Leaders among them gave thought to the two sets of consequences they were obliged to choose between. Resistance would mean a strike. While the new labor law in some respects enables an employer to resist a strike more effectively than the former one-sided law, nevertheless neither the new law or any other condition could bring a strike to termination in less than some 3 months or so. Meanwhile the strike in coal would bring paralysis of almost the whole of the country's industry and economy. Avoidance of this calamity was mainly the thing for which the mine owners chose to pay the price they did.

Mr. Fairless, in a statement he made as the contract was signed, emphasized the effect on an industrial paralysis on the entire country, and added that it might also have had an adverse effect upon the international situation. What was in the mine owners' minds was that much of Europe is at this time dependent upon America for coal; it is being shipped to Europe in large quantities. Deprivation of American coal, causing distress and paralysis to Italy and other European countries, might strengthen the movement toward communism. Also, interruption of coal to Europe might impair European confidence in the Marshall plan, much cherished by our Government, which rests upon the assumption that we can help Europe recover.

The mine owners apprehended that a coal strike might lead to another seizure of the mines by the Government. Though the wartime law under which past seizures were made ended July 1, there was already talk that in the event of a coal strike, Congress would pass an act authorizing seizure. And seizure, the mine owners felt, would be likely to end, as past seizures have, with a granting by the Government of most of Mr. Lewis' demands. Granting of the demands by the Government some months from now would be no less undesirable than granting by the mine owners now.

AN ADDITIONAL MOTIVE

An additional motive weighing with the mine owners was the wish to get on with certain technological improvements in the industry now well under way, such as "gasification" of coal at the mines, expected to offset higher cost of coal.

The mine owners, as a representative of them said to this writer, had to "choose between the devil and the deep blue sea"—in which figure of speech let us assume that Mr. Lewis is the deep blue sea. The defect of their choice is suggested by a phrase Mr. Fairless used. He hoped the contract would bring "industrial peace in the bituminous coal industry for a long time to come." These words uncomfortably recall the phrase used to justify concession to Hitler at Munich for the sake of "peace in our time."

The decision the mine owners came to—leading to higher prices for coal as a basic commodity and hence to higher prices for all sorts of goods—is a step, and an ominous one, in the upward spiral of the country's price level of goods generally. That, if it should go on to serious inflation, would be a greater calamity than any which the mine owners envisaged as possible consequences of resisting Mr. Lewis.

Dissipation of American Resources

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, July 11, 1947

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by George E. Sokolsky, from the Washington Times-Herald:

THESE DAYS

(By George E. Sokolsky)

For three centuries, work was the creed of Americans. The early settlers had to work or starve. The founders of this Nation had to work, or there could have been no Nation. The honored men were not aristocrats, not those who traced their lineage back to William the Conqueror.

Honor went to those who achieved success in any field by hard work.

And out of all this work, the people of this country piled up huge wealth. They created an industrial structure which stands unparalleled in history. They established means of communication, railroads, high-

ways, telegraph, telephone, and more recently the airplane and radio, in the greatest profusion.

They could afford the luxuries of churches, schools, hospitals, and numerous social institutions and associations. Every small town, as well as the large cities, had newspapers and other vehicles of information and free expression of opinion.

All this was the result of work in a free society where each man followed his judgment and gave a maximum of effort. Those billions that politicians speak of so freely and scatter to the winds is the hoard of generations of Americans, accumulating and increasing from the time of the early colonies until these days of profligacy.

It is this hoard that is now being dissipated. Much of it is being spent in futile politics, to putty the holes of a declining society in Europe and Asia.

As dangerous as such a course is, even more dangerous, more frightening is the damage done by imitation of European ways by those who, having the benefits of this free and rich country, seek utopias in a decaying society.

What is the utopia that Europe offers? At best it is a workless society. For the mark of a gentleman in any aristocratic community was that he did not work. He might govern other men. He might control their minds and even their persons. He might devote himself to fashion or to dilettantism in one of the arts or humanities, but he did not soil himself by productivity.

He did not add to the wealth of his nation or any other. He was an ornament.

That, to many, is utopia. It is the ideal to which men, in this generation, look. That, for instance, is what happened in England. For decades the British socialists have been offering their followers a society with less work, fewer hours, more leisure.

When the Socialist government took over, the British workingman assumed that utopia had arrived and that he could work less and be guaranteed from the cradle to the grave. France went through that period on the verge of World War II and was, because of it, smashed by the Nazi.

Here in this country all sorts of devices are offered to lessen productivity until today we are suffering a scarcity which is the result of decreased work. Every industry suffers from limitations upon the efficiency of the worker who restricts his output to conform to rules set to equalize the more competent with the least competent.

Ceilings have been placed upon human progress by rejecting new devices which increase output and which forbid exhibitions of superior abilities by those who possess them.

The danger is that while we are consuming our savings in wars, relief, and aids, we are not building new hoards of wealth by increased output. As our savings decrease—and the national debt is the best example of the decrease—prices rise, wages grow meaningless because of higher prices, and the tax rate becomes an unbearable impediment to new developments and greater output.

In a word, we are being squeezed between losses in our National Capital hoard and the greater difficulty in individual efforts to produce more and to keep the rewards of production.

That is what the Utopians have brought us. For while those who would put heaven on earth immediately paint roseate pictures of what the outcome of their changes will be, actually they make us all poorer as individuals, and they are impoverishing our collective hoard upon which we all depend for national and individual security. This mischief may not appear in the national balance sheet at the moment, but the warning is already in the figures.

The West Pays Its Debts

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Friday, July 11, 1947

Mr. HORAN. Mr. Speaker, under leave to extend my remarks, I herewith include an article printed in the July 7, 1947, issue, of the Wenatchee Daily World, of Wenatchee, Wash., telling of the expected final payment this year on the bonded indebtedness of the Icicle irrigation district, in Washington's Vale of Cashmere.

This article, coming only a few months after the celebration of the pay-off on the Tieton reclamation project in central Washington, is just another proof to the Nation that the West pays its debts. It shows that we of the West are worthy of the investment made in our enterprises by the Federal Government and how this irrigation project, begun in 1923, has added materially to the wealth of the State of Washington and the United States.

The article follows:

ICICLE WATER PAY-OFF

CASHMERE, July 6.—Three hundred and fifty Cashmere Valley fruit growers after harvesting this year's apple crop will pay off the final $60,000 bonds on the life line of their industry—the Icicle irrigation district.

Payment of the bonds will cut their production costs for the growers have been paying $10 extra per acre on retirement of the outstanding bonds. The Icicle, which secures its name from the source of their water supply, Icicle River and Canyon, winds 40 miles at 380 feet elevation above the valley.

Four thousand feet of tunnel, 3.7 miles of pipe lines and the remainder of the irrigation ditch, wood and steel pipe, covers 3,900 acres of orchard land and supplies supplemental water for 3,600 more acres in the Cashmere and Peshastin area.

Claude M. Zediker, secretary of the Icicle district, engineer, fruit grower himself, and the mayor here said today they had spent $1,000,000 since 1923 on reconstruction of the entire system, now 24 years old. He said that the reconstruction involved tearing out flumes, excavation and lining the ditch with 3 inches of concrete—all necessary to secure more water and strengthen the existing system.

The district was organized in 1917 by a private company financed by the Black interests in Seattle. The present nonprofit cooperative took over in 1923 and things started happening. Zediker told of their immediate concern for insuring a continuous supply of water. Because of a gradual reduction in the supply—they went to the source and built three water reservoirs that could be emptied, when needed, into the Icicle Creek. These reservoirs are located at Coldchuck, Eight Mile, and Klonaqua Lakes.

There was another reason for their concern about ample water—overgrazing of sheep within the forests had cut heavily into the soil—erosion led to a sparse watershed and a diminishing supply of water. Government grazing officials doubted this effect on the apple industry; they asked for an inspection and set the date.

"They picked a date when normally sheepmen wouldn't be releasing their sheep to the forests," Zadiker explained, and not around September 1 when they could see the actual results of overgrazing. They must have forgotten to notify sheepmen about the inspection trip or else they didn't cooperate, for when we made the trip, the sheep were there and the damage was plainly visible. Government men then conceded we knew more about the forests and the necessity of protecting the watershed than they did—so we won out in the end and haven't been bothered since."

Eighty-five percent of fruit is water and you don't get fruit tonnage without water—hence the value of the Icicle and similar irrigation districts. Conservatively, Zediker estimated from a study made during the lean years of the thirties that every acre of an average orchard produced at least $500 to other industries of the State before the landowner received a cent from his investment, water charges, or taxes and labor for himself or family.

"By other industries," Zediker continued, "I mean production of boxes, spray material, paper, labor market, warehouse and cold-storage operations, and the railroads. If it was worth $500 in the 1930's think of what it would actually be worth today—I estimate it would run to $1,200 or $9,000,000 alone for this valley—and this doesn't include revenue from the apples themselves."

The annual cleaning job on the Icicle represents quite a chore. Sections sometimes have to be removed and replaced, strainers must be cleaned, and oftentimes the 30 or 40 workmen have to go right into the tunnel pipe themselves to get the debris which has accumulated during the 5-month continuous operations from May 1 to October 1.

Zediker said the pipe and tunnel was in good shape and no further expansion or replacement program was in sight at present. They are not taking on any new customers, but are improving the service to present owners—the growers themselves.

The directors of the corporation, elected annually, with each grower allowed one vote irrespective of land holdings are as follows: Dale Kooken, Dryden; president, Vern Cedergreen, Monitor; and J. Howard Stephen, Leavenworth. C. P. Hartvedt is the manager.

When you talk about Cashmere Valley irrigation, you cannot overlook Peshastin irrigation district—an integral part of the Icicle. They have a 40-percent interest in the Icicle ditch from the intake to the diversion across the Wenatchee River—1 mile east of Leavenworth. In addition, they control 50 percent of the north side diversion to Peshastin Creek.

The history of the Peshastin is equally as interesting and, from a historical viewpoint, the older in inception and water rights. The original stock company—called the Peshastin Ditch Co.—dates back to 1891, and thereby hangs a tale.

In 1942 the 50-year State charter or franchise expired. The stock company was not informed and legal counsel were a bit lax. In effect, they went out of existence as a legal body. So the growers were more than happy; they jumped in with $20,000 and bought up the district that originally spent $60,000 for physical equipment alone. In reality, they bought at receivership, paying what was owed—a rare opportunity for the growers to form their own cooperative, which today is debt free and unencumbered.

There was a time when water rights were sold for loans and taken as security—many a time an orchard purchaser would buy without the water rights appurtenant to the orchard—even legal action ensued which ended up with the water rights coming back to the property. But all that is changed now and the directors have the growers' viewpoint for they are the growers and have seen both the lean and the lush years. They know a man who puts work into an orchard must have water and, like taxes, they remain with the property.

The Peshastin district, a much lower elevation ditch, serves 3,600 acres in the low lying valley lands of Peshastin, Dryden, and

Cashmere. They take their water from three sources, Wenatchee River, Peshastin Creek, and Icicle through 11 miles of pipe and ditch. Water users are assessed only $3 per acre, since they own the district. The ditch is 5 feet across and flumes are constructed at Dryden and Dittman Hill.

There is the story of the Government official who in the early forties had the bright idea of combining the Peshastin ditch and the Icicle in one. It sounded good and seemed practical but these ditches are like family affairs—you must know them to understand them—and oftentimes unknowingly you stir up a beehive when you ask one group of growers to assume the bonds still due from another—and yet today they work closely together and help one another, the water gets on the land, and the apples keep rolling out of the valley.

Admission of Displaced Persons to the United States

EXTENSION OF REMARKS
OF
HON. LOUIS E. GRAHAM
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 11, 1947

Mr. GRAHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Ivan H. Peterman from the Philadelphia Inquirer for July 11, 1947:

DP'S NEED SCREENING BEFORE ENTERING UNITED STATES

(By Ivan H. Peterman)

Sweeping generalities have always been a part of White House utterances, but it seems almost time that on the subject of displaced persons, President Truman come down to specific facts and figures.

"America must admit a substantial number," sounds fine for world consumption; but what does it mean? What is a substantial number compared to 140,000,000 Americans already in our midst? Or what is it compared to the 800,000 still homeless DP's.

This corner is for going very cautious on the admission of any more Europeans. Too many of them are outright troublemakers. The DP ranks, with all due respect for their suffering and ample allowance for deprivations, nevertheless contain today some of the toughest, meanest, and most exasperating characters on this earth. They also include some of the finest, most deserving patriots left alive between the upper and nether millstones of Europe's greedy ruling classes.

It would interest the Nation a good deal more, if President Truman set forth a logical plan on these would-be immigrants. They ought to be thoroughly screened; we want no Fascists and we have enough Commies, too. Let us have a few decent people, instead.

Another thing: Why don't we come out and say how many have already come into the United States? How many refugee Germans? How many Italians, how many Jews since 1933—fleeing Hitler and Mussolini? How many came in legally, and what is the score on illegal entries? Let us total up what we already have, and then parcel out—in fair proportion—a certain number of admissions to countries passed by for lack of sponsors.

I would like to see a few of those Poles who finally took Mount Cassino let in. There are 1,700 in the Monastery's cemetery who won't be a problem to anybody. But there are thousands left homeless.

Great Britain offered these Poles sanctuary, but they had few jobs except the coal mines. That's a pretty grim choice: Mount Cassino's cemetery or the depths of a mine that British laborers don't wish to work. Nevertheless, a percentage of the Polish Legion has filtered back, marrying Scottish girls they met during their training days. Do you remember that far back? I do. I saw them training for the tanks and airborne up near Perth—my first war assignment in 1942. The Poles had come out, half-starved and begrudgingly given passage via the Middle East by the Russians, after being engulfed by the Molotov-Ribbentrop deal.

They came to Britain and joined the Empire's forces. They got no easy assignments after that. They parachuted into Sicily and Italy, and when the SS couldn't be dislodged by the Yanks or crack New Zealanders, the Poles went up there at night, hand-to-hand, killed Hitler's chosen and took the Monastery. The Polish armored units did a job all the way across Europe.

So why not sort out the situation, find out how many Balts—Lithuanians, Latvians and Estonians—how many refugee White Russians, how many non-Commies from Austria, Germany, Italy, and the Balkan States, including Hungary? There has been too much emotionalism, too much burping over hardships and the past, too much coddling—to put it plainly—and not enough fact finding about the wishes, plane, and possibilities of these people.

One of the first things to know: Are they willing to come as the early pioneers came? Or do they expect a hand-made berth when they arrive? Are they determined to pile up in already crowded cities—and where does President Truman propose housing them if they do? Are they willing, as the Polish Legion members have said they are, to go as settlers to sparsely populated areas? Would they be willing to take up lands and start from scratch somewhere beyond the bright lights of Broadway, or the established manufacturing trade centers of the East? We ought to know. We could find out.

Some of these homeless souls would add a good deal to the American melting pot. Others, from their performances already in well-warmed DP stockades, have shown they'll be chronic pains in the neck. Nothing satisfies them. They got into the habit of complaining and slick dealing in order to survive; they haven't settled down and don't intend to.

Back in the days when you could buy your way out of Europe, come here for a "visit," and forget to return after Hitler veered from persecution to outright conquest, plenty of DP's got into the United States. Some came with bulging pockets, and did all right. Others, notably a gang from Rumania, brought convertible valuables along, waited out the war, intending to rush back as grand-scale carpetbaggers. They would sit around in small foreign soirees, in the St. Regis Hotel region of New York, talking it over. A magazine friend of mine, overhearing one day, promised to expose the lot if they ever tried it. Of course, Uncle Joe Stalin took Rumania over, so carpetbagging there is now on the Soviet plan alone.

These details should be considered when writing new invitations to permanent citizenship in the last Promised Land. Certainly the matter of service and wartime sacrifice—not merely loudly shouted personal tribulations, of which all Europeans had their share—ought to be high on the list of qualifications. Wouldn't you prefer to see a man and his family come down that gangplank, knowing he'd killed a few Nazis and done his bit with the rest? And wouldn't you feel surer about the political inclinations of DP's who are on A. A. Vishinsky's purge list than you would about a clamorous fellow already well hated for his disturbing activities in DP camps?

When President Truman and the DP sponsors come down to such practical matters, the American Congress and American public should be sincerely interested. Until then, however, they should be alert that we don't let in the undeserving, while keeping out those who earned a chance.

Old-Age Security

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 11, 1947

Mr. LANE. Mr. Speaker, our Nation, conspicuously first in so many fields, was among the last to develop an awareness of the need for social security.

A severe depression shocked us into the realization that we are all members of a society and are dependent upon one another.

All of us who believe in the free-enterprise system know that it cannot stand up under the cycle of boom and bust—of feast and famine. The best way to preserve our way of life is to distribute purchasing power, especially to those who, because of age or other circumstances, cannot compete in the labor market.

What we need, above all, is an adequate insurance in the form of a national old-age pension system; not for humanitarian reasons alone, but because it is necessary to avoid economic anarchy.

The present system of pin-money pensions will never solve the problem, either for the individual or the Nation. Broken down into 48 State compartments, it results in many cruel discriminations. It ignores the realistic fact that you cannot seal off the people of one State from another, treating one as human and the other as subhuman.

This is a national problem and must be dealt with on a national scale, treating all our aged as fellow Americans.

Like many other Members of Congress, I want to see H. R. 781 come out of committee and onto the floor of the House of Representatives for debate and vote. I am confident that when this forum brings the facts to the attention of the American people, public opinion will do the rest. Your cause is their cause. When properly informed as to the problem, the generations behind you will provide for themselves through you by insisting on national legislation for better old-age pensions without delay.

Statement by Hon. Dennis Chavez, of New Mexico, on Public Health Bill

EXTENSION OF REMARKS
OF
HON. DENNIS CHAVEZ
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES
Saturday, July 12 (legislative day of Thursday, July 10), 1947

Mr. CHAVEZ. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement made by me on yesterday before a sub-

committee of the Committee on Labor and Public Welfare.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

I am glad to take this opportunity to present the reasons which led me, as a Senator from the State of New Mexico and as reflecting the views of the peoples of our great Southwest, to join with the Senators from Montana and New York, from Florida, Rhode Island, and Idaho in sponsoring S. 1320; the reasons why, under my obligations to the Nation and to the people of my State, I must oppose S. 545.

Fortunately, one no longer has to argue over whether or not there is need for Federal action to assure our people of access to modern medical care and of a chance to maintain the good health which that care makes possible. Experts and statisticians have produced volumes of figures proving that our people are not getting the care they should. During the last two sessions of Congress, both the existence of this need and the absolute necessity for Federal action in meeting the need has been recognized by leaders of the Republican Party, as it had been long before by men of my own persuasion. This session has seen the introduction of S. 545 sponsored by Senators TAFT, BALL, SMITH, and DONNELL, and of S. 1320 sponsored by Senators WAGNER, MURRAY, PEPPER, TAYLOR, MCGRATH, and myself. The need and the need for action has been agreed upon.

But the proposals set forth in S. 545 are so unsatisfactory that I am sure its sponsors cannot really have been aware of either the very great extent of the need in the Southwest or of the methods of meeting that need which would be acceptable to the people of the Southwest. It is on these points that I should like to comment. My colleagues will, I am sure, address themselves to the conditions pertinent to those varied sections of our great Nation which they represent.

New Mexico is a most fortunate State in most respects. Our people are rich in their cultural heritage; richly endowed by the climate and character of the land in which we make our homes; rich beyond measure in their deeply satisfying ways of living. But New Mexico is an agricultural State and our people are not rich in the common usage of the word—in dollars. Recent figures indicate that the average effective income for each family in New Mexico in 1941 was only $1,435. That was but 67 percent of the national average of $2,133. In 1944, although the corresponding cash figures had almost doubled, New Mexico still stood at only 70 percent of the national average. If this was the average income for New Mexico, the Senators, knowing that New Mexico has some very wealthy families, will realize that our average family had in fact an appreciably lower income. If even the AMA concedes that a family with $3,000 a year cannot alone and unaided purchase good medical care, it becomes obvious that a bill like S. 545, which at best can aid only 5 to 10 percent of the population, cannot solve our problem. Only a program reaching 80 to 90 percent of our families, as does S. 1320, can do the job.

In October of 1942 there were 45 States with a more satisfactory ratio of people to each practicing physician than in New Mexico. At the same time throughout the country as a whole the distribution of practicing physicians was one for every 1,400 persons. Corresponding figures for New Mexico showed 1 physician for every 2,449 individuals. There were only 2 States with more people per physician, the last State on the list having only 1 for every 2,806 persons. At the other extreme, 1 State showed 885 individuals for each practicing physician. It is unlikely that more recent figures would show much improvement for New Mexico. Nor do such figures begin to tell the whole story because there are areas in New Mexico where the patient-physician ratio is even worse. Physicians here as elsewhere have located for the most part in the more urban communities where they have access to the medical resources necessary for the practice of high-quality medicine. Such a condition means that any bill which pretends to solve the problem but which makes no specific provision for the training and relocating of physicians and which, in addition, requires the State to match Federal funds, is in truth a mockery no matter how well intentioned.

One other factor peculiar to the Southwest must be given consideration. Our people are the proud representatives of three great cultures: The Indian, the Spanish, and the Anglo-American. In terms of Americanism, the claims of these first two groups antedate that of the people of practically any other part of the country. This heritage, together with the fact of citizenship in our United States, means that we in New Mexico are a proud people—rightfully so. It means that we are an independent people—very much so—and it accounts, too, for the extreme patience which characterizes our people. Even in the face of shameful treatment as members of little-known or recognized minority groups, they have exhibited unusual fortitude and forbearance. They, along with millions of others in this Nation of ours, were denied economic and social justice before the last war. Nevertheless, the record of volunteer enlistments from these groups in New Mexico was outstanding during the recent international holocaust dedicated to uprooting fascism. Their performance on every battle front during the war was heroic and many of them gave their lives in the performance of feats of bravery and endurance. Those who returned were fortified in their belief in the ultimate victory of democracy for all the people.

To a people such as this, a measure offering assistance only on condition that they accept the label of indigent—as does S. 545—would be completely unacceptable. Our people would recognize it at once for what it is, namely, a system of emergency relief with a double standard of medical care—one for the low income and another for those of wealth. The people of New Mexico know that there is only one acceptable standard of medical care. We do not want to see separate systems of medical service, one for those who can afford to pay well and another for those who cannot, established in their State or, for that matter, anywhere in our Nation. Such a proposal is archaic, a return to the Elizabethan poor laws of 1604. Those people needing medical care the most would scorn such a policy before bowing to the humiliation of accepting charity. They would rightfully resent the prying of the investigators who would be required to execute S. 545.

To the people of New Mexico S. 545 means degradation, dependence on charity, poor medical care, and a compulsory tax on all the people for the questionable benefit of a few. Such legislation is abhorrent and no solution to a problem affecting over 90 percent of all the families in New Mexico.

The Senate subcommittee reporting on the 1939 Wagner health bill said, among other things: "Poor health leads to unhappiness, poverty, dependency, and even to crime; good health contributes to well-being, production, income, and wealth. The ideals and principles of American democracy call for equality of opportunity. Such equality of opportunity certainly cannot exist unless all groups in the population have access to those health services needed to prevent and cure disease and to promote vitality and well-being." The right of all the people to medical care which S. 545 ignores makes this bill even more intolerable.

In contrast, S. 1320 really recognizes the basic philosophy of making medical care available to all the people. It rests on the right of the individual to health and on the economic need of society for a healthy population—one which is fit and able to produce. S. 1320, as opposed to S. 545 would entitle practically every American family to medical care as a right, when it is needed, in return for contributions made while well. This is an extension of the social-security principle which has already been accepted by the American people to replace the antiquated poor-law system which S. 545 so closely resembles. S. 1320 permits our people, along with those of every other section of the country, to proudly pay the proper percentage of their incomes for their medical care; it assures the man earning a thousand dollars a year or fifteen hundred or two thousand that he is doing just as much to insure the health of his family and of the Nation as is the man earning five or ten thousand; it enables him to seek and to receive medical care on the same rightful basis as any other man.

S. 1320 assumes even greater significance when the administrative aspects of the bill are reviewed. I shall leave a complete review of this phase to my colleagues. However, I should like to indicate in passing that S. 1320 very adequately and properly recognizes the importance of local control. In fact, it provides for the distribution of health services in accordance with local customs and traditions. This, permit me to assure you, is extremely important to New Mexico. It is an amazing incongruity that such provisions are not apparent in S. 545.

S. 1320 further provides that the Federal Government must approve State plans and that there will be standards set for the quality of services rendered. I am not at all afraid, as other Senators seem to be, that such provisions will make the Federal Government dictatorial. Perhaps because we in New Mexico trust our Federal Government and its officials. It also seems odd to me that any legislation involving the expenditure of Federal funds would not contain safeguards guaranteeing their wise expenditure. From this point of view S. 545 virtually gives the medical profession carte blanche. It is no wonder that organized medicine is supporting S. 545. It is nothing more nor less than a subsidy for the voluntary prepayment plans which the medical hierarchy is now advocating but which they so bitterly opposed just a few short years ago.

I particularly approve of the provision in S. 1320 which permits a State to have the Federal Government handle the administration of the program if it so chooses. The densely populated and wealthy States have of necessity developed large departments of welfare and public health which could take the administration of a health program as outlined in S. 1320 in their stride. Other States, finding themselves not so well situated in this respect might well prefer Federal administration. Again, as is true throughout all of S. 1320, there is a democratic adherence to freedom of choice. In contrast, S. 545 not only requires that the State administer the program but it insists that the State health department be the administrative agent. As heartily as I endorse health-department administration of medical care, I still insist that in accordance with our democratic traditions the State should be permitted to choose which agency it feels is best equipped to handle the program. It would appear that those who talk overly much of the principle of "States Rights" are afraid of the decisions which the State might make.

The provisions for rural areas which appear in S. 1320 are of great importance to New Mexico. They mean that, as an inducement to settle and practice in sparsely populated and low income rural communities, physicians may be guaranteed a minimum income; reasonable expenses incurred in travelling to the chosen area may be paid; loans may be made for the purchase of office equipment;

unusually costly travel expenses incurred in the transportation of patients may be paid; funds may be expended to educate the people in the area as to the medical services available and how they may best be utilized; and finally funds are available not only to initially train medical personnel who will settle in rural areas but to permit post-graduate training of any medical personnel located or willing to locate in rural areas. Only in such a manner does a democracy improve the health of the people and fully realize the value of its largest single resource.

In closing I should like to indicate that the problems of medical care which we face in New Mexico are not peculiar to New Mexico. The problems of medical care of the low income, rural and Negro groups are closely interrelated and follow the same pattern. All of these groups receive less medical and hospital service than do the high income, the urban and the white populations and have higher morbidity and mortality rates. Disease and poverty go hand in hand.

The satisfactory solution of the health problems of our Nation cannot of course, be achieved by the medical profession alone. Public health services must also be included in any planning for the protection of the health of the community. It also becomes increasingly important to give a strong voice to the consumer who pays the bill for medical services. This is not only democratic but it is good common sense to have the benefit of the experience and judgment of these groups.

If passed, S. 545 would deter us an unnecessarily long time in reaching a satisfactory solution to these problems. It is an objectionable and un-democratic piece of legislation. In contrast, S. 1320 provides the answer to the health problems of New Mexico and the entire country. It deserves the hearty recommendation of this subcommittee.

Statehood for Hawaii

EXTENSION OF REMARKS
OF
HON. WILLIAM F. KNOWLAND
OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Saturday, July 12 (legislative day of Thursday, July 10), 1947

Mr. KNOWLAND. Mr. President, I ask unanimous consent to have printed in the RECORD four editorials relative to statehood for Hawaii. One appeared in the San Francisco Chronicle of July, another in the Washington Post of July 6; the third in the Portland Journal of July 2; and the fourth in the Philadelphia Bulletin of July 2.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the San Francisco (Calif.) Chronicle of July 1947]

SIMPLE FAIRNESS TO HAWAII

The organic act which created the Territory of Hawaii in 1900 necessarily contemplated eventual statehood. So the United States was long ago committed on that.

Hawaii has now waited 47 years for the fulfillment of that promise. The Territory has an area larger than Connecticut and Rhode Island together. Its population, now 519,000 is larger than that of any other State, except Oklahoma, at the time of admission to the Union.

If there was ever a doubt, based on imperfect knowledge, of the loyalty of some sections of that population, the question was settled in the late war. Admiral Nimitz is on record that the performance of the people of Hawaii during the war erased any prewar doubt he might have had. He has said further that "from a military and naval standpoint, I can see no objection to these islands achieving statehood."

These loyal American citizens who live under our laws and pay Federal taxes have no voice in the enactment of these laws or in the imposition of the taxes; not even the right to choose their own Governors or to vote for President.

The House on Monday voted statehood for Hawaii. It is now up to the Senate. In all fairness, the people of Hawaii are entitled to be freed from their anomalous position. Forty-seven years of tutelage is enough.

[From the Washington (D. C.) Post of July 6, 1947]

HOPE FOR HAWAII

At last the 50-year struggle of the people of Hawaii to obtain statehood has won congressional recognition. In its 196–134 vote approving preliminary legislation authorizing admission of Hawaii as the forty-ninth State, the House showed proper appreciation of Hawaii's case. These Pacific islands, which voluntarily ceded their sovereignty to the United States half a century ago, meet all the requirements for statehood. Their qualifications have been reaffirmed many times by congressional committee.

As a Territory, Hawaii has a history of financial responsibility and of constructive handling of its own affairs. It is a prosperous community of more than half a million Americans whose education and literacy standards are high, whose participation at the polls is far above the national average and whose loyalty was demonstrated beyond all question during the war. There is no racial problem in Hawaii, for the Territory is a living experiment in racial democracy. The old continental argument against encompassing offshore possessions is diminished by the fact that Honolulu is a mere 10 hours by plane from San Francisco—far closer than most State capitals a century ago. With America's vital interests in the Pacific illustrated only too clearly by the war, the State of Hawaii can well serve as a symbol of our permanent concern with that area.

It is regrettable that the Hawaiian statehood bill must go through exhaustive hearings again in the Senate, and that pressure of other legislation probably will prevent passage during this session. But proponents of statehood have won a signal victory in the House which will hold over until the next session of Congress. Then there will be time to concentrate on the Senate for the long overdue recognition of the just aspirations of this group of citizens to become an integral part of the American Union.

[From the Portland (Oreg.) Journal of July 2, 1947]

ALOHA MEANS HAWAIIAN STATEHOOD

Hawaii calls, but not in vain. To the Senate, perhaps not for action at the present session of the Congress, goes Hawaiian Delegate JOE FARRINGTON'S bill to make the Hawaiian island group a State. The blessing of the House upon the measure was a roll-call vote of 196 to 133.

Between Hawaii and Oregon there is historic mutuality of interest. The first farm animals were brought to Oregon in 1811 from the Sandwich Islands (Hawaii) by the John Jacob Astor fur-trading party. In 1825, Dr. John McLoughlin, Hudson's Bay factor, shipped lumber from his sawmill to Hawaii. Ten years later, Nathaniel Wyeth brought cattle, goats, and hogs from Hawaii and placed them on Wapato (Sauvies) Island on the Columbia. In 1840 missionaries from the Atlantic seaboard reached here by way of Hawaii. More than a century ago, Senator Thomas Hart Benton, of Missouri, foresaw the day when "commerce from the Orient and the islands of the Pacific will pour into the valley of the Mississippi through the channels of Oregon." His colleague, Senator Lewis Fields Linn (Benton and Linn counties are on opposite shores of the Willamette River) introduced in 1838 a bill to establish the Territory of Oregon and to grant land to actual settlers. In doing so, Senator Linn argued that the "occupation of Oregon would secure sources of vast wealth in the fur trade, in the fisheries, in Hawaii and the Orient." Owyhee, name of an eastern Oregon irrigation district, is believed to be an early English spelling of Hawaii.

To the people of Hawaii, aloha, a musical word often set to music, has many shades of meaning from felicitation and farewell to salutation and endearment. Now aloha is also beginning to mean statehood.

[From the Philadelphia (Pa.) Bulletin of July 2, 1947]

HAWAII DESERVES STATEHOOD

When the House passed and sent to the Senate a bill that would admit Hawaii to statehood and change the flag for the first time since 1912, opponents raised a variety of arguments which fail to bear up under analysis.

One dealt with the area and population of the islands; yet 3 States are smaller in area, and 10 have smaller populations. Another held that labor union strength among the population would mean two more pro-labor Senators. What validity lies in such an argument no one explained, nor was any more light thrown on the claim that five large business firms control the islands' economy.

Proponents, on the other hand, offered acceptable reasons for creating a forty-ninth State. When Hawaii became a Territory it was with the tacit understanding that it could develop into a State. Furthermore, the world might be particularly impressed at this time with the fact that our democracy is not static, but growing. Similar arguments might be advanced on behalf of other territories when they are ready.

The more than a half million Hawaiians demonstrated their unquestioned loyalty during the war, and in circumstances more trying than confronted most people on the continent. The mixture of populations, objected to by some opponents of statehood, differs only in the origin of its peoples from the older mixture familiar in Eastern States.

No partisanship is evident in this proposal, and no reason appears why the Senate should not follow the House's course. Hawaii deserves statehood.

Will the Taft-Hartley Law Improve Labor Relations in Industry?

EXTENSION OF REMARKS
OF
HON. JOSEPH H. BALL
OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Saturday, July 12 (legislative day of Thursday, July 10), 1947

Mr. BALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement made by me on Thursday, July 10, 1947, on the Town Meeting of the Air. It is entitled "Will the Taft-Hartley Law Improve Labor Relations in Industry?"

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

WILL THE TAFT-HARTLEY LAW IMPROVE LA RELATIONS IN INDUSTRY?

(Opening statement of Senator JOSEPH BALL, Republican, Minnesota, on T Meeting of the Air, Thursday, July 10, t ing affirmative of question)

(Mr. C. H. Haggerty, executive secretary California State Federation of Labor, speaker on program.)

It is perhaps natural that Mr. Hagg should confuse his power and privileges union leader with the rights of emplo under the new labor law. He denounces provisions outlawing the closed shop and quiring a majority of employees affected approve by secret ballot a union shop grant that these provisions restrict the a trary power of union leaders over employ But by the same token, they actually res to employees their right to get a job w out prior approval of a union and to m their own decisions as to whether they a union.

The law prohibits expenditure of un funds for or against candidates for Cong or President. That means the union c not spend a member's dues to support a c didate he personally is against. Of co that may lessen the political power of un leaders, but isn't it a sound protection of individual's right to his own political c viction?

The Taft-Hartley Act is on the books to because no free people can tolerate any g and powerful group, as labor unions are day, being above and beyond the law. P to June 23, there were Federal laws gove ing employers in labor relations, but tually none governing the conduct of uni The power which this situation gave to leaders of big unions was tremend Small employers and individual workers v at their mercy. They had to go along w patterns set by a few union leaders in ne tiations with a few great corporations.

What does the new law do to improve la relations? First, it sets up some rules unions to follow, along with those the ployer must follow. Let me emphasize t the unfair practices of employers in the Wagner Act, such as domination of a un discrimination between union and nonun employees and discharging an employee union activity, are not changed by so m as a comma. All these rights of emplo are protected and Mr. Haggerty's statem to the contrary is not true.

Congress did add some unfair practices unions. It will be, after August 22 w these amendments become effective, an fair labor practice for a union as well as employer to coerce employees in their choice of a bargaining agent. It will be unfair practice for unions as well as ployers to refuse to bargain collectively closed-shop contract will be illegal. Uni shop contracts must be approved by a jority of all the employees affected, and e then, the union will be guilty of an un practice if it tries to force an employer discharge an employee expelled from union for any reason other than nonpaym of dues and initiation fees.

The law also makes it an unfair prac for unions to engage in secondary boy and jurisdictional strikes. These strikes h always violated the intent of the Wag Act, which guarantees to all employees right to freely choose their own represen tives. In a secondary boycott or juris tional strike, a union attempts to force ployees to join a particular union aga their will by boycotting their employer. effect is always to deprive employees free choice.

Other provisions of the law make un responsible for violations of contracts sign and provide that foremen are par management and not employees under Wagner Act.

Under the closed and union shop a was, union leaders were under little c

lost a distinguished colleague in whose memory we are now assembled.

I have lost a good friend, and it is fitting that I should add my sentiments to the occasion of his passing.

FRED BRADLEY was an intelligent, capable legislator, and a good and jovial companion. It is most startling to bear in mind that shortly before his untimely passing the gentleman from Michigan publicly deplored the State affairs, the dinners, and the social activities which constitute such a drain on the vigor and health of a Congressman.

No monument is needed for this man. His able work, his unselfish devotion to duty, his conscientious and untiring attention to his office stand in the history of the United States as a perpetual memorial to him. There abides in the breast of each of us his unwritten memorial—not material, but spiritual.

Because of his devotion to maritime affairs in his committee work, I am reminded of the epitaph of Robert Louis Stevenson:

Here he lies where he longed to be;
Home is the sailor, home from the sea,
And the hunter home from the hill.

Ralph Waldo Emerson has said:

Not gold, but only men can make
A people great and strong;
Men who for truth and honor's sake,
Stand fast and suffer long.

I know that the life of our distinguished colleague, whose memory we now revere, was dedicated to these words, since his activities were so devoted to its spirit.

May we take renewed spirit in the thought of our devoted brother. Let us here resolve to take up the torch where he, by necessity, dropped it and carry on his principles and his spirit to the lofty place where he intended they should ultimately rest.

The people represented by our late friend have lost a champion. Their grief, I acknowledge, is deep. However, merely because this gentleman led so public a life, it did not preclude his full enjoyment of a happy and contented private life, and I wish to extend my sincere sympathies to Mrs. Bradley who stood by her husband so fearlessly and so faithfully throughout their married life. We of the House have expressed our regrets over the passing of so splendid a Member. We have told what a blow his death has been to us and his people. We must, and we should, be remiss if we do not extend our warmer and deeper sympathies to his widow.

Let us bear in mind these words:

Asleep, awake, by night or day,
The friends I seek are seeking me;
No wind can drive my bark astray,
Nor change the tide of destiny.

What matter if I stand alone?
I wait with joy the coming years.

I trust that Mrs. Bradley may gather some consolation from my remarks and those of my colleagues, and in closing commend to her this imperishable quotation:

This is not a loss, life is a promise;
At the end of the lane and fulfillment, we rise again.

Statehood for Hawaii

EXTENSION OF REMARKS
OF
HON. WILLIAM F. KNOWLAND
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES

Monday, July 14 (legislative day of Thursday, July 10), 1947

Mr. KNOWLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Hawaii Nears Its Goal," from the Christian Science Monitor of July 2; an editorial entitled "Hawaii, Forty-ninth State," from the Boston Herald of July 3; an editorial entitled "Statehood for Hawaii," from the Waterbury (Conn.) Republican of July 2; and an editorial entitled "Case for Hawaii," from the Dallas News of July 3, all favorable to statehood for Hawaii.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Christian Science Monitor of July 2, 1947]

HAWAII NEARS ITS GOAL

After 49 years under the United States flag, and something around 28 unsuccessful tries, Hawaii seems nearer statehood than ever before. The House, with little evidence of either partisan or regional division, has passed the enabling bill by a safe majority. The Senate may not act until next session. But with the congressional investigating committee and the administration both behind it, the bill seems likely to get senatorial approval also.

The arguments for Hawaii statehood are many. Here is an instance in which it may be safe to judge by the objections, which appear few.

First is the point of Hawaii's polyglot population (which, by interpretation, means that some fear the high percentage of those of Japanese ancestry). Hawaii's war record in general, the Nisei's war record in particular, plus the notable scarcity of interracial frictions on the islands, would seem to offer adequate answers here.

Two other objections almost cancel each other: First, that Hawaii might come in as a "CIO-dominated State"; second, that Hawaii might come in as a "Sugar Trust-dominated State."

The very nature of these objections suggests that more probably Hawaii might enter the Union during a period in which its "big business" is being challenged by "big labor." This foresees a situation which a number of American States have already had to face and handle—Pennsylvania and Michigan, for instance. Perhaps it would be a situation which Hawaii might handle best on its own, in terms of its own quite unique conditions.

[From the Boston (Mass.) Herald of July 3, 1947]

HAWAII, FORTY-NINTH STATE

As we struggle with the problems of self-government in Massachusetts we sometimes wonder why the Hawaiians, in their island paradise which really has the climate California talks about, are so eager to shoulder statehood. A Territory can legally and morally expect Congress to solve all its problems, and can keep out of trouble by merely doing what the Governor appointed by the President tells it to do. But evidently Hawaii's 500,000 white, brown, and yellow-hued people have become Americans, for they want to take on the hard work of governing themselves. Also, in good Yankee fashion, they object to paying millions of dollars in taxes annually to Washington without having proportionate representation.

Honolulu is an American city. Nobody would have any doubt about that after shopping in its stores or reading its newspapers. Waikiki Beach is a lot like Coney Island, only, thanks be, considerably better looking. In all the villages of Oahu and the other large islands English is spoken and Americanism taught in the schools. About one-third of the population is, to be sure, of Japanese birth, but these people were impressively loyal to the United States during the war and their sons—the Nisei—fought with almost unequalled valor and honor in Italy beside our own troops.

Hawaii has been a part of the United States 49 years. We agree with the House of Representatives, which has just voted 196 to 133 for the statehood bill, that it is high time she was accorded the privileges and the responsibilities of becoming the Union's forty-ninth State.

[From the Waterbury (Conn.) Republican of July 2, 1947]

STATEHOOD FOR HAWAII

The Senate should follow the lead taken Monday by the House of Representatives and vote its approval of the bill which would admit Hawaii to the Union as the forty-ninth State.

Hawaii has at present more population than most of the territories at the time of their admittance to statehood. Hawaii pays more in taxes to the United States Treasury every year than many of the States now incorporated in the Union. During the war the half a million inhabitants of the Hawaiian Islands proved themselves loyal Americans. Hawaii, which has been under American administration for the past 49 years, wants to become a State and to receive voting representation in Congress.

The sum of these factors seems to weigh very heavily in favor of conferring statehood on Hawaii. The only serious argument which has been brought forward in opposition has been that the proportion of Hawaii's population which is of Japanese extraction might prove difficult to assimilate. Such an argument is obviously contrary to our fundamental principles of equality for all and is a weak and somewhat meaningless argument to begin with.

This Nation's great strength has come from the fact of our representation for all Americans in government, the fact of our belief in human rights and liberties and equalities, and the fact that race and color and creed are no barriers to citizenship.

There has never been a more opportune time for this Nation to reaffirm these democratic principles and to demonstrate them for the benefit of those sections of the world which are still incredulous of American freedom.

Admission of the Hawaiian Islands as the forty-ninth State provides an excellent opportunity for such a demonstration.

[From the Dallas (Tex.) News of July 3, 1947]

CASE FOR HAWAII

Hawaii's long-cherished ambition of statehood got a big boost from the lower House in its approval Monday. If the Senate of the Eightieth Congress acts favorably, the flag makers can try to solve the difficult problem of placing with geometrical precision 49 stars on the blue field of the corner of Old Glory.

With us, Hawaii should be a case of put up or shut up. Denying all claims to imperial status, we still have retained on territorial

basis a country that merged its independent kingdom voluntarily in the Union 49 years ago. It has suffered for us and fought with us. Simple justice and a sound theory of fair play urge admission now.

The American babyhood of the 20 islands was passed in an era when Americans, flush with the easy victory over Spain's decadent naval power in 1898, spoke of manifest destiny without catching the vision that might have gone along with it. Hawaii furnished a ready example for Pacific hegemony that might have been developed with profit both to ourselves and the thousands of land dots that make up Oceania. Had we viewed Hawaii as a stepping stone to governmental relations with these isolated insular areas, long before this the Pacific might have been developed under the American flag. Japan's hideous dream of expansion by force majeur might never have developed into its costly reality.

Size and population and economic limitations make impractical the maintenance of many thousands of separate political units. On the other hand small islands lend themselves admirably to the development of localized governments resembling municipalities or counties, larger ones like Hawaii to statehood. A benign imperialism might have cultivated the Pacific toward ideal government, guaranteeing the civil rights of its populations and furnishing trade advantageous to all concerned. It is far too late to realize now on that dream. Hawaii, state or territory, is not a gateway but an outpost.

Pertinent Observations Concerning the Cost of President Truman's Foreign Policy

EXTENSION OF REMARKS
OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 14, 1947

Mr. MASON. Mr. Speaker, Uncle Sam has extended aid to 59 different countries since the fighting ended, handing out a total of $20,000,000,000 in loans, grants, relief, lend-lease, surplus-property credits, and cultural cooperation projects—all to come out of the American taxpayer's pockets. General Marshall, our Secretary of State, now says that it will require at least $6,000,000,000 more per year for the next 3 or 4 years to put European countries back upon their feet, economically and politically. This is a staggering load to place upon the American taxpayer's back. It requires some explaining by those responsible for doing it.

In a partial break-down of the $20,000,000,000 handed out since VJ-day, we learn that Great Britain has received $4,400,000,000, plus 800 fixed war installations we built there at a tremendous cost; France has received $2,000,000,000, plus credit on the purchase of 75 Liberty ships; Italy, $530,000,000, plus her share in the $350,000,000 new European relief fund. From these three items alone we should begin to realize what the rehabilitation of Europe is going to cost us before we are through, because these three countries are already applying for more aid.

When we consider the $50,000,000,000 lend-lease hand-out we made during the war—eleven billion of which went to Russia—the $20,000,000,000 hand-out since VJ-day, and the $24,000,000,000 that General Marshall estimates we must yet hand out to rehabilitate Europe, one can easily see that our American tax burden will be a heavy one for the next 100 years.

Mr. Speaker, a prominent Arab of the Middle East, in discussing prospective aid from the United States with an American representative, said: "All we are interested in is how many dollars we will get and when." This statement expresses the general attitude of Europe, of the Middle East, and of the Far East. If we assume financial and economic responsibility for the rest of the world, what will the program cost? We are already committed to extend further credits to foreign countries of approximately $12,000,000,000. No one knows when these distressed countries will be able to stand upon their own feet and pay their own way. As evidence of this, both England and France are much worse off today than they were a year ago when we provided them with their first postwar loans.

How long can our capitalistic system last under the continuous drain that is being placed upon it? England has gone the way of all Europe; at least she has deserted the capitalistic system and become a hybrid government, half democratic and half totalitarian. She has at the same time gone on relief. Not only has she gone on relief herself, but she has asked us to place her former dependent nations—Greece, Turkey, Iraq, and Iran—on our relief rolls. The idea of placing these impoverished nations on our relief rolls is to keep them from falling into the outstretched totalitarian arms of the U. S. S. R., and thus protect England's Mediterranean life line.

Mr. Speaker, democracy is dying in Europe—dying of war wounds. Democracy as we know it never existed in Asia. Democracy in South America exists in name only, because dictatorship is the order of the day south of the Rio Grande. In view of these facts, it might be wise for us to devote all our efforts to preserving democracy at home. In order to do so we need to keep our financial house in order; we need to keep financially strong and solvent; we should not dissipate our strength nor our resources in trying to revive democracy in other parts of the world. If we weaken ourselves in an effort to revive democracy elsewhere, the last stronghold of democracy will become an easy victim for totalitarianism, the enemy of democracy.

In an address at Springfield, Ill., on January 27, 1837, Lincoln said:

> If danger ever threatens us, it must spring up among us. It cannot come from abroad. If destruction be our lot, we must ourselves be its author and finisher.

Lincoln's words are prophetic. In the light of that warning uttered over 100 years ago, perhaps we should today stop, look, and listen before carrying on the Truman foreign policy to the point where we exhaust ourselves.

Mr. Speaker, we were told that the $400,000,000 lend-lease request for Greece and Turkey is the first step in a 3-year program of world rehabilitation that will cost American taxpayers at least $21,000,000,000. This estimate is made by conservative authorities in the field of world finance. Since we have already extended this peacetime lend-lease aid to Greece and Turkey, we now may be forced to follow through with a complete program of world rehabilitation as a part of our new policy to stop Russia now. In fact, England has already stated that only a generous peacetime lend-lease program can save her from economic disaster.

If we extend this peacetime lend-lease aid, however, we should not lose sight of the fact that the financial burden we are assuming is not the whole burden. The Truman foreign policy, if carried out, means we must continue to export huge quantities of scarce goods—food, clothing, fats and oils, sugar, farm machinery, and so forth—thereby boosting prices of these scarce articles higher and higher. The program will require us to export between thirteen and fourteen billion dollars' worth of good each year for the next 3 or 4 years. This will result in an ever-increasing spiral of price and wage boosts, with their attendant labor frictions and work stoppages. It means adding billions of dollars to the cost of living for American families because of the higher prices that will be charged for their food requirements.

President Truman's new foreign policy, if carried out, will also mean that Uncle Sam accepts the role of world policeman; that from now on he will have to furnish the military might required to stop trouble wherever and whenever it arises in any corner of the world. It will mean we have taken over the responsibilities and obligations that we had hoped a strong United Nations organization would assume and carry. The world now recognizes the fact that the UN is a very weak reed for the world to lean upon, and so Uncle Sam is being called on to feed the world, to finance the world, to police the world, and to support the world, in order to save the world from communism.

We saved the world from Hitlerism at a cost of $300,000,000,000, plus thousands of lives, and blood, sweat, and tears. Now we are asked to save the world from communism at a cost that can neither be estimated nor predicted. Is Uncle Sam strong enough to do all this, even if he should be willing to do it?

Mr. Speaker, at the time of the San Francisco World Peace Conference many Members of Congress urged our United States delegates to that conference to offer the following amendments to the proposed United Nations Peace Charter:

(a) Abolish the veto power in the Security Council.

(b) Require all nations to agree to world-wide inspection of atomic energy development.

(c) Agree upon a world-wide limitation of armaments.

We suggested that if Russia refused to agree to these amendments, or safeguards, and walked out of the Conference, the United States and England, with the other peace-loving nations, constituting at that time at least 70 percent of the world's military power, should go ahead and complete the UN, leaving

Russia on the outside. After the organization was set up and functioning then Russia should be given the opportunity to come in or stay out as she desired. However, if she remained outside and thereafter disturbed the peace of the world—as she has done in the Balkans, in Greece, in Turkey, in China, and elsewhere—the UN could brand her as an aggressor nation and throw the military might of the rest of the world against her. Our recommendations, if they had been adopted, would have forced Russia to join the UN or commit national suicide, if and when she became an aggressor nation. The stalemate at the Moscow Conference and the recent break-up of the Four Power Conference at Paris over the so-called Marshall plan, as a result of Stalin's attitude, causes the same Members of Congress who recommended that action at the San Francisco Conference to wonder if it is too late to act now. Many Members of Congress today believe we should sever diplomatic relations with Russia now; isolate her from the rest of the world, and keep her isolated until she is ready and willing to cooperate to insure the future peace of the world. We believe drastic action on our part is the only way we can prove to Russia that she has gone too far already.

Mr. Speaker, we may as well face the fact that the postwar world of today is composed of two forms of government, two ideologies, that temporarily are living side by side. First, we have the democratic form of government with a President or head selected by the people, as in the United States, England, France, Italy, Norway, Sweden, Denmark, Switzerland, and others. Second, we have the totalitarian form of government with a dictator at the head, as in Russia, in Yugoslavia, in Spain, in China, and elsewhere. These forms of government, or ideologies, are diametrically opposed to each other, and therefore find it very difficult, if not impossible, to compose their differences and get along together. This means that from now on we must live in two worlds—not in one world as we have been led to believe—a democratic world revolving around the United States and Christianity, and a totalitarian world revolving around Russia and communism. The democratic or Christian world believes in God, places spiritual things above material things, emphasizes the dignity of the individual, and makes the state subject to the people.

The question we face is, How can a Christian nation deal with or get along with a communistic nation that rejects God and all that the Christian religion stands for? In trying to reconcile the diametrically opposed ideologies, or in trying to find some basis upon which they can live side by side peaceably, the $64 question becomes overnight the $64,000,000,000 question because it will require that astronomical figure before we find an answer; and even then, in my opinion, the result will still be in doubt.

Mr. Speaker, what is our record so far? We advance money to Poland, and free elections in Poland are denied. We advance more money, and freedom is destroyed in Bulgaria and Rumania. We grant millions to Greece and Turkey, and promptly Austria, Hungary, Yugoslavia, and Albania disappear behind the iron curtain. We grant billions to England, France, and Italy, and now we see the scourge of communism springing up in each of these nations. In spite of all the billions we have advanced we are further away from our goal than we were at the close of the war. Therefore, judging from the results obtained thus far, the future outlook in Europe is not promising.

And what about our record in Asia? In Asia, with the exception of MacArthur's work in Japan, the outlook is exactly the same. China and the rest of Asia are in worse shape today than on VJ-day. The only progress toward peace, the only bright spot in the world today, is found in Japan as a result of MacArthur's work.

Mr. Speaker, America today is full of fears and doubts. Tension between the American eagle and the Russian bear is growing. The bear is squeezing Greece, Turkey, Iraq, Iran, Egypt, Afghanistan, Korea, and Manchuria. If we decide to wetnurse the world it will take a lot of money, as well as "blood, sweat, and tears." Do we want to pay the price—in dollars; in goods; in continued controls; in continued restrictions, and scarcities; in continued high prices; in furnishing American boys to police the four corners of the world? Before undertaking the task we should ask ourselves: Can Uncle Sam carry the whole world on his back without breaking down under the load? My answer to that question is an emphatic "no." What is your answer?

Business Recession

EXTENSION OF REMARKS
OF
HON. JOHN L. McCLELLAN
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES

Monday, July 14 (legislative day of Thursday, July 10), 1947

Mr. McCLELLAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "That Recession," published in the Washington Times-Herald of July 14, 1947.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THAT RECESSION

If you read and listen to economic and industrial predictions you'll recall that a lot of them a few months ago had a recession hitting the United States just about now.

Employment and business were going to be at boom levels through the first half of 1947, but the last half was fated to be anywhere from punk to terrible. Large numbers of economists, statisticians, and industrial fortune tellers had it all figured out, and it couldn't miss.

UNITED STATES BOOM STILL ON

True, most of these prophets of gloom and doom were on the left side politically, but a fair number were conservatives.

So now we are near the middle of July. And how are we doing? The Census Bureau has just reported that we have not only reached the dream goal of 60,000,000 civilian jobs but passed it by 55,000.

This was the count for June. It came on the heels of a United States Employment Service report that likewise made monkeys out of the prophets of a depression in this country. The USES tallied 58,300,000 jobs for May and commented that unemployment had sunk to about the lowest level it can reach in a free labor market.

Employment slacks off a bit in summer, the USES expects new highs in the fall.

WHY THIS PROSPERITY?

Three main reasons are given for this continued prosperity: Manufacturing going on at a high level; consumer demand for goods unabated, despite the inflated prices of many items; and a tremendous export trade.

No early sag along any of these economic fronts is indicated by USES statistics.

We are at this time, in short, practically at the goal demanded by Henry A. Wallace and his fellow leftists when they set up their war whoop a while ago of "60,000,000 jobs."

And we're maintaining this prosperity with fewer and fewer of the wartime Government controls which Chester Bowles and his ilk told us we would abandon at our peril.

A slump may be coming sooner or later; but meanwhile the doom merchants are having a long, weary, and rather pathetic wait.

RUSSIAN RUBLES; AMERICAN DOLLARS

However, a recession does exist somewhere in the world. Unhappily for our leftists, it exists in their spiritual homeland, Soviet Russia. We'll leave it to them to explain why, and content ourselves with passing along some figures from a report on Russia just issued by the energetic United States Bureau of Labor Statistics.

Like the rest of us, Russia has had almost 2 years to get over the shooting part of World War II. Yet, while Soviet living standards were very low before the war, they are much lower now.

The average Russian worker earns 115 rubles a week; the average United States worker, $49.

With his entire week's pay, the Russian can buy 22½ 1-pound loaves of white bread; the American, 394, assuming that anybody wants that many.

The Russian's weekly wage will get him 16.9 pounds of sugar; the American's 503.7 pounds. When it comes to beef, expensive though it is here, the American can buy 81.8 pounds with his weekly $49, while the Russian's 115 rubles will bring home only 8.4 pounds.

In the United States, $49 will buy about 276 quarts of milk; in Russia, 115 rubles pays for 15.2 quarts, if you can find any milk. As for butter, it's about 70.3 pounds for $49 here, 3.8 pounds for 115 rubles in the Soviet paradise.

Getting around to clothes, the average Russian has to work 7 weeks to buy one suit, and a shoddy suit at that. The American worker can buy a good suit for 1 week's pay or less.

The typical Soviet workingman must shell out 2 to 3 weeks' wages for one pair of shoes, while the American can get six to eight pairs for a single week's pay.

Goods are tragically scarce in Russia, whereas the shortages of most consumer goods are disappearing in the United States, now that a reasonable time has passed since we dropped our Russian-style wartime price controls.

DEPRESSIONS WITHOUT END

So, if you're a lover of depresions, as our leftist prophets of disaster seem to be, the best place to look for a big, apparently endless, depression is good old Soviet Russia.

And, while our living standards are going up again after the wartime sag, those in

Russia are on the downgrade. The Kremlin's slaves have nothing to look forward to except a bigger and better depression than the one they now have—which in turn is bigger and better than any we've ever yet had.

The more we learn about communism, the more highly we think of capitalism. At least the latter doesn't have permanent depressions.

Intention to Veto

EXTENSION OF REMARKS
OF
HON. SCOTT W. LUCAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES

Monday, July 14 (legislative day of Thursday, July 10), 1947

Mr. LUCAS. Mr. President, I ask unanimous consent to incorporate in the Appendix of the RECORD a very illuminating, a very sound, and a very well-reasoned editorial on Why President Truman Should Veto the Tax Bills, published in yesterday's Washington Post.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

INTENTION TO VETO

President Truman's advance announcement of intention to veto the tax-reduction bill once more was denounced by Senator MILLIKIN, chairman of the Finance Committee, as an "impropriety," particularly so because control of the purse strings "is the heart of the power of Congress under the Constitution." As a general rule we agree that the President should not try to restrain or interfere with the lawmaking process by warning Congress of a coming veto. We believe also that the veto power should be used sparingly, and only for the purpose of preventing hasty and unwise legislation. In the present instance, however, the President is simply stating his intention not to yield to congressional pressure to sign a tax bill differing in only one detail from the measure he has already vetoed. We can see no impropriety in his announcing in advance that a mere 6 months' delay in giving effect to proposed tax reductions does not alter his conviction that the bill is "wrong" both as to timing and content.

Congressional control of the purse strings is not vested solely in Congress, as some of the President's critics imply. Like all other measures passed by Congress, bills for the raising of revenue are subject to veto. The power to veto is a feature of the system of checks and balances set up under the Constitution. Whether the exercise of that power is wise or unwise in any given instance is, of course, another question—one to which the answer depends upon the bias of the individual critic.

That the veto of the tax-reduction bill was wise, is, in our opinion, confirmed by the recent impetus to inflationary pressures resulting from a variety of causes. If consumer purchasing power should be increased by a $4,000,000,000 reduction in taxes, efforts to bring down prices would be further impeded Moreover, tax reductions would almost certainly interfere with appropriation of funds to assist the distressed peoples of the world, since there would be less surplus income available to meet such outlays. It is evident from the comments of some Members of Congress that tax reduction, in their opinion, takes precedence over the Marshall plan We do not doubt that many legislators who express such views would welcome tax reduction not only as a means of lightening the domestic tax burden but also as a defense against voting adequate sums for world reconstruction.

Following repassage of the tax-reduction bill by the House, Speaker MARTIN appealed to the public to let "your Members of Congress on both sides of the Capitol know how you feel about this necessity for putting our domestic affairs on a sound basis." Granted that financial soundness at home is essential if we are to aid others, it seems to us that the way to achieve financial soundness is to defer tax reduction until we are sure that revenue returns will be more than adequate to cover domestic budgetary expenditures and finance a foreign-relief program. The case for postponement is further strengthened by booming business activity, making it unnecessary to resort to tax reduction as a means of stimulating lagging enterprise.

Air Power Role in Unified Defense

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1947

Mr. CASE of South Dakota. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Post of May 16, 1947:

AIR POWER ROLE IN UNIFIED DEFENSE

(By Col. Harris B. Hull, U. S. Army)

(EDITOR'S NOTE.—The author of this article was a member of the editorial staff of the Post from 1931 to 1936. During the war he served in the European theater as assistant chief of staff to Lt. Gen. Ira C. Eaker. He is presently on duty in headquarters of the Army Air Forces.)

The fundamentals of the military problem facing America are being clouded, at a critical time, by incidental issues. That these excursions into side-line discussion should obscure the important aspects is unfortunate enough, but that this confusion should come at a time when the organization of the military services is being considered in Congress may well be tragic for America.

No one doubts that the future of the marines is an important subject. But the plain fact is that no one in the War Department is advocating abolition of this historic corps.

No well-informed person will argue that economies could not have been effected by a well-organized joint procurement service during World War II. But we did not have such a service when the Japs struck, we did not have many things, so the services set out to procure the needed items in the shortest possible time. That there was waste is incontrovertible. That is the nature of war.

These subjects essentially are diversionary to the basic military problem before us.

What we face is a critically important issue which essentially can be broken down into two parts: (1) strategic emphasis; (2) command.

There are three realms in which weapons can operate—on land, on the surface, and in the air.

The armored columns or World War II revolutionized overnight all tactical concepts of land warfare. They swept hundreds of miles in a fraction of the time required for the major advances of World War I. Modern and improved weapons facilitated the conquest of land masses—first by the Germans and later by the superior allied forces. But when the tanks came to the beaches they stopped.

Similarly, fast cruisers, long-range submarines, and other improved surface craft made fundamental changes in naval tactics. The American fleets of World War II approached a degree of operational efficiency undreamed of 15 years ago. But when the heavy fleet units came to shallow water they had to halt.

The third sphere is the air. Equipment built for air operations is no respecter of barriers. It operates with complete freedom over land or water, utilizing the shortest air route to move at very high speeds, and carrying large bomb loads. Airplanes operate in the universe, which is to say that they operate universally. They constitute the only universal weapon. They were employed in World War II to deliver independent strategic attacks against German and Japanese industry, to cripple the enemy's ability to wage war, and they were used to give support to ground forces.

It is important to remember that the airplane is not solely a bomber. As an instrument of reconnaissance it has no equal and it can be employed effectively as a troop carrier, for logistic support, for liaison missions, or in the other basic military roles.

Two fundamental air lessons emerged from World War II. The first is that there is no real defense against a superior air force. Its great flexibility and limitless operating area make it difficult enough to detect and to intercept. The German air force mounted a strong defense against the day and night attacks of the AAF and the RAF. This was the same German air force which had been the scourge of Europe, which had swept like lightning through the early campaigns of Poland, the Lowlands, and France. The ashes of Hamburg attest to the ineffectiveness of the GAF defense against General Spaatz's and Air Marshal Harris' bombers.

A second lesson to come from World War II is that if the air battle is lost it follows inevitably that the battle on the ground will be lost, regardless of the size of the forces involved. The campaigns of France, Africa, and Italy, viewed from both the Allied and German sides of the lines, stand in evidence.

A prime consideration of the war planner then becomes a treatment of the air situation.

The problem before us today is whether or not we will give air the prime consideration that it deserves, whether or not in our strategic planning we will recognize that the air is the unguarded frontier through which surprise attack can be launched, that if we are to lose air superiority a war may end before any ground or surface forces can be brought into action.

The airmen who recognize these facts are called zealots by a few remaining critics who still preach in the face of World War II experience, that the airplane and the missiles are another of the great family of weapons which started with the bow and arrow and which came to fruition with the automatic rifle.

This doctrine is fallacious. All other weapons, except the airplane, are built to assist the ground soldier and the sailor to complete his mission. The opportunities of employment of air weapons are unique, are as limitless as the realm in which they operate.

Air weapons alone are capable of independent strategic action. In the war against Germany they were the "decisive" factor according to the President's Civilian Strategic Survey Group. In the Japanese war they hastened the enemy's collapse, making invasion of Honshu unnecessary.

No airman advocates the abolition of ground or surface forces. He only asks a clear recognition of the fact that military science has changed and that the strategic emphasis must be given, if we are to be realistic, to the vital problem of air operations. The

airman points out that the avenues of potential action in the air are infinite. Were he to fail to point this out he would be less than an honest soldier. The same opportunities that are available to us for air action also are open to potential aggressors.

In the face of this paramount importance of air our military organization creaks under a system in which air force, far from being placed in a priority position, is subordinated to the other elements. Our command structure is out of balance and badly in need of consolidation. Today we do not have air in its proper place. We do not have unified control or direction.

We need today a coordinated system of military control which will insure that all our resources are employed with efficiency, and should we ever be attacked, in time.

Who is there that can argue that instantaneous control of our military weapons is not a necessity in a day when a single bomb can wipe out a city? If we do not have a unified system we forfeit automatically a degree of military control—we capriciously disregard the most single important factor of war—time.

We should remember that in World War II we had time on our side. Is there anyone who can come forward and guarantee that we will have the same amount of time at our disposal in any future conflict?

For years the airplane was considered as a fad of over-zealous airmen. Its development was hindered by the unimaginative who tried to tie its operation to the maneuvers of land and sea forces. Today full public understanding of the implications of air power is being diverted and unification is being delayed by arguments which, as vital as they may appear, are extraneous to the basic issue.

Many of the military tenets were revolutionized in World War I, others in World War II, but one that has remained unaltered is the advantage of surprise. A successful surprise attack in itself can be devastating enough, but with full exploitation in which additional forces are hurled on stunned defenses the result may well be conclusive.

The opportunities for surprise vary in proportion to the speed of execution. Air power offers, to any potential aggressor, the ultimate in opportunity to effect complete surprise. It is a certainty that the initial blows in a future conflict will be struck through the air. It is hardly necessary to mention the implications of successful surprise attack in an era of atomic weapons.

America's military problem, divested of all but the fundamentals, is whether or not we will recognize this, put air in an equal status, give it a high degree of strategic emphasis and establish a national defense organization capable of giving immediate direction to all our military resources.

Local and National Elections in Japan

EXTENSION OF REMARKS

OF

HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Monday, July 14 (legislative day of Thursday, July 10), 1947

Mr. SALTONSTALL. Mr. President, I have a letter which I ask unanimous consent to have printed in the Appendix concerning recent elections in Japan. It comes to me from a former classmate of mine, a captain in Japan, who helped conduct the elections referred to.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

NATURAL RESOURCES SECTION,
GHQ SCAP, APO 500,
San Francisco, June 1, 1947.

The Honorable LEVERETT SALTONSTALL,
United States Senate.

DEAR SENATOR: You might be interested in a first-hand account of the recent Japanese local and national elections, insofar as it concerns a sizable and representative section of the Japanese nation, and has some indication of the people's progress toward the attainment of democracy, and rule by the majority of the whole nation.

About the middle of last March, the CO of the Aichi military government team gave me the job of organizing and running the surveillance of the coming April Japanese local and national elections, for Aichi prefecture. This duty was required by General MacArthur and the supreme command allied powers for all of Japan, and it was the job of each military government team to cover its prefecture. There are some 45 prefectures, and 2 metropolitan districts, each the charge of a military government team, and as I have said before, these teams, and the MP's, are the real tangible occupation for the great mass of the Japanese. As for the rest of the occupation personnel, the majority live segregated lives in the little replicas of Washington, Fort Ord, and similar. Over here, it is somewhat like Paris in the twenties for a lot of Americans. You can stay here a long time, do your business, have fun, meet a lot of other Americans and a few westernized Japs (with Oxford or Chicago accents), attend a few saki, sukiyaki, and geisha parties, and learn very little of the people or the country. The great majority of GHQ life is like that, and too many of the accounts of today's Japan come solely from such sources. It is pretty superficial, and I feel that this criticism also goes for much of the overseas press. The latter, from what I have seen, read, and heard of their activities, missed a great chance for a story in these last elections. They mostly wrote of the business, solely from what happened in Tokyo, and let it go at that. This was grossly misleading, as the results in Tokyo and the four great cities were quite at variance with other sections, and told at best only a part of the picture.

The job was this, Aichi prefecture covers some 3,500 square miles, and comprises 9 cities, 213 towns and villages, and some 3,000,000 people. The cities run from Nagoya with 800,000, down to Tshushima with the bare minimum for a city of 30,000. Under the new constitution, the prefecture is run by an elected governor and prefectural assembly, the cities by an elected mayor and assembly, and the towns and villages by elected headmen and local councils. All such offices are to be elected, whereas in the former set-up the governors, mayors, and town chiefs were appointed by the central government, and the assemblies were purely honorary bodies, with litle or no power to oppose the executive's will. For this reason, the people had small interest in voting or electing their assemblies.

In these 1947 elections, things would be much different. Not only would the local executives be directly elected and responsible to the local inhabitants, not only would membership in one of the local assemblies mean a certain amount of power and responsibility, but the people of the numerous prefectural districts would be able to elect and send representatives to a national diet, that would no longer be a mere piece of political scenery and an obedient servant of the ruling powers, but the chief power in the nation. This was the new appeal for the people to really come out and vote. In order to qualify for voting, one had merely to be 20 years old, a 6 months resident, registered by a certain date, not a criminal or insane, and able to legibly write down the name of one's chosen candidate on the ballot. The last, a required that all candidates' names be posted, conspicuously, in the polls. One had merely to be able to read and copy a name.

There was also another important difference between those elections and those previous. Formerly, the business of running the elections was in the hands of the governors, mayors, and police chiefs. They fixed the rules. For these elections, no official would have a word to say. The whole business was under the authority of various local administrative election committees. For the perfecture as a whole, there was a prefectural committee with general supervisory powers, and each city, town, and rural district had its own election committee, whose duties were to supervise the election of its own local officials. These committees were chosen from the ranks of the nonpolitical citizens. Their size ran from a dozen to six or seven members, and they generally comprised a banker, a couple of merchants, a couple of lawyers, a school principal, a publisher, a professor, and very often one woman, and a labor-union leader. They had full responsibility for setting up the election machinery, and for seeing that the elections were properly and honestly run, and that the election laws were observed by all parties concerned. For this, they were given full authority over the police and all officials. It was our job to confer with and advise these election committees, to back them and build up their prestige with the officials, the police, and the mass of the people, and to watch the elections, listen to complaints, and take action if anything serious developed.

Aichi prefecture is both an industrial and an agricultural area. Before the war it contained textile industries, porcelain factories, and numerous other industrial works. However, a large section is an alluvial plain, and it is common to see a factory and its towering smokestacks set in the midst of rice paddies. The district also raises sweetpotatoes, fruit, wheat, and cultivates the silkworm and the mulberry tree. Another section is mountainous, where water power is developed and much lumber is cut. All types of economic life—including fishing along the coast—are carried on in the prefecture. The population is fairly evenly divided between farmers and businessmen and workers. A large vote here would be representative and a cross-section of the nation to a significant extent.

Since there were many and different types of offices to be filled in the elections, and since the people were new to voting and apt to become confused by having to vote for too many offices at once, using long, complicated ballots, it was decided to hold a series of elections. The first elections, on April 5, would be for executives. Each voter would vote for one candidate for the prefectural governor, and one candidate for mayor or chief of the locality in which he resided. Since there were numerous candidates for each office, many running as independents, the chances were that the winner would have a mere plurality. This plurality had to be not less than 37.5 percent of those voting, in the case of executives, and there was a provision for a run-off election on the 15th, for such offices as did not obtain this minimum. The run-off would be confined to the two leading candidates. Following, there would be elections on the 20th for the House of Councillors (the upper house of the Diet), on the 25th for the House of Representatives (the lower house of the Diet), and on the 30th, the representatives of the prefectural and local assemblies would be chosen by the voters.

Since there would be 1,562 polling stations and 266 ballot-counting stations distributed throughout the prefecture, and it would be our job to check, advise, and report on as large a percentage as possible, during the voting and ballot-counting days of each election, this called for considerable organiza-

tion. Since our little team, with many other regular duties to perform, could not possibly furnish the needed personnel and vehicles for a good coverage, we were empowered to call on aid from the tactical troops in the vicinity. The most available were the Twenty-fourth Infantry, stationed in Gifu, some 20 miles distant. They agreed to assign us, for the elections, 37 surveillance teams and 1 officer; each surveillance team would consist of 1 noncommissioned officer (of the top 3 grades), 1 driver, and 1 jeep. In turn, we could furnish 9 teams, giving us a total of 46 for the job of surveillance. The Twenty-fourth Infantry is a Negro regiment, although half the officers are white. The various teams would be distributed throughout the prefecture, on their own, spending the nights in Japanese inns, in many cases in remote villages and districts. There have been many criticisms of the Negro soldier, in this war and the last. He has been represented as lawless, undisciplined, and unsoldierly. The elections were to be a great experiment in teaching democracy. We were the teachers, and the Japs judged democracy by the kind of people it produced. Bad behavior on the part of American troops would give the prestige of democracy a bad set-back. I was skeptical over this use of Negro troops, and thought that the "high brass" were bowing to political pressure from the United States of America. How it turned out, I will tell you further on.

During the 3 weeks of preparation we were very busy. There were many maps to prepare, showing locations of roads, inns, police stations, town halls, polling stations, etc. The prefecture had to be sectioned out into eight regions, with so many teams to each region, to insure the best coverage. Suitable inns had to be selected and advised that we would occupy them. The police had to be advised and requisitioned for sufficient guides and interpreters for each team. Then conferences with the more important election committees had to be arranged. At these conferences—a good 30, covering all districts in the prefecture—we took care to see that not only were the whole committee present, but also the local mayor or chief, the chief of police, the school inspector for the district, and other officials. In some cases there were as many as 200 people present, as many citizens came to listen. Also, there was the press. This was what we wanted, as such meetings stirred up interest in the elections, built up the authority and prestige of the committees, showed the officials and bureaucrats where they both stood and got off, brought out questions and discussions concerning the fundamentals of American democracy, gave great publicity to the importance of everyone voting, and showed the people that they need have no fear of using free speech and voting their own choice, as the occupation, through its military-government team, was keenly interested, and would back up an honest election with all its powers. In addition to this, we gave out releases to the press, stirred up the radio people, and made several addresses to large audiences on elections, American democracy, and such subjects.

In addition to the above, we had to train the surveillance teams. This involved briefing talks and the arranging of mock-up poling booths and counting stations, each one equipped with Japanese actors representing all the necessary watchers and officials, plus voters of various ages, sex, education, etc. With these and acting out various situations, we trained the colored soldiers of the teams how to go about their inspections, what to look for, what the election laws were, and how to take care of most anything that might arise.

Finally everything was ready, and all had been coordinated, so that the teams, interpreters, guides, police knew where they were to go, meet, duties, reports, and all the necessary things. From the start it went very well. For the four main elections, and one run-off election, we average over 50 percent full coverage of all the polling stations. In all the elections there were no major violations, such as intimidation, bribery, interference, and the like, and very few minor ones. The latter were mainly technical mistakes and were quickly corrected, as soon as the poll supervisors' attention was called by the inspecting team. The polls were mainly in schools and temples and were clean, orderly, and well handled. All gave evidence of sincere and intelligent effort on the part of the responsible election committees. They would have done credit to polls in the United States. The percentage of those voting, who were eligible, was remarkable. A large proportion were women. I quote a few figures:

ELECTION FOR LOCAL CHIEF EXECUTIVES, APR. 5, 1947

Number of eligible voters:	
Men	789,931
Women	853,442
Total	1,643,373
Number actually voted:	
Men	611,127
Women	596,691
Total	1,207,818

Percentage eligible, who voted, 73.5 percent.

Number of candidates for governor: Socialist, 1; independents, 5. Elected: Aoyagi, independent.

Number of candidates for mayors of cities: Socialist, 1; Liberal, 1; Democrats, 2; Communists, 3; New Political Club, 1; independents, 18.

Mayors elected for nine cities: Democrats, 2; independents, 7.

Number of candidates for chiefs of towns and villages: Socialists, 4; Democrats, 6; National People's Party, 1; Liberals, 2; Communist, 1; independents, 355.

Chiefs elected: Liberal, 1; Democrats, 3; independents, 199.

Women elected: None.

Violations reported or noted by surveillance teams: 16 minor.

ELECTION FOR HOUSE OF COUNCILORS, APR. 20, 1947

Percent eligible voters, who voted: 70.7 percent.

Number of seats, house of councilors, from Aichi prefecture: 6.

Number of candidates: Democrats 7; Liberals, 5; Socialists, 2; Cooperative, 1; independents, 2.

Candidates elected: Democrat, 1; Liberals, 2; Socialist, 1; independents, 2.

Votes by parties: Liberals, 251,100; Democrats, 232,312; Socialists, 147,035; People's Cooperative, 14,698; independents, 362,175.

NOTE.—Out of 1,137,181 who voted, 128,841 ballots were declared invalid, about 11.3 percent. This was mainly due to confusion from the form of the ballot. In the entire prefecture there were 1,633 preelection campaign meetings, by various parties and independent candidates.

ELECTION FOR HOUSE OF REPRESENTATIVES, APR. 25, 1497

Percentage eligible who voted: 77.2 percent.

Number of seats in house of representatives from Aichi prefecture: 19.

Candidates by parties: Democrats, 18; Socialists, 11; Liberals, 11; Communists, 5; Cooperatives, 4; small local parties, 6; independents, 7.

Elected to house of representatives, lower house of National Diet by parties: Democrats, 6; Socialists, 6; Liberals, 4; Cooperatives, 2; Nippon farmers.

Women elected: None.

Independents elected: None.

	Number	Percent
Total vote by parties:		
Democratic	397,162	32.0
Liberal	298,508	24.0
Social Democrat	273,519	22.0
Peoples Cooperative	105,446	8.0
Nippon Farmers	64,505	5.0
Communist	46,595	3.0
Small parties	11,882	1.0
Independents	17,075	1.4
Declared invalid		3.6

Number of preelection campaign meetings, 6,009.

Women elected: None.

Violations: None observed or reported, except a few anonymous communications to MG team, which were later investigated and found groundless.

Principal cause of invalid ballots: Writing in of General MacArthur and other noncandidates' names.

ELECTION FOR LOCAL ASSEMBLIES, APRIL 30, 1947

Percentage eligible who voted: 83.2 percent.

Number of seats in prefectural assembly: 73.

Number of candidates for seats: 267.

Number elected by parties: Democrats, 32; Liberals, 10; Socialists, 10; Cooperatives, 2; Communists, 0; Independents, 19.

Number of seats in nine city assemblies: 332.

Number of candidates: 813.

Number of elected by parties: Democrats, 59; Socialists, 21; Liberals, 19; Cooperatives, 3; Communists, 1; independents, 229.

Number of seats in town and village councils: 4,531.

Number of candidates, 5,501.

Number elected by parties: Independents, 4,531.

Women elected: Prefectural assembly, 1 Democrat; city assemblies, 3 independents; town and village councils, 2 independents.

Number of preelection campaign meetings:	
Democrats	12,884
Liberals	5,830
Socialists	4,918
Communists	1,600
Cooperatives	1,455
Local parties	288
Independents	95,333

Number of invalid ballots: 60,837, 4.8 percent.

Number of violations: 6 minor.

From the above figures it can be seen that in none of the four elections did the actual voting of the eligible voters fall below 70 percent. The least interest was shown in the election for the upper house of the National Diet the Housé of Councillors. For this branch, there were 250 seats chosen, of which 100 were from the nation at large, and 150 represented the various prefectures. Although now a democratically chosen branch, the old aura of the House of Peers still clings to the present House of Councilors, the candidates are apt to be either nationally known scholars, authors, and other noted characters, and they seem more remote to the people, and of less pertainment to their lives. On the other hand, the hottest election was that for the local assemblies. Here it was "my friendo" Wtanabe San running against that no account uncle of Izumi San, and the whole family turns out to vote. As for the Communists, they made a miserable showing, and I think that as long as Japan continues to have free, honest, and secret elections, they will never make first base. One other thing is of significance. The big cities did not make nearly so good a showing as the smaller centers. Here are some figures from election for the local assemblies, broken down by localities:

Percentage of eligible vote cast, by cities and rural districts

	Approximate population	Those voting
Cities:		*Percent*
Nagoya	800,000	67.9
Toyohashi	115,000	88.6
Okazaki		90.9
Ichinomya		90.7
Seto		92.1
Handa	70-30,000	83.5
Kasugai		84.7
Toyokawa		88.2
Tsushima		88.2
Rural communities:		
Aichi-gun	(1)	88.4
Niwakgun	(1)	89.8
Unkata-gun	(1)	95.5
Atsumi-gun	(1)	91.4
Etc	(1)	87-94.0

[1] Less than 30,000.

The good showing in the smaller places, as against big industrial and metropolitan centers like Tokyo, Nagoya, Osaka, seemed due to numerous factors, such as pride in generations of continued residence and feeling of community responsibility, personal acquaintance with candidates, and pressure by various members, including the children, to bring out the entire family vote. The women made as good a showing as the men, even better in some places. They seemed thrilled by the privilege, and flooded the polling places early on the election days.

I have mentioned that 37 of the 2-man surveillance teams were made up of Negro soldiers, from the Twenty-fourth Infantry Regiment. They did an excellent, conscientious, and intelligent job of a difficult assignment, and although for days and nights without officer supervision in remote areas, they behaved in a manner that was a credit to the United States Army, and were fine ambassadors for democracy. They were all big, coal-black, fine-looking men, and I enjoyed working with them. They took a keen interest in the job, understood the nature of the work, and all went like clockwork. However, several officers commented on the odd fact that many of these colored boys, who were doing a good job of supervising elections in Japan, would not be allowed near a polling booth, back in their own home town. The Japs would never have understood that.

I have now transferred from my assignment with Military Government, and am on the last few weeks of my terminal leave. I have signed up for one more year over here, as a Scientific Consultant, with the Natural Resources Section of SCAP. My job calls for frequent field trips, in the inspection, study and reporting on the situation, problems and needs of various mines and mineral-producing properties in Japan and Korea. Just now, I have returned from a week's trip to Iwate Prefecture in the north of Honshu, to inspect two large pyrite producers. Next to coal, iron, and copper, pyrites have first priority in the present mineral program, in aid of Japanese national economy. The sulfur contents of the pyrites are badly needed to make sulfuric acid, for the fertilizer plants, and the latter are a prime necessity.

Succession Bill

EXTENSION OF REMARKS
OF
HON. OLIN D. JOHNSTON
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES

Monday, July 14 (legislative day of Thursday, July 10), 1947

Mr. JOHNSTON of South Carolina. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in the Washington Post on Sunday, July 13, 1947. It is entitled "Succession bill," and is very timely, in view of the fact that as a people we are considering throughout the United States changing the succession of the Presidency of the United States.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SUCCESSION BILL

Three chief arguments against the present law governing succession to the Presidency were advanced when the country suddenly found itself without a Vice President more than 2 years ago. The first was that it would be undemocratic to have an appointed official serve as President. The second was that designation of a Cabinet member as "heir apparent" when there is no Vice President, would enable the President to appoint his own potential successor. The third was the confusion of the present law. Certainly a good case was made for some action on the part of Congress to overcome the defects in the present statute, but we do not think that the right answer has been found in enactment of the bill giving the Speaker and the President pro tempore of the Senate priority in the line of succession over members of the Cabinet.

Should there be an outright vacancy in the White House, something would doubtless be gained by having the Speaker fill it. But the idea that the Speaker is likely to reflect the will of the people is largely fallacy. He is elected to Congress by only 1 of 435 congressional districts. His elevation to the Speakership is usually influenced by seniority and politics more than by ability or alertness in serving the national welfare. It is difficult to think of a Speaker in recent years who has had any reasonable chance of being advanced to the White House by the vote of the people. In our opinion the objection to having an appointed official pinch-hit as President should have been overcome by limiting his service and making definite provision for a special election. Instead, the present bill eliminates all possibility of a special election in such a contingency.

Theoretically, there is objection to having a President name his own potential successor. But in practice this objection seems insignificant. The chance of a Secretary of State succeeding to the Presidency is very small. Surely it did not become a major factor in the naming of former Secretary of State Byrnes or Secretary Marshall. Whatever slight danger there may be in leaving this discretion to the President is overshadowed, in our opinion, by the great advantage in having the head of the Cabinet carry on in the event of his Chief's death, resignation, or disability, in the case of temporary disability on the part of the President, only a member of the administration can properly assume this function. How confusing and stultifying it would be, for example, if President Truman, a Democrat, should be incapacitated for 6 months, with Speaker MARTIN, a Republican, taking his place as Acting Chief Executive, only to be displaced again by the President's recovery. To cite this one possibility of chaos is to indicate how utterly inadequate the present bill is.

As to the third argument for the bill, we have previously pointed out that its punch has been lost. The vague implication in the present law that Congress would be called into special session to order an election in case of vacancies in both the Presidency and Vice Presidency is of little significance now that all possibility of holding a Presidential election before 1948 has passed. To our way of thinking the need for special election machinery for use when and if necessary was the strongest argument for enacting an emergency Presidential succession bill, 2 years ago. Now it is no argument at all. Congress would have done much better, as Representative GWYNNE pointed out, to have discarded this makeshift bill and ordered a thorough study of succession to the Presidency as well as our machinery for nominating and electing Presidents. There is still time for such a study to be approved.

United States Largesse Totals Twenty Billion

EXTENSION OF REMARKS
OF
HON. ALBERT W. HAWKES
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES

Monday, July 14 (legislative day of Thursday, July 10), 1947

Mr. HAWKES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "United States Largesse Totals Twenty Billion," by Clarke Beach, of the Associated Press, as published in the Washington Post on Sunday, July 13, 1947.

The humanitarian impulses of the American people are great, and their willingness to make loans which would have no foundation in any business transaction is also great, but from my point of view, the people of the United States must soon begin to consider whether their impulses to "give," and to make unsound loans, are greater than their ability to pay when the pressure to pay their debts is finally upon them.

If we "give" ourselves into national bankruptcy and the destruction of our great American system, then we will not have fulfilled our role of leadership in the interest of the peoples of the world and the people of our own country. Let us stop, look, and listen, and first know that what we are doing is for the good of the world, and, secondly, know, so far as is humanly possible, that in doing these things we are not destroying ourselves to the disadvantage of our own people and the peoples of the world.

Individual freedom and the acceptance of individual responsibility are so interwoven that they cannot be separated for any people on earth or for any group of people within our own borders.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNITED STATES LARGESSE TOTALS TWENTY BILLION

(By Clarke Beach)

The United States has made grants and pledged loans totaling more than $20,000,000,000 for the relief and rehabilitation of foreign nations in the postwar years.

At the request of the Associated Press, the International Economics Division of the Commerce Department compiled a complete list of American largesse.

Outright gifts to prostrate peoples in Europe, Asia, and Africa amount to $7,215,000,000. Of this, individuals and institutions gave $1,500,000,000 in parcels and money.

(The data on private gifts were obtained from banks and other organizations having a remittance business, from post-office money-order and parcel-post records, and from philanthropic institutions.)

Loans comprise $12,871,000,000 of the total. They have been made, generally, for 20- to 30-year periods. They bear interest of 2 to 3½ percent.

To get an idea of the enormous sums involved in these loans and gifts, recall that the public debt of the United States in 1932 was only $19,487,000,000. All the goods which this country exported between 1932 and 1939 cost somewhat less than $20,000,000,000.

BULK TO EUROPE

Chief recipients of the gifts have been the countries of eastern and southern Europe. Western Europe comes next and Asia third.

Britain has been by far the largest borrower.

Most of the goods exported to the loan countries have been food, fuel, and clothing. Machinery, steel, and other hard goods have been exported mainly through UNRRA in the form of gifts.

Here are some facts cited by a State Department expert:

We exported 29,600,000 tons of coal in the year ended June 30—all but 3,000,000 to Europe and North Africa. In average prewar years we exported only 50,000 tons of coal.

We exported 14,500,000 tons of bread grains, nearly all of it wheat, in the past year. To Italy went 1,276,000 tons, to France 682,000 tons, and to Greece 376,000 tons. In average prewar years we exported only 36,400 tons to all those countries.

All our exports—both consumer items and hard goods—are steadily mounting. In June we were exporting at the rate of $1,400,000,000 worth of goods a month—an all-time record.

CHINA'S PORTION

Here are the gifts made by the people of America through their Government:

UNRRA: $2,700,000,000. This is 72 percent of all UNRRA donations. Largest recipient of UNRRA help was China, with $530,000,000. Two Russian Soviets, the Ukraine and Byelorussia, received large grants.

Post-UNRRA relief: $350,000,000, which this Government will distribute as it sees fit.

International Refugee Organization: $75,000,000. This is 45.75 percent of the IRO budget. It will help care for 1,200,000 homeless and destitute persons.

Philippine grants: $620,000,000. To pay private claims for war damage, $400,000,000 is provided; for public rehabilitation, $220,000,000.

Gravy Train in the Kitchen, Too

EXTENSION OF REMARKS

OF

HON. SCOTT W. LUCAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Monday, July 14 (legislative day of Thursday, July 10), 1947

Mr. LUCAS. Mr. President, out of order, I ask unanimous consent to incorporate in the Appendix of the RECORD an editorial dealing with the tax situation. The editorial is entitled "Gravy in the Kitchen, Too," and is from the Chicago Times of July 11, 1947.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GRAVY IN THE KITCHEN, TOO

Bill Jeffers, the railroad man, tells his friends: "The backbone of America still eats in the kitchen."

If the Republican Party wanted to do something for the backbone of America, it would pass more of the tax-reduction gravy out into the kitchen where so many of the great American family eat. Instead, the Republican tax bill ladles out the gravy to the penthouse trade.

When he vetoed the GOP tax-reduction bill last month, President Truman said it was the wrong kind of bill at the wrong time. The Republicans want now to make the reduction go into effect next January instead of this month. But it's still the wrong kind of bill. It does not give enough tax reduction to those in the lower brackets who are being hit hardest by rising food and other costs.

The average family whose income is $2,500 has been hard hit by current high prices. A big part of its income goes for food. The GOP tax bill would give this family a kickback of $30 in taxes. It would give the $50,000-a-year man a reduction of nearly $5,000.

Some believe that since the $50,000-a-year man is taxed at a rate of 72 percent, he is entitled to the bigger kick-back. Senator SCOTT W. LUCAS (Democrat, Illinois), proposed a more equitable reduction. LUCAS would raise personal exemptions from $500 to $650, thus giving a better break to the average man with a number of children. He would reduce surtax rates by four points. These changes would eliminate taxes for many low-bracket families and still would give the $50,000-a-year man a couple of thousand dollars' reduction.

If the gravy train for the rich does roll through Congress now, there probably will not be a general overhauling of the tax laws for a long time. This is the time to see that more tax relief goes to the people who eat in the kitchen.

Tax-Reduction Bill

EXTENSION OF REMARKS

OF

HON. PETE JARMAN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 8, 1947

Mr. JARMAN. Mr. Chairman, section 138 of the Reorganization Act passed last year directs the Committees on Ways and Means and Appropriations of the House and Finance and Appropriations of the Senate, to meet jointly at the beginning of each regular session of Congress "and report to their respective Houses a legislative budget for the ensuing fiscal year, including the estimated over-all Federal receipts and expenditures for such year." This section also states "such reports shall be made by February 15." The word is "shall" not "may." It is common knowledge that the members of these committees have failed to comply with this provision of law in that this report has not been made. Naturally, since they are dominated by Republicans, it is a Republican violation of law for which the Democratic members are not responsible.

The newspapers tell us that the House Members proposed a reduction in the President's budget of $6,000,000,000, which the Senate Members thought should be four and one-half billion. We are all well aware that the appropriation bills as passed by the House will not reduce the President's budget nearly as much as even $4,500,000,000. In fact, they will not do so even if such "phony" reductions as the elimination of $800,000,000 from the appropriation for tax refunds, which will, of course, have to be restored in deficiency appropriation bills, are considered as actual reductions, which they naturally are not. We are equally aware that the Senate has already greatly increased many of these appropriation bills, that it will undoubtedly increase numerous others and that the final real reduction in the President's budget will most probably be nearer $1,000,000,000 than four and one-half, to say nothing of six billion. In fact it may be less than one billion.

Not only has this report, which would have informed us what we might expect and which the law required to be made by February 15, not been made, but only one appropriation bill for the fiscal year which commenced 8 days ago has become law. Such a situation has never heretofore existed since I entered Congress.

It is interesting and thought compelling, even though astounding, to refer to the headlines in the July 4 Washington Post from which we first learned of the Republican determination to again pass this tax bill now, while we are still groping in the dark. Just under the front page headline 'House starts tax-cut bill on repeat run," we find: "Army appropriation boosted 600 millions by Senate group." On page 3, where the first referred to article is continued, we find "The House will call up and probably pass on Monday legislation giving veterans the optional right to cash their terminal leave bonds" which will, regardless of how we feel about it, add $2,000,000,000 to the inflationary potential and cost $3,000,000 for administration, which will be added to the public debt by this Republican decision.

Though not germane to the subject of these remarks, the next paragraph quotes Majority Leader HALLECK as planning to also take up the following antisouthern measures; minimum wage, antipoll tax, and possibly antilynching legislation.

On page 2, we find another evidence of Republican wastefulness under the headline "Voice funds cut to bring dismissals." The House has passed by a three-to-one vote legislation permanently authorizing the all-important cultural relations program of the State Department, which favorably impresses a subcommittee of the Senate Foreign Relations Committee and will doubtless become law before adjournment. Despite this prospect, this article refers to the reduction of another million in this appropriation which will require very expensive and unnecessary liquidation of an organization which will probably have to be recreated during the fiscal year.

I quote from an editorial, Revised Tax Bill, on page 6:

In the message accompanying his veto of the tax bill, President Truman declared that reductions in income taxes would increase existing inflationary pressures on prices and were not needed now to provide additional funds for business expansion. * * * The purely political gains that the Republicans hoped to achieve from their drive for tax reduction have, in our opinion, already been

chalked up to their credit. We doubt whether those gains are very substantial. * * * We conclude, therefore, that the decision to revive the issue of tax reduction is not only, economically speaking, ill-timed, but a tactically unwise political maneuver.

An editorial, Military Missionaries, follows, which is followed by one on budget surplus from which I quote:

During the 17 intervening years, the Federal debt has risen from approximately $16,000,000,000 to more than $258,000,000,000. * * * Opponents of the tax-reduction bill that encountered a Presidential veto are well aware of the need for tax relief; they merely object to tax cuts at a time when the country is facing new drains on its resources for foreign aid and has not yet succeeded in effecting necessary reductions in outlays.

I particularly call the attention of those who insist that taxes should be reduced now, because this occurred after the last war, to this increase in the national debt from sixteen to two hundred and fifty-eight billion which resulted somewhat from depression but primarily from war. The situations are by no means identical or even similar.

On page 7 of this same issue, we find under the article "Split with Russia" by Mark Sullivan, the following:

At long last, after 2 years of patient endurance of fustration by Russia, we have taken responsibility for the leadership the world hungers for. Britain and France have acted upon our leadership and other countries will. The mere act of decision on our part, the coming to conclusion, will have on other peoples the psychological effect of confusion ended, of men's spirits released, their freedom assured. It will be a psychological tonic as constructive as the material help we give.

Can any conscientious public servant, who pays even lip service to the concepts of good business practice, conscientiously vote for tax reduction 6 months hence after reading such headlines in one paper, which are merely illustrative of those in the press of our Nation today? While we cannot possibly know now, when only one appropriation bill has become law, what our governmental expenses for the fiscal year now commencing will be, we do know that the cashing of some $2,000,000,000 in terminal-leave bonds was authorized yesterday and that the passage of this bill today will decrease our revenue by at least $4,000,000,000. Six billion dollars is a goodly sum for an economy-minded Congress to indirectly add to the public debt and the inflation potential in 2 days, even though Republican dominated and indifferent to business principles. Since it is Republican dominated, it is but natural that the large taxpayer would be the main benefactor of this bill.

Since we do not know what to expect now, nearly 5 months after we should have been tentatively informed by the report of which I spoke and a week after we should have gained positive knowledge by the passage of all appropriation bills, we certainly cannot be expected to know what the situation will be 6 months hence. This is particularly true in view of the approaching Paris Conference looking toward the implementation of the Marshall plan. In January we will have a much better idea of the size of the foreign commitments in which we must indulge, by no means entirely because of our humanitarian attitude, but primarily in self defense, to prevent the world from crumbling in ruins about us and the resulting revolutions and probable war which would be so much more expensive to us, not only in dollars, but in precious lives than whatever foreign commitments are decided upon as necessary.

Why the necessity for acting on tax reduction now, effective January 1? As evidence of the fact that this bill could be passed by January 15, I call your attention to the fact that it will be passed today, only 4 days after the above-referred to headline, which first warned us that it would be here. Since Chairman KNUTSON attempted to pass a tax reduction bill in June, retroactive to January 1, there could certainly be no complaint against such a short retroactive period. Furthermore, it now appears almost inevitable that a special session will occur several months hence. If the Republican leadership does not wish to wait until January, when information which will enable us to act intelligently will be available, why would it not be preferable to enact tax legislation during this special session with the information then available, which would undoubtedly enable us to act far more intelligently than we possibly can today? The fact is, my colleagues, that no truer statement has been made in this debate than the one by the gentleman from North Carolina [Mr. CLARK] when he said that if politics were eliminated from this bill only the enacting clause would remain. I hope the number of my democratic colleagues who are willing to join our Republican friends in running the risk of immediately returning to deficit financing will prove to be small.

We all thank the gracious God that the shooting war is over. However, the war will not have really concluded until the signing of the peace treaties and the restoration of world order. In view of the increasing responsibilities of our country, which results from our position of leadership, which we cannot abdicate, I am strongly of the opinion that it behooves us to stop, look, and listen before reducing taxes at a time when business is more active and prosperous and our people are more able to pay than at any other time in our history.

Yes, the line of least resistance is to vote for tax reduction. Perhaps a measure of statesmanship is required to vote against it, particularly when we positively know that it will pass the House and realize the probability of it doing so over the President's veto. Even so, it is in my considered opinion but common, hard-headed business sense to oppose tax reduction in early July, effective in January, under the uncertain conditions I have outlined, during this period of unprecedented prosperity and when the people of our country can enjoy their tax reduction just as much if it be authorized either in a special session or early in January. Should the argument be advanced that business would know better how to plan, I reply by repeating that our people, both individually and as operators of industry, are more prosperous now than at any time in the past. Witness the largest national income in history.

In conclusion if you are unaware that inflation confronts us, inquire of your wives who do the shopping. What effect will this $6,000,000,000 addition to the inflationary spiral have? Are you willing to gamble that it will not be the straw that will break the camel's back, rather than wait and act more intelligently 3 or 6 months hence?

I am strongly in favor of tax reduction at the proper time, but I am not at all sure that even next January will be that time. Such may be the case. I sincerely hope it will. In this event I shall gladly support appropriate tax reduction then, but I cannot too strongly urge you to permit us to take a look around, to see what happens during the next 6 months, and defer action on this all-important matter, at least until any special session, and preferably until early next January. In the meantime, your constituents who wish tax reduction will not gain or lose one single penny by such action on our parts.

There Is No Perfect Peace

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1947

Mr. CASE of South Dakota. Mr. Speaker, there is altogether too much talk these days about the clashes of ideologies and the consequent interpretation that another world war is inevitable.

We need, in my humble opinion, to restore a sanity in thinking. There is no perfect peace. Those who despair because everything does not come out just as they would like to have it are demanding a perfectionism which history has never offered any age.

That is my opinion, at least, and I was heartened recently because thoughts like these were expressed in a brief but notable speech by the Honorable James F. Byrnes, former Secretary of State, former Justice of the Supreme Court of the United States, former Member of the United States Senate and the House of Representatives, to mention only a few of the many positions of honor and responsibility he has held.

His remarks were given when he received the annual humanitarian award of the Variety Clubs, International, May 12, 1947. In presenting Mr. Byrnes, Chief Justice Fred M. Vinson recalled that during the war Mr. Byrnes had served his country as Economic Stabilization Director and War Mobilization and Reconversion Director. Then he stepped upon the world stage as an advocate of and worker for peace.

The very first day he became Secretary of State, Justice Vinson recalled, Byrnes said:

There can be no doubt that the peoples of this war-ravaged earth want to live in a free and peaceful world. But the supreme task of statesmanship the world over is to help them understand that they can have peace and freedom only if they tolerate and respect the

rights of others to opinions, feelings, and ways of life which they do not and cannot share.

Mr. Speaker, here in the United States, as well as elsewhere, the "task of statesmanship" is to help our people to understand that they, too, "can have peace and freedom only if they tolerate and respect the rights of others to opinions, feelings, and ways of life which they do not and cannot share."

And supplementing that thought, I wish to place in the RECORD the address of Mr. Byrnes to which I have alluded, for it voices the fear which I have that "both in the Soviet Union and in the United States there is too much talk about war and too little talk about peace." The address follows:

STATEMENT BY JAMES F. BYRNES UPON HIS BEING PRESENTED THE HUMANITARIAN AWARD BY THE VARIETY CLUBS, INTERNATIONAL, MAY 12, 1947

RESPONSIBILITY NOT TO MISREPRESENT

I should be happy to receive this award under any circumstances, but I am particularly happy that it should be presented to me by Chief Justice Vinson, who for many years has been one of my dearest friends. That friendship is responsible for the generosity of his statements.

Throughout this Nation, wherever the Variety Clubs, International, have "pitched a tent," they have won the good will of the people of the community by their good works. These men and women who make their living in the field of entertainment have given not only their money but their time and their talents to improve the lot of others. They have given relief to the needy. They have given financial assistance and intelligent guidance to organizations of boys and girls. They have given assistance and encouragement to the unfortunate who were out of work and out of luck.

Because I have had opportunity to know of their good works, I ask the privilege of giving the honorarium which has been tendered me to the welfare fund of the Washington unit of this organization.

It is understandable that the Variety Clubs, International, should show an interest in our foreign policy because the membership includes so many people engaged in the motion-picture industry. That industry now plays an important part in our foreign relations. The motion picture has become an unofficial ambassador to many countries, interpreting to other people our American way of life.

I am confident that those directing the industry, as well as the writers and artists, realize that with this great opportunity there has come also a great responsibility, the responsibility of seeing to it that without sacrificing the quality of entertainment that makes American pictures welcome everywhere, they do not misrepresent our American life.

Nothing could give me greater happiness than to know that during my recent public service I have made some contribution to the cause of peace.

Two years ago the people of the world were rejoicing because of the end of hostilities in Europe and were praying for the early end of the war in the Pacific. As the people of many nations counted their dead and welcomed home their living, they had but one hope—that out of it all there would come a universal yearning for peace that would make future wars impossible.

Today they are disturbed. They are disturbed because both in the Soviet Union and in the United States there is too much talk about war and too little talk about peace.

CONFLICT IS NOT INEVITABLE

The people of the Soviet Union do not want war. The people of the United States certainly do not want war. The people of other nations still suffering from the terrible cruelties of the recent conflict pray for a lasting peace.

Under the circumstances, if war should come, it will not be because the people want war but because of the incapacity of those who control the governments of the world. I do not believe there exists such bankruptcy of statesmanship. I deny that conflict is inevitable. On the contrary, I believe we can make the peace and we can keep the peace. I realize the difficulties. But we can overcome those difficulties.

We have made it clear to the Soviet Union that it cannot dictate the terms of peace. We must also realize that the United States cannot dictate the terms of peace. There can be such dictation only to a defeated enemy state or a defenseless state. The Allied Powers must realize that in their peace negotiations there is no place for the take-it-or-leave-it attitude. They must negotiate with each other on terms of equality. They are not called upon to sacrifice fundamental principles, but they are called upon to make wise decisions as to what are questions of principle and what are questions of policy.

THERE IS NO PERFECT PEACE

And the people of the United States must not demand perfectionism in our peacemaking. We must recall the words of President Roosevelt in his last message on the State of the Union on January 6, 1945. Then he said:

"Perfectionism, no less than isolationism or imperialism or power politics, may obstruct the paths of international peace. Let us not forget that the retreat to isolationism a quarter of a century ago was not started by a direct attack against international cooperation but against the alleged imperfections of the peace."

The President was right. He foresaw the coming of this day. In this imperfect world there is no perfect peace. But we must follow our policy of patience and firmness and seek thereby to establish a peace as nearly perfect as human beings can devise.

Booklet on Fascism Should Be Printed at Once

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Friday, July 11, 1947

Mr. PATMAN. Mr. Speaker, although the House of Representatives authorized the printing of the booklet on Fascism with the knowledge that at least 100,000 additional copies would be asked for, the resolution providing for the printing of these copies has not as yet received the attention of the Committee on House Administration to which it was referred. I hope the committee will take action as soon as it can conveniently. This session of Congress is expected to end July 26, less than 2 weeks from now. The resolution will not only have to pass the House, but will also have to pass the Senate, so time is of the essence.

In the Washington Post for Sunday, July 13, 1947, there appeared an article written by a prominent reporter, Mary Spargo, on the subject No Leftist Balm in Fascism Exposé—It Tars Them With the Same Brush. This article fully describes the booklet on Fascism in Action.

When the resolution for its publication was first introduced, the charge was made that the booklet was not well prepared and not as well prepared as Communism in Action. This article states that it is "an equally objective and possibly even more scholarly book." This was also the testimony before the Committee on House Administration when hearings were being conducted on the question of whether or not it should be printed as a House document.

Both booklets on communism and fascism should receive wide distribution. I cannot understand why any person should be eager to distribute one and not distribute the other.

The article is as follows:

NO LEFTIST BALM IN FASCISM EXPOSÉ—IT TARS THEM WITH THE SAME BRUSH

(By Mary Spargo)

What is fascism?

How does it start, how does it operate, and what are the danger signs to warn the people of any nation if their government is drifting toward a Fascist state?

The House of Representatives decided last week that Americans should have the answers to these questions. It ordered publication of a book on the subject prepared by some of the Nation's leading experts.

The book, Fascism in Action, will roll off the Government Printing Office presses within a few days.

Fascism in Action is a companion piece to Communism in Action, which the House ordered published last year. Both were prepared by the Legislative Reference Service of the Library of Congress, a group of experts employed by Congress.

Communism in Action was prepared at the request of Representative DIRKSEN, Republican, of Illinois. Fascism in Action was prepared at the request of Representative PATMAN, Democrat, of Texas.

The authoritative study on how communism works has had a phenomenal distribution—700,000 copies. It has become a textbook in political science and government at Harvard.

Judging by the brisk advance demand and the amount of free advertising it has received, Fascism in Action, an equally objective and possibly even more scholarly book, should also crowd the best sellers.

STIRRED 2-HOUR DEBATE

The question of whether or not Congress should publish Fascism in Action touched off a heated 2-hour debate on the House floor. It's a toss-up whether that was better advertising than having a book banned in Boston.

One of the reasons for the House wrangle was the fear voiced in some quarters that Fascism in Action would be used by left-wing groups to attack American business. Some of the most urgent requests for the book came from apparently very left-wing sources.

The left wing, however, is going to find little comfort in this book.

At the request of the House Committee on Administration, Dr. Ernest S. Griffith, director of the Legislative Reference Service, a Rhodes scholar and an expert in political science, has written a preface to Fascism in Action pointing to the deadly parallel between communism and fascism.

Even without the preface the careful reader could not fail to see the similarity between the Fascist and Communist state, especially in their foreign policies.

The book is an analysis of how the Fascist system worked in Germany, Italy, Japan, and Spain. Except for a brief mention of the American industrialists tied in with one German cartel, it does not mention this country. It is left to Patman's foreword to

suggest that there are strong symptoms of fascism in the United States.

OLDER THAN PHARAOHS

The writers content themselves with pointing out that fascism is not new but deeply rooted in ancient ideas and institutions. It is a state of mind as well as a political system. In every age and in every government there have been and are latent seeds of fascism.

Of the ancient roots of fascism, the document states: "Politically it has drawn generously upon the theories of absolutism, the supreme right of kings, dictatorship, and tyranny, ideas older than the ancient Pharaohs, Nebuchadnezzar, Alexander the Great, and Caesar."

What is the prime difference between fascism and democracy?

"Fascism builds everything around the purpose of the state and makes the state preponderant, while democracy holds the individual and his freedoms and rights as primary and would build the welfare of society upon his freedom."

As to its insidiousness:

"The transition to fascism from any other form of government is deceptively easy, for it progresses by steps and stages, but the change from fascism to other forms of government to date has been destructive and violent, as is testified by the fate of most fascist countries during the last generation.

"This is not surprising for the fascist doctrine is couched in violence, and its program is one of conflict, of violent and aggressive prejudice openly espoused and approved."

UNIONS WERE USEFUL

There are going to be some surprises even for the usually well-informed in this book.

For example, even some conservative writers think this country veered toward fascism when Congress cracked down on labor. Some of the provisions of the Taft-Hartley bill do appear to measure up to the fascist yardstick Congress is about to make public, but it is not true that the fascist states destroyed labor unions.

In fact they created new ones, gave them a place in government councils and took them over, lock, stock, and barrel.

Many liberals want this Government to do as much as possible for recreation. But the Fascist states made control of their people's leisure hours an important objective. The dictators wanted to leave no time for people to think or to become discontented.

If this objective study points to anything it points the way toward as small a degree of Government control over the lives of its citizens as possible. That does not mean, however, that the laissez faire philosophy can go so far that monopolies and cartels flourish.

The Fascist states used monopolies, too, and cartels became not only part of their internal economy but also of their foreign policy.

LEGISLATIVE MEMO

When the GPO gets out the first 1,500 copies of Fascism in Action for Members of Congress, some of them may want to take another look at the Bulwinkle bill to exempt railroads from the antitrust act.

The section on German cartels was one over which members of the House Committee on Administration tangled most fiercely. The writers cite the Kilgore committee report concerning the participation of some American firms in I. G. Farben.

"Its cartel agreements numbered over 2,000 and included agreements with such major industrial concerns as Standard Oil (New Jersey), the Aluminum Co. of America, E. I. du Pont de Nemours, Ethyl Export Corp., Imperial Chemical Industries (Britain), Dow Chemical Co., Rohm & Haas, Etablissements Kuhlmann (France), and the Mitsui interests of Japan."

FROM OWN MOUTHS

If the scholars employed by Congress have come up with some surprises, they have also come up with some analyses that are not only new but alarming. That is perhaps particularly true of the chapter on foreign policy, which is said to be the only existing exhaustive analysis of Fascist foreign policy.

Written by Dr. Thorsten Valentine Kalijarvi, European affairs analyst of the Legislative Reference Service and final editor of Fascism in Action, the chapter has been approved by the State Department.

Dr. Kalijarvi has used as the basis for his conclusions about Germany much of the material gathered by the State Department in 1945 and 1946 from interrogations of German leaders.

The dynamic and aggressive character of Fascist foreign policy is stressed. It is alarming to gather the conviction that both Fascist and Communist states depend upon crisis politics in international affairs to maintain their power at home.

The history of Fascist Germany, Italy, and Japan, particularly, as set forth in these pages, shows that no compromise is possible with nations whose foreign policy is set in this aggressive course. Every concession is taken as a sign of weakness in the decadent democracies and sooner or later a head-on collision becomes inevitable.

PERSONAL REFLECTION

Here are Dr. Kalijarvi's conclusions about Fascist foreign policy—and the reader should not forget the deadly parallel between fascism and communism:

"1. The dictator formulates and determines foreign policy, which then reflects his strengths and weaknesses.

"2. Established agencies for the conduct of foreign relations are frequently relegated to the background and made impotent. This results in a conspicuous lack of correlation of foreign policies both in formulation and in execution.

"3. Revolutionary methods as practiced at home are translated into international affairs, resulting in secretiveness, duplicity, and contradictory actions. This is destructive to confidence between states and thus militates against a stable international order.

"4. Many agencies are set up to do the same thing, and the overlapping duties and functions of these agencies cause confusion and frustration in the administration of Fascist foreign policies.

"5. In Germany those who set, controlled, and executed foreign policies were amateurs and dabblers.

"6. Fascist foreign policy lacks continuity and correlation.

"7. It generally lacks informative background for decisions. Therefore, it is inefficient, paradoxical, and self-contradictory, since crucial steps are taken capriciously, intuitively and individually.

"8. Fascist foreign policy tends to become a crisis policy, which gathers momentum as it progresses. In the case of Hitler, he was able to deal only with one point at a time, thus intensifying each crisis in which he was involved.

"9. Fascist foreign policy is world-wide. It is quick to claim threats to the security of the Fascist state no matter where they may appear to arise, and it tends to take aggressive action on the basis of such claims wherever it is possible to do so."

GRANDSTAND SEAT

Dr. Kalijarvi saw the strongest Fascist state in operation. A native of Gardner, Mass., Kalijarvi took his doctor of philosophy degree at the University of Berlin in 1935.

As one reads his careful analysis of Fascist foreign policy, a conviction grows that the sovereignty of small nations and their right to their own internal and foreign policies vanished soon after World War I.

There were 13 authors of Fascism in Action. Part 1, dealing with the political structure of fascism, was prepared by George B. Galloway, Kalijarvi, Raymond E. Manning, Howard S. Piquet, and M. Loretta Standard.

Part II, dealing with the economic structure, was prepared by Julius W. Allen, Ludwig Hamburger, Theodore J. Kreps, and John Kerr Rose.

Part III, dealing with the industrial structure, was prepared by Francis R. Valeo, Hugh L. Elsbree, William H. Gilbert, Jr., and Helen E. Livingston. Dr. I. L. Kandel, author of School and Society, prepared the chapter on education and thought control.

In writing and editing this document, Kalijarvi said, the staff kept constantly in mind how it would read 5 years hence.

A Courageous Newspaper

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, July 11, 1947

Mr. SMITH of Wisconsin. Mr. Speaker, it is refreshing to note that some newspapers maintain a consistent policy between the editorial department and the advertising department. Mr. Mason Dobson, a courageous editor, has clearly stated the reasons why his paper will not accept advertising copy from the Communist Party which recently has undertaken a national advertising campaign. Mr. Dobson says very clearly:

We're trying to say as plainly as we can that we aren't willing in the name of free speech or anything else to subject freedom to the abuse and the lies of Communist propagandists.

Mr. Speaker, I recommend to the Members of the House the editorial which I am including as part of my remarks and which appeared in the Beloit Daily News on Thursday, July 10, 1947.

DOUBLE TALK BY THE NEWSPAPERS

On one page of a Wisconsin newspaper the other day an advertisement of the Communist Party of Wisconsin was published.

On another page of the same newspaper the same day was printed an editorial headed "Double Talk by the Communists." The editorial sought to undo what the advertisement tried to do, and perhaps did do, to a degree.

The juxtaposition of advertisement and editorial provokes us to the writing of an editorial which might be headed "Double talk by the newspapers." This is it:

Many silly things are done in the name of freedom of speech and of the press and one of the silliest of these is to encourage Communists to make use of both in their efforts to destroy the very freedom whose protection they claim.

In its editorial the Wisconsin newspaper to which we refer had this to say about Communists:

"It must be remembered that the American Communist Party and its subsidiary, the Wisconsin Communist Party, is an organization inspired by an alien ideology and having as its goal the conquest of America through internal revolution for the purpose of establishing a dictatorship of the proletariat in a Soviet America. It advocates death to the American system. This Communist Party of Wisconsin is operated solely for the benefit of a foreign nation whose first aim is the liquidation of American capitalism.

"Joseph Stalin himself, addressing American Communist leaders, declared: 'It is necessary that the American Communist Party should be capable of meeting the moment of crisis, fully equipped to take direction of future class wars in the United States. You

must prepare for that, comrades, with all your strength and by every means. You must forge real revolutionary cadres and leaders of the proletariat who will be capable of leading the millions of American workers toward the revolutionary class wars.'

"* * * They seek, not labor's progress under the American system which brought to labor its present standard, but American revolution by bloodshed and eventual control of labor through class wars. * * * Were they to succeed in their plan of class strife and revolution the United States Constitution and its Bill of Rights would be the first to die. * * * Resort to political action, of course, is secondary to the Communist cause. First they must get rid of our freedoms and the Constitution."

That is what the newspaper said on one page while printing the same day on another page an advertisement of the Communist Party.

But if the Communist Party is what that newspaper said it is, what reasonable and common sense and patriotic justification is there for printing the party's advertisement?

How far ought American newspapers go in giving Communists a freedom which they would destroy the moment they acquire the power they seek, and whose efforts to acquire that power are abetted by the advertisements they publish?

In the effort of Communists to destroy our economy and our democracy should Communists be allowed to abuse a democratic freedom which they do not tolerate or permit in their own economy?

Must we, in the end, see our democracy destroyed by the abuse of such a freedom?

Freedom of speech is a magnificent thing. It flourishes only in a democracy. Unless democracy is maintained there is no such freedom. If we believe sincerely in such a freedom we have the obligation to preserve the democracy in which it can flourish.

So, somewhere along the line, there comes a time when realistic thinking and honest forthrightness should call a halt to the destructive efforts of democracy's enemies. We think such a time has come.

Communism is the enemy of democracy and Communists are the enemies of this country.

That, it seems to us, is reason enough to step up on the line and be counted among the enemies of communism in this country.

It is reason enough, it seems to us, to say now to Communists that we aren't printing Communist advertising on one page—and apologizing for doing so on another page.

We're trying to say as plainly as we can that we aren't willing—in the name of free speech or anything else—to subject freedom to the abuse and the lies of Communist propagandists.

If some may say this does violence to the principle of free speech, we say only that we do violence to that principle in a good cause—which is to do our bit to defend democracy by opposing communism here by every legitimate means at our command.

We want no part of communism. We'll oppose communism with as much energy and intelligence as we have. We won't permit ourselves to be used by Communists.

We won't be swayed by Communists who bawl "free speech" in this country while they liquidate it in Russia—and would liquidate it here if they could.

We don't believe in double talk by Communists—or by newspapers. The Communists are frankly out to destroy democracy. Newspapers ought to be as frankly and as aggressively and as intelligently busy fighting communism.

And if Communists insist on using brass knuckles there's no sense in relying on soft words to oppose them.

We're trying to make our position clear on this issue. There will be no Communist advertisements in the Daily News. Then there need be no apologies for them on the editorial page.

And if the academicians want to make something of it, let them. What liberties do academicians have in Russia where art, music, literature, drama, and all the works of all the academicians must glorify the Communist state or cease to exist?

Do they want that here?

The Ideals of America—Address by Bishop Sheil, of Chicago

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 15, 1947

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the Most Reverend Bernard J. Sheil, D. D., auxiliary bishop of Chicago, at the national convention of the American Veterans' Committee, on June 20, 1947, at Milwaukee, Wis.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

In the life of every nation comes a moment when that nation must study once more its basic principles. It must reexamine those basic ideals which are the source of its greatness, and it must examine itself to see whether it is still following those ideals. Such a moment has arrived for the United States. It is a moment crucial in its implications not only for us but for all humanity. In the tragic war which scourged our world and in the social revolution now sweeping the earth there is and there shall remain but one issue: man and the freedom and justice belonging to him. It is imperative, then, that we be neither ignorant nor uncertain of what the American ideal is, for it is an ideal which, in the destiny of this Nation, was meant to be a model and a hope for the people of the world.

The ideal of America is a society of free men enjoying the fruits of justice; men free to think, to speak, to worship; men free to govern themselves without arbitrary domination by self-appointed masters; men free to live their lives without fear or oppression or want; men free from any economic strangulation which would make freedom a hollow catchword. This is the American ideal—an ideal which is the very lifeblood of a genuine and organized democratic society.

Americans have always sought freedom and justice for all men. They have sought freedom and justice, because only in such an atmosphere can the human person flourish in the manner God intended. Freedom and justice are not luxuries which only the rich and privileged can afford. They are not merely an expensive addition to fine living. They are an absolute condition of life. They are God-given rights, not something bestowed by a paternalistic government or a kindly superstate. They belong as of right to all men and to every man individually.

The key to the interpretation of American history is the persistent struggle to keep alive this ideal of freedom and justice; to vindicate it and to expand it against every force, which would seek to destroy or restrict it. That struggle has never ended, and each generation of Americans must not only protect and consolidate the hard-won gains of the past; it must also move forward by making freedom and justice vital realities in every sphere of life for ever-increasing numbers of people.

To us, the possessors of this noble heritage, has fallen the high duty of preserving and expanding this freedom and justice from the growing threat of totalitarianism—the most powerful single danger to the entire concept of democracy. The choice, not of the future, but of the present, is between democracy and totalitarianism; between a social order based upon human freedom and one founded upon the idea of the state as the complete and unquestioned arbiter of human life. The successful conclusion of the war has only intensified the urgency of choosing the social order of the future. I repeat, the choice is between democracy and totalitarianism.

We Americans believe that our democracy, of all the political systems in the world, is the one which now most closely corresponds to the needs and rights of men. It is based squarely upon the deeply religious foundations of the fatherhood of God and the brotherhood of man. Its roots lie deep in the soil of Christianity, so that it is impossible to understand democracy correctly apart from its religious background. Above all, it derives its strength from the Christian belief in the absolute and unique value of the human soul, which transcends all the power and glory of the world. In our democracy man is the foundation and the end of the state; man is the shaper, the maker, not the tool of the state. Only at our grave peril can we neglect the religious foundations of our American democracy; for without this foundation democracy cannot remain itself. Without this foundation freedom and justice and equality will have only a tenuous hold on the minds and wills of men.

And there are suspicions of a fading concern for freedom and justice within this Nation. Our concern for these things is fading because we are not quite sure what they are. It is strange and sad that we who possess the only decent political form of life hesitate and grope when we should be firm and decisive. For many of us, our glorious tradition is in tattered remnants. In the land of Washington, Jefferson, and Lincoln, in the land of noble avowals of devotion to freedom and justice, shameful compromises abound. There are Americans who have never understood America. And they have consistently acted against the best interests of the country. We cannot, of course, doubt their integrity; but we are justified in questioning their practical wisdom.

A glaring example of this unenlightened action is the Taft-Hartley bill. Without any doubt, this bill is aimed at hamstringing all unionism. The alleged interest in the freedom of the individual worker is an ironic play with words. The bill is out of line with the American tradition because it unduly restricts freedom and interferes with that justice which is every man's due. It is almost entirely punitive in nature, and as such, it will cause more ills than it is designed to cure. The satisfaction of spiteful revenge is not calculated to produce beneficial results for the Nation.

The desire to weaken unions is not shared by everyone; but it is common among powerful groups. And we must remember that it is the unions who delivered the workingmen from their bondage. It is the unions which have given justice to workingmen; for this alone, unions deserve our most fervent and devoted support. Through the unions, the working people have tasted economic justice and have enjoyed the fruits of economic freedom. All the Taft-Hartley bills in the world will not make them forget that freedom and that justice. The memory of such rights, once enjoyed, will never die.

Only in the past years have labor unions come into their own as an acknowledged and responsible social force in the United States. Yet they have, by and large, shown an anxiety for the welfare of the Nation that industry itself might well imitate. In their over-all concern for justice the labor unions have pointed the way to their colleagues. The unions, unquestionably, have done more than any other economic group to bring justice to ordinary men; by and large, they have been more democratic within their

own ranks than have their managerial counterparts. It would be most unfortunate for the United States if any serious harm were done to the cause of unionism now; unfortunate for the very things for which America stands: Liberty, justice, and equality.

There is still much muttering about what the opponents of social progress are pleased to call Government interference. One of the reasons businessmen complain about Government interference is that for generations no government dared question the actions of business. Naturally, therefore, when legitimate and necessary Government intervention began there was weeping and gnashing of teeth. Much of the resentment at Government intervention is in the nature of hurt surprise, like that of an undisciplined child that is suddenly made to do what he should have been doing all along. Let us not, however, carry this analogy too far. For the abuses of our industry have not been the actions of a child. They have often been heinous crimes against society.

There would never have been any Government interference if business had regulated itself, and if business had shown at least as much concern for workingmen as for profits. What they call interference is a result of their own failure to concern themselves with the well-being of the people. Recent social legislation is the result of the full, unreserved recognition that the Government has the fundamental duty to secure citizens in the peaceful enjoyment of their natural rights. This includes the fundamental right of providing for themselves and their dependents a decent livelihood by honest and efficient labor. If private industry is unable or unwilling to afford men the opportunity of honorable employment, government is bound by its very nature to employ all its resources to secure to all citizens this essential right to work. This is not a new truth, and Leo XIII gave it excellent expression when he said: "It is the first duty of every government to make sure that the laws and institutions, the general character and administration of the commonwealth are such as to produce of themselves public well-being and private prosperity. Above all, the public administration must duly and solicitously provide for the welfare and the comfort of the working people." The people who pay the price for economic blunders are not the bland, well-tailored leaders of the business world, but unhappy men and women trembling for their jobs.

Recent rumblings against social advances are unpleasantly reminiscent of the time when the sphere of business was an absolute; even God Himself, it seemed, could not enter. In the past several years I have detected, I fear, a carnival air among certain of the rich, as if the happy hunting days are about to return. There is rejoicing in the camp of the Bourbons; and they charge, with unseemly haste, to push the sweaty people back behind the barricades. The anarchistic, communistic unions are about to be broken. Once more the worker's inalienable right to starve will stand as one of the foremost pillars of free enterprise; once more a total disregard for human dignity will be accepted as an avowed principle of commerce. Once more the almighty dollar will be elevated to the altar, to be worshipped as the one true god. Once more the devout followers of Mammon are in control of the sacred edifice of business, which can no longer be touched by morality or law. After all, business is business; we can hope for no further revelation. I have no quarrel with the rich. I will readily grant that there is nothing more pleasant than the sight of the privileged classes enjoying their privileges; but I must admit, even more readily, that there is nothing more heart rending than the sight of the underprivileged grubbing for the basic decencies of life.

Another example of this state of mind is seen in the tax law sent to the President, and fortunately vetoed by him. With tender concern for those in the upper income brackets, our lawmakers evolved a tax reduction which adds to the average man's income the princely sum of $30 and to the rich man's income anything from $1,000 up. I do not by any means advocate "soaking" the rich; but the President was certainly right when he said this plan gave too much tax relief too soon to the wrong people.

Yet another indication of our failure to live up to our ideals is the languid interest in the Stratton bill. This is the bill which would permit 400,000 displaced persons to enter the United States over a 4-year period. Probably the strongest opposition to this bill comes from our own indifference to the pitiful plight of these people. They hunger not only for food and drink, but for justice and mercy. They do not wish to return to their native lands, for reasons that are perfectly obvious. They look to the United States as to an island of light in a sea of darkness. They are ready and eager to live again, if we will just give them a chance. The opposition comes also from the professional Americans, interested, they allege, in preserving us from alien influences, although the bill expressly provides that undesirable persons will be excluded. Our racially pure patriotic groups have quite forgotten that we are all the descendants of immigrants. To them and to all who think like them, I should like to repeat these lines:

"Give me your tired, your poor,
Your huddled masses yearning to breathe free,
The wretched refuse of your teeming shore.
Send these, the homeless, tempest-tossed to me.
I lift my lamp beside the golden door."

The greatness of America has come from just such groups. Our welcome to these people would strengthen our position in the world as the leading exponent of liberty for all men.

There is another example of our waning care for justice and freedom. This is the regrettable tendency to find communistic influence in almost every proposal for legitimate social and economic improvement. And those who favor such measures are arbitrarily accused of being Communists. It is a mystery why there must be a Communist plot in these measures. We have been told that if we just let free enterprise alone big business would bring us straight into a modern Garden of Eden. Those who dared to protest were immediately labeled Communists. Even now if anyone points to the evils of modern industrial society, the smear brigade goes into immediate action.

Does a speaker have the temerity to state that anti-Semitism is un-Christian and un-American? He is a Communist. Does he dare take the part of labor? That is sufficient proof to label him a Communist. Was he against scrapping the OPA? Does he mention that the wholesale price of food products has risen 40 percent since OPA was done to death? Does he remind the propagandists of free enterprise that they promised to bring prices down if controls were removed? Does he remind them the profits and prices have spiralled dizzily while wages have not kept pace? If he does, he is labeled a Communist.

Naturally, our good social laws are positively not communistic; they are normal outgrowths of our Constitution. The anguished wails of the opponents of improvement serve only the communistic movement. They arouse a fear of progress which plays directly into the hands of the Communists, who thereupon appear in the public eye as the sole defenders of the common man. If the high tide of national prosperity recedes, many citizens may turn to communism, in the mistaken apprehension that the Communists are the champions of the underprivileged.

At the same time it would be the height of folly to think that there can be any compromise between communism and democracy. Communism is intrinsically wrong, under any form, in any possible combination of circumstances. And we detest its fruits just as we detest the fruits of fascism. Now, I do not believe in hysterical ranting or in witch hunting. But I do believe in intelligent appraisal of realities and of men. Time after time, Communists have proved themselves unworthy of the trust and respect of men of integrity. Time after time, worthy organizations have found themselves dominated by a few persistent and clever men. Time after time, these worthy organizations have lost the support of decent people because of the actions of their few Communist members. Today a growing number of true progressives are realizing that the Communist affiliation is the kiss of death. We can never forget that American Communists are the spiritual cousins and the servile lackeys of totalitarianism. And we instinctively recoil from lackeys, whether in the service of the well-to-do or their totalitarian counterparts.

These and other problems in America can be solved in freedom and justice if we act in unity. When the war ended, the unity that had joined us in wartime was revealed in its true light—a temporary partnership designed to cease when the last shot was fired. Many shortsighted Americans forget that, while war is a hard, dirty business, it is just as difficult to fashion a true peace. They have forgotten that without the complete and unselfish cooperation and guidance of America the world cannot win a real peace. And only a united America can lead the world to peace. Apparently, some of our prominent men have not learned that what happens in Timbuctoo has repercussions in Toledo; that when the life and liberty of a Pole are threatened, the life and liberty of a Philadelphian are in jeopardy.

We can achieve this unity only in a common belief that man is a creature of unique dignity; that his rights are inalienable, for the very reason that they come to him from God. There is no other road to unity. But unity can make us successful in the fight for justice only if we have the right motives. We cannot be motivated by some vague sentimental affection for the common man, or by hatred of the rich. We must be motivated by solid, real concepts, by the fatherhood of God and the brotherhood of man. These are the beginning of all human relations; they are the bed-rock foundation of enduring peace. Only when we realize that human rights are derived from God can we effectively fight unbridled social and economic exploitation. Only then do we have the right motives for granting to others that liberty and justice which we demand for ourselves.

How long do you think our present Congress would fumble, if, united in this way, we demanded immediate action to provide decent housing, with only incidental regard for the hitherto sacred right of plentiful profit? Here we are a Nation of 140,000,000 people, with a demonstrated capacity to produce war material in an unending stream; but we bog down completely in the effort to provide adequate housing for our citizens, the majority of whom are returned veterans. The answer is greed: The greed of a few who seek to profit at the expense of the many. We see the congressional leaders of this Nation which spent billions to develop the destructive energies of atomic power hold up their hands in horror at the prospect of spending even a little money to provide low-cost housing for millions of our people. And how long do you think our cities would be fettered by racial restrictive covenants if we the people spoke in unity to demand that our courts cease to mock the justice they are sworn to uphold? How long do you think we would be forced to watch the disgusting spectacle of some of our representa-

tives dutifully fulfilling their obligations to their campaign backers in voting for legislation that "has been strenuously pressed upon" them?

In the practical order, we must work swiftly to effect the reign of justice and charity. And I know of no group in America today that is better equipped and better situated to accomplish this work than the veterans' groups. You of the American Veterans' Committee possess an enviable opportunity for heroic achievement. The people of America are crying out for leadership; they are sick of selfish groups who think only of their own interests. They are appalled by would-be leaders who go about fomenting dissension and suspicion only to take advantage of the resulting confusion.

Gerald Vann has remarked that "we of the modern West are the only people in the whole history of the world who have refused to find an explanation of the universe in a divine mind and will. * * * And is it not worth wondering whether, perhaps, that refusal is not at the root of the chaos and misery in which we find ourselves? Without a sense of ultimate purpose, without intelligible answer to the ultimate why and whither, what else could we expect?" Because we are without this sense of purpose, we have not yet provided the world leadership which God intended us to have when He so richly endowed us.

The hour is late; but we still have time. Pius XII in a recent address said that we are living in a time of panic and pessimism; and he called for a great upsurge of Christian faith and love which will sweep the world like a "mighty breath of pure air." Only a spiritual rebirth can bring about a genuine solution to our problems. Mere material remedies can never cure the evils of hatred and cynicism and greed, evils that exist only in the souls of men. The Pope calls for a fearless courage, rooted in "a love as ardent and as vast as the world." Such a love would purge our society of the hatreds which plague us and would drive away the fear which, in the words of the Pope: "* * * hides under the appearance of Christian prudence, and under this pretext remains silent when duty should require it to utter a fearless 'non licet' to the rich and powerful."

I have said that the choice for today and for tomorrow is between democracy and totalitarianism. And, if there is a war in the future, it need not be a war of arms. It must be a war of ideas and of competing social systems. The domains of this conflict are no longer located in geographical areas; they are now located in the bodies and souls; in the minds, and hearts, and wills of men. The techniques of this new warfare, then, must be spiritual. The aim is not to reshape the map of the earth; but to reshape the thoughts of the human mind; to create new objects for the aspirations of the human heart; new ideals for the human soul. The aim is to enkindle the flame of quenchless hope in lives that now know only the darkness of despair. The aim of this spiritual warfare is to teach every child of Adam that his destiny is not to grovel in the slime like beasts that perish; but to walk among the stars as the sons of God.

Missouri Valley Authority

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 15, 1947

Mr. PRICE of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I herewith include an editorial from the New York Times, July 12, 1947, regarding the proposed Missouri Valley Authority.

The editorial follows:

MR. TRUMAN BACKS THE MVA

We have had a costly lesson this year in the necessity for futher control of the upper Mississippi and Missouri Rivers and their tributaries. This investment of at least a quarter of a billion dollars is not recoverable, except as it may stimulate action to prevent such losses in the future. Congress has authorized the expenditure of two billion dollars on a long-range flood-control, power, navigation, and soil-conservation program. It has not, however, appropriated much of the money. This year's budget includes $35,000,000 for flood control, or about one-eighth of the minimum estimate of this year's flood losses. And this niggardliness is in no sense economy.

But the spending of money on rivers for single purposes, such as the control of floods, has been rendered obsolete by the success of the Tennessee Valley Authority. Multiple-purpose river engineering is the modern thing, and since we cannot safely turn over a whole great river valley to a single private enterprise we are compelled to invoke the powers of the Federal Government. This has been done in the Tennessee Valley with all due respect for local autonomy and for private business. There is no reason why it should not be done in the vaster and more complicated arena of the Missouri Valley. This is the purpose of the Murray bill, creating a Missouri Valley Authority, to which President Truman gave his warm endorsement on Thursday.

The Murray bill, introduced by the senior Senator from Montana, is modeled on the TVA Act. It creates a public corporation, directed by a three-member board, to develop and carry out a plan for the use and control of the river and its tributaries. Flood control, reclamation and irrigation, industrial expansion, power, navigation, recreation, and the protection of wildlife are mentioned in the bill in that order, which is probably the order of their importance. There are two elements of controversy. One is power. The Missouri's undeveloped power, a good deal of it in thinly settled upstream areas, is something more than 2,000,000 kilowatts, or a little less than TVA's present development. It is something in the pocket for future use. The other dispute is intragovernmental. An MVA would take over from the Bureau of Reclamation and the Army, and these agencies—especially the Army—have a human reluctance to surrender their functions.

But it is hard to see how the river can finally be controlled and used if private power companies and several Government agencies each have a vote—and a veto. The lesson of TVA is that private enterprise doesn't suffer from abundant power, flood control and conservation. Indeed, the Tennessee Valley today hums with private enterprise, both big and little. The Missouri Valley may be too big, and in places too arid, to hum. But it can get ahead if it has an MVA to attend to the matter.

The Eightieth Congress

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 15, 1947

Mrs. DOUGLAS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech made by me on the occasion of the First Gertrude Dudley Memorial Lecture at Chicago University on June 5, 1947:

The Congress of the United States is the most precious institution of this democracy. It is the living product of the faith of our forefathers in the people.

Each morning as I approach Capitol Hill, I feel the heart of the Nation beating under the Capitol dome. Each day as I watch the men, women, and children of America flow through their Capitol, I feel the strength of the Nation that keeps the heartbeat steady.

What does one find in the Halls of Congress? One finds men and women coming together from the farms and from the cities of America, thousands of miles apart, representing every walk of life and many professions.

Here one finds a cross-section of the country. Here one finds men of many national origins, Catholic, Jew, and Protestant, white and Negro working together.

Here one finds mediocre talents as well as rare ability and judgment and the highest integrity, devoted to service.

But whatever the ability, taken on an average, the Members of Congress are the hardest working group of people I have ever known.

They come early in the morning to their offices. Hurry back and forth all day long from their offices to the committee rooms, from the committee rooms to the floor of the House and the Senate and then back again to their offices. Rarely is an evening completely free of work.

Here the Representatives from 48 States covering a continent discuss everything from the village schoolhouse to the harnessing of the sun's energies.

Here the pressure of ideas beats constantly.

Here new ideas struggle for expression, become plans, and are finally drafted into legislation—legislation which the people then study, weigh, accept, or reject.

This is the institution that has developed out of our forefathers' efforts to give to the people an instrument through which they could manage their governmental affairs. This is the bulwark of our democratic system.

Men want freedom and security. They do not want to barter one for the other. Under democratic government, they can achieve both.

To those of us who have been cradled in democracy, freedom looks easy. Yet an essential safeguard of freedom must be an ever-living appreciation of it.

Every generation is asked to defend the principles which guarantee our freedom not only with life but with the mind and the heart.

We cannot safeguard that which we do not deeply and profoundly appreciate.

Each generation must reevaluate the principles which secure freedom and uphold them in daily living—in conduct with others.

In order to do so each generation must discover for itself, the root and substance of freedom.

We have guaranteed freedom of thought and expression for ourselves by defending that right for others—even though we may despise what they say. We have grown tough minded and fearless on this daring concept.

Democracy is not a leveling or a blind assumption that all men are equally capable. It is a belief in the dignity of the individual and his right to equal opportunity.

This belief is the cornerstone of our democracy. Our Government was set up as the instrument of this belief: to serve the people—all the people—through the voice of the people. The people do not serve the Government. The Government serves the people. Power does not rest in the Government but in the sovereign will of the people.

This—the most revolutionary concept in the world—is the basis of our Government.

Our democracy is the instrument of the people themselves, conceived and built to insure their liberty and to promote their welfare and happiness. It has given the millions of men and women on this continent more liberty and greater security than is found anywhere else in the world.

We have gone further in bettering the lot of the individual with less restraint than any other form of government.

Because we believe that the welfare of people should be the goal of good government, our democracy has brought the millions of men and women on this continent further along in man's historic march toward the building of an enduring peace for all men than any other government in the world.

For we know that our liberty and security today are indivisible with the liberty and security of others.

In the Congress of the United States a Member of the House or of the Senate can no longer represent the best interests of his district and the future of the people he represents if his horizons are limited to the boundaries of his district.

Just as the Federalists, in the interest of their people, moved their horizons from the boundaries of the colonies to the boundaries of this continent, so the Representatives of today must move their horizon from this continent to the rim of the earth.

Today, when the radio carries the voice to a listener in China or India more quickly than Patrick Henry's cry for liberty or death reached his audience in the little Virginia church house, today when we can get to London in as many hours as the days it took Jefferson to get from Monticello to Philadelphia, we can no longer afford to have Congressmen who are "Peoria minded."

We won our political democracy under Jefferson. True, we broadened it under Lincoln and we must further broaden it today by the passage of antilynch and anti-poll-tax legislation, but the basic principle of political democracy was assured a long time ago.

That principle of political democracy has given the people the political power to pass any bill they determine to pass.

We won our political democracy early but have never finished our continuing battle for economic democracy.

Until we win this battle for economic democracy, we are threatened with the loss of our political democracy. If we are to continue to grow, and to be prosperous as a nation with benefits for all our people, we cannot continue to permit the wasteful exploitation for the benefit of the few of our natural resources—forests, mines, lands, water resources—and, above all, we must put a stop to the exploitation of people.

We know that in our highly industrialized civilization staggering concentration of economic power in the hands of a few must be prevented if opportunity for free enterprise is to be something that all can enjoy.

We have learned through years of bitter experience and study that we must use every possible weapon against devastating depressions that leave one-third of our people unemployed, with bread lines stretching across the country, and want, misery, and tears the order of the day.

Now that communications in the world have almost annihilated time and space, we have learned that economic depressions have very far-reaching consequences. It is no longer possible to have a long depression anywhere in the world which to some degree does not affect the whole world.

We now understand that political peace, essential to the survival of men the world over, must be founded upon international economic peace. In other words, the best insurance policy we can take for our children to guarantee that they live out their lives to a ripe old age is to work for economic stability at home and in the world.

In the light of these facts, the last Congress, convinced we could no longer legislate in a vacuum, passed the Employment Act of 1946. The act provided for a Council of Economic Advisors to the President, to appraise programs and activities of the Government and to formulate and recommend national economic policy.

Under this act, the President at the beginning of this legislative session, as every President will in the future, presented to Congress an economic report on the State of the Union.

For the first time in our Nation, we proposed scientifically to evaluate our resources and productive capacity, prospective employment and consumer buying power for the coming year.

In other words, in seeking to balance the budget of our National household, we take an inventory of our national resources and of what we have on our shelves.

The job of Congress is to achieve national stability—to strike a balance between prices, wages, and profits.

The job of Congress is to obtain the same high level of production in peace that we achieved in war.

The job of Congress is to promote human happiness by increasing individual opportunity and deepening individual security for all.

The job of Congress is to enrich the spirit of man by general freedom.

The Republican Party in the last election won a majority of seats in both Houses. The Eightieth Congress, therefore, is under Republican leadership. As a result, the legislative program is the responsibility of the Republican Party. A bill must be given the green light by the leadership before it is considered by committee and brought to the floor of the House.

By studying legislation one can easily and accurately discover what a party considers of first importance to the welfare of the people.

This Congress has utterly failed the people. It has set aside the economic report made to it by the President and turned it over to Dun & Bradstreet. Instead of a program of social legislation, the leadership of this Congress has a three-point program to meet the greatest challenge this country has ever faced.

The program of leadership of the Eightieth Congress is—

1. Cut taxes for the rich.
2. Break the back of labor.
3. Destroy the agencies of Government set up to protect and promote the welfare of the people.

Rising prices, housing, FEPC, health, education, development of natural resources, antipoll tax, scientific research, antilynch, power development are not the concern of this Congress.

No wonder Senator MORSE a few days ago in Washington charged the Eightieth Congress with yielding to selfish economic pressures in a program that is seeking "to make the rich richer and the poor poorer." He warned that "we can't win the peace by the selfishness and isolationist thinking of the Eightieth Congress."

What this Eightieth Congress is up to can be clearly seen in its actions on the tax bill, on the labor bill and on the various departmental appropriation bills. These bills together demonstrate the pattern. The underlying purpose of them all is to give special help to the vested interests of this country.

The tax bill particularly shows this tender consideration for the rich. Of course, everybody likes tax cuts but it doesn't make sense to cut taxes if by doing so we recklessly invite further inflation.

If we really want to save the people's money, we should be grappling with rising prices which have cost the American public $8,000,000,000 since last June, and about which this Congress has done nothing.

Instead, it proposes now to raise rents with a phony rent control bill that will cost the American people at least another billion dollars.

The tax cuts are intended to save $4,200,000,000, but the policies of this Congress are costing the American people more than twice that amount. It is the little fellow who is paying most of the nine billion cost of inflation, and it is the big fellow who gets most of the relief from tax cuts.

Breaking the back of labor is the second point in the program of the Eightieth Congress. The Congress, after piously writing into the labor bill a reaffirmation of their faith that collective bargaining is essential to industrial peace, proceeds to write a bill calculated to disrupt, weaken, and destroy collective bargaining, thus paving the way for more labor strikes—not less.

The Taft-Ball-Hartley bill as it was sent to the President will give great advantages to the minority of nineteenth century employers who still hate collective bargaining and will undermine established union principles and the legislative gains of labor in the past 15 years if this bill becomes law.

The bill would undermine the administration of the Wagner Act, which guarantees the right of workers to self-organization, free of coercion, intimidation, and interference by employers.

We have heard much talk of union abuses, such as jurisdictional strikes and secondary boycotts. A bill to check these abuses, if confined to that purpose, would easily be passed into law; President Truman last January, in fact, requested such legislation.

The Taft-Ball-Hartley bill goes far beyond this purpose; it reproaches and punishes unions for striking last year when the vast majority of strikes had nothing to do with jurisdictional squabbles.

The strikes of last year—just as the strikes of 1919 which followed World War I—were strikes over wages and union security.

Whenever a Government fact-finding board recommended a settlement of a strike, with one exception, the recommendation was accepted by the union involved; it was the corporations—General Motors, Westinghouse Electric, United States Steel Corp—which rejected proposals of Government fact-finders and mediators. That is plain historical fact.

But now a majority of Congress wants to penalize unions for the strikes, while doing nothing about the truly serious growth of monopoly and concentrated economic power among corporations, and doing nothing about the rising cost of living which has made new wage negotiations necessary.

Binding the hands and feet and gagging the mouth of labor doesn't put milk and eggs in the ice box for 50,000,000 people.

The abandonment or curtailment of Government programs which will eventually affect every man, woman, and child in America is the third point on the program of the Eightieth Congress.

Under Republican leadership, Congress labored 2 weeks and turned forward the clock in the District of Columbia 1 hour. Congress labored for 5 months and turned back the clock in Government one decade.

To the farmer who helped feed the Allied armies and who has been guaranteed by legislation that he will be helped in his continuing struggle against soil erosion and the washing away of the topsoil, which if allowed to continue would change this country from the bread basket of the world to a land with large areas of barren waste, for the help he now asks, the answer is: "You have had enough."

To the tenant farmer asking to own a farm of his own so that he too may have a stake in free enterprise, the Congress answers: "No more loans to tenant farmers." Despite the fact that money invested in this program was repaid 176 percent ahead of schedule, the answer is still the same: "You have had enough."

Two and one-half million American mothers still read to their children by flickering coal-oil lamps. Only one out of every two rural homes in America has electric power.

To the millions of American mothers of rural homes who now ask that the lights be turned on, that they may use the power to milk, wash and iron, cook, and read by, the Congress answers, and the answer is a crippling cut in the REA appropriations.

Even though this investment comes back dollar for dollar, plus interest, and is ahead of its payments, setting up a chain reaction for other needed services, making for greater production and employment, the answer of the Congress is still the same: "You have had enough."

For the thousands upon thousands of children asking for a warm, balanced meal, at least once a day, the answer is: "We have to cut somewhere. You have had enough."

To the progressive, forward-looking citizens of the Northwest and the far West who ask for dams, water, and power, the Congress answers, and the answer is: "You have had enough." Despite the fact that irrigation farmers and power users in this great section pay back into the Treasury the capital advanced for construction, dollar for dollar, the answer is still the same: "You have had enough."

To the veteran who spent years in a fox hole, and who now wants to raise his family in decency and dignity, free from in-laws, free from doubling up with strangers, free from trailer camps, free from the orders of move over or move out, and now asks his Government to take steps to make it possible for him to obtain a home, the answer is: "You have had enough."

To 72 percent of all the families in America who have an income of less than $3,500 a year, pleading that they be rescued from the inflation which is eating away their dollars—pleading for workable legislation to hold down rents—the answer is, "You have enough."

To the school teacher who protests that she cannot support herself on her pitiful and paltry pay check and asks for help, she is told, "You have enough."

To the wage earner—a victim of the high cost of living and NAM propaganda, begging that his hard-earned rights not be taken away—the answer is, "No; you have had too much."

To the men and women in poll-tax States asking for help; to the Negro who fought with his white brother, not without honor, and who now asks that he be given equal opportunity to earn his living, and to lynching by mob violence, Congress turns a deaf ear.

This program is a betrayal of democratic life. This program is short-sighted and wasteful. This program puts in jeopardy our ability to win the peace.

Even on foreign affairs the record in the House is not good. I will give but one illustration. There are many more.

We cannot have political peace if we don't achieve economic peace. Nevertheless, a dangerous attack on the entire trade-agreements program has been carried on at all sessions of the Ways and Means Committee of the House.

This attack culminated in the passage of the wool price-support bill, which has a neat little amendment attached to it that does three things:

One, strikes a blow at the trade-agreements program.

Two, throws a monkey wrench into the International Trade Conference now being carried on in Geneva, repudiating the assurances of the United States Government to 17 other nations that tariffs on certain commodities, among them wool, would not be increased before the Conference.

And, three, the amendment indicates a revived fondness for tariffs which is, to say the least, frightening.

This would all be very discouraging if we didn't live in a democracy, but we do—and we must never forget it.

The right to accept or reject any legislative program rests with the people. They have the last word.

In other words, the pencil has an eraser on it. If the people don't like the program that Congress has spelled out in any given 2 years, they can and should erase it at the ballot box.

For every 2 years the sovereign people of this union can change the complete color of the House, and while the Senate can only have its complexion changed in any given 2 years, it is nevertheless very responsive to any change that takes place in the House.

It takes a better Congress to win the peace than it does to win the war.

If we can't afford to have "Peoria minded" Congressmen, it's up to the people to see we don't get them.

And to the degree men and women in the 48 States work through their representatives in Congress for economic democracy, to that degree they are working for enduring peace—the issue of our time.

As we work let us never forget that our United States is the pilot plant for the United Nations—living, working, concrete proof that union of nations is possible.

We can renew our hope and energy if we measure constantly the difficulties and barriers that separated the Thirteen Colonies out of which our Union grew with the difficulties and barriers that separate the nations today, for we find that the job already done on this continent was more challenging, fraught with greater hazards, than the job which confronts us today.

The suspicions, jealousies, and fears that separated men when this Nation was born were no less real than they are today. If it had not been for the revolutionary, far-reaching, abiding faith of men like Washington, Jefferson, Jackson, and Lincoln we would today be living as they are in Europe—separated by border troops, currency, language, customs, plus the age-old fears and jealousies that rot man's mind and heart.

The only way the Colonies could survive was to stand together. They came together of their own free will. But they made very sure that no one Colony should be able to dominate any of the others. That is what we are trying to do in the United Nations—make sure that no one nation shall be able to dominate any of the others.

The safeguards which were developed 170 years ago were far reaching and revolutionary in that the emphasis was placed for the first time not on the state but on the people.

This is the root of the success of the United States. The United Nations Charter breathes the same life—for it is the first international document ever written which places the same emphasis on the people.

If we the people of the United Nations live up to that Charter to the degree that we the people of the United States have lived up to our Constitution, we will not fail.

If we the people of the United States give enlightened leadership here at home, we will be the symbol of hope for all the world.

Corporation Farming

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 15, 1947

Mr. MILLER of California. Mr. Speaker, under leave to extend my remarks, I include a resolution adopted at the annual encampment of the Veterans of Foreign Wars of the United States, Department of California, at its recent convention held in Santa Cruz, Calif., commencing June 10, 1947.

The Veterans of Foreign Wars reflecting the attitude of those men who have made a maximum service in the defense of their country realize that devotion to country does not cease when they shed their uniforms. They have been quick to protect the interests of the people of this Nation and of their own comrades in arms. That is why they have definitely gone on record against a legislative bill that if adopted would encroach upon the family-type farm—the farm that has been the backbone of a free America.

The resolution follows:

Resolution 28

Whereas the Veterans of Foreign Wars have consistently supported legislation bulwarking the family-type farm and look with admiration and hope at the generous example set by the people of the Columbia Basin, where the Department of the Interior has been empowered to purchase private lands for veterans' settlement on family-size reclamation acreages; and

Whereas in California, on the Central Valley project, the exact opposite process is under way, with the land and produce corporations taking control of ever more lands and driving the family-type farm out of existence, closing off the opportunity of veterans and others to establish themselves as independent farmers; and

Whereas Senate bill 912 (the Downey-Knowland bill to repeal the acreage limitation on service of Central Valley project water) would only further and foster this socially destructive process and is therefore an improper piece of legislation for public-minded men such as these to introduce and support particularly when viewed in comparison with the far-seeing generosity of the Columbia Basin Congressmen: Therefore be it

Resolved, That the Veterans of Foreign Wars call upon Senators Downey and Knowland to abandon their open championship of corporation farming and all its destructive meaning to our California life, and that our national legislative committee be instructed to oppose legislation of this type.

Endorsed: Lieutenant Lansdale Post, No. 67, April 17, 1947.

SAM J. RIPPON,
Senior Adjutant.

Be it therefore

Resolved, That the Thirteenth District, Department of California, Veterans of Foreign Wars, endorse this resolution.

RUSSELL C. MASON,
Commander.

Taft-Hartley Bill Analyzed

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 15, 1947

Mr. PRICE of Illinois. Mr. Speaker, what is in the Taft-Hartley bill? There seems to be much confusion as to real contents of the measure.

The analysis which follows is perhaps one of the clearest on the subject. It

was prepared by Paul H. Douglas, a member of the faculty of the University of Chicago. It appeared in the Decatur (Ill.) Herald-Review, Sunday, June 22, 1947, and I herewith ask unanimous consent that the Herald-Review's article be inserted in the RECORD.

Paul H. Douglas, who prepared the analysis, not as a member of the university staff, but as an interested citizen, is a noted educator and soldier. Early in World War II he enlisted as a private in the United States Marine Corps. At the time of his discharge after the war's end he was a major and wore the Purple Heart for wounds in action in the Pacific.

The analysis follows:

AN APPRAISAL OF THE TAFT-HARTLEY BILL

(By Paul H. Douglas)

After a close and somewhat prolonged study of the Taft-Hartley labor bill, I have come to the conclusion that while it embodies features which have won wide popular support, it also has concealed within it a number of sleeping or delayed time bombs, of which the general public is ignorant, but which are likely to be fatal not only to unionism, but also to orderly industrial relationships.

The good features of the bill lie on the surface and are obvious to all. It requires unions as well as employers to bargain in good faith and hence makes this obligation reciprocal. It prevents unions outside a plant from trying to alter by sympathetic strikes or boycotts the bargaining representatives which the workers inside have chosen in an authorized and fair election. It prevents unions from charging new members excessive initiation fees. It requires the unions to publish their financial accounts and the salaries of their officials. It outlaws the jurisdictional strikes which have little justification, but which the unions have not effectively prevented. It makes explicit the right of an employer to present his case to the workers in contests over representation.

CONTAINS MANY DUBIOUS CLAUSES

Were those provisions all, few legitimate objections could be raised to the act. But unfortunately they are not all. The bill also contains a series of very serious and dubious clauses. These are so cleverly embedded in the text as scarcely to be noticed by the general reader and are evident only to the experienced. But taken in their entirety, they will make the effective practice of legitimate unionism extremely difficult. Among these provisions are:

1. Because of the fact that (a) elections to decide whether or not the workers wish to be represented and if so, by whom, may be held as frequently as once a year (sec. 9 (e) (3), and (b)) employers may present a request for such a new election on behalf of a person or group claiming to represent the employees (sec. 9 (c) (1) (b)), the way is opened to a continually harassing series of elections which can wear down union strength. Employers are thus put in a position in which they can finally catch union strength at ebb tide and frequently get the union voted out. A provision that elections might be held as frequently as once every 2 years would not only be understandable, but perhaps desirable. But to permit them to occur every year opens the way to incessant electioneering, which is certainly not good for industrial stability.

EMPLOYERS COULD PLANT STOOGES

2. In addition, workers can be denied representation through unions if a union has not "furnished to all of the members" copies of its required financial report. (Section 9 (f) (B) (2)). It would be proper to require a union to make these reports freely accessible to all of its members, but to require the delivery of such reports to all members is unduly onerous. It would be a relatively easy matter, for example, for men to be planted inside a union who would then claim that they had not been furnished or delivered copies of the financial report. This could then be used as a pretext to deny a union the right to represent the workers even though the majority desired it, and to prevent the union from initiating charges of unfair-labor practices against employers.

3. The act outlaws unions if they "restrain or coerce" employees who do not wish to join a union nor to strike (sec. 8b; sec. 7) without giving any definition of what constitutes "restraint" or "coercion." While the general public properly condemns violence or threats of violence in connection with picketing, and does not approve of wholesale mass picketing, courts have erred grievously in the past in declaring peaceful picketing by a moderate number to be acts of restraint and coercion. What this act does is to create a national court for the decision of what have hitherto been largely local police issues and gives this court a blank check by which it may outlaw innocent as well as guilty actions.

4. The act outlaws all forms of sympathetic strikes and boycotts (except those directed by workers against their immediate employers (sec. 8 (b) (4)). Some forms of these activities are undoubtedly antisocial, and as I have indicated, abuses have occurred when unions, beaten in an election, have used these methods to compel an employer to deal with them over the opposition of the majority of the workers inside a plant. But there are other cases, such as where "struck work" is shipped out to other firms to complete, where if the workers in these other firms are compelled to work on the material or to fulfill the contracts, they are in effect being forced to act as strikebreakers. I do not believe that the fair-minded American public wants this to be required.

SOME STOPPAGES ARE PROVOKED

5. While many will approve the provision making unions suable for violations of contracts and for sympathetic strikes and for boycotts (secs. 301, 303), these provisions are in practice susceptible of great abuse. For example, sporadic stoppages of work by sections have been a vexatious feature in the newly organized mass production industries. In some cases the unions have been at fault in not dealing energetically with these stoppages. In other cases, however, the stoppages have been provoked by unduly cumbersome methods on the part of employers in dealing with grievances and by the anti-union attitudes of foremen and minor officials. In such cases it is very difficult for unions, however well-intentioned, to control their members. And yet if they fail to do so, it is possible that they can be held financially liable under this act and perhaps stripped of all their funds. It is indeed quite conceivable that unscrupulous antiunion groups could plant undercover men within the union ranks who would start such stoppages which could then be used as grounds for bankrupting the unions.

Experience in the clothing and steel industries seems to indicate that as unions grow older and as both sides get accustomed to collective bargaining, wildcat strikes gradually disappear. This is one of the evidences of the collective maturity of both parties. But to make such acts a possible ground for suits implies a degree of control by a union over all the acts of its members which voluntary associations rarely possess and could be made the pretext for a campaign to strip them of virtually all their resources. While this whole question is a knotty one, it personally seems best to me to make the penalties for illegal and damaging acts enforceable against the guilty individuals instead of against organizations as such.

COUNSEL WOULD DOMINATE BOARD

6. The act strips the enlarged National Labor Relations Board of virtually all control over its own staff and procedures and confides these instead to a general counsel whose appointment by the President is required to be confirmed by the Senate (sec. 3 (a)). This official is not only to be in charge of all attorneys but also over all officers and employees in the regional offices. He and not the Board is to have the power to investigate charges and issue complaints. He may thus sidetrack certain complaints and expedite others, and in addition, can control the making of settlements. Since the majority of the Senate, because of the overrepresentation of the agricultural States and the exemption of railroad labor from the act, will probably tend to be basically hostile to organized labor, it would seem that the Senate in its present mood would reject the appointment of anyone whose attitudes were markedly different. There is grave danger, therefore, that the activities of the Board will be dominated by an executive who will not proceed in a judicious manner. While I grant that some members of the Board may in the past have been lacking in a judicial frame of mind, it should be remembered that the two chairmen who have largely shaped its policies, namely, Messrs. Madden, and Millis (the latter from our own State of Illinois) have been exemplary public officials and that in practice the Board has been seldom overruled by the courts. While it is true that the prosecuting and judicial functions of regulating commissions should be separated, this had already been effective by the Walters Administration Procedures Act and by the Board's own rules. To inject a general counsel into the situation who becomes in effect the practical dictator of the field procedures is likely not only to produce bad but also biased administration.

7. While the act provides a referendum to decide whether or not a union can ask for the union shop, it is necessary that a majority of all eligible voters must approve this in order for it to carry. (Sec. 8 (a) (3). This may be debatable, but it would seem better merely to require a majority of the votes cast. For the existing phrasing would permit employers to identify the attitude of employees and to put pressure upon them to stay away from the polls.

DISMEMBERS LABOR DEPARTMENT

8. The progressive dismemberment of the Department of Labor is continued by transferring the Conciliation Service from that Department to the status of an independent agency (sec. 2020). The Conciliation Service has been greatly improved during the last year and a half and in this improvement the representatives of management have played an important part. It is sound administration to have the bureaus dealing with labor integrated in one department and not scattered to the winds, as is now being done. Business would resent such tactics being followed in the case of the Department of Commerce as would the farmers in the case of the Department of Agriculture. There is no reason why labor should be singled out for such treatment.

9. The act forbids unions from making not only any "contributions" in connection with national primary or general elections, but also any "expenditures" (sec. 304). Outright contributions by unions for such purposes are doubtless subject to abuse although they can be defended on the ground that they permit the many in the low-income groups to pool their individually small contributions to offset the bulked contributions of the wealthy. But this act goes even further. It would prevent unions from publishing literature to acquaint their members with the voting records of Members of Congress or the public attitudes of candidates

for governor or President. While an apparent attempt is made to make this prohibition mutual by a loosely worded clause which would similarly prevent "any corporation" from making similar expenditures or contribution (and which might stop newspapers from taking polls, etc.), this restraint is not applied to unincorporated employers' associations and hence in all probability would not serve to restrain them. This somewhat one-sided and certainly injudicious prohibition strikes at the fundemental rights of citizens in a democracy.

In addition to the points which I have outlined above, there are other matters of more than dubious fairness in the act, such as the fact that the Government in being given the power to prevent national strikes is not given adequate powers to see that a just settlement is reached. But for reasons of space I shall not go into these issues.

Perhaps there will be some who, while admitting the force of the above contentions, will, nevertheless, favor the bill as it stands because they believe it gives the Federal Government the power to deal with Nation-wide crippling strikes, such as in coal, which threaten the public health or safety. Here it should be pointed out that by section 502 Congress seems to have included an escape clause which would permit a coal strike. For there it is provided that the quitting of labor "because of abnormally dangerous conditions of work" shall not be deemed to be a strike. This would seem to open the way for Mr. Lewis to stage a Nation-wide walk-out at such time as he deems appropriate and to refer to it as a protest against unsafe conditions.

VETO IS JUSTIFIED

It is a pity that the advice of Senators IVES and MORSE in respect to this act was not followed. They begged Congress to divide the measure into several bills. One could have dealt with the generally recognized abuses which do need correction. The others could then have dealt with the more debatable and dubious issues of public policy. But Senator TAFT and Congressman HARTLEY and their followers were adamant in refusing to permit this. They were successful in tying up the doubtful and bad features along with the good. They may have been actuated in this by a desire to put the President in a difficult position. But in so acting they have placed the country in a similar situation. There is good ground for believing that, taken in its entirety, the bill would do more harm than good and that the President would therefore be justified in vetoing it and Congress in upholding any such veto.

The Motion Picture and the World Today

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 15, 1947

Mr. McDONOUGH. Mr. Speaker, I have made the statement before the House that the motion-picture industry is one of the greatest mediums of influence upon the people next to our great educational institutions. It is good to know that one of the great leaders in this industry fully realizes the tremendous influence that motion pictures have upon the public mind and character, and the need of the motion-picture industry carefully scrutinizing and publicizing its own releases to protect the public welfare.

Clean, wholesome motion pictures can do a great deal of good. Inspiring patriotic and historical pictures can be of great benefit in preserving our national traditions and creating better international understanding. The reverse kind of pictures can do a great deal of harm.

Mr. Louis B. Mayer, a leading industrialist of the Nation, head of the Metro-Goldwyn-Mayer Studios, in Los Angeles County, recently delivered a brilliant address before the Newspaper Advertising Executives Association at their annual convention at San Francisco July 7, 1947, on the subject the Motion Picture and the World Today. His address follows:

Mr. Chairman, guests of honor, members of the Newspaper Advertising Executives Association, to address such a distinguished gathering is indeed a privilege and I am deeply grateful for the honor of your kind invitation.

San Francisco, the birthplace of the United Nation's Charter, the city of hospitality, is always a pleasant place to visit. Last week our attention was again called to the birthplace of our Constitution, Philadelphia. These two great cities will ever recall man's advancement in political science.

We have much in common, your business and mine. There are few enterprises in the country which have as much competition as the motion picture and the newspaper.

Forty years marks my experience in the motion-picture industry in all its branches. I am like the man who adopted the pretty little kitten and found in a few months that he had a full-grown lion on his hands. Motion pictures attracted me first because it was something entirely new, and by hard work would afford a decent living; also, because I knew all the happiness and relaxation it would give to the people of the world.

But those of us who pioneered in the industry never dreamed that the nickelodeon was the pretty little kitten that would grow into the lion.

Grandpa said the automobile would never supplant the horse. He would not have believed that voices would ever circle the world and he certainly never imagined that man would invade the domain of the birds.

Little did I dream as I opened the door of that small theater in Haverhill, Mass., that the motion-picture industry would rise to such dominance in American life and cross international borders to influence the conduct of nations.

Statesmen and scholars have referred to the screen as the greatest educational force in the history of the world.

The expenditure of some $52,000,000 annually in newspapers, places our industry third on the Nation's list of advertisers. Metro-Goldwyn-Mayer alone has some 14,000 theater accounts which advertise in local newspapers.

Besides ranking third as an advertiser, Hollywood news is found on many pages of your papers. Every day news services carry stories from Hollywood. There are over 500 newspaper and magazine correspondents in Hollywood representing every language and nation on earth. Hollywood rivals the Nation's Capital in news that attracts the world.

Beginning with the Federalist over a century and a half ago, the press has battled to preserve our American way of life; then came the screen and then the radio—two powerful aids.

In every age serious crises have arisen and conflict of opinion have engaged nations in battle with each other, and even in civil wars.

Today there is an undemocratic state on the march. Its political philosophy is foreign to our traditions.

The crisis we face—and few have ever equaled it. It is not a battle among ourselves; it is not a battle between two countries, but it threatens the way of life upon this planet; it threatens our fundamental concepts of human rights and liberty.

More precious than our lives we hold our liberty—a liberty that means free speech, free press, the right to assemble and remonstrate against real or imaginary wrongs, and the right to worship at any shrine; a liberty that means free enterprises and unlimited opportunity; a liberty which lights the footsteps of the poor boy born in a floorless cabin in Kentucky as brightly as the pathway of the boy born to wealth and social position.

These liberties, won on many battlefields, must be preserved. This serious responsibility we share in common with the newspapers and the radio.

The inventive genius of man has annihilated distance, and two great oceans which in the past have insured our security no longer afford us that protection. If the slightest doubt existed, Pearl Harbor dispelled it.

A silent, white flash and a hundred thousand people died at Hiroshima. Yes; we split the atom. A new undreamed-of force of destruction had been let loose in the world, struck terror in men's hearts, caused military leaders and statesmen to change all their plans of warfare.

A powerful nation challenges and discredits the liberties I have mentioned and seeks to spread its influence to dominate the lives of men and women in smaller nations. No one can dispute the right of any people to select their own form of government * * * but the right to force its own government upon another people is disputed. This has never been the American policy. We are proud of our traditions. Cuba and the Philippines came to us by right of conquest, but we did not destroy them or enslave their people.

Right now we are doing everything possible to help the Philippines recover from the staggering blows of the last war—we not only made the Philippines free and gave them all the rights of an independent nation—but today, our Government is assisting the Philippines in rebuilding her industries, her buildings, her roads, her schools, her churches—and to make that country self-sustaining—that her people may once again enjoy the prosperity attained under our protection.

We encourage trade relations with Cuba; we extended credit to the country; our people purchased Cuban bonds—and the great guns of our Nation protect its independence—that is the American way.

Our system of free enterprise has provided free schools for our children, free parks, security for unemployment and old age, and has supplanted fear in their hearts with happiness. The billions of dollars in savings accounts; the billions invested in Government bonds; the 30,000,000 automobiles; the many thousands who, each day, attend our great national sport, the baseball game, cheering and applauding; the millions who attend the theaters and other amusements; it is all evidence that all groups and all classes enjoy the freedom and prosperity of America.

We play—we work—there is a deep thrill in watching ten, twenty or thirty thousand men and women laughing and joking, swinging their dinner pails, as they enter the great factories of the Nation, or leave after the day's toil.

Motion pictures portraying these actual scenes in American life are welcomed by all liberty-loving countries * * * and frowned upon and denounced wherever liberty is suppressed.

The reason behind the dictators action is readily understood—if his people were to see and learn of the freedom of the working men and women in a free country, it would destroy his power.

The comfortable homes of the working men—the children playing in the parks, or

running to and from school—the whole family riding in their own automobile, or basking in the sun on the beaches, or at the lake—would cause his working people to demand a similar way of life.

Yet, this same Nation welcomes with open arms The Grapes of Wrath, Tobacco Road, and similar films, which portray only a small portion of American life, which is certainly less typical.

Under our system, industrial life has been so organized that in a few months our factories turned from the products of peace to the engines of war and, with a united front, labor and capital together made great sacrifices in a common cause. We won. We preserved liberty, not only for ourselves, but for our allies.

We preserved our way of life, not for one class, but for all classes.

What can the motion-picture industry do in this world encircling conflict? The message of the screen reaches approximately 235,000,000 persons throughout the world, in 86,640 theaters.

There is a heavy responsibility upon the producers of motion pictures. A motion-picture can not only afford entertainment, but be of educational value. In this crisis, it can portray fairly and honestly the American way of life, and can be a powerful influence in the lives of the millions in other countries who are either denied access to our way of life, or who have never had the opportunity of experiencing it.

This is not propaganda, unless one would say that presenting to the world our way of life, our freedom, our opportunities, our defense of liberty, our emphasis on the dignity of the human being is propaganda.

Propaganda, as such, should never masquerade under the cloak of entertainment. Subjects of controversy should be clearly designated.

Our industry has opened wide its gates and welcomed talent from every corner of the earth. There are 125 different arts, crafts, and trades in our industry. There is no discrimination in the selection of talent. In whatever country we find talent we present it to the people of the screen. You can easily recall the names of artists of every nationality: Garbo and Bergman came from Sweden; Garson and Coleman from England; Boyer from France—these are just a few. Some of these artists have won the highest honors our industry can confer.

Our American talent comes not only from great cities but from farms and towns. A little town in Ohio gave us Clark Gable; from the Midwest plains of Montana came a cowboy—Gary Cooper. Another chap waited on tables to pay his way through school, and nearly everyone knows him—Gregory Peck. A little girl with enthusiasm and great ambition found an outlet for her talent on the screen, and millions acclaim Judy Garland.

Our industry is confronted with as keen competition as any of the great enterprises of this country. We welcome competition. Foreign films are exhibited in American theaters on the same basis as our own. There is no quota. There is only a nominal tariff. They flow in as freely as the air. This is not true of American films sent to foreign countries. In most other countries there is a tariff and a tax, which places our films at a disadvantage to the films produced in those countries.

Our films are not confined to depicting American life. The great film Mrs. Miniver portrayed the courageous and heroic resistance of the British during the blitz. That film gave renewed courage to men and women who were engaged in the battle for freedom all over the world. That was no imaginary epic. That was a truthful, pictorial demonstration of the undaunted courage and stanch hearts of the British—fighting for survival.

In all events, we do our utmost to try to show people of the world in the best light possible.

Last year more than 400 feature films were produced in this country. England made more than 100, with more than 300 produced in other parts of the world.

During the war we supplied all of our films—some 43,189 prints of feature films and 33,217 shorts—to the armed forces overseas. This was a contribution to the war effort, and was furnished free of all cost to the Government.

Again the Government has called upon us, and we are now supplying pictures to be exhibited to the peoples of occupied countries. The men and women of Germany, Japan, Austria, and Korea are getting, in many instances for the first time a glimpse of the true America. It is a contribution to world peace—to a better understanding—among all peoples of the earth.

More recently the motion picture invaded another field. It has stimulated the desire of people to purchase new inventions, to adopt new styles, and to desire the machinery they see in the farmers' fields. A new design in a house, a new style in a woman's hat or hair-do, or a new design in a dress—all these are popularized through the motion-picture screen.

I recall a film, It Happened One Night, where Clark Gable pulled off his shirt and there was no undershirt beneath it. Immediately hundreds of American boys stopped wearing undershirts. And we heard emphatically from the manufacturers of undershirts. In another film, however, Clark wore an old turtle-neck sweater. Instantly turtle-neck sweaters became the rage, and manufacturers found an unprecedented demand which they had not had in years.

More and more the world becomes one unit. No nation can sell and not buy. No nation can buy and not sell. Our industry is supporting the Government's program at the World Trade Conference in Geneva. The barbed-wire entanglements erected at the borders of nations must be untangled if the countries are to be prosperous and the people happy.

We have many problems in the motion-picture industry. We have made errors, the same as any other business. We are earnestly striving to improve every picture that is exhibited—to uphold the high moral standards of America. Great historical films have been produced; great films showing the advancement of science and art, and films which stimulate the imagination to reach out into unconquered worlds.

Another field the motion picture has entered is the schoolroom. It has been established that many subjects can be taught more easily and with greater rapidity in the schoolroom through the medium of motion pictures.

Someday the American school will have talking blackboards which will be as common as today's blackboards and chalk. I realize this means redesigning classrooms so that films can be adequately shown. It means training teachers to use films intelligently; research to determine what film content is most acceptable and most important in education

We reach into every community in the Nation and become a part of the community—the motion picture theater is an integral part of community life. Out of every dollar that is taken in by the cashier of the local theater, 65% is paid out for rentals, local advertising, local employees, local taxes and other local expenses.

In common with the newspapers and radio, the screen fights the battle for freedom of speech. Jefferson said "that Government is best which governs least." Intelligent self-disciplined industry is our greatest assurance that the freedoms guaranteed us by our Constitution will not be denied.

By maintaining high standards, by adhering to the truth, we can preserve the right to this freedom.

Yes, the motion picture industry has grown into a mighty institution, reckoned in billions of dollars. Yet, it is still in its infancy. It has hardly begun to use its facilities to entertain, to educate, and to carry its message of good will and happiness to all the people of the world. In my opinion, its possibilities of power and influence are greater than any other single instrumentality.

The responsibility, ladies and gentlemen, is great. We all appreciate that responsibility. It is my deep and solemn conviction that the Maker of the universe intended that men should be free and not slaves; that the peoples of the earth should enjoy the bountiful treasures which Nature has placed under every sky; that men and women should be happy and not depressed, and there should be a song of peace and good will in every heart.

We pray God that we may be worthy of the stewardship entrusted to us, and do our bit to realize these dreams.

A Resolution

EXTENSION OF REMARKS
OF
HON. EDWARD O. McCOWEN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 15, 1947

Mr. McCOWEN. Mr. Speaker, under leave to extend my remarks, I am hereby presenting a resolution, as follows:

RESOLUTION BY MATHEWS-CARTER POST, NO. 325, THE AMERICAN LEGION, MANCHESTER, OHIO

Whereas the cost of living has increased to the point where veterans are unable to live upon the pensions and disability allowances now paid by the Veterans' Administration; and

Whereas, veterans of both World Wars served their country with valor and honor and are entitled to a living compensation for the proper and adequate support of themselves and their dependents: Now, therefore, be it

Resolved by Mathews-Carter Post, No. 325, the American Legion, Manchester, Ohio, That they support and urge the passage of House bill 2716 now pending in Congress of the United States, in order that veterans will be paid an increased allowance from Veterans' Administration based upon their needs in accordance with the number of persons dependent upon them.

Adopted this 23d day of May 1947.

JAMES O. DEATLEY,
Post Commander.

Attest:

JAMES W. LANG, Jr.,
Adjutant.

Problems of Small Business—Statement by C. Wilson Harder

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES

Tuesday, July 15, 1947

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement presented before the Joint Committee on the Economic Report yesterday by

Mr. George J. Burger, director in charge of the Washington office of the National Federation of Small Business, on behalf of C. Wilson Harder, president of the federation. Mr. Harder was unable to be present personally, and a statement was given for him by Mr. Burger.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

My name is C. Wilson Harder, president of the National Federation of Small Business, Inc., a national organization comprised of independent small businessmen throughout the Nation. For the National Federation of Small Business, Inc., which has the largest individual membership of any business organization in the United States whose head office is in San Mateo, Calif., and with district offices in Chicago, Ill., and Washington, D. C., I would like to express to the committee our sincere thanks in granting us the privilege of appearing here to state our views before this important body.

I think, before I go into my complete statement, that we owe a debt of gratitude to the foresight of the Congress in creating the small business committees in the Seventy-seventh, Seventy-eighth, Seventy-ninth, and Eightieth Congresses. During the war years, small business of this Nation had the help of the small business committees in the Congress. It is a safe conclusion in stating that most of the small businesses would have been eased out for the duration of the war without this aid. I think it safe to say that in Great Britain, small business did not have this kind of help during the war years and found itself in a very precarious position and some industries the bulk of them small business people, were eliminated for the duration of the war.

I think, also, at this time it is important and proper to pay tribute to Senator TAFT who was an active member of the Small Business Committee of the Senate in the Seventy-seventh and Seventy-eighth Congresses, and at the same time, Congressman WRIGHT PATMAN who served in a like capacity in the House side on their Small Business Committee. In our opinion, it was these two important committees in the Congress that saved the day for small business of this Nation, and I am glad to have this opportunity to make our position publicly known.

I believe, in opening my remarks, it is important to know that we feel this committee has an important obligation on their hands to save the economy of the Nation—more important, the free-enterprise system on which this Nation was built. The importance of this committee's undertaking is typified in a letter that I recently noted in the New York Times under date of June 21, which I quote:

"PLACE OF SMALL BUSINESS—ITS IMPORTANCE STATED AND PROTECTION AGAINST BIG ENTERPRISES URGED

"To the EDITOR OF THE NEW YORK TIMES:

"The recommendation in the report of the Committee for Economic Development, for improving the plight of small-business enterprises are encouraging because they have long been needed. It is hoped that means will be found to put them into effect with reasonable dispatch.

"The report points out that 98 percent of all American business qualifies as small business." So long as these little enterprises remain comparatively sound and active, there need be little fear of an over-all business slump.

"Over the years, America developed the strongest industrial economy the world has known through the combined work of her thousands of small, widely scattered enterprises. To further strengthen the place long held by small business, steps should be taken to keep the small enterprise harmless from the encroachment of the large enterprise which, by one means or another, would take over the little fellow or force him out of business. As big business gets larger and more centralized, the balance which has kept American financially strong swings toward economic unstability.

"Some much needed improvement in our patent laws should be considered by the committee so as to protect small enterprises which are pioneering new inventive ideas. It should not be possible for big business to sit quietly on the side lines until by hard work and sacrifice and invention is proved successful and then to throw up legal barriers against its manufacture and sale.

"Regardless of the ability of big business to spend more time and money on research and development, once they get the inventive idea no subsequent advancement made possible by greater facilities and manpower, except in rare cases, should be permitted to deprive the original sponsor of rights vested in him by his patent. Americans are prolific and resourceful inventors and, from the beginning, in most cases, in order to obtain recognition they have been obliged to commercialize their work the hard way. That is how small enterprises are born.

"EDWARD F. CHANDLER.

"NEW YORK, *July 13, 1947.*"

We agree with this and the statement recently released by the Committee for Economic Development in which they state, in part: "We are so fully aware of the fact that small business in most lines has been unusually vigorous and prosperous since the war." Their statement continues, "but the boom times of 1946 and early 1947 will not last forever." It is our opinion that the latter condition is slowly approaching the crisis. It is our opinion that if our Nation had not opened its arsenal in supplying the world since VJ-day, due to increased production facilities, small business of this Nation would find itself in a precarious position. In some industries it appears that that has already come about. The federation, speaking for its members, insists, and demands strong and healthy competitive conditions.

It is my opinion that the purpose of this committee, to a large degree, is to dig into production and competition in the Nation's industry which will, after all, bring about a healthy competitive structure and bring prices more in line so that the consumer will be in a position to purchase his necessary requirements. I do not believe that the trend in our Nation's business structure tends to bring about fair and healthy competition. That is not my belief only. I refer to the reports of the Senate Small Business Committee in the Seventy-ninth Congress, Document No. 206, "Economic Concentration and World War II." Then again, the same committee reports, Seventy-ninth Congress, second session, Committee Print No. 16, "Future of Independent Business"; and again, "United States versus Economic Concentration and Monopoly," a staff report to the Monopoly Subcommittee of the Committee on Small Business, House of Representatives, Seventy-ninth Congress. Then again, appearing in the press, July 1, 1947, was a United Press story stating that in 1947 they list 45 American firms in the "Billion Dollar Club." The total assets of these 45 American firms in 1947 totaled $103,456,016,995. It would be foolish to suppose that this economic concentration in the hands of 45 leading corporations would not have some serious effect preventing a healthy, fair, honest, competitive condition in the Nation's industry. There is a danger—and a serious danger—unless this committee is insistent that small business is given the proper protection to function in fair competition in which the public will be the beneficiary. We may reach a point in our Nation's economy where it will end in socialization of most of the industries, and we for one, speaking for small business, will fight to the very end any such attempt.

This economic concentration situation must be serious when Mr. B. C. Forbes recently stated the following:

"Dinosaurs, too big, became extinct. The Roman Empire, overexpanded, fell. And the far-flung British Empire is shrinking. Is it possible for ambitious American industrial, financial, and other leaders to overdo expansion?

"I have an uneasy feeling that the time has come for the brainy stalwarts administering these massive organizations to give very serious thought to their future policy. Should they reach out unrestrainedly, acquiring vaster and vaster interest, travel farther along the road toward monopoly, dominance? Or should they pause to reflect on what the final consequences of unrestrained growth may be?

"These questions deserve the most serious, long-visioned pondering."

It would appear to us in reports we received from our members, our field staff, and others, that there is a great worry in the minds of small business if they dare to attempt to force competition. As many state, they will end up with price wars or, again, their source of supply no longer available. Having the closest contact with small business of this Nation through our membership, these reports we are receiving every so often, show the fear felt by small producers and small independent retailers, of what will happen if they attempt to bring about real competition in which, indirectly, the public will be the principal beneficiary. Our members believe that production sparks competition and that competition in turn sparks production when both are uninhibited by either business or governmental checks. If this condition comes about our Nation's economy will be in fair and healthy competition and fear of retaliation from suppliers will no longer hinder small business of this Nation.

It is interesting to note that on July 5, 1947, the American Federation of Labor recommended to its Nation-wide membership the setting up of cooperatives. This must all lead to a fact that this economic concentration, in the hands of a few corporations, controls and dictates the price structure throughout the Nation. It is not my intention to state that these leaders in big business get together and plan. But it is my opinion that the power in the hands of a few corporations acts for them as a warning or deterrent so that the great numbers in industry don't step out of line.

The Committee of Economic Development in its recent report confirms what I have just said when they stated, "The growth of big business in the last 50 years undoubtedly has taken place, in part, at the expense of smaller concerns." They further state that, "some large firms undoubtedly have taken unfair advantage of smaller competitors." We might as well look the facts in the face; we are never going to bring about a real competitive condition in the Nation's industry until this economic concentration is broken up for the maintenance and reestablishment of many thousands of small businesses. It is my honest conviction that the public, in this way, will get lower prices and better commodities.

It is not our intention to ask this committee for any protective measure for the inefficient small businessman. We have no interest in the inefficient small business institution; that is, provided his inefficiency is due to his own negligence.

It is possible that the Government itself has been at fault or negligent in its administration and enforcement of the antitrust laws. Possibly big business has been aware of the situation.

Just a few months ago the former Assistant Attorney General, the Honorable Wendell Berge, stated, in substance, before the Senate Civil Service Committee, that for the past 35 or 40 years the administrations have

been giving merely lip service to the enforcement of the Sherman Act. Bear in mind, members of this committee, this is not my statement; this is the statement of the then Assistant Attorney General in charge of antitrust. Unfortunately, the Nation's press did not carry his complete testimony. I ask, How are you going to bring about real and healthy competition within the Nation's industries in which the public is the present beneficiary unless law enforcement takes place and is done immediately?

It is significant to note that the Federal Trade Commission has been appealing to the Congress for nearly 20 years, requesting an amendment to the Sherman-Clayton Act that would prevent or prohibit corporations in the same line of endeavor to merge. Up to the present time, Congress has not seen fit to pass such legislation; witness the merger upon merger of corporations in the same lines of industry during the past 10 years. The result is that you are adding more to the "billion-dollar club" in our Nation's economic structure, and through this will stifle and prevent healthy competition. It is my opinion that if there is to be a future for small business of this Nation, with the public being the principal beneficiary, the main and foremost action of this committee should be vigorous and immediate antitrust enforcement.

I need not tell you the effects on small producers when they see corporation upon corporation merging in their respective lines of industry. You will know what this must mean to the thinking of a small producer and even more important, to the small retailer. So it is my intention to make as the No. 1 issue the recommendation, before anything else is done, to bring about free competition and the preservation of small business. Antitrust laws must be enforced; not merely lip service, but by a directive of this joint committee to the respective agencies. A glaring example of the depressing effect of alleged antitrust-law enforcement is the action of the Federal court in Sioux City, Iowa, June 24, 1947. I quote:

"TRUST CHARGE DROPPED—PACKERS MAY AGAIN BE INDICTED, HOWEVER, BY MIXED PANEL

"SIOUX CITY, IOWA, June 24.—A 1942 Federal grand-jury indictment charging three major packing firms with conspiracy to violate the Sherman Antitrust Act has been dismissed on motion of the Government. The packing firms * * * has attacked the indictment on the ground there were no women on the panel from which the grand jury was chosen.

"Federal Judge Henry N. Craven dismissed the indictment yesterday on motion of United States District Attorney T. E. Diamond, who said he agreed with the defendants' contention."

While I am talking on the antitrust laws, I must also include the importance of the Robinson-Patman Act, because that ties in with preventing monopoly if the law is vigorously enforced. Some institutions have enjoyed special price consideration from the producer to them because of the alleged mass purchasing power. It may be found that the benefits these mass purchasers receive from certain producers will not always be passed on to the ultimate consumer. What apparently they do, too, with their mass purchasing power is to keep their resale price at a level that prohibits independent retailers to compete. It is not competition but destruction.

A recent case came before the Federal Trade Commission on an alleged Robinson-Patman Act violation in which certain large companies received benefits over all other consumers of that manufacturer; it is true that the Federal Trade Commission issued a cease and desist order shortly before Pearl Harbor, and it is interesting to note the observation of the report of the House Small Business Committee on this particular case. In their press release, dated June 15, 1947, they stated, in part, "During the war the Government virtually took a holiday on enforcing these laws in the interest of maximum production." In a recent case in Danville, Ill., the Federal court found that a mass distributor had consistently operated thousands of retail stores, and these stores were run at a loss. No independent retailer could hope to meet this unfair competitive condition. It was also found that this mass distributor had effected lower prices than those granted to other buyers of the same suppliers—this was circumvented by outright cash contributions. It is significant to note that when this mass distributor received these special concessions from the supplier he demanded that he be protected against any alleged Robinson-Patman law violation. We find in the court record of the same case that when new independent retail stores were to be established this mass distributor put in effect special practices and policies in the reduction of its prices until the new establishment was closed out of business. I have heard it stated that in some other cases mass distributors establish stores in a community that are run for 2 or 3 years without a profit or until they are able to concentrate the business in their hands and the hands of some other few mass distributors supplying in that territory.

Small business is interested in the tax structure, finance, labor, and business management, but I think small business' main and present concern is: What is Congress now going to do with these antitrust laws? Is it going to be just a continuance of lip service by the various governmental agencies? If this takes place, there can be only one alternative—socialization of the Nation's industry.

I ask that this committee recommend:

1. A special appropriation of at least $2,000,000 (the minimum) to the Antitrust Division for the purpose of making an industry-wide antitrust investigation in order to:

a. Get at the problem of concentration.

b. Prosecute vigorously and immediately all cases pending in the Antitrust Division.

It is my understanding that the present Congress has appropriated $2,150,000 for the fiscal year beginning July 1, 1947. It is my further understanding that the Antitrust Division of the Department of Justice in its original budget requested $3,500,000, but that this request was reduced by someone in the Antitrust Division.

To substantiate our request, we refer to you the finding on pages 6, 16, 48, and 51 in the report, United States Versus Economic Concentration and Monopoly, Committee on Small Business, House of Representatives, Seventy-ninth Congress. Then again, we refer you to the Senate Small Business Committee's report, Future of Independent Business, Senate Committee Print No. 16. You will note that their recommendation for the Eightieth Congress was the increased appropriation for the Antitrust Division.

It is interesting to know that economic concentration is increasing in leaps and bounds when, on June 19 of this year, Senator LANGER offered a resolution which was referred to the Committee on the Judiciary. He cited the reason for the resolution quoting the Federal Trade Commission as the source of information. Since 1940, 1,800 industrial concerns have been absorbed by other concerns. More than one-third of all mergers since 1940 have been in three industries in which small concerns have predominated: Food, nonelectrical machinery, and textiles. Big companies are most active in mergers of business units since 1940, almost one-third of the absorbed companies being taken over by the largest corporations with assets of $50,000,000 or more. At the end of 1945, the 62 largest manufacturing corporations held $8,400,000,000 in net working capital. About three-fifths of the mergers in the past 6 years have been "horizontal"—firms producing similar products. The purpose of Senator LANGER's resolution boiled down to the recommendation of an investigation into the efficiency, economy, and practices of giant corporations in the United States.

Price discrimination has been the graveyard of most small businesses. In 1936, after a most thorough investigation by the Congress, they approved and put into effect the Robinson-Patman Antidiscrimination Act, Public Law No. 692, Seventy-fourth Congress. In the act there is a provision which I quote:

"That the Federal Trade Commission may, after due investigation and hearing to all interested parties, fix and establish quantity limits, and revise the same as it finds necessary, as to particular commodities or classes of commodities, where it finds that available purchasers in greater quantities are so few as to render differentials on account thereof unjustly discriminatory or promotive of monopoly in any line of commerce; and the foregoing shall then not be construed to permit differentials based on differences in quantities greater than those so fixed and established."

No such investigation has ever been made by the Federal Trade Commission on the quantity discount provision. It is interesting to note that two very large contracts in a major industry were in effect just at or about the time the Robinson-Patman Act became law. In one of these contracts, the Federal Trade Commission had found a preferential of $41,000,000 accruing to a mass distributor over the independent buyers of the same producer. When the Robinson-Patman Act became law, that producer supplying this mass distributor publicly stated the cancellation of the contract because he could not justify the price under the new law. Some 60 days later, another major producer, with a similar type of contract with another mass distributor, made the same announcement of the cancellation of his contract with a leading national corporation—cancellation of the contract because they could not justify the price under the law. In other words, quantity discount was involved and they, with the best legal authority available, came to the conclusion that they could not justify their prices—hence the cancellation. It is to be regretted that the Federal Trade Commission did not go in immediately and make a Nation-wide investigation, at least with some few principal corporations who were enjoying quantity discounts, and find out whether these quantity discounts were in full keeping with the provisions of the Robinson-Patman Act.

The next recommendation:

2. That this committee recommend a special appropriation of not less than $350,000 and that the Federal Trade Commission be instructed to make this investigation which is provided within the law itself on quantity discounts, and report back to this committee and the Congress not later than February 1, 1948, an interim report on their investigation. It apparently has been that the Commission never had the proper appropriations or the necessary competent personnel to go in and do this job properly, and until this is done by the Commission, we say to this committee that insofar as the Robinson-Patman Act is concerned, it is a dead-letter law.

Surely this committee or the Congress should not be fearful of making these measly appropriations to these two important agencies with a direct mandate to those agencies of what they should do with this money. After all, Congress since VJ-day has appropriated to Bretton Woods, British loan, Greece and Turkey, UNRRA, new relief, lend-lease settlement and surplus property, Germany and Japan, Export-Import Bank, a sum totaling $19,500,000,000, and with the Marshall plan now coming up we will be most lucky if this amount is not doubled within the next few years—all out of the taxpayers' pockets. It is more necessary to the future

of our own Nation's economy that a few million dollars be appropriated immediately to the enforcement of these antitrust laws. For refusing to do so, the result can be only one thing—regimented economy.

It is my hope and trust, when I make the plea for the 100,000 or more small businesses for which we speak—and we speak for all with no cliques or groups but all our membership—that this committee take under immediate advisement the recommendations I have set forth and put into effect at once these recommendations. The result will be a healthy and steady competitive condition in our industries, and, most important, the public will get lower costs and improvements in the various commodities.

It was my hope to include recommendations as to the taxing structure affecting small business, the financial situation affecting small business, the long-term capital loan, the labor situation affecting small business, suggested management methods for small business through the Department of Commerce. However, I believe that the subjects I speak on are of more importance for our Nation's economy and future, and I would like to request the privilege of filing with the committee a supplemental statement on the various programs which I have just mentioned and which cannot be included in this prepared statement.

I would like to bring to the committee's attention the result of a questionnaire circulated among our members, through the official publication, the Mandate, bulletin No. 141. The questions were as follows:

1. Are you for or against full-scale investigation of the present lack of enforcement of the Sherman-Clayton Act and the Robinson-Patman Act with adequate authority placed in the hands of the Federal Trade Commission, and full investigation of the Federal Trade Commission to see that all violations are handled promptly and effectively?

2. Are you for or against full investigation of the Antitrust Division for the purpose of making all corrections necessary to bring about prompt and effective prosecution of all monopoly violations now incompleted, also efficient and prompt handling of all future antitrust violations?

3. Are you for or against the House and Senate Small Business Committees giving preference to action on the above-mentioned issues, over activity which pertains to any certain vocation of business?

The answers have been received and tabulated, and the result of the poll was, as follows:

Question No. 1: 97 percent for, 2 percent against, 1 percent no vote.

Question No. 2: 96 percent for, 2 percent against, 2 percent no vote.

Question No. 3: 95 percent for, 3 percent against, 2 percent no vote.

In closing, I say to you, in all sincerity, that unless immediate action is taken through this committee and its recommendation to the Congress of a vigorous and immediate antitrust-law enforcement, with the proper applications, small business of this Nation might as well know the score now as later on—they are through.

Modernization of Railroads—Editorial From the Wyoming Eagle

EXTENSION OF REMARKS
OF
HON. JOSEPH C. O'MAHONEY
OF WYOMING
IN THE SENATE OF THE UNITED STATES
Tuesday, July 15, 1947

Mr. O'MAHONEY. Mr. President, the Wyoming Eagle, on July 4, contained an interesting editorial entitled "Come West, Mr. Young" on the modernization and development of the Union Pacific Railroad. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

COME WEST, MR. YOUNG

One man who ought to come west and get an eyeful of real railroad progress is R. R. Young, chairman of the board and reputedly the guiding spirit of the Chesapeake & Ohio lines. The C. & O. is not quite the greatest as American railroads go, but the noise its chairman is making in newspapers and magazines might fool the unsuspecting into believing that his outfit is the biggest and best ever.

One of the large advertisements inserted in metropolitan newspapers recently by Mr. Young's C. & O. is headed, "Why the railroads cannot afford not to modernize." It speaks of the rolling tenements that still pass for sleeping cars and tired, old, creaking day coaches. It says that "if old-line practices continue to be tolerated, then regardless of rate relief, further deficits and bankruptcies are certain."

Apparently Mr. Young has been looking over only certain lines. Certainly, he has not been looking at western railroads. Or if he has, he is unfair in that he does not print the whole truth. By implication he puts over the idea that it is the C. & O. which is progressing while other railroads are decadent and ill managed. What are the facts?

Last year, only last year, mind you, the C. & O. installed its first two streamliners on a short run between Detroit and Grand Rapids. Further orders have been placed for new equipment to replace its rolling tenements and creaking day coaches. Few replacements have been made yet; only orders have been placed. This is all disclosed in the C. & O. advertisements.

Not last year, but 13 years ago, the Union Pacific put into service its first streamliners—on the long run from Chicago to the Pacific coast. The Burlington Zephyrs began running between Chicago and Denver. And during the last 10 years practically every western road installed streamliner service, long before Mr. Young's lines, apparently, heard of air-conditioned, Diesel-powered passenger service.

Nowhere else in the world do communities and states enjoy train service comparable to that provided by the Union Pacific. Here is daily streamliner service (both directions) between Chicago and Los Angeles, and between Chicago and Portland. Here is thrice a week streamliner service between Chicago and San Francisco—the reason this service is not provided daily being that the Southern Pacific, over whose tracks the trains run between Ogden and Oakland, has not as yet consented.

And another thing, western railroads are going in for dieselization in a big way, meaning the fastest freight service in the country. The Union Pacific alone has placed orders aggregating $23,807,000 for Diesel locomotives.

However, this is only a small item in the UP's postwar modernization budget. It was disclosed recently that since VJ-day ultramodern equipment to the value of $88,785,000 has been ordered, much of which already is in service.

If R. R. Young, of the C. & O., knows of any railroads that are too stupid to modernize, he should name them and not imply that all lines but his own are in that category. And before sponsoring any more advertisements he should get acquainted with what lines west of Chicago have done and are doing. Come west, Mr. Young, and see some real railroading.

Statement of George M. Humphrey

EXTENSION OF REMARKS
OF
HON. GERALD W. LANDIS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 15, 1947

Mr. LANDIS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of George M. Humphrey, chairman, Pittsburgh Consolidation Coal Co., Pittsburgh, Pa., to the Joint Committee on the Economic Report, Washington, D. C.:

Mr. Chairman and members of the committee, I was summoned to appear before this committee to discuss the subject of your general inquiry long before there was a settlement of the recent coal wage contract.

However, in view of all of the questions that have since arisen with respect to that settlement, it would be inappropriate now not to discuss the coal contract and its effect upon the so-called wage-price spiral.

When the mines were turned back by the Government to the operators last month, Mr. Lewis simply said that his men were unemployed, there being no contract in effect, and that if the operators wanted to employ them certain conditions would have to be met or the men would not go to work. Whether that would constitute a strike or not within the meaning of the new labor law was something for the lawyers and courts to decide, but there was no doubt that little, if any, coal would be mined in the meantime.

This was not a theoretical matter—it required a practical decision. There were two immediate courses open, either let the mines stay idle and resort to mediation, litigation, or legislation, or another Government seizure; or on the other hand, work out with the union the best possible terms that could be voluntarily agreed upon.

The first consideration was what would the consequences of each of these alternatives be?

Coal is in great demand both here and abroad, and stocks are relatively low. Without coal production it would only be a short time before transportation would be crippled, steel production curtailed, and all manufacturing dependent upon coal, steel, and transportation would be seriously interrupted, with consequent unemployment and increased shortages of many commodities for use both here and elsewhere throughout the world. While 400,000 miners would face payless pay days voluntarily, there would be many thousands of other workers who would be forced into involuntary idleness and loss of pay. Further shortages would force higher prices and the familiar spiral of increases would continue to go further out of control.

The Taft-Hartley law was new and its application to these particular circumstances involved unsettled questions upon which legal authorities differed.

The Smith-Connally law had expired and talk was current concerning the possibility of new legislation by Congress for seizure by the Government or proposed new remedies, the results of which no one could foresee. All this would be time consuming and nothing was suggested which would start the mines working after the miners' holiday and prevent the serious interruption to the production of coal, with all the vicious consequences on the general economy of the Nation as well as those resulting from further shortages of many much-needed articles of commerce. Furthermore, all our past experience had been that when once the Government intervened in a labor dispute, it finally granted about all that was asked by the union, but only did so after serious

strikes had taken place causing great damage and inconvenience to the public as well as to our customers and ourselves.

On the other hand, what would be the result if an agreement could be reached through collective bargaining? The men would then return to work and production would continue in coal, steel, and many other commodities. There would then be no crisis threatening soon to paralyze a large part of American business. As production rose and finally supplied demand there would be an application of the economic law of supply and demand with a resulting pressure on prices. Clearly the choice of courses to follow was that of reaching an agreement and maintaining production all along the line with all of the benefits to the entire Nation that would result therefrom, unless the price of such an agreement was unreasonable and excessive.

There was so much speculation and misinformation about this contract during its negotiation and before it was actually prepared and available for study that many people have become confused by the inaccurate and misleading stories they have read or heard. Are the terms of the settlement really inflationary or unreasonable? Let us consider just what they are.

The miners' request for six additional paid holidays which was made in this case, as well as in many others recently, was denied and withdrawn. The request for premium pay for Saturdays and Sundays as such was also denied.

Further safety precautions are earnestly desired by both parties, and an additional constructive safety program was agreed upon.

The purposes and general administration of the welfare fund which was the real cause of the last bituminous coal strike and was first established by the Government after its seizure of the mines about a year ago were settled so as to accord with the terms of the Taft-Hartley law. This fund is for an employees' welfare program to be used and administered strictly in accordance with that law.

The issue of the unionization of foremen has caused two recent industry-wide strikes and many local interruptions to production. An agreement was finally reached in this contract which not only complies with the Taft-Hartley law, but may well settle this serious issue for the benefit of all industry. Under the new contract there is reserved to management, free from union control or organizational activities, all necessary management employees, and at the same time the union is protected from the abuse of such exemptions. There is nothing more important to the efficient functioning of our industrial system than the proper settlement of this long-standing controversy regarding foremen.

It has been said that this agreement was purposely designed to avoid the real intent and obligations of the Taft-Hartley law.

It is not practical to try to analyze all the legal obligations of the parties under the contract. Certain points, however, have been raised upon which comment is warranted. The first is the so-called willing-and-able-to-work clause, which was first included in an agreement with this union by the anthracite coal operators about a year ago. That clause is contained in the following sentence:

"It is the intent and purpose of the parties hereto that this agreement will promote and improve industrial and economic relationship in the bituminous coal industry and to set forth herein the basic agreements covering rates of pay, hours of work, and conditions of employment to be observed between the parties, and shall cover the employment of persons employed in the bituminous coal mines covered by this agreement during such time as such persons are able and willing to work."

On this point the Taft-Hartley Act provides in section 502:

"Nothing in this act shall be construed to require an employee to render labor or service without his consent, nor shall anything in this act be construed to make the quitting of his labor by an individual employee an illegal act."

If an employee is unable or unwilling to work and wishes to terminate his employment, he may do so in compliance with the contract and the law which says he shall not be required to render service without his consent. If, on the other hand, he has a grievance, the contract provides that—

"Any and all disputes, stoppages, suspensions of work, and any and all claims, demands, or actions growing therefrom or involved therein shall be by the contracting parties settled and determined exclusively by the machinery provided in the settlement of local and district disputes' section of this agreement, or, if national in character, by the full use of free collective bargaining as heretofore known and practiced in the industry."

It is not unusual to provide for the arbitration machinery to be used as the remedy for disputes under a labor contract, and it does not contravene the policy of the Taft-Hartley Act.

It has been asserted that the check-off provision of the contract does not comply with the requirements of the law. There seems to be some confusion as to whether dues alone may be checked off on the basis of voluntary employee authorization as contrasted with the check-off of initiation fees and assessments. This will probably later be clarified, but regardless of this relative detail, no violation of the law is intended by the contract which in the check-off section provides:

"In order that this section may become effective and operate within the limitations of the Labor-Management Relations Act, 1947, the mine workers hereby agree to furnish, with all reasonable dispatch, to the respective operators, and the operators agree to aid, assist, and cooperate in obtaining written assignments from each employee so employed."

If the law is held to limit check-off to dues only, the law shall be complied with, because it is clear from what I have just read that the intent of the parties was to operate within the limitations of the Labor-Management Relations Act, 1947.

The union did demand clauses which, in the operators' opinion, would have contravened the provisions of the Taft-Hartley law but which, in the opinion of the union, were proper. The operators were adamant in refusing to grant such provisions. There is no provision in the contract which was intended or which, if properly construed, weakens in any way the right of government to enforce fully any and all provisions of the law and which is not in full compliance with the law. In fact, it would be impossible for the operators, even if they cared to do so, to make a valid contract which would be contrary to the provisions of the Taft-Hartley Act.

This brings us to the important matter of wages and hours.

Under one of the previous settlements made by the Government after seizure of the mines, a 9-hour portal-to-portal day underground was established by Secretary Ickes as a war measure. When the mines were again seized by the Government about a year ago, an agreement was made by the Government with the miners that the 9-hour day be continued, notwithstanding the fact that the 8-hour day and the 5-day week was then being adopted by most other industries and an increase of 18½ cents per hour was generally being paid to maintain the take-home pay in view of the reduction in hours. By this Government agreement the pay was increased, but the hours were not reduced. This left the coal business in a situation different from most other industry. Wages for the coal industry were increased, but hours of work were not reduced and the preservation of take-home pay had to be faced in the future whenever a new agreement was reached which reduced hours. We could have no objection to the miners' request to eliminate the ninth hour and adopt the 8-hour day underground as standard in coal mines as is customary in other industry. But because it had not been settled in the coal business when it was generally settled in most other businesses, the ninth hour had to be dropped in the new contract without reducing the pay per day. We did not think that in view of present conditions we were justified in demanding a reduction in take-home earnings at this time, and we do not believe we would have been supported in such a demand as the reason for a serious coal strike.

Despite many statements which have been made to the contrary, the only increase in the miners' take-home pay is an increase of 15 cents an hour, or $1.20 for an 8-hour day. This wage increase is identical with the wage increase of 15 cents per hour granted recently in many other industries to meet increases in living costs. It does not set up a new wage pattern, but rather conforms to an already existing wage pattern. Under the new contract a coal miner gets the same pay for an 8-hour day underground as he formerly received for 9 hours underground, plus this wage increase of 15 cents an hour. In the absence of overtime his take-home pay is increased under the new arrangement only to the extent of 15 cents an hour, or $1.20 a day. Under the Government agreement in force last year, a base-rate man working a 5-day week took home $59.25 for his week's work. Under the present agreement, he will take home $65.25, or an increase of $6 per week. If, because of the miners' declared desires and the very high cost of premium pay for the sixth day's work, the industry should stabilize on the basis of the 5-day week, as is common in so many other industries, a base-rate man who previously worked 6 days will have $10 less take-home pay for his 5-day week under the terms of this agreement than he was previously earning, but of course he would be working one less hour each day and one less day in the week.

The hourly wage of the miner is high under the agreement, and it should be. Coal mining differs in many important respects from almost all other industries. It is a hazardous occupation. The economy of the whole country now and for the future depends on the type of men who seek and take employment in coal mines. Since the war the sons of coal miners have not come to the coal industry for employment. The industry must attract high-grade young men if the coal industry in America is to continue to be the most progressive of any country in the world. In our negotiations with the union we strove to arrive at a contract which would produce this result.

A comparison of earnings will demonstrate that they are not out of line with those in other industries considering the nature of this industry and the kind of work required. Certainly there is nothing wildly inflationary or grossly unreasonable in paying such wages to our employees.

The increase in the cost of coal on this basis will vary with different mines in different districts but even if it is to average as much as 75 cents to $1.00 per ton as now estimated, it is entirely possible that as the working forces get adjusted to the shorter hours and more efficient operations result, the tonnage per man, per hour may increase and if so costs and prices gradually be expected to decline. If the cooperation which has been promised by the miners' union is realized and it is much more apt to be so by satisfactory mutual agreement than by strikes and Government controls—increasing production and increasing efficiency will surely mean more coal at less cost.

On the other hand, the effect of shortages on prices is conclusively illustrated by the increase in spot prices for coal which have taken place recently when a strike and shutdown was only threatened and which are right now much more than the actual advance in cost which will result from this contract. It is only reasonable to expect that these higher prices will gradually be adjusted downward when, as a result of this agreement, it becomes apparent that production will continue and a supply of coal will be currently available.

Only continuous production will give other industries and the American public the coal and the other things dependent upon coal in the volume which is required, and not until that volume is attained and demand is more nearly in balance can we hope to gain much-desired economic stability. Strikes causing interruptions to production and resulting further shortages of various articles will be most costly and damaging to the Nation.

It has been said that big steel and big coal made this settlement to the detriment of small coal business. The exact reverse is true. Small coal operators are by far the largest employers of contract miners who work on tonnage rates while the larger mines, which are mechanized, employ almost wholly hourly and day-rate men. Tonnage rates are not increased at all by this agreement and the tonnage man is increased only $1.20 per day, whereas the hourly and day-rate men get the same $1.20 per day increase as well as the maintenance of their old "take-home pay" for 9 hours for now working only the new reduced 8-hour day. The advantage competitively is all in favor of the small mines and against the large operation.

The negotiations which led to this agreement began many weeks ago. The southern operators groups immediately withdrew. The remaining operators negotiating committee continued to meet with the miners' representatives only breaking from time to time when failing to reach agreements on the several issues. The union's demands for reduction in hours and increase in pay were never modified in the slightest degree.

Mr. Fairless and I were called in by the operators' committee after an impasse had been reached, in a last attempt to work out an agreement. When the settlement as finally proposed was submiteed to the northern and captive coal operators for their approval it was unanimously adopted.

By avoiding the strike and all of the resulting damage that would surely follow, this agreement will do more to stabilize the economy and retard inflation than has the settlement of any controversy in the soft coal business during the past several years. Production and only production which creates a balance of supply and demand is the only sure cure for the increasing wage and price spiral.

This new agreement is in full compliance with the spirit of the new Taft-Hartley law which covered several of the most controversial issues and it terminates the trend toward Government dictation of industrial relations and seizure and control of business.

Long-Needed Change in the State Department

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 15, 1947

Mr. JUDD. Mr. Speaker, the American people today have no greater concern than how to get our State Department so organized and staffed as to become as effective and efficient and vigorous in pursuing our national objectives by diplomatic and economic means as our War and Navy Departments were during the war in pursuing our national objective by military and naval means.

Under leave to extend my remarks, I include a penetrating and stimulating article on this urgent question by John Chamberlain from Life magazine:

MEMO TO ROBERT LOVETT—RE: SOME OF THE PERPLEXING QUESTIONS THAT CONFRONT THE NEW UNDER SECRETARY OF STATE—CAN STATE CLEAN OUT ITS REDS?—HOW CAN WE UNIFY UNITED STATES POLICY?—WHAT SHOULD KENNAN'S STAFF DO?—WHERE DO WE GET GOOD DIPLOMATS?—WHAT WILL REPLACE BRADEN'S JOB?

You, an able and eminent member of the class of Yale 1918, have been designated Under Secretary of State to succeed Dean Acheson, Yale 1915. This Old Blue apostolic succession, this laying-on of hands is a splendid thing for God and for country as well as for Yale. The world knows what a remarkable job you did during the war as Assistant Secretary of War for Air, fighting for the big bomber program that eventually crushed the Axis. You had a firm directive from Commander in Chief Roosevelt—"50,000 planes a year"—and the rubble of the German cities is testimony to the fact that the down-the-line work which you supervised was done with firmness and dispatch. Aside from your war record it is reassuring to know that you rose above the handicap of having a great father, Robert Scott Lovett of the Union Pacific Railroad. Where the average son of a great man is apt to spend his life making a cult of failure, you derived from your childhood a sense of the sweep and courage and productivity of America. Moreover you didn't depend on your marriage to Adele Brown of the Brown Brothers-Harriman banking-house fortune to further your career as a banker; I understand that you rose to the top in the financial world on your own, permitting your in-laws to hire you only after you had proved your capacity to master the intricacies of finance, including international finance. It is also cause for satisfaction to remember that you were a patriot beyond the call of duty in World War I, quitting college to become a pilot in the United States Navy's air arm, in which you helped develop the early theory and practice of night bombing. Everything you have done has been crowned with success—and if you have paid for the expenditure of your highly charged nervous energy by developing a troublesome digestive tract, I am sure that your black Scot pertinacity is equal to strenuous days in State.

In the State Department job, however, you will have to deal with the impalpable elements that make Russian human nature, for instance, different from American or British human nature; you will have to be psychologist as well as technician. When you were in the War Department, Russia was an ally, not a stumbling block standing in the way of world peace. Although the Russians once denied you the use of shuttle bases at an uncomfortable point in the war's history, you have yet to experience the conspiratorial and evangelical aspects of Marxism. Like many men of affairs who have been immersed in practical adventures, you have been sheltered from the ideological storms of the modern world. I know that you are not like some members of the wealthier classes, consumed by a bad conscience and therefore a set-up for any plausible Communist who wants to talk another Park Avenue scion into the glories of fellow traveling. But although your conscience is clear you have never tried to work with Communists in a trade-union; you have never had your character assassinated in a Communist-line publication; you have never had an opportunity to watch the Communists and their peripheral stooges from close-up. Thus you may be gullible, as indeed, your predecessor, Dean Acheson, was gullible until events served to educate him to reality.

You are entering the State Department at a ticklish period of change. For 3 years our foreign policy has been based on fundamental errors. Item 1: The deal behind Chiang Kai-shek's back which gave Soviet Russia imperialist rights to the Chinese port of Dairen. Item 2: The attempt to force the Chinese Communists, their army included, on Chiang in the name of unity, an odd notion for a nation that once refused unity with the government of Jefferson Davis and the armies of Robert E. Lee. Item 3: The Potsdam Agreement, which fragmentized the German economy and kept Europe from solving its productive problems as a unit. Item 4: The supervengeful Morgenthau plan, which has kept us from thinking constructively about European revival for two horrible years of starvation that may end with the incubation of a whole host of new Nazis. Item 5: The appease Stalin mania, which originated in the blithe assurances of the otherwise estimable Harry Hopkins, who had probably never cracked a book on Marxism in his life. Item 6: The constant shifting of our policy in Latin America, with its now forcible, now feeble handling of the Argentine. In order to help formulate sound policies for the future, Robert Lovett, you should meditate deeply upon these sins of our past. They have created many a dilemma that will not lightly yield to thought and action.

But if you inherit the result of these fantastically mistaken policies of the past, you are also entering the State Department in a period of great promise. Your chief, George Catlett Marshall, is a man who hates both failure and slipshod work—and though he was palpably wrong in trying to force unity among Communists and Kuomintang in China (it is nature-faking to believe that Communists will ever cooperate in a coalition except to further their own ultimately disruptive ends), it can at least be said for Marshall that the Chinese policy was not his own. Marshall, as you very well know, will back you up at all turns, but with Molotov and Tito and Chiang Kai-shek and the Chinese Communists and European redemption all tumbling in and out of his mind he won't have time for handling details. You will have to suggest things to George Marshall, not vice versa.

You will also have to suggest things to certain career men in the foreign service who have become passive through the years. The trouble with our career diplomats is not that they may have a fondness for tea and striped trousers. But the tea-and-striped-pants accusations symbolize a dissatisfaction with the ideal of the career man, which is never to take a chance for fear that it might possibly be construed as a mistake. What we need abroad is a number of Ambassadors who are evangelical about the virtues of democratic capitalism, which has made the United States both productive and free. Let our men speak out for the American essentials which have energized people like yourself. You cannot, of course, fire the passive career man. But you may be able, over the months, to jockey men around, getting the dynamic fellows into key spots on the earth's surface.

Before the advent of Acheson and Marshall the State Department was hardly an administrative mechanism. In the old days it had its own boyars, barons or independent warlords—Sumner Welles ruled over American Republics, Stanley Hornbeck took the Far East for his own, Jimmy Dunn ran Europe. Nobody bothered to explain the State Department to Congress until Dean Acheson, who had quit a job as Under Secretary of the Treasury in 1933 when the Roosevelt gold

policy gagged him, came back into Government service as Assistant Secretary of State in 1941.

Acheson is a splendid advocate and a splendid organizer. His brief for the stock exchange in the Richard Whitney case is remembered to this day as one of the ablest briefs ever written by a canny attorney. As liaison officer for State with Congress, Acheson was a great success. A debonair, tall and aristocratic fellow, Dean Acheson has a distinct Anglo-American flavor, which he comes by honestly as the son of an Englishman who was Episcopal bishop of Connecticut. The Anglo-American flavor has never gone down with prairie Congressmen, but Acheson surmounted his handicap by organizing his material superlatively well. His briefs for his new client had much to do with the success on the Hill of lend-lease extension, Bretton Woods, and UNRRA.

The real Acheson accomplishment, however, is the 9:30 meeting. Not so long ago each area desk in State worked with little reference to what the next geographical division was doing, and nobody knew what the economics department of State was up to or why. The result was a gorgeous confusion of administration—one man might be chasing Fascists in Paraguay, another man might be coddling them in Spain, another might be annoying Communists in Poland, still another might be welcoming them in China or Iran. The Secretary or the Under Secretary of State would get the news of chaos too late to do anything about it, and there was always the worry about what PM or Drew Pearson might say. Acheson brought an abrupt end to this state of affairs by bringing certain department heads together at 9:30 three or more times a week. The 9:30 meeting has been attended by Freeman ("Doc") Matthews, head of the European office; Loy Henderson, head of the Near Eastern and African office; John Carter Vincent, head of the Far Eastern office; Will Clayton and Willard Thorp from the economics division; Charles Fahy, the department's legal adviser; Charles ("Chip") Bohlen, the Russian expert who attended all the big conferences at Yalta and elsewhere; Ben Cohen, counselor of the department, and various other functionaries. Only Spruille Braden, of the division of American republics, remained aloof—no doubt a tribute to his unmalleable personality but a headache for his coworkers.

Ever since the introduction of the 9:30 meeting Freeman Matthews, for instance, has been able to judge just what Loy Henderson's policy in Turkey means when it is stacked up against affairs in Italy or Germany; the various area problems have been tackled in the light of coordinated thinking. And now that Marshall has called Norman Armour, a career foreign-service man, from retirement to serve as Assistant Secretary of State in coordinating all the various area offices, Latin America included, it should serve to make the job of Under Secretary so much easier.

There is a drawback, however, to the Armour appointment, and you, Robert Lovett, should be aware of it. In creating a coordinating assistant secretaryship for Armour, the title of Assistant Secretary of State for American Republic Affairs vanishes with the resignation of Spruille Braden. Latin Americans must inevitably take this as an affront to their dignidad. Moreover, the appointment of Armour is no consolation to Argentineans, for Armour never warmed up to Perón when he served as Ambassador in Buenos Aires. This may cause certain minor difficulties in our program of wooing the Argentineans to sincere support of hemispheric unity. Incidentally, the bad features of Bradenism did not stem from his dislike of Perón's coddling of Fascists in the Argentine; if we had broken with Perón, there would have been much to justify it. The trouble with our Argentine policy was that it was neither fish nor fowl; we kept an Ambassador in Buenos Aires as a token of friendship, yet at the same time we needled the Argentineans from Washington. Thus, we made the worst of two worlds; nor did we consult the wishes of the other Latin-American nations on Argentinean policy.

With Braden gone, you, Robert Lovett, should look into those who have helped conduct our Latin-American affairs under him, for while Braden was undoubtedly anti-Communist as well as anti-Fascist, it is a fact that some shady left-wing characters were among his top advisers for an extended period. The more notorious of these advisers have departed, but the people who hired them and listened to them may still be in a gullible frame of mind.

Even if you have an assistant secretary to keep track of the area desks, you, Robert Lovett, should still sit in on the 9:30 meetings—at least for some time to come. But if you or your assistant should miss an occasional meeting you will find that you can brief yourselves quickly on the discussions, for another recent State Department innovation—that of the secretariat, which was Marshall's own idea brought over from the War Department—sees to it that conversations, cables, and papers are briefed for quick perusal by the Secretary if and when he desires to see them. The secretariat controls all incoming and outgoing messages—which means that relevant material, say, from Chungking or Moscow doesn't languish for critical hours or weeks on an area desk.

You, Robert Lovett, will find both the 9:30 meeting and the secretariat made to your own efficient hand. But even more important than these innovations is the new long-range planning committee headed by George Kennan. Much has been written about our ad hoc, or Saturday-to-Saturday diplomacy. At one time we are hot for the Morgenthau plan for pastoralizing the German economy; at another time we have come to our senses about the Ruhr, whose coal production can hardly be pastoralized without ruining French, Dutch, and Belgian industrial systems. When a Cordell Hull is telling off the Japanese on the eve of Pearl Harbor, he promises unequivocally to back the nationalist government of Chiang Kai-shek through hell and high water. But later in the war a new view comes to the fore in the State Department: The corrupt Kuomintang government of Chiang must be leavened by the admixture of the supposedly pure agrarian communism of Yenan. Such weather-vane statesmanship has operated because there has been no long-range planning, no properly evaluated theory of United States political interest. The Kennan group should do much to put the State Department on a firm philosophical base.

George Frost Kennan is one of the real patriots in the State Department. His granduncle, George F. Kennan, once wrote a famous series of exposures of the czar's political prisoner camps in Siberia; and the young namesake nephew, after his graduation from Princeton in 1925, elected to take up where Uncle George left off. Joining the State Department in 1926, the young Kennan was sent to Berlin (he already knew German) to immerse himself in Russian language and history. Summers he worked for Loy Henderson in the Baltic States, and in 1933, when the United States at last decided to recognize the Soviet Union, he went to Moscow with Ambassador William C. Bullitt.

Unlike Ambassador Joseph Davies, unlike that other Russian expert, Chip Bohlen, George Kennan was always suspicious of the ultimate objectives of the Soviet state. Perhaps it is significant that his career languished when Harry Hopkins was telling Franklin Roosevelt that Stalin could be wangled into behaving after the war. During the dark days of his career, Kennan, an introspective, sensitive person, developed stomach ulcers. But toward the end of 1945 Averell Harriman, our Ambassador in Mossow, began to see through Stalin's game, which was to gain a maximum of United States material aid without promising a thing for the future. Harriman let Kennan offer his estimate of the situation in Moscow—and Kennan, in a long dispatch, recalled Washington to the fact that Stalin was a Marxist. True, others had said as much in the course of the years; William Bullitt tried to tell President Roosevelt that Stalin was not the Duke of Norfolk in 1943; Adolf Berle had said the same in 1944. These men had laid their diplomatic careers on the line in the "appease Russia" period and had lost out. But Kennan, who had lived through the "everything for Russia with no return commitments" phase, was listened to in early 1946. What he said, in effect, was that the Soviet believed in the vulnerability of world capitalism and would stall until such time as it could take advantage of world economic depression. But he also said in essence that Russia, the great, fluid state that occupies the plain that stretches from Poland to the Pacific, would give ground if confronted by firmness in the united West. The specifically Marxist theory is to strike when "inner contradictions" paralyze capitalism; the purely Russian theory, derived from the time when the dukes of Muscovy were fighting the Mongols over endless plains, was to retreat in times of weakness to a position that could be held.

Since the only power in the world that could possibly menace the United States at the moment is Russia, the appointment of Kennan to head a long-term planning group has symbolic significance. But it is a significance that is not unfriendly to a Russia that is willing to cease the Marxist game of promoting discord and world revolution. That is the point which you, Robert Lovett, should clearly grasp.

The Kennan staff is in process of being assembled as you take over. For example John Davies, who has been in Moscow, has come home to join it. The appointment of Davies to the Kennan staff may be a good one, but you should be warned that John Davies was once Gen. Joseph Stilwell's political officer—and "Vinegar Joe" Stilwell was until his recall the symbolic head of the anti-Chiang, pro-Chinese-Communist movement that later did its best to unseat Pat Hurley as Ambassador in Chungking. Davies may or may not support what has become known as the John Carter Vincent Chinese policy—which would treat Chinese Communists as simple agrarian democrats and merge them into the government of China without due thought to their containment as a disruptive element. But the point is that personalities in the State Department date from different periods—and they often have a lack of broad consistency. I am not urging you to underwrite the right wing of the Kuomintang in China; it might be sounder policy to encourage the emergence of certain democratic middle groups. But I am urging you to be wary of equating communism and liberalism anywhere.

It is often said that Chinese communism is different. But the Marxism that is followed by Stalin does not regard the world as divisible into different capitalisms; they are all supposedly subject to the same laws that allegedly push democratic capitalism into the phases of imperialism and monopoly. The other side of this Marxist coin should be equally plain; no communisms are different in the final analysis.

Now, in this letter to you, Robert Lovett, I don't want to a Red baiter. I am willing to admit that John Carter Vincent, who is going out into the field this summer when he relinquishes his job as boss of the Far Eastern office of the State Department, is anti-Chiang Kai-shek for honest pro-American reasons. The Kuomintang, no doubt,

has its corrupt aspects, and no doubt any money we send to China should be accompanied by United States advisers to help them spend it for truly productive purposes. But it makes no sense to oppose Russian infiltration in Greece, Turkey, and Iran, and to protest against it in Hungary and Austria, while we actively maneuver to increase Russian penetration of China. Somehow, sometime this must dawn on President Truman—and you, as the top-ranking assistant to Marshall and the voice of consistency in the State Department, might properly argue the case with your superior, George Marshall. He, having been the instrument of Truman's inconsistency for the period of a year in the Far East, is in a psychologically bad position to begin an argument with himself.

If you elect to become a force for unity in our foreign policy, however, you may run into a refractory situation. While Dean Acheson has honestly changed his mind about the nature of Soviet dynamism, it is still a fact that the State Department has never had a house cleaning. If John Carter Vincent is no longer to head the Far Eastern Office certain people who have been in charge of digesting information for him will undoubtedly linger on at the information desks to digest for his successor. The working-level men are in many respects more powerful than their superiors—for they set facts in perspective before the facts are sent up to be acted upon.

Having changed his own mind about Stalin's foreign policy, Dean Acheson did noble work in giving a tip to the Iranian Embassy that resulted in successful firmness at Tehran in the face of Soviet maneuvering to split Iran. But before Dean changed his mind he was spokesman for an appease Russia attitude. He attacked General MacArthur at the precise moment when the Communists were turning their guns on the general because of his efficient methods of instituting the occupation of Japan. MacArthur had never done anything to controvert the fact that Washington not his own conscience, sets broad policy for Japan, yet Acheson chose to make it appear otherwise. Why? Who put him up to it? These questions have never been answered. Acheson also appeared on the same platform at Madison Square Garden with the Red Dean of Canterbury to address a Communist-supported mass meeting.

While Acheson showed great ability to learn from the cables from Europe, he never did anything to disturb the people who had once used him. You, Robert Lovett, are left with these people on your hands. If they, too, have changed their minds under the impact of events, then there is no real case for house cleaning in the State Department. But you should be aware that they once pushed Dean Acheson into doing the work of the appease Stalin school. If you are properly aware of this you will be in a position to gage their present loyalties and practices and to make recommendations to Marshall accordingly.

With a planning board and a secretariat and the 9:30 conference to speed the work and to tune up the thinking of the State Department, the United States is at last in a good technical position to cope with the outer world. But there are still some things to be done. The Kennan planning board might be made more effective if it were to be entrusted with making an audit, an inventory, of United States resources along the lines proposed by Senator VANDENBERG on June 13. If we know what margin of goods and services we have to play with, we will be in a better position to decide just what percentage of the national energy should be devoted annually to world rehabilitation. The Kennan board might also set up a table of priorities in rehabilitation; it might well appear that a little food devoted to strengthening the muscles of Ruhr coal miners would be worth the expenditure of millions of dollars elsewhere. One hopes the Europeans will themselves offer us a plan for rehabilitation on an integrated continental basis. But such a plan will have to reckon with the weakest links in the economic chain. The Kennan group should know just where the weak links are. It should also cut itself free from the incubus of the Morgenthau plan for pastoralizing Germany. This plan, while it is now more or less abandoned, still prevents certain key people from thinking constructively about making the Germans support themselves.

This letter to you, Robert Lovett, is not written out of any assumption that you can make policy. That job belongs to George Marshall and President Truman—and the American people. But even though your position is purely administrative in its functional aspects, no man who holds it should be innocent of certain realities. The Under Secretary must be the eyes and ears of the policymakers—and it is futile to argue that eyes and ears do not affect the decisions of the brain.

So here's wishing you well. I don't know how you are going to find good men to carry out the work of the Department in all spheres—first-rate people just don't want to work for the Government when they can make more money elsewhere. Perhaps we need some system of scholarships for youths who might wish to be State Department career men. That is a good subject for argument in the near future. But even though you will have to make shift with some Old-School-Tie people who have lost the faculty for energetic conduct of their work, even though you may have to get along with ex-fellow travelers in certain spots, I know that you yourself are as capable as they come. May your shadow never grow less—and may it be cast where it will do the most good in bringing the world back to the ways of peaceful production.

Long-Term Planning Essential to Security

EXTENSION OF REMARKS
OF
HON. HAROLD C. HAGEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 15, 1947

Mr. HAGEN. Mr. Speaker, it is the present intention of Congress to adjourn on or about July 26.

Although this Congress has made an excellent good record in passing many bills, there is still a great deal of work left unfinished. Under the Reorganization Act, Congress will not meet again until January 3, 1948.

With world events moving so fast, Congress must be available for immediate call to cope with possible emergencies. There is some likelihood that the acceptance of the Marshall plan will materialize during the summer months. If a substantial number of the European nations decide to cooperate, Congress will have to act quickly on whether or not Marshall's suggestions will be put into action. This will mean weeks of debate on the terms of our participation in the plan and additional weeks of debate on the amount of assistance to be made available for the rehabilitation of the countries of Europe participating in the Marshall plan.

Recent disclosures about the security measures surrounding the atomic energy plants give rise to some apprehension as to how soon other nations will perfect their atomic research projects.

Although it is not a probability, it is not entirely out of the realm of possibility that an unfriendly foreign nation might develop new atomic bombs within the next 3 or 4 years.

An atom bomb dropped on the city of Washington, D. C., would probably completely disorganize our entire Government. No plans as yet have been made for this possible emergency. It is my sincere belief that we should prepare for such an emergency by devising a master plan of government which would, in effect, anticipate the horrible possibilities of atomic war. Some practical method for managing and operating this Nation at a location away from Washington, D. C., should be devised.

I do not wish to be classified as an alarmist. This idea is not a new one and it has been timidly put forth by many outstanding thinkers in national, political, and economic circles. However, I feel that the time has come to press for definite action. Congress should devote some time this summer to setting up a committee to investigate ways and means of carrying on our Government activities in an orderly manner in the event that an atom bomb should fall on Washington and wipe out the majority of our national political leaders in the United States.

I heartily recommend to my colleagues that we give some thought to recessing with the view of coming back into session for a month or 6 weeks late in September or October to consider the proposal of providing for the administration of government in case of a serious disaster befalling our National Capital.

The Preservation of the American Family

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 8, 1947

Mr. CELLER. Mr. Speaker, there has come to my attention the annual report of the National Desertion Bureau, Inc., of New York City. This splendid institution, whose origin dates back 42 years ago, is dedicated to the rebuilding of homes broken by desertion. Though sponsored and supported by Jewish philanthropic agencies, its free service is available to non-Jews. Based upon many years of intimate experience, Mr. Charles Zunser, secretary and executive director, has embodied in this report a number of very constructive recommendations designed to strengthen the family. Copies of the complete report may be secured by addressing National Desertion Bureau, 67 West Forty-seventh Street, New York City 19, N. Y. Portions of this valuable report are here reproduced:

There is strong evidence that the institution of the family, throughout western civilization is going through a crisis. When

divorce statistics show that one out of every three American marriages ends in the divorce court, it is time for everyday folks, let alone our leaders and thinkers to sit up and take notice. Recently Dr. Carle C. Zimmerman, the Harvard sociologist, no alarmist, in an address before the American Social Hygiene Association, said "Evidence indicates that our middle-class family-system has reached its maximum demoralization—or will very soon. If left alone the family system will break up before the end of the century."

Every war tends to shake the marriage institution. That America, which was perhaps less disturbed than other belligerents, should be experiencing a divorce epidemic was not expected and should end our complacency. The National Bureau, as the only agency of its kind in the world, combining the function of a legal aid and social agency in the field of domestic relations, is placed in the peculiarly sensitive position of being a repair shop, a test tube, a hospital ward, a laboratory, or a mechanism where these crises manifest themselves.

As a social agency we witness the lamentable results of family desertion: economic, physical, and mental break-down; truancy, juvenile delinquency, ending in a pattern of adult amorality and crime. As a legal-aid agency we try to cope with this vast plethora of problems with the inadequate weapons the law affords us. We seek to mend broken homes, and in cases where incurable marital gangrene has set in, we perform legal amputations.

What type of cases come to us? Let me illustrate from actual records:

Mrs. A, a recipient of public aid, asked that her husband who had deserted her and their children, be located and compelled to provide support.

Sergeant B, just returned from overseas, found his wife had disappeared with the last allotment check, their child temporarily placed. He asked that she be located.

Mr. C was receiving old age assistance. His son Louis, age 35, had not been heard from in several years. The public assistance agency requested the Bureau's aid in locating the son.

Mrs. D, who was dependent upon relatives for support, had not heard from or about her missing husband for more than 5 years and believed him dead. She had a chance to remarry. She requested aid in securing an Enoch Arden decree. She could not afford to retain an attorney. The Bureau obtained a dissolution for her on payment of the actual disbursements.

Mrs. E, a deserted wife, suffered a mental breakdown and had to be institutionalized. Her child was under care of a child placement agency which asked the Bureau to assist in locating the husband.

Mr. F, deserted his wife and children, turned up in Miami, Fla., where he went for a vacation, and an easy divorce. Through our correspondent there, the suit was successfully contested; support was secured.

Mr. G, chose Reno as his gateway to freedom. The marriage had long since gone on the rocks and was irreparable. He got his divorce but not before he was made to pay a lump sum to enable the wife to get a fresh start, and to send his children a weekly stipend.

Our 1946 intake includes referrals from 116 family, children's and law-enforcement agencies in 23 States and 15 foreign countries. We located missing persons in 2,037 cases and gave legal assistance in 1,584 situations. Some 703 family adjustments were effected without resort to court action.

Is the outlook altogether hopeless? I think not. To begin with, I believe that the present divorce rate is likely to recede considerably after the flood of hasty wartime marriages has subsided. As an institution the family needs no defense. The wealth of the Nation lies in the character of its citizens. It is the home where the child's personality is developed.

What can be done? Here are my recommendations:

1. The creation of a nonsectarian desertion bureau, modeled along lines of this agency, which has functioned so successfully for 42 years. In this connection it is well to note that there is no comparable agency in the nonsectarian field; that from its inception the bureau had accepted isolated non-Jewish cases referred to us by the courts, the law-enforcement and nonsectarian agencies we have often made use of. During the war, the United States War Department designated the bureau as one of 46 legal-aid agencies throughout the country, to handle cases, within our functional area, in behalf of servicemen and their dependents. These were, of course, taken on a nonsectarian basis. After VJ-day the various veterans' agencies have similarly referred cases to us, likewise on a nonsectarian basis, so that a fairly large segment of our intake today consists of non-Jewish cases. An analysis of new and reopened cases for the first 3 months of 1947 shows a total of 781 cases of which 133, or 17 percent, were non-Jewish. The comparative figures for a similar period in 1946 were 23.5 percent. These point to a definite need for the creation of an agency to be built on nonsectarian lines.

2. A Federal marriage and divorce statute, like Britain and Canada, with concurrent uniform legislation by the States, to prevent States from offering competitive divorce bargains and to bring greater security to children of parents who, after divorce, escape their responsibility across State lines.

3. The National Association of Legal Aid Organizations, with which we are affiliated, has sponsored a uniform divorce recognition act which has the approval of the National Conference of Commissioners on Uniform State Laws. This proposed legislation has for its purpose the recognition of alimony judgments of sister States and their equitable enforcement. Identical bills will be offered to each of the States.

4. The prevention of hasty and ill-considered marriages by a 5-day waiting period between application and issuance of a license plus a physical and psychiatric clean bill of health. The important point is that all States must adopt similar measures.

5. Maternity vacations and care as recently inaugurated by Sweden alarmed by the declining birth rate, has taken these steps to prevent the dissolution of the family for economic causes.

6. The creation of desertion bureaus, preferably municipal, with case workers to study personality maladjustments within the family group at the inception of domestic discord symptoms, thus preventing the final break-up of the home.

7. Rational and vigorous enforcement of existing desertion laws on the part of prosecutors.

8. A Federal family-desertion act that will make the abandonment of a minor child and the crossing of a State line a Federal offense similar to the national motor-vehicle law. This will give Federal courts, where the deserter is found, jurisdiction to impose support orders without recourse to extradition and will subject offenders to the Federal probation system.

9. Extension of family courts to municipalities and counties where none exist now, with full jurisdiction in all family matters including divorce, annulment, dissolution, etc., with properly organized social service and probation departments working in conjunction with attached psychiatric clinics.

10. Proper ethical and hygienic instruction, both in school and in the home, as to marital and parental duties.

Report to Congress on Fascism Heavily Debated

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 11, 1947

Mr. PATMAN. Mr. Speaker, an Associated Press staff writer, James Marlow, has written an article, which appeared in the newspapers Sunday, July 13, 1947, on the report to Congress on fascism. This article states that the writer has gone through one of the original copies and that it is worth the time of anyone who wants to understand fascism in action.

There were only 26 copies made—1 for myself and 1 for each member of the Committee on House Administration. My copy has been and is now with the Legislative Reference Service of the Library of Congress, being carefully checked before being sent to the Government Printing Office for printing.

The article is as follows:

REPORT TO CONGRESS ON FASCISM, HEAVILY DEBATED, NEAR FINISH

(By James Marlow)

Very shortly the Government will publish, for sale to the public, a booklet called Fascism in Action.

This study in dictatorship—how it works and how it gets that way—was prepared by a special staff of the Library of Congress.

Representative PATMAN, Democrat, of Texas asked that it be done. Before it could be printed for the public the House had to approve.

This it finally did after much delay and fiery debate because some Members of Congress said it was a waste of money.

The Government Printing Office will announce the price of it, which won't be much, when it's printed.

This writer has gone through original copies. It is worth the time of any one who wants to understand facism in action.

BASED ON FOREIGN STUDIES

Mr. PATMAN wanted it made public as a companion piece to Communism in Action, another booklet which the House ordered printed last year.

This, too, was prepared by the special Library of Congress staff. So far more than 400,000 copies of it have been sold.

Neither booklet deals with any evidences of communism or fascism which have appeared in this country.

One sticks to communism in Russia. The other concentrates on fascism in Germany, Japan, Italy, and Spain.

The conclusion of the long study on fascism is, roughly, that fascism means these things:

1. A dictator runs a Fascist government. He's supported by a single political party and a special class. The state, for its own so-called good, keeps everyone under its thumb.

2. Freedom, in the democratic sense understood in this country, does not exist. An individual's life means little. It is full of duties and obligations to the state.

LEISURE SUPERVISED

3. Religion is attacked if it suggests obedience to anyone else before the state, or if it emphasizes the importance and dignity of the individual.

4. An individual's leisure time is carefully supervised because the state wants to control his waking thoughts and actions.

5. Education and thinking are controlled to make the masses think and do what the dictator wants.

6. Foreign policies are aggressive, or warlike. Fascism, looking for more living room for its people, seeks to build an empire.

7. To suit its own purposes, the dictatorship directs banking and private investment.

8. The dictatorship controls foreign trade of its people to suit its own ends.

9. Labor is so controlled that free collective bargaining and self-government by labor organizations are abolished. In short: Free unions are smashed.

FARMING INTENSIFIED

10. Farming is developed intensively so the population can be fed with its own products. Its purpose is to be self-sufficient.

11. Transportation, beside carrying goods and passengers, is built up to ease unemployment and as a preparation for war.

12. Fascism goes in for big arms programs. This tends to raise living standards. But no one knows how long that could last since no big Fascist state has lasted long enough to show it.

13. Big business and big industrials are favored and strengthened. Enough private profit is permitted to let the special ruling class get rich.

Tariffs are raised. Huge sums are spent for military purposes. Not only is freedom of the individual disregarded, so are freedom in business dealings and investments, and even freedom in changing jobs.

AMVETS Organize Post in the House of Representatives

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 15, 1947

Mrs. ROGERS of Massachusetts. Mr. Speaker, I believe that every Member of the House will be glad to know that a group of veterans employed in the House of Representatives have organized an AMVET post—affiliating themselves with the largest veterans' organization that has come out of the recent war.

The unit will be known as the House of Representatives Post, No. 19, District of Columbia.

Several months ago the House approved a congressional charter for this great and youthful organization and last week the United States Senate Judiciary Committee placed the measure on the Senate Calendar for final adoption.

Thus AMVETS will be the first and only veterans' organization of World War II to be officially recognized by the Congress.

The post was organized by J. H. Leib, former national legislative director of AMVETS.

The acting commander and cofounder of the post is Lucian O. Hunter, Jr., legislative aid in the Speaker's lobby.

Among the charter post members are:

Karl Standish, clerk of the House Veterans' Committee.

Allan M. Ames, Assistant Doorkeeper.

Richard G. Jefford, Assistant Sergeant at Arms.

Jack W. Watson, clerk to House Administrative Committee.

Howes W. Meade, Member of Congress.

S. A. Morichetti, House gallery doorkeeper.

Richard A. Micheel.

Millard B. Rice.

Wesley H. Wilson, Capitol policeman.

Joseph L. Bowles.

William E. Brady, House gallery doorkeeper.

James C. Hunter, House post office.

An organizational meeting to elect officers will be called this week, and the post charter will remain open for additional members.

A letter welcoming the post into the organization follows:

AMVETS, AMERICAN VETERANS
OF WORLD WAR II,
July 11, 1947.

LUCIAN O. HUNTER, JR.,
Acting Commander, Post No. 19,
Washington, D. C.

DEAR AMVET HUNTER: It is a great honor and pleasure for me, on behalf of the District Department of AMVETS, to welcome you and your members of Post No. 19, House of Representatives, to the department.

We feel very fortunate to have posts in the Senate and House. We know you will be active with us and help AMVETS become the leading organization for the veterans of World War II.

Yours in AMVETS,

REGIS COLE,
Executive Secretary.

An Editorial by W. Harvey Hurt in the Wayne County News, Waynesboro, Miss.

EXTENSION OF REMARKS
OF
HON. WILLIAM M. COLMER
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 15, 1947

Mr. COLMER. Mr. Speaker, under leave to extend my remarks, I am submitting herewith a timely editorial which appeared in the Wayne County News of Wayne County, Miss.

When we think of the possibility of World War III, we are awed almost into insensibility with the implications of what such a holocaust would mean. Certainly, no man or group of men with any degree of love of his fellowman, could, in his right mind, think of bringing another such tragedy upon the world.

Mr. Harvey Hurt, the editor of the Wayne County News, has evidently been giving some serious thought to this question.

Possibly the best assurances that we have that such a thing might not happen is in the gruesomeness of the thought itself.

In this connection, Mr. Speaker, I recall that shortly after World War II in a conversation with that great British war leader and statesman, Winston Churchill, I raised this question. I asked him what assurances we had that once Russia came into possession of the secrets of the atomic bomb, she would not send a fleet of bombers to unload these deadly instruments upon Britain or America in a sneak attack similar to the Pearl Harbor tragedy. Mr. Churchill replied that the best assurances that he could think of was that the Russians would have no assurances that the next night we would not retaliate by destroying the principal cities of Russia.

So, Mr. Speaker, when we contemplate the possibility of a new world with even more deadly implements of warfare than those used in the last war, we can get some comfort out of Mr. Churchill's philosophy.

The editorial from the Wayne County News follows:

NATIONS SEEK NEW WEAPONS

It is an indication of the state of the world today that every time someone makes a suggestion for world disarmament, it is received respectfully, but with complete pessimism as to the possibility of achieving it. No sane man can help but be appalled by the cost of the world's present military establishments or by their obvious threat to a prolonged peace. But the hope that something tangible can be done to cure this—a hope that was held high at the end of World War I—is almost totally lacking now. The truth is that the world is actively engaged in an armament race which is of an unprecedented character.

In the last war there were only two major new weapons—the atomic bomb and the German guided missiles. All other weapons simply represented developments of lethal instruments which had long been in existence and involved no revolutionary principles. Some basic weapons, such as the rifle, have been essentially unchanged in generations. And even a block buster is simply an evolutionary advance on the small aerial bombs of the First World War.

Today's armament race does not follow the classic pattern of attempting to produce and store more standard weapons than the competing nations. Its emphasis is largely on new weapons. As a consequence, much of the race is being run in the laboratories, rather than in the munitions factories.

This, of course, is particularly true of atomic weapons. Our atomic-bomb plants are still going at full capacity, and the work being done is as completely shrouded in secrecy as in wartime. The Russians are known to have put a number of the leading German nuclear physicists to work on atomic research and to have given it No. 1 priority among their own scientists. No one outside of Russia knows just how much progress has been made.

It would be a grave mistake, however, to let the terrible potentialities of atomic power blind us to other possible innovations in the bloody art of warfare. Our own Army has been carrying on extensive experiments with guided missiles, using the seized German equipment, and other armies are unquestionably following suit. This is one of the most ominous weapons yet devised, and some experts believe that had the European war lasted another year or so, German technicians might have been able to develop it to the point where it would have crushed England. When the latest type of bombs appeared, England established a strict censorship to keep knowledge of the damage done from becoming known to the world. These weapons were particularly terrifying in that their speed was so great they outran their own sound. Thus, the explosion took place before the missile was ever heard.

What kept them from becoming a decisive factor was their inaccuracy. They could be aimed to hit a section of a city—but they could not be controlled with sufficient accuracy to strike a particular target, such as a plant or an arsenal. Present efforts are directed at perfecting the guiding equipment and giving them the accuracy of artillery.

Pilotless aircraft, controlled by extremely advanced radio equipment, is another subject of intensive research. Planes are infinitely cheaper and more abundant than crews—at the end of the last war we were producing aircraft much more rapidly than we could train men to man them. If a truly efficient and reliable pilotless air force could be developed, the deadliness of war in the air would be multiplied manyfold. Enormous fleets could be sent against enemy targets, and the losses would be in material, not in men.

At intervals there is discussion of the possibilities of bacteriological warfare. Even in the first war it was rumored to be impending, though nothing came of it. The problems in the way are enormous—foremost among them being some means of protecting the user's own people from retaliation in kind. Germs do not respect boundaries. Again, means of distributing bacteria may be an unsolved problem. But in these days, when science seems to be on the verge of outdistancing the ability of man to control it, no innovation can be considered impossible. And no one can believe that in a war of extermination any belligerent would let moral scruple stand in the way of the employment of any killer.

A little news has seeped out concerning the United States War Department's plans in the event of another war. The atomic bomb has made it necessary to plan on the widest possible decentralization of authority—if one city or a dozen cities were wiped out, there would have to be a super command post ready to take over elsewhere. There has been much serious discussion of putting certain essential industrial plants underground, either in natural or constructed caves. The cost of this would be incredible—but no one yet seems to have devised any other defense against the A-bomb.

Perhaps the almost inconceivable destructiveness of weapons now being developed will, in the long run, be an assurance of peace—for the simple reason that another war might literally mean the destruction of civilization. General Eisenhower touched on this vividly when he said: "The earth may become a flowering garden or a sterile desert—and we may make the difference."

GI Loans

EXTENSION OF REMARKS
OF
HON. GEORGE MacKINNON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 15, 1947

Mr. MACKINNON. Mr. Speaker, the authority of the Reconstruction Finance Corporation to buy GI home loans approved by the Veterans' Administration was recently discontinued. My amendment to continue this authority in the RFC was defeated in the House by the narrow margin of 12 votes on June 24, 1947. Immediately thereafter I introduced a separate bill to accomplish the same result. This bill is H. R. 3974, introduced on June 25, 1947.

Under leave to extend my remarks, I include an article from the United States News on July 11, 1947, entitled "Future of Veterans' Loans," and a copy of H. R. 3974:

FUTURE OF VETERANS' LOANS—INCREASED RISK FOR PRIVATE LENDERS, WITH RFC BACKING ELIMINATED

THREAT TO GI HOUSING BOOM WHERE LOCAL BANKS BALK AT BIGGER MORTGAGE LOAD

Private lenders now are put on notice that they will have to assume at least half of the risk when they make home loans to veterans. This may bring a sudden end to the GI housing boom in areas where local capital is running low.

What has happened is this:

Congress has taken away authority of Reconstruction Finance Corporation to buy up GI home loans approved by Veterans' Administration. Under the GI bill of rights, VA guarantees 50 percent of real estate loans to veterans up to a maximum guarantee of $4,000. Veterans have borrowed $4,200,000,000 under this program. About one-third of all nonfarm mortgages written in the last year have been GI mortgages. Their value represents one-eighth of the value of all nonfarm residential mortgages outstanding today.

With RFC in the field ready to pay the full face value of loans offered by original lenders, there existed, in effect, a 100 percent guarantee of GI loans by the Government. Congress approved that backing for GI loans last August. It kept the GI homes program moving at high speed.

Actually, RFC's part in this loan business was on a small scale during the 11 months when it could buy GI mortgages. Only $63,000,000 worth of mortgages was in RFC hands on May 31, and the total bought before the June 30 deadline is not expected to exceed $90,000,000.

But builders and lenders knew the agency was there to support the market any time money was needed, or loans began to go sour. Too, as smaller banks in the South and Southwest began to get more requests for real estate financing than they wanted to handle, they started to sell an increasing amount of GI mortgage paper to RFC. A bank that had loaned $10,000 to a veteran, for example, with VA approving the deal, could sell the mortgage on the veteran's house for $10,000, less whatever payments had been made, to RFC. And the RFC would pay the bank one-half of 1 percent for continuing to collect the principal and interest payments from the veterans involved.

With RFC out of the field, however, banks and other lenders must find buyers for their mortgage holdings in the investment public. Representative JESSE P. WOLCOTT, Republican, of Michigan, who led the fight to prohibit this RFC activity, argued that, if the public did not support the GI home-loan market, any additional Government action should come through amendment to the GI bill of rights rather than by "going through the back door of the RFC."

Public interest in buying GI loans appears limited. Here and there premiums of 1 to 1½ percent have been paid for such mortgages, but buying is confined to the safest loans.

Result is that lenders no longer can count on a sure and quick market for GI loan paper. This means that banks and mortgage companies which already have invested heavily in GI loans may balk at putting any more money into such loans.

That, in fact, is just what will happen, as officials see it. T. B. King, Director of VA's Loan Guaranty Service, reports that many builders have been promised operating funds by lenders who themselves had planned to use the RFC purchase market to get their own money back quickly. These builders now may have to abandon or delay construction plans.

A substantial number of banks in small cities and towns say they will not have any more money to lend on GI homes unless they can sell some of the mortgages. Prospect, thus, is that builders will have to find new sources of operating funds.

Trouble now indicated in GI home loans will be the first set-back this program has encountered. The record to date on GI real-estate loans is nearly all good. Out of 736,687 home loans approved by the end of May, only 370 had been defaulted and only 1,923 defaults were pending. About 1,000 home loans have been paid off in full.

But VA does not minimize the potential troubles involved in a program of the size it has undertaken. In the early days of the loan program, excessive appraisals often were approved; loans have been made during a period of peak prices, which already are beginning to weaken down payments, and thus the veterans' equities in the houses under loan, are small. All these weak spots will show up in any widespread economic adjustment, and, in that case, home-loan defaults would go high.

As to the long-term future, there will be at least 16,000,000 veterans of World War II, nearly all of them eligible to get VA guarantees on loans. If half of them take up their home-loan privileges to the limit, VA will have guaranteed, over all, $32,000,000,000 worth of real-estate mortgages. The agency has set up a Property Management Section to take care of foreclosure problems as they may arise.

Business loans to veterans are not affected by RFC's withdrawal. Where a lender will put up the money, veterans still can offer a VA guarantee of one half the loan up to $2,000. But lenders have been cautious. Only about 70,000 business loans are on VA books, with a face value of about $213,000,000. Defaults are recorded on 1,400 and another 1,238 are pending, most occurring through failure of trucking and entertainment enterprises.

H. R. 3974

A bill to authorize the Reconstruction Finance Corporation to acquire home loans guaranteed or insured under the provisions of title III of the Servicemen's Readjustment Act of 1944, and for other purposes.

Be it enacted, etc., That the Reconstruction Finance Corporation, in addition to other powers granted to it by any other act of Congress, shall also be authorized, within the limitations provided in the Reconstruction Finance Corporation Act, to provide for original mortgagees a market for home loans guaranteed or insured under the provisions of title III of the Servicemen's Readjustment Act of 1944, as amended, by the purchase, administration, and disposition of such loans directly, or through national banks, acting as agents or as trustees.

Why Sell Our Oil Abroad?

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 15, 1947

Mr. POULSON. Mr. Speaker, under leave to extend my remarks, I should like to insert in the RECORD an editorial taken from the Honolulu Star-Bulletin of July 7, 1947.

I consider this article most apropos of our present policy of exporting vital commodities, and I believe it should be of interest. The editorial follows:

WHY SELL OUR OIL ABROAD?

A man who knows what he is talking about points to the rapidly dwindling oil reserves of

the United States and definite danger for the future.

The danger is not only that the United States might disastrously drain its oil supplies in peacetime—but that in wartime we wouldn't have enough oil of our own to supply our planes, ships, and plants.

The man is Edwin W. Pauley, one of the best-known oilmen in the United States. He is, in addition to being an expert on oil and a man with large interests in oil, an adviser to the United States Government on certain important phases of foreign relations.

He is the official adviser on reparations to the United States Government and as such he has visited most of the major foreign countries.

In particular, he has been in the Orient and he has had personal experience with the tough and realistic attitude which Soviet Russia is taking toward her nearby neighbors and the rest of the world.

Mr. Pauley, visiting in Honolulu, says that if there should be another World War, the United States would have to tighten its belt on oil consumption far more strictly even than in World War II.

Moreover, the United States would have to get foreign oil to augment its own depleted supplies.

Mr. Pauley did not say so, but the United States might have to pay an exorbitant if not a terrible price for any oil we should get, in wartime from foreign soil.

And at this very time when oilmen view with alarm the steady drainage of our precious reserves, we are selling oil abroad—including notably, Soviet Russia.

Only a few days ago the Star-Bulletin carried the story of lubricating oil, grease and drums or containers being loaded aboard a Russian freighter for shipment to a Soviet port.

Now the irony of this is that Soviet Russia has abundant oil of her own. She has within her own boundaries some of the richest oil fields in the world. She has, in some of her satellite countries, much other oil available. And in case of need, Russia won't hesitate to go right into those satellite countries—with armed force, if necessary—and take what oil she wants.

In the face of these facts the policy of the United States in continuing to allow shipment of oil abroad begins to look like sheer folly.

And it is a grim reminder to Honolulu of the days when Japan was buying scrap iron in the United States—and moving it through this port to her ship plants and munitions factories. Japan was getting ready to turn the deadly might of her war machine on Pearl Harbor, on the Philippines, on Midway, on the Aleutians, and on American soldiers, sailors, and marines dying at Guadalcanal and elsewhere in the Pacific.

But, until only a few months before Pearl Harbor it was "business as usual" for Uncle Sam with Japan.

We "couldn't afford" to take the decisive step of shutting off Japan from our scrap iron.

Stalin's Sucker

EXTENSION OF REMARKS
OF
HON. ALVIN E. O'KONSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 15, 1947

Mr. O'KONSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Frank C. Waldrop from the Washington Times-Herald of July 15, 1947:

STALIN'S SUCKER

(By Frank C. Waldrop)

Rarely does an old-school, career diplomat ever spill the inside story of his trade. So it will pay you by any test to get a copy of the current issue of Life and read the piece by Arthur Bliss Lane, who resigned as United States Ambassador to Poland just to be free to write it.

The sum of it all is that Stalin's favorite chump or sucker during the recent war was the late F. D. Roosevelt, for whose folly Poland is paying now in blood, and the whole world may next find itself paying, too.

The tragedy of Poland is, of course, the central crime and horror of World War II. It is a crime in which the United States has its share of guilt and so do England and France.

England and France, in early 1939, worked a confidence game on the Poles by promising them effective help if they would defy Hitler. The Poles fell for it and in September of that year found themselves invaded by Germany and Germany's ally, Russia, while England and France went into the sitzkrieg.

The Poles were just brave fools. They were sure their friends would not let them down. This writer was talking the other day with a young Polish refugee. Said the Pole:

"We were so sure the English and French were coming that even when the Nazis and the Reds were right on top of us we wouldn't give up hope. I remember one day the wild excitement in our village. We heard the French had cut clear through Germany and their troop trains were spreading over Poland.

"Actually, some firemen from Warsaw were passing through on the train to some other place to show people there how to fight fire bombs. But the sight of those unfamiliar uniforms was all we needed. It took weeks for the truth to sink in."

The truth, in fact, never did sink in with the Poles from 1939 to 1945. They fought the Germans. They fought the Russians. They ran an underground government at home, another government in exile in London, they raised an under-cover Army in Poland and built another Army in exile that fought in the air over England, across the desert in Africa and up Italy.

The Poles believed that in the end their bravery and love of freedom would be justified in history, even though bravery and the love of freedom were costing them their young men and women, and for that matter their old ones, too, at a sacrificial rate beyond any other nation's.

They were willing to stand it, for the Poles believed that Poland would be restored and free when the war ended.

Arthur Bliss Lane, in this Life piece abovementioned, lets you know in detail just how cruelly the Poles were deceived by false friends.

Just to give it to you quick, here is what he tells about his visit with President Roosevelt to get orders before leaving for Warsaw:

"I said that the Soviet view * * * of an independent Poland was quite different from ours. The President replied that he had entire confidence in Stalin's word and felt sure he would not go back on it."

There it is. Arthur Bliss Lane is no schoolboy, nor is he a tattletale. He is a serious-minded professional dealer in relations between nations with 31 years' experience in positions of great trust and importance.

Roosevelt, in 1944, had convinced himself that he had entire confidence in Stalin's word. He thought he had put the Indian sign on Bloody Joe after one easy session of the Roosevelt charm school. Such vanity.

So Lane went on to Poland, and there he found and documented the evidence that Life sums up under the headings:

"How the Communists rigged the Polish elections."

"Why the deputy foreign minister bossed his boss."

"How Poland was sold down the river at Yalta."

"Why the government officials have shifty eyes."

"Who the Kremlin's top agent in Poland is."

"How Poles disappear overnight."

It is all fascinating, as any great and monstrous tragedy is fascinating. It is also a story to make any American ashamed because our Government played such a disgraceful part in deceiving the Poles and helping to deliver them to Stalin.

No need to repeat the details of Lane's piece here, except to say that they include many items you may have read first in the Times-Herald as they were happening.

Such things as the Russian double-cross of the Polish underground army of "General Bor" that led these brave and foolish Poles out where the Germans could wipe them out while a Russian Army sat down 10 miles away to watch.

Also, how the Russians kidnaped the 15 Polish leaders who followed the lead F. D. gave them at Yalta and undertook to negotiate with the Kremlin. All they negotiated was their own destruction.

The above and many other stories of the same kind were first told in the Times-Herald during the war. They were denied and denounced as lies. Now you can read them again, furnished by a man who learned the facts officially.

The value of Lane's report is that it shows us just what kind of a character Stalin is. And whether Lane meant to do so or not, it also adds some more dope on F. D. R., whom history now begins to bill publicly, "Stalin's sucker."

Story With a Moral

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 15, 1947

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by George S. Benson:

STORY WITH A MORAL

(By George S. Benson, president, Harding College, Searcy, Ark.)

One time there was a young man, the younger son of a well-to-do farmer. Times were good, prices were high. It was a period of prosperity for everybody. Apparently spending had got to be a habit with most of the folks in that community. At any rate, this son saw that others were having a good time spending money. Since everybody's doing it, he thought, why shouldn't I enjoy myself?

So this fine young man who had all the opportunities one could wish for, and a brilliant future in sight, kept after his father until one day "the old man settled him off" with a good deal of money. This country boy then went to town, and set out to have himself a better time than he had ever had before. He spent more money than he had ever spent before. Friends were numerous. Playboy super de luxe, this young man had swarms of lady friends. But they required money.

HE ACHIEVED WISDOM

Now, you are wondering, if you have read this far, whether this misguided and pampered lad ever quit spending. He did. He quit spending when a depression set in, for that was the time when he found himself unable to obtain any more money. At this

point, our broken-down playboy began to think. Wisdom was forced upon him and he learned the hard way. He found he couldn't even buy a sandwich, and panhandling was out of the question. Rather than starve, he took a farm job feeding pigs.

If this lad had done what some of our so-called statesmen advocate, he would have continued to borrow and spend. But having thought the matter through, he went to work, even though his hunger was scarcely outdone by that of the pigs he was sent to feed. He had spent all, and he was in want. You may read the rest of this story in Luke 15, for it is the story of the prodigal son who finally came to his senses.

NO MONEY MILL

Must we, as a nation, spend all that we have before we come to our senses, like the prodigal son? With signs of depression approaching, we continue to spend and spend, apparently from habit. Doing little or nothing about our monstrous national debt of $260,000,000,000, we continue to look around trying to find things for which to appropriate money. We have come to count off our years as spending years, in terms of the next budget and appropriations bills.

It is easy to justify any and every expenditure. Constituents in each and every community represented by Senator Bloake and Congressman Doake can spout a whole book of reasons why this or that pet project must go through. Folks are inclined to think that the money for the whole thing is a gift, just because they don't see where it comes from. But the founding fathers did not leave at Washington a mill which flows out perpetual dollars.

DAY OF RECKONING

Maybe it's not a nice thought, but you can't keep on spending money without knowing where it's coming from. This was a fact the prodigal son discovered. Neither can you safely manufacture currency to carry through your spending projects. Either course will soon lead to dire results. A day of reckoning will come to a country that spends all it has, just as it did to the prodigal son. Let us have more wisdom than the prodigal, who found that he could repent only when hard times struck him.

Our spending, as opposed to saving, has created a situation that calls for the best brand of intelligent citizenship. It is already time to go to work. We must also impress upon our legislators that if they are to be statesmen, not mere politicians, they must conserve the wealth of the country rather than lavishly spend it. Without being penny-wise and pound-foolish, we ought to adopt fiscal policies that will cut down our growing debt.

Strategists Deplore Our Failure To Support China

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 15, 1947

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Constantine Brown from the Washington Sunday Star of July 13, 1947:

STRATEGISTS DEPLORE OUR FAILURE TO SUPPORT CHINA—ARMY, NAVY EXPERTS HOLD STRONG, FRIENDLY CHINESE NATION IS VITAL TO AMERICA'S LINE OF DEFENSE IN PACIFIC

(By Constantine Brown)

Generalissimo Chiang Kai-shek has ordered total mobilization in China, and this applies not only to China's manpower but to all resources the country still possesses.

The Chinese leader is fighting with his back to the wall. But it is clear to every one in China—and in Washington, too— that unless American support is forthcoming, his battle will be in vain and he will be overwhelmed in the next few months.

The American Government's attitude toward China is considered by those who attempt to read the future as one of the major errors it has committed since the end of the war.

Now, when high-ranking Army and Navy officers and many civilian officials insist that the possibility of war with Russia should not be ruled out, China assumes top strategic importance for America's national defense. In fact, it is considered as America's first line of defense in the Pacific.

EUROPEAN-MINDED

Until a few weeks ago it was not in good form to doubt Moscow's good intentions and raise the possibility of a Soviet aggression against the United States. Many vital reports on Soviet activities in western and northwestern Siberia were salted away without ever seeing the light of day, lest the American people become alarmed about Russia.

Reports that Russian submarines were spying on American naval exercises in the Pacific were designated top secret by responsible American authorities. So were the reports of feverish military activities of the Red armies in the area facing Alaska and Japan. The same was true of news that the Russians were establishing important military airfields in the same area.

There have been no indiscretions in official quarters about the astounding progress of construction of railways and other communications throughout Siberia. But all this information, which exists in the files of responsible Government departments, adds up to but one thing: Such activities on the part of Moscow leaders are inexplicable unless they harbor hostile intentions with respect to Alaska and northwestern Canada.

This possibility—distasteful as it is—should not be hidden from the American public. But the long tradition of excluding the American public from its Government's confidence in matters of foreign affairs still stands today, as it did in pre-Pearl Harbor days.

PROVED LOYALTY

It is admitted in military quarters—although not in the State Department—that a strong China, friendly to the United States, would be an effective deterrent to Russia's plans in the Pacific area. The American people are European-minded right now because the Government, the press, and the radio place great emphasis on that part of the world, rather than on the Far East. Americans are traditionally European-minded and went to war twice to save that continent. The Far East is regarded as hopeless and relatively unimportant.

In its early stages the last war created the fear that American territory could be invaded by the Germans, either from Britain—if it fell—or from North Africa. The blow came, however, from the only other major Pacific power—Japan.

Today the U. S. R. R. is only a stone's throw from Alaska, one of the weakest spots in the American armor. It is admitted in Washington military quarters that little has been done to fortify Alaska and the chances of adding to its defenses right now are limited. Yet it is admitted in the same quarters that if a hostile power were to establish itself in that area, the security of the west coast would be seriously jeopardized.

The attention of the American public is focused on the Balkans, France, Italy, and Germany. We are now considering spending billions of dollars to rehabilitate Europe, in the belief that this will assure our own safety. Yet no one speaks seriously of strengthening our position in the Far East.

REJECTED JAP OFFER

Since the end of 1944 there has been much talk about the corruption of the Chinese Government and the dictatorial powers of General Chiang. From the State Department came inspiration for the charge that China is rotten to the core, as are the leaders of the national government.

It may be true that the top men in China, such as T. V. Soong and the Kung brothers, are no model of honesty. It is equally true that General Chiang is a dictator, less so, however, than Prime Minister Stalin or Marshal Tito and certainly more friendly to America than to any other western power.

But General Chiang and his corrupt government have given ample proofs of loyalty to the United States. The fact is seldom mentioned that General Chiang rejected Premier Tojo's offer of an honorable peace shortly after Pearl Harbor and after the Japanese had conquered Singapore, Malaya, and the Philippines.

According to information only now coming out, the Japanese offered to recognize General Chiang as the supreme leader of China and told him that the two countries would share exclusive domination of Asia, at the expense of the white races. Russia was to be kicked out of Siberia, which was to be taken over by the Japanese, while a Chinese-Japanese campaign would liberate India.

Although that moment was the darkest for the United States, General Chiang turned down what appeared to be a tempting offer and continued to fight with what little he had. If he had accepted the Japanese proposal, Allied victory might have been postponed for many years.

Some State Department officials maintain privately that General Chiang is too shrewd a man not to have realized that victory would finally be on the Allied side. If he is as shrewd as that, he also would have realized that his position would not have been more desperate than it is today if he had gone over to the enemy.

The fact is that General Chiang believed China would recover only with the help of the United States and he had no reason to doubt our sincerity of purpose. It was the American Government which in 1931 started the ball rolling against the Japanese aggression in Manchuria, as it had earlier offered its services when the Russians in 1929 tried to take over a part of Manchuria.

FOUGHT REDS

The American Government did its utmost to supply China with equipment and war materials while it was fighting the Japanese single-handed, and Mr. Hull went on record—just as Mr. Stimson did before him—in opposition to any partition of the young Chinese Republic. It was under the administration of President Hoover that we enunciated the doctrine of nonrecognition of Japanese conquests in Manchuria, and the Japanese attack on Pearl Harbor was precipitated by our determination not to let Japan expand on the Asiatic mainland.

All these facts were well-known not only to General Chiang but also to his corrupt advisers, who saw no profit in the tremendous bribes offered them after Pearl Harbor by the Japanese. Yet since 1945 we have done much to weaken the position of the only Chinese Government which still enjoys recognition of the world powers.

China has been fighting communism for the last 20 years. After flirting with Russia in the twenties, General Chiang realized the pitfalls of Soviet friendship. He expelled the military mission headed by the Communist leader, Mikhail Borodin, whom Moscow had sent to help General Chiang's regime. General Chiang began fighting the Communists with the smiling approval of Washington. It is true that he made peace on one or two occasions with the Communists who were

cooperating with his divisions, particularly in the defense of Shanghai in 1937. But these were only incidental compromises, as occur in all Chinese civil wars.

PRESSURE ON CHIANG

After VJ-day General Chiang, who was aware that the Communists headed by the Moscow puppet, Mao Tse-tung, would prevent an early recovery of China, wanted to use his American-trained divisions to end the Communist movement. He told some of our representatives, including Ambassador Patrick Hurley, that unless he disposed of the organized rebels while his military power remained, China would become the scene of a bitter civil war.

The United States opposed his plans. The State Department and a part of the press and radio told General Chiang that he must bring the Communists into the government and try to work with them. His argument that the only way to work with Moscow's tools was to surrender to them had little effect on the State Department's officials in China and in Washington.

When General Chiang demurred he was told that American assistance henceforth would be predicated on his ability to unify China by taking the Yenan government into his own. Under this pressure General Chiang agreed.

After the spectacular resignation of Ambassador Hurley General Marshall, who had just given up his position as Chief of Staff, was given the thankless task of mediator between the Chiang government and the irreconcilable Communists. General Marshall went to China and extended de facto recognition to the Yenan group by organizing tripartite teams to bring about a truce in China's civil war.

STRATEGY FAILED

Although the present Secretary of State was given wider powers by President Truman than any other special Ambassador ever had, he took his inspiration from the specialists in the State Department. This group of men was wedded to the idea that the Chinese Communists had nothing to do with Moscow, that they were agrarians and reformers, and that by hook or by crook Mr. Truman's special Ambassador had to ram cooperation with Yenan down General Chiang's throat.

This failed because Mao Tse-tung's representative, Chou En-lai, adopted the Moscow strategy of making promises which he did not intend to keep. General Marshall returned to Washington denouncing both the national government and the Communists for the failure to create a united regime.

Russia stayed on the side lines. She had signed a treaty of amity with General Chiang in August 1945, but when it came to execution of that treaty, she used delaying tactics to enable the Communist armies to infiltrate Manchuria before General Chiang's troops arrived.

All kinds of obstacles were placed in the National Government's way to favor the Yenan puppets. All these were sugar-coated for the good reason that there was still a strong American army in China, which under strong provocation could have acted. Frantic propaganda to get the Americans out of China was begun by the Communists and so-called liberal newspapers and radio commentators.

CHIANG'S PLIGHT

But General Chiang still had American-trained divisions which were no match for the Russian and Japanese-trained Communists. He had obtained the promise of a loan from Washington to bolster his forces. The amount earmarked by the Export-Import Bank was $500,000,000. But he soon discovered that American laws would not permit him to buy military equipment in this country. The money could, however, he thought, be used to alleviate China's acute economic crisis.

This crisis was ascribed by the political philosophers in the State Department to the crookedness of the Chiang administration. In fact, however, it was impossible for the Nanking government to remedy the situation when the country was in the throes of war against the Yenan Communists, who are receiving strong support from Russia.

SOME POSSIBILITIES

The Chinese Government is being told now by Washington that credits would be available if they are to be used for sound rehabilitation projects. How can such projects be planned by a Government which is fighting for its life? This argument is answered by our policy framers: "What about making peace with the Communists?" No such suggestion is being made by Moscow to Mao Tse-tung when he asks for military equipment and support in the persons of Japanese instructors or Korean Red-trained divisions.

The Chinese tragedy can easily affect our own security. According to American observers recently returned from China the Russians aim to place the portion of China between Manchuria and Tibet under Soviet supremacy. The rest of that vast country will be left to its own devices and recovery will be prevented by fomenting civil wars and political and economic chaos with the assistance of ambitious and unscrupulous war lords who are willing to fight for personal profit.

Under these conditions and without even America's moral support, General Chiang is expected to disappear from the Chinese scene within a year or less. The ideologists in the State Department thus will have played unwittingly into Soviet hands.

A strong and friendly China, our military and naval experts maintain, would be a serious threat to whatever aims Russia might harbor in the Western Hemisphere. With a strong Chinese Army on her flanks the Moscow leaders would think twice before deciding on any rash action.

POSITION CHANGES

Our stand in favor of the Chinese National Government since 1931, when the Japanese first entered Manchuria, a stand which brought a head-on clash with Japan in 1941, has now been changed. Policy framers in the State Department have decided that China is no longer democratic and does not deserve our support, which the military considers more important than ever in the past.

China is not a democracy in the American sense of the world. But neither was she a democracy when we came to her assistance 16 years ago. There have been no radical changes in China for ages. But there appear to have been some fundamental changes in the new policy framers in the State Department, changes which we hope will not affect America's security. However, some observers fear that mistaken ideas about foreign countries could prove expensive, indeed, for the American people.

Crisis on the Colorado

EXTENSION OF REMARKS

OF

HON. NORRIS POULSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 15, 1947

Mr. POULSON. Mr. Speaker, under leave to extend my remarks, I am inserting in the RECORD an editorial from the Los Angles Times of July 3, 1947, which I consider both timely and of interest to southern California and Arizona, alike.

I should like to point out that there have been resolutions introduced in both the Senate and the House requesting the Attorney General of the United States to start suits such as this editorial recommends.

Furthermore, the House Public Lands Committee has also recommended that the Attorney General institute such action.

This editorial, I believe, clearly presents the issue. It follows:

CRISIS ON THE COLORADO

Slowly, and for the most part behind the scenes, there has been built up on the vital question of ownership of Colorado River water a situation so dangerous that it now demands to be discussed fully and openly. If it is allowed to fester any longer the vicious consequences may impair the entire course of future growth of southern California and Arizona.

The public has been slow to grasp the full gravity of the increasingly serious Colorado River deadlock.

In a series of articles last fall, the Times presented the facts involving the 25-year fight between California and Arizona over apportionment of the river's water. Those articles set in motion some forces which may tend toward an eventual settlement. But meantime the factors adding to the seriousness of the water conflict have been intensified.

For 25 years Arizona and California have not been able to agree even upon a formula to approach an understanding; they cannot now agree; and there is no prospect of an agreement in the future.

Under these circumstances, the Times recently has taken the lead, along with Gov. Earl Warren of California and Gov. Vail N. Pittman of Nevada, in exploring the possibility of a United States Supreme Court ruling on the whole complicated and tangled mass. Admittedly, a Supreme Court ruling is a final resort only after efforts at compact or arbitration have been exhausted. And all such latter efforts never appeared more hopeless than now.

At this moment the practical factors adding to the misunderstanding and ill will are multiplying fast. Arizona's great Central Valley around Phoenix is suffering an acute water shortage, lack of rainfall having left the storage spaces behind Roosevelt and other dams practically empty, and this climaxing a series of dry and terrifying years. Yet California water officials are in Washington bitterly opposing before Congress an Arizona project for diversion of Colorado River water to correct the shortage. In southern California there has been formed the aggressive Colorado River Association with Preston Hotchkis as its president to support the demands of California for Colorado River water.

Yet, in all truth, it must be admitted that the demands of some extremist elements in California are as unfair and unjustified as some similar demands by Arizona extremists.

And, all the while, 6,500,000 acre-feet a year of Colorado River water—almost half of the river's useful flow—is going to waste into the Gulf of California because it is not needed now.

Indeed, the sickening thing about the whole fight is that it is over a situation which may develop 25 or 30 years from now when the full flow of the river is in use. California tries to establish a claim which will stand up years hence. Arizona tries a retaliatory grab. Then both sides cry "Thief!" and "Robber!"

This senseless bickering and name-calling has gone on long enough.

What is needed now, under the direction of the governors of the three States most vitally involved—California, Arizona, and

Nevada—is an agreement to seek participation of the United States in a suit to determine the water rights. Otherwise the jockeying for legal advantage, extending over a period of years, is going to become more and more ridiculous and unproductive of results.

California taxpayers have a $500,000,000 stake in Colorado River water, Hoover Dam, and numerous other works. This must be protected. Yet Arizona deserves a fair deal, too. She is an intimate part of southern California's economy, with the Colorado River in reality only an artificial boundary line.

Every support should be given the present attempt in Congress to get the matter before the Supreme Court; a difficult problem in itself from a legal standpoint because the Court is reluctant to set forth "declaratory rights"—a case in which the issues have not yet jelled. Still, because the United States itself is involved so deeply because of its contract commitments to the States along the Colorado, the Court may be persuaded to take jurisdiction.

It is to be hoped it will. Every citizen of southern California should make himself fully acquainted with the details of this controversy. It involves every drop of water coming out of the tap. It involves, literally, the Southwest's "last water hole."

Military Training

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 15, 1947

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Daily Press, St. Marys, Pa., for July 11, 1947:

MILITARY TRAINING

Many organizations and individuals with laudable purposes in mind are opposed to universal military training, believing steps in that direction lead to war.

We would like to know what they propose substituting for an armed nation that faces a constant threat as does America at this time.

The majority of World War I veterans can tell you the price this Nation paid for unpreparedness, and the lesson was repeated, far more costly in World War II for the same pacifist reasons.

A burglar intent on robbing your home will not be scared off by soft words.

A nation that has its eyes on the wealth of America will not be dissuaded from its purpose by pleas for world-wide disarmament.

When World War I was over this Nation in a gesture toward peace towed to sea and sank what then represented the most powerful naval force in the world.

The one man who told United States the next war would be won by superior air power was literally kicked out of the Army, his name besmirched until later facts proved his accurate forecasting.

All this was done in the name of world peace, the seeking for something tangible. We led the way in promoting peace for all nations and all we got from it was the further arming of such nations as Japan and Germany, World War II foes.

No one wants to see universal conscription become a fixed policy in United States, but there remains no alternative at the present time that we can see.

Realists know that in this present unsettled state of affairs America needs to be alert. We only have to recall here the slimy Soviet espionage work in Canada in getting data on the atomic bomb to realize that country does not recognize anything but brute force.

We have seen the United Nations sink lower and lower in public prestige. It has yet to raise its voice in protest over the Russian seizure of Hungary.

When you put all these things together they spell the need for an adequate armed America.

And as far as can be seen the only way to accomplish that is by universal military training by making every boy at 18 liable to 1 year military service.

He may never have to go to war, but if he does he will, at least, be prepared for it, not thrown into conflict with little knowledge of the weapons he must use as was frequently the case in two world wars.

America has paid a tremendous price for the preservation of the freedom it now enjoys.

Would it hurt any 18-year-old lad to spend 12 months of his life in carrying on that freedom?

We agree with what Cy Peterman, war correspondent of the Philadelphia Inquirer, had to say on the subject when he said:

"If it only teaches young men to say 'No, sir' and 'Yes, sir,' it will have accomplished something worth while."

But that would not be our only reason for favoring such a training program. It would mean the future security of America, a guaranty this would remain a Nation of free men and free women long after this generation has answered its last summons.

What we have enjoyed in the way of human liberties should be passed on to succeeding generations so the Statue of Liberty has the same meaning in years to come as it does today.

Universal military training will be an expensive proposition, but only a fragmentary cost of what total war would be.

World Collectivism by Compulsion

EXTENSION OF REMARKS
OF
HON. HUBERT S. ELLIS
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 15, 1947

Mr. ELLIS. Mr. Speaker, as our State Department representatives are now in Geneva negotiating trade agreements and formulating plans for the International Trade Organization, division of the United Nations, it is encouraging to find an editor now and then who is informed and has the courage to speak out. During extensive hearings on the Reciprocal Trade Agreements this spring by the Ways and Means Committee of the House, it was demonstrated beyond a shadow of a doubt that by and large the agreements had operated to the detriment of American industries and agriculture. Now comes the International Trade Organization which is the subject of an editorial by Mr. Edward Swint, editor of the Point Pleasant (W. Va.) Register. His conclusions are correct.

The International Trade Organization and the International Refugee Organization are organizations set up under the United Nations, and if carried to their ultimate conclusions will permit the free flow of merchandise and people between countries. It is readily observed that the United States will be the sole loser under this arrangement. It is plainly evident that we are on the road to surrendering two basic rights we have held sacred for 150 years—the control of immigration and the control of the importation of merchandise.

The editorial follows:

AMERICAN PEOPLE WILL NOT SUBMIT TO THIS PROPOSAL

While Congress has been wrestling with such domestic problems as new labor legislation, cutting the Budget, and a bill for the reduction of income taxes, some of the global planners of the State Department, led by Will Clayton, have been at Geneva, Switzerland, putting together the framework for the proposed International Trade Organization.

The master plan for this projected set-up is described by Garet Garrett, one of America's most competent economic analysts, as prepared by experts and clothed in language that only experts can understand.

The ITO, if approved, would function as a part of the United Nations. Under the proposed plan, which calls for the establishment of a vast interlocking system of state cartels, directed from the single seat of international authority, we would lose control of our foreign trade, besides surrendering the right to order domestic affairs according to our own liking, in some particulars, at least.

That the American people will sanction such a plan when they come to understand it seems very unlikely. International cooperation on a voluntary basis is one thing; world collectivism by compulsion is something entirely different.

Slaves at $13.05 a Day

EXTENSION OF REMARKS
OF
HON. GEORGE MacKINNON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 15, 1947

Mr. MACKINNON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Stillwater Evening Gazette, Stillwater, Minn., of July 9, 1947:

SLAVES AT $13.05 A DAY

In announcing his new contract with coalmine operators John L. Lewis gleefully boasted that it is the best deal he has ever put over. Well he might boast, too, for under the new contract the miners will get $13.05 a day in addition to all sorts of benefits that make them about the best paid working people in the country.

Mr. Lewis tries to give the impression that he has put over a fast one on the mine owners but he is not fooling anyone. What he means, of course, is that he has put a fast one over on the coal consumers, for they pay the bill. They are paying twice as much for coal as they did a few years ago, due almost entirely to increased pay to the miners.

A puzzling thing about Lewis is that despite his glee over this record-breaking wage contract, he took occasion to lambaste the Taft-Hartley Labor Act which apparently has not hampered him in the least. The new coal-mine wage also must be a little disconcerting to those other labor leaders who have been using the Taft-Hartley law as a wailing wall, dubbing the act the slave-labor law. It will be hard to convince the public there is a slave angle to a law that permits a $13.05 daily wage to coal miners.

Lobbyists

EXTENSION OF REMARKS
OF
HON. HENDERSON LANHAM
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 15, 1947

Mr. LANHAM. Mr. Speaker, on Friday, July 11, I extended my own remarks in the RECORD in connection with an editorial which apeared on July 8 in the St. Louis Post-Dispatch.

Today I am including in the RECORD an editorial along the same lines from the Atlanta Journal of July 10.

I heartily approve of this editorial because I believe the pendulum is swinging too far against the development of our great waterways for the threefold purpose of navigation, flood control, and production of power, all for the benefit of the people as a whole.

The editorial follows:

LOBBYISTS

One of our most valued Washington services, Congressional Quarterly, edited by Henrietta and Nelson Poynter, informs us that at present 842 lobbyists are registered and plying their trade in and around the Capitol. These 842 legislative agents are seeking things either positive or negative, active or passive, commission or omission by government.

As evidence of the value put upon them by their employers, these lobbyists admit total salaries of $3,727,000 a year. But that is probably only a fraction of their earnings. About one-third of them report no salaries, saying their pay is contingent upon results or that they are operating only part-time at lobbying and cannot allocate the portion of their stipends attributable to that activity.

So you may see that the art of making friends and influencing legislation is a pretty big and growing industry in the precincts of Capitol Hill. The cold, statistical facts, taken from official sources, give especial point to certain recent comments made by Drew Pearson, Thomas L. Stokes, and other uninhibited correspondents. There doubtless are those who suspect Messrs. Pearson and Stokes of nagging some of the big interests, but the evidence in the record supports their charges of powerful organized pressures, especially in behalf of the electric-power industry, the railroads, and the associated real-estate agents.

This newspaper feels a high interest in these activities which concern the Tennessee Valley Authority and public power. We have commented from time to time for more than a year on the Nation-wide propaganda drive whose aim obviously has been to discredit TVA in popular esteem, and in Congress to hobble and handicap it by legislative action.

We are familiar with all the arguments that are brought against TVA, and yet, giving them the full weight due, we believe that TVA is a great success, a national asset, and should be continued in operation in accordance with the congressional act by which it was established.

We are familiar with all the arguments in favor of the private ownership of electric utilities and yet we still believe there should be further utilization of the Nation's rivers and their valleys for the public benefit in the manner of TVA.

It has been disturbing, then, to learn of the operations of the lobbyists for the electric companies in their endeavors to rip TVA and balk any further development of hydroelectric power by the Government. Especially disturbing is the skill of the lobbyists. Fourteen of them are registered and their capability is attested by the fact that they admit to an average salary of $19,170.

The most intense activity of these lobbyists which was obvious to the naked eye was brought against the House Appropriations Committee in its consideration of funds for public power projects in the Interior Department bill. This was carried on by the National Association of Electric Companies, which has 110 member companies operating in every State except Maine, Iowa, and Nevada. Only part of the pressure was applied from Washington. More effective probably were the pressures which were organized in the districts and home communities of the Congressmen.

This form of direct action can bring terror to the heart of a timid representative fearful of a hard race for re-election. To receive letters from bankers, merchants, and captains of industry at home, urging him to oppose socialistic experiments and to stand stalwartly for free enterprise and rugged individualism, give him pause in the manner calculated by the organizers of the propaganda.

As it stands, the lobbyists have done well for their big business clients at Washington since the turn of the calendar. The job has not been completed in the matter of public power, for the Senate is yet to take a whack at the legislation.

But the accomplishments are such as to suggest that a congressional reaction has occurred and it is time for the people to stop, look, and listen.

Skillful propaganda is swinging the pendulum; it may be further than the public is aware.

Worcester Housing Authority Praises Bill

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 15, 1947

Mr. DONOHUE. Mr. Speaker, under leave to extend my remarks, I wish to include an article from the July 11, 1947, issue of the Worcester Telegram. This article comments on the testimony of Mr. Raymond P. Harold, chairman of the Worcester Housing Authority, given July 10 before the House Veterans' Affairs Committee at an open hearing on H. R. 3565, a housing bill which I introduced in the House of Representatives:

The article follows:

PRAISES REPRESENTATIVE DONOHUE'S VETS HOUSING BILL

WASHINGTON.—Raymond P. Harold, chairman of the Worcester, Mass., Housing Authority, yesterday told the House Veterans' Affairs Committee that the veterans' housing bill filed by Representative HAROLD D. DONOHUE, Democrat, from Worcester, "seems to offer the most workable and least expensive means of easing the veterans' housing shortage."

"As chairman of our housing authority in Worcester, I have had a close-up view of the desperate plight into which some of our ex-servicemen have been forced," he said.

"From reports, also, I am sure that our problem in Worcester is only a fair sample of that existing in most cities and towns of the United States. Anyone who has actually reviewed the cases of such distress will agree with me that something must be done to relieve them. Also, anyone who has figured the various ways and means under today's excessive building costs realizes that the job cannot be done without some kind of governmental aid.

"The plan DONOHUE proposes," he said, "has the merit of calling for the use of Government credit, with good prospect that the loan will be repaid with interest, instead of requiring a grant or inviting the waste that always accompanies construction by the Government itself.

"Briefly," he continued, "the bill is an amendment to the Servicemen's Readjustment Act of 1944. It would make funds available to local or State housing authorities, groups of veterans, or others, organized as limited dividend corporations, in proportion to housing needs and veteran population.

"Funds would be advanced," he said, "at the rate of $1,000 a room, or 50 percent of cost, whichever is less, for the construction of up to 200,000 multiple-housing 4- to 6-room rental units. Funds so advanced by the Government would constitute secondary charges on the rental projects, with interest and principal payments deferred until first mortgage obligations were all discharged."

MANY TO PARTICIPATE

"Any qualified public or private agencies may participate in building and financing rental homes for veterans under the bill's provisions," he said. These agencies include any bank, Federal savings and loan, or building and loan association, insurance company, real estate or builders' corporation, veterans' cooperative, and any groups of citizens representing the civic, business, or industrial life of a community.

"It is anticipated," he said, "that most of the applicants for assistance under this plan would be municipalities. To the city or town that has been struggling to keep faith with its veterans and at the same time avoid a ruinous advance in the local tax rate, this solution will come as a godsend."

After careful calculation, our housing authority is convinced that it can build comfortable, healthy units to rent for $35 to $45 a month, depending on size, he continued.

"With the 10-year exemption from city taxes and with most efficient use of the city's various services, we could amortize half of the project cost in not more than 32 years. At that time, the Federal Government would hold the prior lien.

"While no one can say precisely what the value of property will be 32 years hence," Harold said, "experience indicates that buildings that have been well-constructed and given good care retain a very considerable value for beyond a 32-year period."

DWELLING STRUCTURE

"Each dwelling structure contemplated in the Donohue bill would be of not less than four dwelling units," he said, "with a minimum of 12 dwelling units in any one community. Safe, sanitary, and complete living accommodations must be supplied, and each unit must consist of not less than four rooms, of which two shall be bedrooms; nor more than six rooms of which three shall be bedrooms," he said.

"The following construction and financing provisions are specified," he said. "Project plans must have approval of the veterans' administrator. An approved local public agency or corporation sponsoring a project shall agree to complete it in accordance with approved plans. Such agency or corporation shall have a paid-in capital fund of not less than 5 percent of the project cost, with dividends on this capital stock limited to 4 percent per annum. The first mortgage shall bear interest at a rate not to exceed 4 percent, and it shall be amortized at the rate of at least 3 percent annually."

Annual net profits, he said, after taxes and amortization of the primary obligation shall be allocated: 1, to payment of any arrears of interest or amortization of the primary obligation; 2, one-half of remaining net profits

to a reserve for contingent losses until this reserve equals 10 percent of the project cost; 3, 10 percent to a reserve for amortization of secured obligations.

INTEREST RATE

"A government loan on a project may be repaid with interest at the rate of 2½ percent per annum," he continued, "at any time after 10 years from the date of project completion if it is established that emergency need of rental homes for veterans no longer exists. Partial repayments of the Government loan may be made at any time. This appears to leave the way open for sale of the project after 10 years, or to retain it and repay the Government on the same basis as applied to amortization of the primary obligation, namely, at least 3 percent principal payment yearly."

The bill specifies exemption from real estate taxes and other local assessments for a period of not less than 10 years. If local or State law does not permit tax exemption, then taxes and assessments shall be paid without cost to the project operation or by reducing first mortgage interest by an annual amount sufficient to pay such taxes and assessments.

To insure fair distribution of Government funds for veterans' rental housing, loans would be distributed between counties on the ration between the number of veterans living in the county and the total county population. The same basis of apportionment would be used between States, Harold maintained.

President Truman Misrepresents the Housing and Rent Act to the Detriment of the Public

EXTENSION OF REMARKS
OF
HON. JOHN C. KUNKEL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 15, 1947

Mr. KUNKEL. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the RECORD the following remarks on the Housing and Rent Act of 1947:

When the President signed the Housing and Rent Act, he attached a long message containing many misrepresentations. These were so glaring and obvious that they reflect either on his intelligence or his integrity—one or the other, or both. For instance, in respect to the 15-percent increase which can be made only by voluntary agreement between landlord and tenant, the President said: "This is voluntary only so far as the landlord is concerned." Actually, the tenant is completely free to negotiate as to any percentage increase as long as it is less than 15 percent. He can negotiate as to the length of the lease—18 months, 2, 3, or 5 years. He can bargain about improvements. If he cannot secure a satisfactory arrangement, then he can tell the landlord flatly that he will stay in until March 1, 1948, avail himself of the protection given him by the present law, and take a chance on perhaps having an additional extension of rent control for a new period.

The President's own appointee, the Housing Expediter who is administering the act, Frank Creedon, issued a statement. Mr. Creedon said: "Both tenants and landlords are afforded protection under the terms of the act * * * Its provisions will prevent unwarranted increases in rents and unlawful evictions." And further: "It is up to the tenant to decide whether he wishes to sign such a lease * * * the new law states that the lease must be entered into voluntarily and made in good faith * * * Control of maximum rents remain just where they were under the old law * * * there is no provision in the new act that changes rents automatically * * * nothing in the new law invalidates a lease now in existence." Mr. Creedon said there were "specific protections" in the statute against evictions. Quoting again: "The tenant who continues to pay the rent to which the landlord is entitled and lives up to the obligations of his tenancy generally, has no more fear of eviction than before." Mr. Creedon issued this analysis only 4 or 5 hours after the President's message was presented to the Congress.

The President protested against the removal of controls of building materials. Yet all the witnesses before our committee, Government, and others, all stated that these materials were in ample supply at present, with one exception. This exception was taken care of in conference before the bill was finally approved.

Of course, Mr. Truman's message was a purely political gesture made for political effect. It does not worry either the Congress or me personally, to receive a verbal spanking from Mr. Truman. If he wants to play politics with these messages, that is his responsibility, as long as it does not create impressions which will hurt the general public. But this has had, and was bound to have, the unfortunate effect of giving landlord and tenant a completely erroneous idea of the new law to the worry and disadvantage of both. This is proven by Mr. Creedon's statement which is in complete accord with the outline given in my radio talk a few weeks ago, and it is further proven by careful reading of the law itself. Those who pay any attention to Mr. Truman's utterances on the subject, if landlords, will find themselves in legal difficulties; if they are tenants, they may make commitments or arrangements thinking they do not have the protection which the law does accord to them. I hope no one in this area, either landlord or tenant, will be led astray by what the President said.

There is no authority in the Constitution for the President to send critical messages along with bills he signs. The net effect is to undermine the law he has approved and which he has taken an oath to support. I feel that statements such as these are entirely improper coming from one who is sworn to administer and execute the law.

The President repeated this process of criticism when he signed the Treasury-Post Office appropriation bill. All this, despite the fact that the Congress has gone to every length to cooperate with the President, particularly in respect to his foreign program.

While President Truman's vetoes have cause the most comment, the text not only of his veto messages, but also of the messages accompanying laws he has signed, have caused much resentment in the Congress. In vetoing the labor bill, the President attacked every one of its many sections, thereby making it clear that no legislation whatever on this subject could hope to secure his approval. This all-inclusive attack was undoubtedly one reason why his veto was overridden. His criticisms of its "unworkability" give rise to misgivings about his intentions to administer it well. They also encourage disrespect and opposition to the law. This may be good politics but it is bad for the country.

Mr. Speaker, the above analysis is substantially the one presented by me over radio station WHP on July 6, immediately after the message had been delivered.

Export Controls

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 15, 1947

Mr. GAVIN. Mr. Speaker, if anything more had been needed to demonstrate the dangers of granting again the unlimited authority to control exports it has been supplied by the Department of Commerce. In response to public and congressional demand that exports of petroleum, especially to Russia, be stopped, the Department restored petroleum to its controlled list just before June 30. Now it has admitted through its Under Secretary William C. Foster, that it went ahead and issued licenses for still further shipments.

The Navy complains of inability to get fuel oil in California. The Department of Commerce licenses shipments of fuel oil to Russia. This is the same Department that was supposed to control shipments of steel abroad but has permitted the pipe needed by our oil and gas industries to go abroad in unprecedented amounts. There is a shortage of that material here and the spot interruptions in supply in the United States is conceded by all to be due to such shortage.

The Congress must decide soon what course is to be followed on controlling exports. I understand authority has been extended until March 1, 1948.

There should be no further extension of full authority to license the export of materials we need, particularly petroleum, and especially to a country whose political and military aggressions we are supposedly trying to stop by exporting our dollars. Those in charge of the export controls have demonstrated a contemptuous disregard of the expressions of Congress. They should not be trusted further.

Better Than No Law

EXTENSION OF REMARKS
OF
HON. HUBERT S. ELLIS
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 15, 1947

Mr. ELLIS. Mr. Speaker, in view of the widespread misunderstanding of the labor law passed recently by the Congress, it is refreshing to find an editor now and then who evidently has observed the history of the legislation and presents a sound statement in respect to its enactment.

Cooperation on the part of the opponents would have been tremendously helpful. Unmovable opposition to the correction of any abuses whatsoever made intelligent legislation very difficult.

I submit for your consideration an editorial by Mr. Clyde A. Wellman, editor of the Huntington (W. Va.) Advertiser.

The editorial follows:

IMPERFECT LAW

The new labor law, which Congress passed over President Truman's head and, as a consequence, stirred a greater emotional storm than it has by any other action in years, is not perfect. None of its supporters at any time claimed it to be perfect.

But it is better than no law at this time to lessen discord in labor-management relations. And it won't destroy the unions and put labor in chains, as its well-organized opposition argued. It won't for the simple reason that there are clear provisions in the Constitution to bar destruction and enslavement.

One reason for the law's imperfections is that the opposition was unmovably opposed. It was irreconcilable to any labor legislation Congress might pass. The law was written with no assistance or advice from the labor leaders invited to appear before the committees responsible for drafting the bill. None of them admitted any unfairness or abuses in union management and practices. Any suggested change was denounced as restrictive. There was much name-calling, but nothing constructive from the labor leaders appearing before the committees. They simply were opposed to any labor law being enacted, and that was that.

Except for this negative attitude, the utter lack of any cooperation from labor's own leadership, Congress no doubt could have produced a better bill than the one the executive branch of the Government now has to enforce.

Capitol Lights and Reflections

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 15, 1947

Mr. GATHINGS. Mr. Speaker, under leave to exend my remarks in the RECORD, I include the following article from the Christian Science Monitor of June 17, 1947:

CAPITOL LIGHTS AND REFLECTIONS

(By Harlan Trott)

WASHINGTON.—One of the pleasant impressions of Washington to a returning stranger is the first glimpse of the Capitol dome at night. Rising white and austere and serene, it seems to symbolize the city's quietness and cleanness.

It is surprising to see how many State capitols resemble it at a distance, particularly Arkansas' in Little Rock. Although the mellowed, settled air of time surrounds it, these old steel engravings show that the Capitol dome was still unfinished when Lincoln took the President's oath. Even so, a lot of American history has seethed around it, as all the vast array of cast-iron equestrians scattered around Washington's 750 parks testify.

It would be interesting to see a census count of the statues that impart their solemn dignity to the Nation's landscape—not counting that Army of stone sentries of Civil War vintage that have been eyeing village traffic as far back as when a discerning sight-seer by the name of Lord Bryce recorded his impressions of the American scene.

At Shiloh, Tenn., where the Interior Department maintains a fine military park, you can hardly see the forest for the monuments different States have erected there to memorialize the valor of their native sons, North and South, who fought there. And on the field of Gettysburg, there are nearly 1,000 commemorative markers.

Uncle Sam must spend a good deal of time just sharpening the lawnmower, what with 30,000 acres of parks to keep up right around Washington. At the moment, the Park Service is dismantling the two unsightly second-story footbridges spanning the Lincoln Memorial reflection pool between the Navy Department and those temporary buildings that housed its Bureau of Supplies and Accounts during the war.

The Federal Communications Commission and the OPA—or the little that's left of it—are moving in. The Government is trying to compress all its activities within Government-owned buildings. When these two agencies move into the former Navy offices, the Government will have reduced its rented office space from 6,000,000 square feet to 4,000,000.

Anyway, the bridges are coming down so that soon the reflection pool will once more mirror the Grecian temple which houses Daniel Chester French's colossal likeness of Lincoln.

What would Louisa May Alcott have said had she lived to gaze up into the great carved face, recalling the day when she gave the boy in Concord a sculptor's tool. It is not hard to imagine—seeing this seated Lincoln and remarking how genius flourished from such a homely beginning as that which first inspired young French to fashion a bullfrog from a turnip.

It was another Concord resident who said something to the effect that if you carve a better likeness than your neighbor, you'd never have to mow your own path. Incidentally, their times touched, for didn't Emerson—stroking his chin approvingly as he surveyed the young sculptor's bust of him—remark, "Yes; that is the face I shave every morning."

The proof is in the Park Service's 1946 statistics. No fewer than 995,957 pilgrims paused before the compassionate gaze that French breathed into this sublime conception of Lincoln.

These figures testify not only to the deep Lincoln appeal but to the wide citizenship of the Capital. A policeman's whistle brought this home the other day. Intercepting two pedestrians in the act of disobeying a traffic light, the policeman had to hear all about "the way we work our traffic signals back home."

You can taxi anywhere in the central zone of the Capital for 30 cents, but it costs $2 to walk across the street against the light—if one of Washington's polite policemen should catch you.

Address at Annual Picnic of Southern Wisconsin Cheese Association

EXTENSION OF REMARKS
OF
HON. GLENN R. DAVIS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 15, 1947

Mr. DAVIS of Wisconsin. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address made by me at the annual picnic of the Southeastern Wisconsin Cheese Association at Juneau, Wis., on July 13, 1947:

Down in Kentucky they tell a story of the farmer up in the hills who owned an old plug of a plow horse that he paid $1,000 to enter in the Kentucky Derby. This old plug, of course, had no chance of winning and the farmer's neighbors went around shaking their heads and wondering why anyone would want to pay $1,000 to enter an ordinary old plow horse in the Kentucky Derby. Finally one of the neighbors got up the courage to ask and the answer he got was, "Well, I knew that old Dan didn't have a chance to win, but it was worth that much money to me just to see him in such good company." That is about the way I feel about getting back here to Juneau today—that it is worth a lot to me to be in such good company. We think of people as being "good company" when they are interested in, and think about, and do the same things that we do.

When we mention cheese in Wisconsin, we are talking about something with which we are all familiar, and something which certainly merits our interest and concern.

By traveling a few miles in three different directions from Juneau we can reach the three most important centers of the cheese industry in the United States. Just a few miles east of here, within the boundaries of this county, is Mayville, the center of the foreign-type cheese business in America. To the south is Monroe, the Swiss cheese capital of the Nation, and to the north is Plymouth, the cheese market where the price of American cheese for the entire country is determined. Right here, in this county of Dodge, nearly 90 percent of all of America's brick and Munster cheese is produced. Of cheese of all types produced in 1946, the State of Wisconsin produced 525,000,000 pounds, representing one-half of the Nation's total output, and a 2 percent increase in production over 1945, the highest previous year.

Out of 3,760 cheese manufacturers in this country last year, 1,941, or more than half, were operating in this State. Wisconsin, as anyone who looks at one of our automobile license plates can tell you, is known as America's Dairyland. It is also, in truth, America's Cheeseland.

Cheese is one of the oldest known prepared foods of man. The Old Testament contains numerous references to cheese. I don't suppose that the early Jews or the Romans could have told you that cheese is rich in vitamins, proteins, in fats and in minerals (especially the all-important phosphorus), or that a pound of cheese contains more of these essential components than is contained in a pound of meat. But the Jews and the Romans did know that for some reason or other cheese was a highly beneficial food. It was a part of the regular rations of their armies. The early Greeks provided their wrestlers with cheese to give them endurance.

Up in Pierce County they will tell you that it was Wisconsin cheese and butter that stopped the Germans at Stalingrad, and if Clyde Chapman of Dairyland Co-op is here in the audience this afternoon, I am sure he will verify this story.

All of us here recall the seemingly unstoppable drive of the Germans to the suburbs of Stalingrad. Now, it so happens that at this crucial moment of the war, the first lend-lease shipments of cheese from Plymouth, and butter from up in Pierce County, reached the defending Russian armies. It is a matter of history that the Russians held their ground, and then took the successful offensive which ended only when Germany was beaten. Some people will say that is a mere coincidence, but up around Elmwood they will tell you that there is no question but what there was a direct cause and effect relationship. It is true that battles have been won or lost by lesser things and that I have heard arguments with less factual basis made on the floor of Congress.

From that day in April 1864 when Chester Hazen opened the doors of Wisconsin's first cheese factory at Ladoga, the Badger State quickly forged to the front as a cheese producer. During the last 15 years we have almost doubled our production. Wisconsin's cheese industry fully fell into step with the

demands for greater and greater wartime production. There was no marketing problem—the demand always exceeded the supply. Cheese was used to fill the gap caused by the faltering meat supply. The millions of men and women in the armed forces throughout the world received cheese as part of their rations. Now we are approaching a buyer's market. Government purchases have declined. European countries are going back into cheese production. They are attempting to gain back the American market for Edam, Roquefort, Camembert, Italian, and other foreign type cheeses they enjoyed before the war. They are attempting to use this means to obtain some of the dollars these countries so badly need for their trade balances. In the final analysis, they will succeed only if American cheese producers cannot continue to compete in quality and salesmanship with their foreign competitors.

The American cheese producer continues to be blessed with a firmly expanding domestic cheese market. American per capita consumption of cheese last year was about 7 pounds, the highest in history. This represents a 100-percent increase in the last 50 years. The wartime habit of cheese eating among both civilians and servicemen has continued into the postwar years. This healthy condition deserves greater efforts for greater expansion. It is a job of quality production and salesmanship. The Swiss people have an annual per capita consumption of 16 pounds; the Dutch 14; the Danes 13; the Italians 12. Even the meat-loving Britishers have a per capita cheese consumption of one and one-half times that of Americans.

I remember a few years ago, when I was teaching school at Waupun, I lived in the home of two elderly ladies who kept two covered dishes on the dining-room table at all hours; one contained crackers and the other cheese. To them, and before long to me also, cheese was considered a delicacy far better than nuts, or candy, or fancy fruits.

I am stating nothing new or different when I say that the greatest marketing asset of cheese or any other product is the ability to offer a standardized product of high quality. Wisconsin has long been famed for the grading and branding of cheese. There are still many individual cheese manufacturers who consider cheese making an art and not a science and who find it hard to reconcile themselves to making cheese in accordance with any set procedure. But through continued research and competition with the large-scale marketeers of processed varieties the industry is becoming more and more standardized. Consequently, the purchaser can rely upon one pound of Wisconsin cheese of any particular type being more and more similar in texture and flavor to the previous pound, or the next pound, purchased. This is a necessary development. Too frequently have housewives been passing over the superior natural cheese in favor of the standardized processed cheese which often has a lot of other things besides natural cheese mixed with it but has been made with a fixed process and has been made palatable and attractive looking.

If we agree with the necessity for this standardization, we must, I believe, also agree that pasteurization of milk for cheese is an inevitable development. I don't know whether the time for 100-percent compliance with that development has arrived. I do know that dairy specialists in Wisconsin and Minnesota in recent issues of trade papers have predicted that in the near future all cheese will be made from pasteurized milk. It is well known that bacteria found in raw milk sometimes survive in cheese. Pasteurization can remove that risk in natural, unprocessed cheese. Several States, including New York, New Jersey, California, Illinois, Indiana, and others, now have such requirements.

Perhaps it is presumptuous for me to make these few suggestions to you. Many of you have been connected with this industry for many years, some of you for practically your entire lifetime. It is because I want our State to continue to be known as not only the State that produces the most cheese but also as the State that produces the best cheese, and because I believe it is important to all of us in this State that every pound of cheese be of top quality that I take the liberty of making these suggestions. Quality along with sanitation is the phase of the cheese industry that every individual producer can control.

Now, to diverge from the specific subject of common interest which has brought us together here today, I would like to spend the remainder of my time on a subject that is, I am quite sure, of general interest to all of you. That is a brief summarization of the activities of the Eightieth Congress thus far.

In my opinion, the outstanding contribution of this session of Congress has been to make substantial strides toward taking the Federal Government off the backs of the people. By the time Congress adjourns late this month it will have slashed Federal spending by about $4,000,000,000 for the next fiscal year. It has not been an easy task. Let no one be mistaken about that. The Congress, and particularly the appropriations committee have been hindered, blocked and undermined in their efforts at every turn, by a stubborn and persistent bureaucracy. Let me cite a few examples, with which some of you are already familiar. Last March and April some of you received notices from the Milwaukee Post Office that certain mail was being delayed because of lack of funds for hiring sufficient help. You saw in your Milwaukee newspapers headlines to the effect that some 250 temporary employees had been released. The inference was that economy was interfering with the postal service. What they did not tell you was that the postal department was then operating under appropriations which were made in 1946, and that the present congressional economy efforts, therefore, had no connection with this alleged curtailment. Nor did they tell you that it was not until May of this year that the postal department came before Congress to ask for any appropriation to make up their deficiency. The representative of the postal department at that time repudiated the actions of the local postal authorities.

We have been flooded with mail and criticized in the press because of decrease in appropriation for the Bureau of Internal Revenue. Inspired propaganda has attempted to create the impression that the enforcement and investigation of tax collections would be severely crippled. The fact of the matter is that the appropriation for this function was curtailed by less than 4 percent, and this because much of the difficult immediate postwar tax work no longer existed.

You have been told that the Antitrust Division of the Department of Justice has been crippled at a time when business monopoly is growing. This is more than propaganda; it is deliberate falsehood. The appropriation for the Antitrust Division was increased by more than 25 percent. Every Congressman has had letters and received personal calls protesting the elimination of certain Federal jobs. To continue our efforts in behalf of Government economy in the face of this opposition was not easy, but continue we did. It is safe to say that there will be 100,000 less Federal employees by September 1 of this year. Several of my personal friends from Wisconsin, who are in various bureaus and departments in Washington—fellows that I had gone to school with—have told me that only the surface has been scratched; that there is still a lot of fat that needs to be removed. We are pledged to pare the Federal bureaucracy by half a million by the end of 1948.

At the suggestion of Congressman WALTER NORBLAD, of Oregon, a very pointed cartoon has appeared in a number of newspapers throughout the country. The first scene shows a delegation of people demanding economy in Government spending. The second scene, a few weeks later, shows the same people back to protest against economy which has stepped on their particular corns, demanding that the "economy wave be started somewhere else." This, I might add, is too typical to be really humorous.

Many times we have heard speeches urging greater appropriations for some particular agency delivered on the floor of the House by Congressmen who have had those speeches prepared for them by the paid press agents (they call them public relations officials) of the particular department or bureau whose appropriation happens to be before the House at that time.

These instances show why I believe that $4,000,000,000 worth of savings to the taxpayers of this country represent an outstanding achievement.

We are attempting to pass some of these savings on to the 1948 taxpayers. Most of you will recall that the previous attempt was defeated by the President's veto. The new attempt simply delays by 6 months the effective date of the tax reduction. The House passed this revised tax measure last week by a vote of 302 to 112. It now is in the hands of the Senate. President Truman has said he will veto this proposal also. He has insisted that the measure gives too much tax relief to the large taxpayer and not enough to the small taxpayer. A comparison of the proposed tax schedule under this bill with the existing tax in 1939, the last year before we went onto a wartime tax schedule, shows that this measure would be proportionately more favorable to the small taxpayer than were the income tax schedules of 1939.

A second major achievement of this Congress has been to restore a measure of equality to the relationship between labor organizations and employers. The Labor-Management Act of 1947, which was passed over the President's veto, removes a great many of the faults which have grown up since the original Wagner Act that was passed in 1935. Many of you have had your milk dumped in the road to run down the gutter while the children of nearby cities went without milk, simply because some milk truck-driver or processing-plant worker refused to join a particular labor organization, or because one of your cooperative dairy plants refused to sign a closed-shop agreement. This legislation strikes at these and similar evils.

No one asserts that the Taft-Hartley law is perfect. That is why a commission of 14 members has been set up under the law to provide for continuing revision as defects in existing legislation are exposed. Surely those who have refused to give a single positive suggestion for the improvement of the Wagner Act should be the last, instead of the first, to criticise every single provision of the Taft-Hartley law.

This Congress has also passed the so-called portal-to-portal law. It prohibits the bringing of suits which, if successful, would wipe out thousands of business establishments in America.

There is now pending before the House of Representatives a bill by Congressman REID MURRAY, of Waupaca, which would compel the Department of Agriculture to support the price of milk on a basis of 90 percent of parity. We have had this support in theory, but the Department of Agriculture has sidestepped its responsibility on several occasions. Congressman MURRAY'S bill has the support of every Wisconsin Congressman. It has been favorably reported by the House Committee on Banking and Currency, and will help to insure a fair price for the most

important single item in the income of our State.

I have not attempted to read the roll of the enactments of this Congress. I have attempted, instead, in the short amount of your time that it has been my intention to take, to mention some of the high lights of what I think will generally be considered one of the most fruitful sessions in many years.

The Congress will, within the next few months, be called upon to decide its gravest question since December 8, 1941. Secretary Marshall and his aides have been holding a series of secret conferences with the leaders of Congress regarding the so-called Marshall plan for the rehabilitation of some 50 countries of the world. It has been suggested that this vast project will drain America of her substance to the extent of more than $20,000,000,000 during the next 5 years. A study is now being made to determine to what extent America can, with safety to our resources and reserves, participate in such a plan.

I do not believe this grave decision will be made this year. I hope not. I want the people of this district and of the entire country to have a chance to think, to read, and to discuss this problem. We need to know the extent of the need, the objectives, and the prospects of such a vast program. I hope it will be debated in every town hall in America before Congress reconvenes in January. Its resolution will require all the thinking and all the information that can be mustered. Every Member of Congress will need the help of the people of his district in making his decision, and, above that, he will need the help and guidance of Him who gave us courage in the grave trial of war, and must now give us wisdom in this grave hour of peace.

No Money for "Down Under"

EXTENSION OF REMARKS
OF
HON. PETE JARMAN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 15, 1947

Mr. JARMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Post of July 13, 1947:

NO MONEY FOR "DOWN UNDER"—OUR SILENT SALESMEN ARE GETTING THE GATE

One of America's wartime links with the people of the Southern Hemisphere will be broken this week, by order of the State Department.

Padlocks will be snapped shut Wednesday on the American information libraries in Sydney and Melbourne, Australia. Later this month, similar libraries in Wellington, New Zealand, and Johannesburg and Capetown, South Africa, will close their doors—for lack of funds.

Congress slashed the State Department appropriations so deeply that the department officials decided to abandon the dominion libraries. Each of them cost about $30,000 a year.

MORE THAN BOOKSHELVES

In the scholarly sense of the word they were not libraries at all. They were primarily reference centers and reading rooms, where anyone seeking facts about any phase of American life could find them in books, periodicals, and Government documents.

To make them accessible they were located on downtown streets to help inquirers, and reference assistants were put in charge.

This was something new in American foreign relations, but it worked. Almost from the moment the Office of War Information established the libraries, visitors crowded in at a rate of about 3,000 a month at each of them. In addition, information rippled out to the press, to universities, and to a public that had learned most of what it knew about America from Hollywood.

Henry Seidel Canby, then editor of the Saturday Review of Literature, was in Melbourne the day President Roosevelt died. He described what happened as follows:

"Every newspaper in that part of Australia began to telephone the information library. What was the procedure of installing a new successor? Who would be his successor in case of Mr. Truman's death? What effect constitutionally might this tragedy have upon American policy? What was the relation of the Chief Executive to Congress? Where had Mr. Truman stood in his political activities? What was he like?

"The result was the best and most accurate and most thoroughly informed newspaper coverage of a world-important event in another country that Americans then resident in Australia had ever seen."

SPARED BY CONGRESS

This was not outright propaganda at all, yet Dr. Canby and others described it as propaganda in the best sense of the word. Every American diplomat stationed in the dominions, and the dominion governments themselves, praised the libraries for what they did to make the United States better understood.

Even in Congress there was seldom the slightest criticism of the libraries, although other activities of the OWI and the State Department were attacked without mercy. The Mundt bill, passed by the House by a 3-to-1 majority, authorizes the continuance of information libraries abroad, and the State Department plans to maintain most of them in Europe and Asia.

Why were the dominion libraries the first to go? Congress did not decree it; department officials decided it on their own. Officials are reticent about the reason, but as nearly as can be gathered they did it because the dominions were farthest from Moscow. Since there was not enough money to continue information work everywhere abroad, it will be continued in those places that are more directly in the path of Soviet penetration and propaganda.

By this process of reasoning, it was judged more important to inform Bulgaria than Australia, Egypt than South Africa, Iraq than New Zealand.

A WARTIME NECESSITY

It was not always so. Early in the war when hundreds of thousands of American troops were stationed in Australia, it became apparent that the dominions had been badly and wrongly informed about the United States. One or two mass-circulation newspapers were distorting American attitudes and policies almost as bady as Communist propaganda in Europe distorts it today. In South Africa there was an active pro-Nazi movement which never ceased its sniping at the United States, especially among the Afrikaans-speaking population.

There was no teaching of American history in the dominions, and precious little knowledge of it. There were few American visitors, and little opportunity to get American books, magazines, or newspapers. With widespread ignorance there was also much suspicion and misunderstanding.

New Zealand still has not a single resident newspaper correspondent in the United States; South Africa has just one; both countries, and Australia, still clamor for the kind of material the libraries supplied. Prof. Ralph H. Gabriel, of Yale, who taught for a year at Sydney, said the other day that their loss would be a disaster.

FERDINAND KUHN, Jr.

Do We Want a Wool-Growing Industry in This Country?

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 15, 1947

Mr. MANSFIELD. Mr. Speaker, the wool industry in the United States is in a very precarious position. It is vitally necessary that this Congress consider carefully and pass the wool bill, which I hope will be before us shortly. If this Congress does not give this needed assistance to this industry, we can expect it to decline still more. This would be disastrous to the country and is something we should not allow. The wool industry is entitled to the protection guaranteed in the bill unanimously reported out by the Agriculture Committee, and I sincerely hope that we will pass this measure before adjournment.

Mr. Speaker, I am inserting at this point in my remarks a statement of facts concerning the sheep industry as compiled by Mr. Carl O. Hansen, secretary of the Montana Wool Growers Association, and published by many papers in my State of Montana. I recommend its reading to the membership because it states briefly our position and the need for assistance by the wool industry:

FACTS CONCERNING THE SHEEP INDUSTRY

(By Carl O. Hensen, secretary, Montana Wool Growers' Association)

MONTANA SHEEP NUMBERS

Sheep numbers in Montana have been declining steadily from nearly 4,000,000 head in 1942 to less than 2,000,000 head at the present time. This alarming liquidation is based on a number of factors, but lack of profit is the principal reason for sheepmen going out of business. Other factors include the labor shortage and the uncertain future for the industry.

UNITED STATES WOOL PRODUCTION

The United States produces, at the present time, only 300,000,000 pounds of wool annually and our annual consumption for the past several years is approximately 1,000,000,000 pounds. The United States has always depended upon imports to satisfy its demand for wool. In normal times the United States produced approximately two-thirds of its consumption.

WOOL IN TIME OF WAR

Army and Navy officials have testified that a domestic wool industry is absolutely necessary for the proper defense of the country during wartime. They are convinced that something should be done now to assure the United States a strong industry and a suitable reserve of domestic wool. During the war, wool was stock-piled for our security and wool growers were encouraged to stay in the business. To do this the Government purchased all domestic wool at a set price. Now after the war, certain interests not sympathetic with the wool industry are willing to sell the wool grower down the river, since the wartime purpose has been accomplished. Others who are more farsighted realize the need for a healthy domestic wool-growing industry in the event that there might be future wars. Naturally if we are to maintain a wool industry, wool growers will need some type of support, because they have to compete with foreign wool. The British Joint Organization controls the world wool market

and can undersell our domestic wool growers within 24 hours' notice no matter what the wool market is in this country. The reason for this is quite simple. The cost of production in this country has risen tremendously since before the war. In Montana these costs have doubled and labor costs have increased 158 percent. Americans have the highest standards of living of any country in the world, so in any kind of times, it will cost more to produce domestic wool than foreign wool.

ESTIMATED INCOME FROM WOOL AND LAMB IN MONTANA

The estimated 1946 income from wool in Montana was $10,005,000 from 22,234,000 pounds of grease wool. The estimated 1946 income from lamb in Montana was $18,805,000 for 121,950,000 pounds of lamb.

PREPARATION OF FLEECES

Australian wool is considered approximately 10 cents per pound more valuable than domestic wool of the same grade, due to the superior method of preparing the fleeces for market. The Australians "skirt" all fleeces at the shearing pens. This procedure consists of removing the britch, leg wool and offsorts from the fleeces and packing this wool separately from the main body of the fleece. That makes the fleece uniform which is desirable from a selling standpoint. Australian wool is also graded at the shearing pens.

WOOL IN INTERNATIONAL TRADE

The British Empire has very little to bargain with when it comes to trading with this country with the exception of wool. The Governments of the British Empire appear to have a most selfish motive when trade agreements are discussed as far as wool is concerned. These governments want us to lower our tariff so that they can make this country a dumping ground for that product which is so extensively produced in these countries. They are not satisfied with supplying the United States with the amount of wool which represents the difference between our production and our consumption. However, the wool growers themselves in Australia have made statements supporting our tariffs and want to see our domestic wool growers protected. Our State Department appears willing to lower the tariffs and let the foreign wool come into this country and then subsidize our own domestic industry. There is this point about it. No matter what our domestic market is, the joint organization is going to undersell our wool just enough below our price to obtain the market. As we have said before, the Joint Organization controls the world wool market. They market about 80 percent of the world's apparel wool.

OUR WOOL STOCK PILE

The Government owns over 400,000,000 pounds of grease wool which it has been unable to sell because, according to law, it cannot sell wool at less than parity price. Foreign wool has been selling at a price enough lower to steal the market so the Government has been stock-piling the wool. The Government should be allowed to dispose of this wool at market prices and in an orderly manner so as not to upset the market. This is only fair to our domestic wool growers, because it is not their fault that we have this tremendous stock pile. It is simply an aftermath of war and the industry is a war casualty.

IT BOILS DOWN TO THIS

Do we want a wool-growing industry in this country or not? If we do, the only way we can have one is to give the domestic wool grower enough protection so that he can grow his wool and receive enough for it to pay his operating costs and have a reasonable profit. This can be accomplished by adequate tariff, import quotas or direct Government subsidy. If we do not have a wool-growing industry, it should be remembered that it would weaken the defense of this country and millions of acres of land which are adapted to sheep grazing and sheep grazing alone would be valueless and the source of income from taxes on these lands would be lost.

OPPOSITION TO THE DOMESTIC INDUSTRY

Certain members of the Boston wool trade who have derived substantial profits from handling foreign wool during the war would rather see the domestic wool industry liquidated. Profits to wool handlers on domestic wool since 1943 have been moderate because they were paid on a commission basis. These handlers who have made huge profits prior to the war at the expense of the domestic growers are opposed to a program that would protect the industry.

The wool trade has thousands of dollars to spend lobbying and on publicity that is detrimental to the domestic wool industry. In spite of this opposition, wool-growers' associations were able to convince Congress that their request for protection was based on facts and that the industry does need protection. Even though the wool legislation was turned down by the President, there is still hope of remedial legislation that will protect the industry through 1948.

Postal Retirement Bill

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 15, 1947

Mr. KEATING. Mr. Speaker, it is my sincere hope that the so-called Stevenson postal retirement bill, which has now been reported favorably by the House Committee on Post Office and Civil Service, will be approved promptly by the Rules Committee and brought to the floor of the House for action before adjournment. This measure has been redrawn to meet certain objections made by some of the members of the Rules Committee. In some respects, notably regarding the elimination of dependent children under 18 from the benefits of the legislation, I regret that this has been necessary.

The bill, however, certainly substantially improves the lot of a group of Federal employees whose faithfulness, devotion to duty, and quality of performance are unsurpassed either in governmental or private employment. This measure will afford to them, at a very slight cost, according to actuarial estimates, a modest increase in their retirement annuity. No one can doubt that this recognition is needed and, in my judgment, richly deserved.

Expand and Strengthen the ROTC Program in Our State Colleges and Universities

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 15, 1947

Mr. EVINS. Mr. Speaker, the Reserve Officers Training Corps has functioned in the colleges and universities of this Nation for many years and has served to provide trained men for the armed services of our country both in time of peace and war. The ROTC has been a popular and useful arm of service for our Nation's defense and it should be strengthened and expanded. In this connection, Mr. Speaker, I desire to include a letter from Dr. C. E. Brehm, president of the University of Tennessee at Knoxville, outlining the need for an expanded ROTC program and urging the passage of pending legislation to provide for the effective operation and expansion of the Reserve Officers Training Corps. I urge the members of this Congress to give thoughtful consideration to the contents of Dr. Brehm's message as his opinions represent the views of one of the outstanding educators of our country. The passage of legislation recommended by Dr. Brehm will greatly stimulate volunteer enrollment in the ROTC and serve to strengthen and build up the defense of our country. Action on this and similar needed legislation should be taken prior to the adjournment of the present session of the Congress. The letter is as follows:

THE UNIVERSITY OF TENNESSEE,
Knoxville, July 8, 1947.

Hon. JOE EVINS,
House of Representatives,
Washington, D. C.

DEAR REPRESENTATIVE EVINS: On April 29 there was submitted to the House a bill designated as H. R. 3280 which provides for Army ROTC activities in cooperation with the land-grant colleges. The proposed intent of this bill is to encourage ROTC enrollments in the various colleges of the country in order to provide officers for the Army and at the same time give military training to young men as a part of our whole national defense program.

If this bill is not enacted in this session of Congress, but held over until the next session, it will be rather disastrous for the ROTC program. By that I mean that it will receive a set-back that will require some time to overcome.

The War Department has given the colleges much assurance of the need of the postwar ROTC program and particularly along the lines provided in the ROTC legislation. By virtue of the interest of the War Department in this program and the belief that the proposed legislation would be enacted into law, the colleges have endeavored to encourage in every way young men to participate in the ROTC programs. For example, in cases of students in colleges with ROTC schools pursuing the advance course in military instruction, it is proposed to give each student monetary allowances at a daily rate not exceeding $1, plus the cost of the garrison ration of the Army for the number of days under instruction during the last 2 years of training.

We have a large number of veterans enrolled in the University who would make excellent officers due in large part to their war experience. Many of these students are unwilling to increase their academic load by taking ROTC courses unless some financial assistance is given. Last summer when it was rumored that postwar ROTC legislation would increase the emoluments to about $60 per month, we had a large number of applicants for the advanced courses, but when Congress failed to act, most of these students lost interest in the program.

At the present time we are adding three additional units to our program here, Signal Corps, Transportation Corps, and Ordnance, making a total of six units. We may not be able to secure enough students for all

of these units if the proposed legislation fails to pass before Congress adjourns.

It is our understanding that there is no real objection to the bill in Congress. It is just one of those that lies in a committee without any action unless someone gets behind it. It is for this reason that I am writing you.

We feel that enactment of this legislation will have a profound effect on the interest in the ROTC program in all the colleges where this program is under way, and certainly will have a big influence in building up a reserve of men who have had Army training as a part of our national defense program.

Anything which can be done to expedite action on this bill before Congress adjourns will certainly be a great stimulus to young men enrolled in the ROTC program.

Yours very truly,

C. E. BREHM,
Acting President.

A Free Society or the Police State

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 15, 1947

Mr. SMITH of Wisconsin. Mr. Speaker, I am including as part of my remarks a pertinent editorial which appeared in the Washington Evening Star on Monday, July 7, 1947. It clearly points out the issue involved in the world today. It is high time that we appreciate this problem:

THE ROOT ISSUE

In its latest statement on American foreign policy, the Federal Council of Churches has gone to the heart of our troubled times in declaring that "the critical and supreme political issue of today is that of the free society versus the police state." The statement—drawn up by a special commission headed by John Foster Dulles—does not offer any easy solutions, but it has the virtue of reminding us that much more than naked material power is involved in current world tensions. At the root of everything is the ideological or spiritual clash between two entirely different ways of life.

If Russia had the same political system as the United States and the other western democracies, if its people had liberty, if they could think, speak, write, assemble, and vote freely, the international situation today would certainly be far brighter than it is. There would be disputes, of course, and rivalries of one kind or another, but fundamentally there would be agreement on the thesis that the state exists for the individual and not the individual for the state—a thesis whose acceptance would enable all nations to move forward together in building a just and enduring peace. What poisons the atmosphere with fear and suspicion is that the Soviet Union, far from being democratic, is a totalitarian dictatorship run by a handful of men who brook no opposition, rigidly control all avenues of information, systematically employ distorting propaganda, and maintain themselves in power with the constant help of a ruthless and omnipresent secret police. Worse still, it is a dictatorship that makes the most of conspiracy, infiltration, and direct and indirect aggression to undermine the independence of other countries and extend its sway wherever it can throughout the world.

The Soviet system thus differs from our own as night from day, and unless and until it makes room for liberty we shall be hard put to get along with it. The Federal Council of Churches, however, is one with those who completely reject the idea of an inevitable war and who oppose national policies based on that idea. It holds that the United States can do much to meet the situation by launching a "moral" drive to impress upon peoples everywhere that we "stand on the principle of a free society as against a police state" and that we are ready to back that principle by word and deed at home and abroad, particularly with aid to nations "intelligently striving to help themselves and to help others."

Freedom attracts men generally. If we uphold it vigorously, we can succeed in rallying so many friends of it in Europe and Asia that the Russians, as a matter of expediency, may feel impelled to stop trying to extend its opposite. All this may be more easily said than done, but the Federal Council of Churches has offered timely counsel in advocating it.

Establishing a European Order

EXTENSION OF REMARKS
OF
HON. PETE JARMAN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 15, 1947

Mr. JARMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post of July 12, 1947:

ESTABLISHING A EUROPEAN ORDER

It is arresting to contrast the situation in Europe now and after the Napoleonic wars. Europe lay in chaos after Napoleon had been thrown out of Russia. Alexander I could have stayed at home, shut himself off from the world, and sought to repair the domestic ravages of war. But he refused to take the line of least resistance. This half-lunatic, half-genius of a sovereign was convinced that victory would be of no value for Russia without the reestablishment of a European order. And to him belongs the initiative for leading Europe back to pacification and what Secretary Marshall calls a working economy. Ferrero, the historian, gives the Russian ruler prime credit for saving Europe from suffering the fate of the Roman Empire.

But his successors, members of the Politburo, have different ideas. The veil came off their intentions when Molotov, invited to join in European reconstruction, not only said "No" but warned Europe against engaging on the adventure of reviving the old continent. Nobody, we fancy, will take any notice of the published reasons for Russia's refusal. That the great effort is a device, as Molotov sees it, to split Europe and invade the sovereignty of its members is, of course, utterly fantastic. Just the opposite is true.

It is solely because Europe saw yawning before it the fate of Rome that the nations are essaying this fundamental attempt to restore a continental system. The prospect alarms the men in the Kremlin. Men who prate the Marxist jingle, "From each according to his ability and to each according to his need," don't want to see it applied among nations, even though interdependence is the insurance of life. They want to see Europe kept on its back, divided and weak, so that it will be easier to tie to the Russian chariot. Out of fear the Europeans have hitherto allowed themselves to be bludgeoned by the Kremlin. Secretary Byrnes in his proposal for a 40-year pact and his famous speech at Stuttgart sought unavailingly to assuage the panic. In his time, so soon after Europe's trial by fire, the Europeans could not exert the effort necessary to shed the new toils in which they were being wound and bound. Time and Secretary Marshall have now shown them a way out.

The dazzling diplomatic initiative of Secretary Marshall was the stroke of the moment which bids fair to rescue Europe. The gathering today will comprise only half of Europe. But eastern Europe will be watching the work with the same eagerness that it betrayed before Russia slammed the door on its participation. It is our guess that the Poles and the Czechs will not quickly forget their public humiliation at the hands of their Russian masters. The Czechs in particular had been seeking to demonstrate their independence of Russian dictation. To be sure, they said, the Communists are in control, but they are Czech Communists, and they are wedded to the parliamentary system. There was no disputing the Czech contention—till (it will be said) now. Accordingly the fact that the Russians have cracked the whip is likely to cause a resentment throughout Czechoslovakia that bodes ill for the tightening and expansion of the satellite system. The way to encourage the Czechs to break away is for the men in Paris to show what can be done when men are seized with the urge of reconstruction in the interests of all. One result of Russia's obstructionism already is plain. By their panicky and egregious demonstration against Czechoslovakia the Russians have destroyed the model, the show-window exhibit, of a freely elected Communist organization of a western country which they hoped to sell to far western Europe.

The Paris Conference will not break up into working committees, we hope, before it nails down its unifying purposes in resolution form. The main job, of course, is for the expert committees. Without a doubt the European transport organization, killed by the Russians in United Nation's European Commission, will be revived. Transport is second only to coal in reviving a working economy in Europe. Transport was the one and only truly international system in Europe, a system mainly dependent on the inland waterways and coastal shipping. Coal used to go from Silesia to Vienna—a distance of some 300 miles overland—down the River Oder, all around Europe, through the Dardanelles, and up the Danube. The break-down of this system is an example of the shattering of those invisible ties binding Europe together that inspired the Marshall initiative.

But something more than mere restoration of a working economy is in the minds of the men who are now assembling in Paris. Long delay has made the problem of recovery so urgent that the pooling of resources and the coordination and allocation of capital expenditures and imports are essential. That may be the thin end of the wedge of political as well as economic integration. "One of the greatest mistakes committed by human indolence," says Ferrero, "is the belief that order is best preserved by keeping it as it stands. It can only be preserved by continually reconstructing it." The facts of our diminished planet plainly show the need for modern reconstruction.

The adventure, in short, may be a turning point in history. The present undertaking is a response to an idea born in desperation as much as to a man, but in the immense work that is about to begin men will be needed who have vision as well as courage.

Representative Joseph J. Mansfield

EXTENSION OF REMARKS
OF
HON. EARL C. MICHENER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, July 14, 1947

Mr. MICHENER. Mr. Speaker, I would be doing violence to my inner feelings

if I permitted this occasion to go by without adding my tribute of love and respect to the life and character of one of God's noblemen, the late Representative JOSEPH J. MANSFIELD.

When I came to Congress Judge MANSFIELD had been here one term. I served one term on the Rivers and Harbors Committee with him. I knew him intimately and well. In those days he was a man of splendid physique, always well-groomed, attractive, very active and, indeed, agile. I remember well when he was overtaken by sickness in Texas and returned to Washington in a wheel chair, there to remain the rest of his life. It apparently did not discourage Judge MANSFIELD, however. He said to me one time: "Yes, it is inconvenient, but just think of the number of people in the world who are so much worse off." That was the philosophy of the man, and we all came to appreciate it. The day was never dark and dreary when Judge MANSFIELD was around.

Mr. Speaker, in order to be an efficient and a successful Member of Congress one must have intelligence, he must be industrious, he must be honest, he must be tolerant, and, last but not least, he must have the respect and confidence of his colleagues. Judge MANSFIELD was endowed in a marked degree with all of these attributes. He not only had the confidence and respect of his colleagues but he had their affection. This is best evidenced by the sincere eulogies pronounced today. I have been in Congress a long time and I believe this is the longest memorial service I ever attended. There is a reason. A good and a great man has gone and we all join with the family in genuine sympathy.

The Taft-Ellender-Wagner Bill

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 15, 1947

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein the following editorial which appeared in the Boston Traveler, Monday, July 14, 1947:

THE TAFT-ELLENDER-WAGNER BILL

We have failed to speed housing construction, to build homes at prices people can afford, to give the veteran a place to live. There are not more houses going up. There are fewer. Things are not getting better. They are getting worse.

We have said all this before and we shall say it again. It is America's worst problem today. It is the duty of every American to have a clear-cut knowledge of the crisis, as well as the practical steps proposed to end the crisis.

One of these is the Taft-Ellender-Wagner bill. This sets up a national housing commission, lets home-loan banks and other federally chartered institutions lend money for homes, gives Federal insurance for those loans, protects the owners against foreclosure, guarantees interest to investors in home construction, gives financial aid to slum clearance projects, subsidizes housing for the needy, and in other ways aims at smashing the economic log jam which has created a dearth of new building amidst the greatest demand of our history.

Much of this may be novel, some of it may be impractical, a little of it may be dangerous. But Americans without homes are novel, a market frustrated by the want of homes to buy is impractical and above all, for veterans and other Americans to go on month after weary month in attics, converted garages, Quonset huts, and trailer camps is dangerous. There could be a tremendous explosion somewhere. It could set off chain explosions all across the country.

Will Rogers

EXTENSION OF REMARKS
OF
HON. WILLIAM G. STIGLER
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 15, 1947

Mr. STIGLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Bob Considine:

KING OF THEM ALL—ROGERS TOMB STILL A PRIME TOURIST LURE EACH YEAR

(By Bob Considine)

CLAREMORE, OKLA., July 12.—Today's American humorists are measured by their Hooper ratings and the grosses they attract in their movie house and night club appearances.

They rise and fall not so much on their gifts for provoking laughter as from their astute selections of gagwriters, the gall of their agents, and the acumen of their managers.

Will Rogers, king of them all, died before such modern yardsticks could be applied to him. But he'll be remembered when the rest of them are forgotten. His tomb and its memorial have become a major United States shrine.

Since the rambling place was built in 1938, on a green slope which Rogers bought in 1911 as a site for a home, more than 4,000,000 persons have visited it.

The crowds grow bigger with the years, a remarkable tribute to the gentle memories he stimulates. He was killed in a crack-up with Wiley Post, near Point Barrow, Alaska, August 15, 1935, but there is as much interest in him today as in his prime.

STATUE DOMINATES SITE

The body of Will Rogers lies beneath a simple marble tomb, set in a stately terrace.

With him now are his wife, Betty Blake, who died in 1944, and their fourth child, Fred, who died in 1920 at the age of 2. But one still feels Will Rogers is alive, for the entire memorial is dominated by Jo Davidson's bronze statue of the humorist, head bashfully down, hands deep in the pockets of his crumpled coat and a shy, sly twinkle around the eyes.

A number of dioramas now complete portrayal of Will's life. They are miniature stages which show Rogers from the time he was a child on a nearby ranch to a final graphic portrayal in which an Eskimo calls through cupped hands to the lifeless bodies lying in a half-submerged seaplane.

In another room are his saddles and lariats, and some of his early scripts, including the last one of his "telegrams," as he called them, to his editors. In one case lies his portable typewriter, crushed as if hammered by a sledge hammer. He had it in the plane with him.

A GIFT OF TONGUES

The Rogers legend is perpetuated in many ways. One lands here at the Will Rogers Airport, or comes in on the Will Rogers Special. Claremore has a Will Rogers Library. Oklahoma Military Academy auditorium is named for Will. The Hollywood movie colony once named him mayor of Beverly Hills. In the Colorado Rockies high above the Broadmore Hotel and Colorado Springs another Rogers memorial sounds its chimes. There are Will Rogers theaters in Claremore, Tulsa, and Oklahoma City. Will Rogers had a gift of tongues that made him understood in the most primitive community as he was on the stage and in Congress. The only other bronze struck from Davidson's mold stands in the Capitol in Washington.

At the base of each is written a favorite Rogers expression:

"I never met a man I didn't like."

The Ten Capitals of the United States

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 15, 1947

Mr. HAYS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address presented before the Germantown Historical Society by Leighton Paxton Stradley, a member of the Philadelphia Bar, a former assistant professor at the University of Pennsylvania, and a director and member of the society:

The New York Times magazine, in a recent article commenting on the selection of New York as the site for the United Nations capital, stated that New York was the first Capital of the United States and is now the first capital of the world. Actually, Philadelphia was the first Capital of the United States and New York was the eighth. In determining the correctness of this, it is necessary to ascertain when the Colonies first became independent and united states.

It is generally conceded by historians and other authorities that, with the adoption of the Declaration of Independence, the Colonies became an independent country and a member of the brotherhood of nations. Our citizens were no longer subjects of the King of England but were citizens of the Republic. This is often referred to as the birth of the Nation. The title and the declaration clause of the Declaration indicate that the action was taken by "the Representatives of the United States of America in Congress assembled."

It was asserted in the Declaration of Independence that the States had the power to regulate commerce, foreign affairs, and the conduct of the war. Hildreth, in his history of the United States, says that the Continental Congress seized the reins of power and assumed leadership of the insurgent States, that it issued bills of credit, raised armies, declared independence, negotiated foreign treaties, carried the Nation through 8 years of war, and finally wrested from the mother country an acknowledgment of sovereignty.

At the time of the signing of the Declaration of Independence and of the birth of the Nation, Philadelphia was the seat of the government. Consequently, it was the first Capital of the newly formed United States. Three changes of the Capital followed during the course of the war, which is briefly outlined:

The day before the adoption of the Declaration of Independence, Howe landed on Staten Island with a large force of troops, said to be about 9,000 men. During the weeks following the landing, this army was swelled by the arrival of additional troops, and estimates of the final force run as high as 30,000 men.

On August 27, 1776, he launched an attack with 20,000 men against the American forces at Brooklyn Heights. The battle was fiercely fought, but the Americans were decisively beaten.

The American Army at this time was at its lowest ebb. This period, August to December 1776, was known as "the dark days of the war." Washington's army was slowly disintegrating due to the low morale of the troops. It is said by historians that when Washington left the vicinity of New York his army was a ragged, starved, defeated, and demoralized band. Many of them deserted, many were killed, and many, whose enlistments were expiring, returned to their homes. At one point Washington's forces were reduced to less than 1,000 men.

Howe, realizing his advantage, decided that Philadelphia should be taken. It, as the capital of the United States, was the citadel of American authority. Howe thought that if Philadelphia were taken, the revolutionary cause would be broken and the war terminated. He accordingly planned an expedition across New Jersey to attack Philadelphia. Washington, pursued by the British Army, went from New Brunswick to Trenton, and conducted his well-known "retreat across New Jersey" just in advance of the British forces. He succeeded in crossing the Delaware at Trenton and was safely across when the British arrived. Washington had foresight enough to sequester all of the boats and river craft in the vicinity, so that when the British reached the river there were no boats available for crossing. On learning this, Howe and Cornwallis decided not to pursue the campaign further at that time. Leaving outposts at Bordentown, Trenton, Princeton, and New Brunswick, and Elizabethtown, they returned to their comfortable quarters in New York. Cornwallis planned to return to England to report the brilliant successes of the British Army in their campaign after the Battle of Long Island.

British patrols came within 17 miles of Philadelphia and some were reported as close as the Cooper Creek opposite Philadelphia. Members of Congress, hearing of this, were terrified particularly by the reports of the brutality of the Hessian soldiers and by the prospect of their own indictment for treason and the punishment by hanging. Congress accordingly resolved to leave Philadelphia for Baltimore. It did so on December 20, 1776, and thereby established Capital No. 2.

At this time, the British were in control of New Jersey while the Americans controlled the Pennsylvania side of the Delaware River. Washington decided that he would be obliged to make some showing to boost the morale, not alone of the Army, but also of the entire country. He accordingly planned an attack on the British in New Jersey. The famed crossing of the Delaware at McKonkey's Ferry was accomplished by Washington on Christmas night, but two other expeditions were unable to cross. Washington's forces landed 9 miles above Trenton early the following morning and proceeded to Trenton, where his army fell on the Hessians, fought the battle in the streets of Trenton, and defeated the entire Hessian army in Trenton. Washington decided to retire immediately to the Pennsylvania side and recrossed the Delaware at once. However, scouts in Trenton informed him that there were no British soldiery in that locality, so Washington returned to Trenton with his army. When Howe heard of Washington's success at Trenton, he dispatched Cornwallis to retrieve the situation.

Cornwallis appeared in Trenton on the 2d day of January 1777. Washington decided to face Cornwallis and give battle, but before doing so retired to the south of Trenton on the other side of the Assumpink Creek. The British attacked the Americans, but were unable to cross the bridge over the creek and decided to retire and resume the attack the following morning. It has been said that the fate of the Colonies hung in the balance at the second battle of Trenton and that this battle turned the tide of the war in America's favor. Washington's escape with his army intact opened the way to ultimate victory for American arms. Washington again decided to retreat. He accordingly left the campfires burning to deceive the British, bypassed the whole British Army in the night, and proceeded at once toward Princeton, where he defeated the British below the town. He then proceeded north to winter quarters at Morristown. Cornwallis, hearing the guns at Princeton, rushed to the aid of the British forces there, but arrived after the American Army had left. Cornwallis decided not to give open battle to Washington. He accordingly retired to New Brunswick, leaving Washington in command of south Jersey.

The Congress, finding that the British pressure on Philadelphia was removed, returned to Philadelphia on March 5, 1777. This campaign of Washington, particularly his brilliant successes at Trenton and Princeton, established him for the first time as a commander of the highest order. His name and prestige and the morale of the American Army were immensely restored. Volunteers flocked to the American colors and reestablished the American Army.

Washington was waiting to see what move Howe would make. Howe, instead of going to the assistance of Burgoyne, assembled a naval expedition with transports and left New York with 18,000 men with the idea of attacking Philadelphia. When Howe appeared off the Delaware Capes, Washington was assured of the fact that Howe was moving on Philadelphia. He moved his army south, crossed the Delaware River at New Hope, passed on through Philadelphia, Chester, and Wilmington, and brought his army beyond the hills of Wilmington. Howe, meanwhile, was forced to make his landing in the Chesapeake because of obstructions in the Delaware. While waiting at Wilmington, Washington was informed that Howe's march to the north was further west. He accordingly shifted his army to Chadd's Ford on the Brandywine. Issue was joined with Howe on September 11, 1777.

The Americans again suffered defeat and Washington was obliged to retreat leaving Philadelphia undefended. Howe accordingly entered Philadelphia at his leisure, arriving there on the 26th day of September 1777.

Meanwhile, Congress was again alarmed on hearing that the British were at the "fords over the Schuylkill" and left Philadelphia on the approach of Howe and his army. The Liberty Bell was removed from Philadelphia to Easton and Bethlehem and was finally secreted in a church in Allentown for several months. Numerous cities in Pennsylvania were considered as sites for the Capital. Lancaster was finally selected and thus became the third Capital of the United States. Congress arrived there on September 27, 1777, and immediately went into session. It was reported that British patrols were reaching out as far as Lancaster County, and after a 1-day session at the third Capital of the United States, Congress decided to place the Susquehanna River between it and the British Army, and moved to York, Pa., where it went into session on September 30, 1777. York, then became the fourth Capital.

When Howe occupied Philadelphia, he kept only four regiments in the city and posted the bulk of his army at Germantown. In the meantime Washington retired to Pennypacker's Mill at Schwenksville. He succeeded in re-forming his forces, and again prepared for an attack on the British in an endeavor to force them back against the Schuylkill River. Washington moved into an attack on the British at Germantown on October 4, 1777. He was again repulsed owing to a mistake of the American forces in firing into each other in the fog, to the stout resistance of the British under Colonel Musgrave at the Chew Mansion, and to a disastrous delay by General Greene's army on the left. Washington returned to Pennypacker's Mill and then retired to Valley Forge. Valley Forge was selected because it was well situated for defense and Washington desired to be in a position where he could come to the rescue of Congress at York if it should become necessary.

After Burgoyne's defeat, Benjamin Franklin and the other commissioners in France were able to obtain a treaty with France by which our independence was recognized. More importantly, France openly supplied us with funds, sent over a navy, and later sent an army. It was reported that the French Fleet was preparing to bottle up the British in Philadelphia by taking possession of the Delaware Bay and River. The British Ministry, alarmed at this, and also at the prospect of a war with France, Spain, and Holland, decided to concentrate their forces in this country, and accordingly ordered General Clinton, then in command of Philadelphia, to evacuate Philadelphia and return to New York. Clinton left Philadelphia on June 18, 1778.

General Clinton decided to retreat across New Jersey. He accordingly crossed the Delaware, with his army and with a large number of Tories and camp followers. Washington decided to pursue and give battle. He engaged Clinton at Monmouth. The battle went well for the Americans and might have resulted in the surrender of Clinton, except for the treachery of Gen. Charles Lee. The British were repulsed, and Clinton withdrew to New York.

As soon as the British pressure was removed, Congress left York and returned to Philadelphia on July 2, 1778. From the time of the return of Congress from York there seemed to be no question but that Philadelphia would remain the capital of the United States. It was adapted in every way for that honor and distinction. However, in 1783, a most unfortunate occurrence took place.

In the meantime, Cornwallis, following his successes in the South in the taking of Charleston and Savannah and the defeat of Gates at Camden, allowed himself to be bottled up at Yorktown, and was forced to surrender in 1781. This was virtually the end of the war, and a preliminary treaty of peace was made in England. Congress decided that the American Army should be disbanded in order to save the expense of maintaining it, which, at that time, the Federal Treasury could ill afford. Since the definitive treaty had not yet been made, Congress asked the Army to accept furloughs without pay. The members of the service accepting the furloughs were subject to recall if the treaty should not become final. The men, however, objected to being furloughed without pay owing to their extreme needs. They had not been paid for some months because of the depleted state of the Federal Treasury. When they had been paid it was with continental money and other worthless currency. The result was that the men and their families had been reduced to a pitiable condition.

In 1783 a mutiny broke out in Philadelphia over these conditions. A body of disgruntled veterans marched into Philadelphia and made their demands on Congress. It is reported that they posted sentries at the various entrances and surrounded Independence Hall, where the Congress was then sitting. President Elias Boudinot was seized and detained a short time by the mutineers. They

seized the city's arsenals, attempted to seize the bank, and were altogether riotous and unruly. President Boudinot called on the Pennsylvania authorities to restore law and order and to protect the Members of the Congress.

The Pennsylvania authorities, under the Constitution of 1776, consisted of a supreme executive council and its president, often referred to as the President of Pennsylvania, who at that time was John Dickinson. The Pennsylvania authorities declined to take any measures to protect Congress, and Congress accordingly resolved to leave Pennsylvania. On June 24, 1783, they left for residence at Princeton, N. J., which became the fifth capital.

The session at Princeton was comparatively short, from June to November 1783. During this time the first important debates in Congress on the selection of a permanent residence for Congress took place. Here, for the first time, arguments were made for having a separate and independent Federal town, which would have title to the area ceded to it by the States, erect its own buildings, have quarters for its own members, and, more specifically, apply its own law in the district. These ideas were later followed, and became part of the arrangements under which Congress settled at the District of Columbia, where these conditions are presently in effect.

In response to a suggestion by Congress that a permanent residence was contemplated, invitations from many sections of the country poured in calling attention to the advantages which would make the individual cities ideal sites for the permanent seat of the Government.

After a great deal of debate, it was finally decided to set up a Federal city at the Falls of the Delaware or at Georgetown on the Potomac. This was followed by a resolution that until a permanent Federal city was located Congress should meet alternately at Annapolis and Trenton. Congress reluctantly left Princeton and resolved to convene at Annapolis on November 26, 1783. Accordingly, Annapolis became the sixth Capital of the United States. The session at Annapolis was characterized by elaborate ceremonies, at which General Washington surrendered his commission as Commander in Chief of the Continental Army. The treaty of 1783 with England was adopted at this session, thereby terminating the war. Congress adjourned at Annapolis on June 3, 1784, and, in accordance with the resolution adopted at Princeton, convened at Trenton, the seventh Capital, on November 1, 1784. After a session of less than 2 months at Trenton, Congress decided to convene the following January 1785 at New York, the eighth Capital, until such time as a Federal town should be established.

When the Continental Congress convened at New York, its power was waning, and the Congress itself was losing prestige. During the war, the Continental Congress had a function to perform in prosecuting the war. When the war was terminated, however, it was evident that the operations of the Continental Congress under the Articles of Confederation were inadequate for the needs of the country. This situation resulted in the convocation of a convention at Annapolis to consider the possibility of a uniform system of commercial regulation. All the Colonies were invited to send their representatives.

The Annapolis convention convened in 1786, but owing to the fact that only five States were represented and a quorum could not be obtained, no action was taken other than to issue a call for a further convention to be held in Philadelphia.

The convention was held at Philadelphia in 1787, and proposed a constitution which was to become effective when ratified by nine States. The call for the meeting of the First Congress under the present Constitution was issued by the old Continental Congress. It fixed March 4, 1789, and New York, as the time and the place of the meeting.

The Constitution of 1789 in section 8, clause 17, provided that the Congress should select a permanent residence for the seat of government. The Constitution also provided that the seat was to consist of territory ceded to the Federal Government by the States in which the district was located, and specified that the district was to be not more than 10 miles square. Owing to the large amount of territory involved, this ruled out Philadelphia and New York. In the case of Philadelphia, if the 10 square miles were started at the Delaware River, the 10-mile point would reach into Delaware County, and if they were started at League Island the 10-mile point would reach into Germantown. This would have meant a third of the wealth and population of the entire Commonwealth. New York would have been similarly affected, as it would have taken all of Manhattan Island, and more.

The First Congress under the Constitution convened in New York. New York was, therefore, the first capital under the new Constitution. There were three sessions of the First Congress, two in New York and one in Philadelphia. Among the first matters taken up by the First Congress was the selection of a permanent residence. The choice finally narrowed down to a location on the Potomac and three locations in Pennsylvania, one on the Susquehanna, another at the falls of the Delaware, and the third at Germantown. The issue was brought to a head by the passage of a bill in the House of Representatives selecting the Susquehanna site. This would have been the area presently occupied by Wrightsville and Columbia and the nearby territory.

When the bill passed by the House of Representatives reached the Senate, Robert Morris, whose vote against Susquehanna resulted in a tie vote, succeeded in having the Susquehanna location deleted and Germantown inserted in its place. On Morris' motion for Germantown, there was again a tie vote. In order to settle the issue, Morris offered a $100,000 contribution by the Commonwealth of Pennsylvania to bear the expense of the erection of public buildings. When his authority to commit the State to this large appropriation was questioned, Morris offered personally to guarantee the payment. As he was one of the wealthiest men in the Colonies at the time, despite his later financial difficulties and imprisonment for debt, his personal guarantee was well worth the amount involved. The deciding vote was to be cast by John Adams, President of the Senate, then Vice President of the United States. John Adams was no doubt influenced by the $100,000 contribution and voted in favor of Germantown. The bill was then returned to the House of Representatives for action on the amendment and was approved with the amendment in favor of Germantown. At the last moment, however, James Madison of Virginia, who throughout had been an advocate for the Potomac site, succeeded in putting a rider to the bill, providing that until Congress otherwise indicated, the Pennsylvania law would apply to the Federal district.

This necessitated returning the bill to the Senate for action on the amendment. When the bill reached the Senate, it was near the time for adjournment of the first session, and the bill was not acted on before adjournment.

Between the first and second sessions of the First Congress there was a considerable change of sentiment and a great deal of controversy over Hamilton's financial measures. Hamilton, as Secretary of the Treasury, proposed ways and means to handle the debt incurred by the war. It can now be seen that his plan was sound and practicable, but in the eyes of a great many legislators at the time it was thought inexpedient to saddle the new Government with a large funded debt, although it was clear that there was no money to pay the debt which amounted to $73,000,000.

Agreement was reached in both Houses of Congress on the funding of the foreign debt and the domestic debt. Sentiment was sharply divided, however, over the assumption of the State debts of $21,000,000. The South was violently opposed to the assumption; and the North, particularly New England, was just as strongly in favor. The argument became so acrimonious that the New England States threatened to secede, and they might well have done so. It appeared that Congress, except for the Pennsylvania Representatives, was about equally divided and that the Pennsylvania Representatives themselves were divided. Consequently, Pennsylvania held the balance of power.

Hamilton became disturbed over the state of the Union and the threats of secession, and decided that the matter could be settled only by a compromise. The compromise of trading the capital site for the assumption of the State debts proved to be the proper solution owing to the fact that those two controversies were invariably linked together in all of the debates in Congress. It is not generally known and it does not seem to have been recorded except in Maclay's Journal, that Hamilton first approached the Pennsylvania delegation and offered them the site for the national Capital either at Philadelphia or Germantown if the Pennsylvania delegation would support the assumption bill. There was considerable sentiment in Pennsylvania against the assumption bill, particularly on the part of Senator Maclay and before Pennsylvania accepted or rejected, Hamilton made a similar offer of compromise to Jefferson. Jefferson accepted and entered into a log-rolling agreement that the site was to be located on the Potomac in return for Jefferson's obtaining the concurrence of the southern delegation, particularly Virginia, in voting for assumption. This bill was passed and signed by the President designating the permanent Capital on the Potomac, but subject to the temporary Capital being located in Philadelphia for 10 years from 1790 to 1800.

In 1793, while Philadelphia was the seat of the Congress, the city was visited with a devastating yellow-fever epidemic. Congress was not in session at the time since the epidemic occurred in the summer, but was to reconvene the following December. The members of the Cabinet, however, were forced to leave Philadelphia, and went to Germantown. Washington joined the Cabinet members in Germantown, so that in 1793, Germantown became the ninth capital of the United States for a period of 1 month. Washington secured living quarters at the residence of the Reverend Frederick K. Herman. This house immediately adjoined Germantown Academy on School Lane and is now on the school grounds. He later removed to the Morris residence on Germantown Avenue. Cabinet meetings were held in both of these places, except during a short period when Washington toured a number of towns in an effort to find a location where the Congress might sit.

As the cold weather developed, the yellow fever disappeared, and Congress convened at its regular session at Philadelphia in December.

The yellow fever reoccurred more or less annually until about 1798 and 1799. Owing to the widespread districts that were affected, Congress in 1798 moved to Trenton for a few months. Promptly at the expiration of the 10-year period in November 1800, Congress convened in the District of Columbia where it has remained ever since. Washing-

ton, in the District of Columbia, therefore, became the tenth and last capital of the United States.

Shooting Into the Air or What's in the Sky?

EXTENSION OF REMARKS
OF
HON. HENRY O. TALLE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 16, 1947

Mr. TALLE. Mr. Speaker, the friendly and warm-hearted poet of your State, whose verse is cherished in every American household and often read as the family gathers around the hearthstone, once wrote:

I shot an arrow in o the air,
It fell to earth, I knew not where;
For so swiftly it flew, the sight
Could not follow it in its flight.

I breathed a song into the air,
It fell to earth, I knew not where;
For who has sight so keen and strong
That it can follow the flight of song?

Long, long afterward, in an oak
I found the arrow still unbroke;
And the song from beginning to end
I found again in the heart of a friend.

In these days of the war's aftermath, newspapers and the radio report almost hourly that strange objects have been seen in the sky. Some say the objects are pancakes, some say they are disks, some say they are saucers, and some say they are blades shunted from circular saws and plummeting through the sky. Others with a scientific bent contend the things they see are reflections of ice particles having fun with the sun. The imagination of the human mind is left free to speculate on what the strange objects, if any, may be.

Apropos of all this, a delightful fellow in St. Louis recently posed the following question:

I shot a glimpse into the sky,
I saw a disk go flying by.
Some say I saw a saucer,
Some say I saw a saw, sir.
What do you think I saw, sir,
A saucer, or, a saw, sir?

Mr. Speaker, if jitters have overtaken some people, may it not be that the sublime poet of Cambridge, who is so dear to the American household, can through his verse stay the shakiness of nerves? And, has not the genial gentleman in St. Louis performed a service to society in posing his pertinent question? Gentle reader, what do you think? Are the things some see in the sky pancakes, saucers, saws, disks, arrows, or songs? Or are they the dollars that used to be in the long ago when they fetched something in return in the market place? Maybe so.

I have a suggestion to make, Mr. Speaker: Everyone will gain, if everybody will give a fair day's work in return for a fair day's pay. That is a down-to-earth idea and not at all exciting. But he who follows that old prescription may find at the close of day that he can see nothing in the sky except the familiar objects that have been taken for granted with the rising and the setting of the sun.

Minimum Wages

EXTENSION OF REMARKS
OF
HON. GERALD W. LANDIS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 16, 1947

Mr. LANDIS. Mr. Speaker, the minimum wage law is here to stay. I am certain that it should be increased. Workers are entitled to a fair share of the employer's profit. Our goal is full employment at a wage which will give American workers a decent standard of living.

MINIMUM WAGE EXEMPTIONS

The provisions of minimum wages and maximum hours shall not apply with respect to—

First. Any employee employed in a bona fide executive, administrative, professional, or local retailing capacity, or in the capacity of outside salesman—as such terms are defined and delimited by regulations of the Administrator.

Second. Any employee engaged in any retail or service establishment the greater part of whose selling or servicing is in intrastate commerce.

Third. Any employee employed as a seaman.

Fourth. Any employee of a carrier by air subject to the provisions of title 2 of the Railway Labor Act.

Fifth. Any employee employed in the catching, taking, harvesting, cultivating, or farming of any kind of fish, shellfish, crustacea, sponges, seaweeds, or other aquatic forms of animal and vegetable life, including the going to and returning from work and including employment in the loading, unloading, or packing of such products for shipment or in propagating, processing, marketing, freezing, canning, curing, storing, or distributing the above products or by-products thereof.

Sixth. Any employee employed in agriculture.

Seventh. Any employee to the extent that such employee is exempted by regulations or orders of the Administrator issued under the section which applies to learners, apprentices, and handicapped workers.

Eighth. Any employee employed in connection with the publication of any weekly or semiweekly newspaper with a circulation of less than 3,000, the major part of which circulation is within the county where printed and published.

Ninth. Any employee of a street, suburban, or interurban electric railway, or local trolley or motorbus carrier, not included in other exemptions contained in this section.

Tenth. To any individual employed within the area of production—as defined by the Administrator—engaged in handling, packing, storing, ginning, compressing, pasteurizing, drying, preparing in their raw or natural state, or canning of agricultural or horticultural commodities for market, or in making cheese or butter or other dairy products.

Eleventh. Any switchboard operator employed in a public telephone exchange which has less than 500 stations.

MAXIMUM HOURS

The provisions of the 40-hour week shall not apply with respect to—

First. Any employee with respect to whom the Interstate Commerce Commission has power to establish qualifications and maximum hours of service pursuant to the provisions of section 204 of the Motor Carrier Act, 1935.

Second. Any employee of an employer subject to the provisions of part 1 of the Interstate Commerce Act.

LEARNERS, APPRENTICES, AND HANDICAPPED WORKERS

The Administrator, to the extent necessary in order to prevent curtailment of opportunities for employment, shall by regulations or by orders provide for—

First. The employment of learners, of apprentices, and of messengers employed exclusively in delivering letters and messages, under special certificates issued pursuant to regulations of the Administrator, at such wages lower than the minimum wage applicable under the law and subject to such limitations as to time, number, proportion, and length of service as the Administrator shall prescribe.

Second. The employment of individuals whose earning capacity is impaired by age or physical or mental deficiency or injury, under special certificate issued by the Administrator, at such wages lower than the minimum wage applicable under the law and for such period as shall be fixed in such certificates.

Through the passage of the Fair Labor Standards Act, Congress took an important step toward a minimum standard of living necessary for health, efficiency, and general well-being of workers. However, in terms of real wages it now falls far short of the goal envisioned by Congress. It is my belief that the act should be amended to increase the present 40-cent-an-hour minimum to 60 cents an hour. It is clearly justified by the current level of unemployment insurance. Certainly no one would agree to a wage level below the income level established for idleness. Yet, that is the situation created by the existing minimum wage and existing unemployment insurance.

Veterans' Affairs

EXTENSION OF REMARKS
OF
HON. HARRY P. CAIN
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Wednesday, July 16, 1947

Mr. CAIN. Mr. President, I request unanimous consent to have printed in the RECORD an article by the Washington Times-Herald veterans' editor, Lt.

Comdr. Tyrrell Krum, USNR, retired, which appeared in the Times-Herald of Sunday, July 13, 1947.

The article is written in support and approval of House bill 1888, an act to incorporate the AMVETS, American Veterans of World War II, which appears as Order 452 on the Senate Calendar.

Commander Krum is a disinterested and impartial observer and constructive critic of veteran movements and organizations. His point of view may be helpful to other Senators as they consider House bill 1888.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

VETERANS' AFFAIRS

(By Tyrrell Krum, lieutenant commander, United States Naval Reserve, retired)

With the presently scheduled date for adjournment of the first session of the Eightieth Congress a brief 2 weeks away, it becomes increasingly clear that the mass of legislation designed to aid veterans of our past wars which is now lying idle in the legislative hopper is going to be passed over until next year.

It is obvious that the bill which would make terminal-leave bonds convertible into cash after September 1 instead of waiting for the original 5-year maturity date will, in all likelihood, be enacted into law before Congress goes home.

But as to passage of the Kearney training-on-the-job subsistence increase measure and the bill to raise the amount of monthly subsistence paid veterans going to schools and colleges under the GI bill of rights—it would appear they are doomed.

Both these measures have been chucked into a pigeonhole by the House Rules Committee with orders that there they are to remain, despite the clear and uncontroverted fact that were they to come to the floor of the House passage would be certain.

However, we hope that the Senate will find time to pass one very meritorious piece of legislation already adopted by the House—the granting of a Government charter to AMVETS—the American Veterans of World War II.

The Senate Judiciary Committee recently reported out the AMVETS' charter bill and ordered it placed on the upper Chamber's consent calendar. The road ahead appears cleared of further road blocks.

And let us get this one point clearly in mind: AMVETS is not to be confused with the AVC, which stands for the American veterans committee.

AMVETS is a first-rate organization composed of high-class veterans of the Second World War; it is Nation-wide in scope and today has some 120,000 members.

On the other hand, AVC is a conglomeration of Commies, Reds, radicals, parlor pinks, fellow travelers, and other extreme leftists—a large segment of whom never served a day in Uncle Sam's armed forces and thereby stands as an impostor when it terms itself a war veterans' group.

PMA Committeemen

EXTENSION OF REMARKS

OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 16, 1947

Mr. TEAGUE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following preface and a magazine article dealing with Mr. W. Lewis David, a State committeeman of the Production and Marketing Administration and a farmer living in my district near the city of Corsicana, Tex.

The State committeemen of the Production and Marketing Administration of the Department of Agriculture have been doing a wonderful job with the soil-conservation program in Texas and have given many hours to the well-being and general welfare of the farmers of the State. These men have given the PMA many helpful suggestions and have done much toward carrying out the programs on marketing and production set up by the PMA, one of the Department of Agriculture's most important units.

One of these committeemen is W. Lewis David, and the following article tells graphically some of the practical work he is doing.

HIS LAND IS GOING TO SEED, AND LEWIS DAVID FINDS THIS NOT ONLY PROVIDES A CASH INCOME, BUT CONSERVES THE SOIL AND SAVES BOTH TIME AND LABOR

The immediate reason why W. Lewis David changed over from growing cotton, corn, and a few other grain crops to seed production on his 1,200-acre farm just south of Corsicana, was the scarcity of labor brought about by the war. But the results of his program have brought about benefits far beyond this immediate need. Because he can offer year-around employment, he has been able to attract and keep the type of men he wanted—men of sufficient ability and skill to operate expensive machinery. His legume planting and rotation has reclaimed depleted soil and been an important factor in a 50-percent increase in crop yields, and he has found an all-year money crop.

Back in 1940, after several years' service as county agent and as agricultural economist in Washington, Mr. David returned to the farm his father had bought at the beginning of the century. Following tradition, he put between 500 and 600 acres in cotton and about 200 acres in corn and other grain crops. He sprayed for cotton insect pests and observed the usual practices of farming, only to find at the year's end that he hadn't done much better than other farmers in the vicinity who did not practice insect control. Probably nothing would have been done at the time, however, if the labor situation hadn't become critical. He considered several changes, even discussing the possibility of drug crops with representatives of Parke & Davis, whose need was great due to the war. He discovered, however, that growing such crops required special technical knowledge and a great deal of practical experience.

His work with soil conservation groups made him aware of the great need for legume seeds whose supply did not meet the growing demand of farmers, and he finally decided to try a plan of growing legumes and other crops for seed, using phosphates as fertilizer. The first field was planted to clover in 1941, but without phosphate. Then in 1942, he experimented with 150 acres, using phosphate on vetch, and made better than ⅔-bale of cotton per acre following this program. Hubam seed was harvested for the first time in 1942. He didn't know too much about it at the time and declares he made many mistakes. But when, in spite of mistakes, he made around 400 pounds of seed to the acre and realized 18 cents per pound for it, he knew if the work were done correctly, it would yield a big income, in addition to the good it was doing the land.

Soon he began to experiment with hybrid corn which he grows exclusively as a seed crop. This year he planted some black medic with seed imported from England, the first time this clover has been tried in this section of the State.

Mr. David's rotation system—until the land is sufficiently rebuilt—calls for clover every other year and has resulted in a 50-percent increase in crop yields. This has been so obvious that the owner of a plot of land directly across the highway from the David farm, whose last corn crop did not warrant further planting, offered Mr. David the seed harvest if he would sow it to legumes to restore its fertility.

In working out a schedule which would provide a good distribution of labor, Mr. David grows hubam as a summer cover crop and vetch for the winter. Hubam, planted about February 15, is harvested in July after the time to pull corn and before the cotton needs attention. Vetch, seeded with rye about October 1, is up and covering the land at the time of the spring rains and is ready for harvesting about the middle of June.

So successful has this program been that the same land which in 1939 required the efforts of nine tenant families and seven tractors is now worked more efficiently with one self-propelled combine for harvesting, three tractors, a seed cleaner, and three laborers—paid by the hour—in addition to Mr. David.

The seed cleaning takes place in a large quonset barn with concrete floor and 24 200-watt lamps to make work possible during dark days and at night. The electric cleaner has a capacity of 1,500 to 2,500 pounds (30–50 bushels per hour) depending on the kind of seed. It is adjusted to different types and sizes by a series of screens. A scarifier, which breaks the hulls, increases germination and results in a more uniform stand. A seed separator, which works on the same principle of gravity as the cream separator, separates seeds of the vetch from those of the Abruzzi or Balboa rye planted as a support crop to hold the legume above ground for combining and with which they become mixed in harvesting.

All seeds are inoculated, a process which adds to them the bacteria necessary for the legumes to take nitrogen from the air instead of from the soil.

When there is time enough, Mr. David does custom cleaning for other farmers in the vicinity, but his equipment is primarily for his own use.

His land is divided into approximately this pattern: 300 acres in rye and vetch; 150 acres in Hubam clover; 80 acres in oats, some of which is certified seed; 165 acres in corn, 100 of which is for seed, and 50 acres in cotton, grown solely as a source of protein feed.

In addition to legumes in a rotation program, his conservation plan includes terracing and contour planting. Before building his terraces, he established his outlets, sodding the lead-off waterways largely to Dallas grass and the permanent pastures onto which the water empties to Bermuda. Prior to sodding, legumes and phosphates were used on the pastures to build up their fertility. Stock tanks have been built and electric fences enclose the pastures where white face cattle graze and are prepared for market.

Milch cows and White Leghorn chickens are kept for family use, and a 40-acre wood lot supplies fuel for the people working on the farm.

Land which until a few years ago knew nothing but cotton and corn and gradual deterioration, is now returning to original fertility, yielding bountiful harvests and contributing to a carefully planned agricultural prosperity.

Escaping Gas

EXTENSION OF REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 16, 1947

Mr. RANKIN. Mr. Speaker, the so-called Rizley bill will increase gas rates from the city of Washington to President Truman's home town of Independence, Mo. In fact, it will increase rates in every State from California to New York.

Why doesn't every Member of the House and Senate develop the same information as to the effect of this bill upon the people of his own congressional district and State as I compiled for my district and presented to the House on July 11, 1947, as shown at page 8708 of the CONGRESSIONAL RECORD.

Each of these gas pipe-line transmission utilities already considers the Rizley bill passed, and they have arranged their corporate set-up to take advantage of its provisions.

This bill directly affects every person in the United States in that it increases the cost of gas, as well as that of certain manufactured articles, which increased cost is passed on to the purchasing public.

I plead with each Member of the House and Senate to examine this measure carefully and determine for yourselves the effect of this bill upon your own people.

For the information of the House, I am inserting an excerpt from an editorial on this subject which appeared in today's Washington News.

It reads as follows:

ESCAPING GAS

That strong odor comes from the Capitol—where lobbyists and lawmakers are working to help the natural-gas industry escape effective regulation.

With only 2 hours of debate, House Members passed the Rizley bill, which many of them said they didn't understand. It forbids the Federal Power Commission to regulate the cost of producing or gathering natural gas. It directs the Commission to accept, as a rate base, any figure the companies name as the market value of gas entering their pipe lines.

In 9 years the FPC has saved consumers $150,000,000 by regulation under the 1938 Natural Gas Act. The Supreme Court says it has done this legally and properly. The net income of companies under this regulation was 58 percent higher last April than in April 1946. Their book cost totaled $1,292,000,000 last January 1. Since then they have applied to the FPC for certificates for additional facilities estimated to cost $1,222,977,569.

So their business seems to be thriving, and investors seem eager to put in more capital under the law as it stands. Yet these natural-gas companies are driving for higher rates and freedom from regulation.

Two companies—Cities Service and Panhandle Eastern Pipe Line—are now having to return to customers some $48,000,000 which the FPC and the courts found they had collected improperly.

Your gas bill will get bigger if the Rizley-Moore measure becomes law. And it's a symptom of a current trend that could hit your pocketbook hard.

For, in addition to the natural-gas companies, other public utilities of all kinds have seized on this as the time for a determined effort to repeal, indirectly, most of the Federal regulation enacted in the last 20 years. The Rizley bill is only one of a dozen along these lines pending in Congress.

Labor Education Extension Act

EXTENSION OF REMARKS
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 16, 1947

Mr. TOLLEFSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following statement explaining H. R. 4078, known as the Labor Education Extension Act, which I introduced in the House of Representatives July 2, 1947:

This bill is a constructive piece of labor legislation. It has the united and wholehearted support of all labor organizations. This is what labor says:

AFL: "Such a service would give workers the material and tools with which to meet their educational needs."

CIO: "All affiliated international unions, councils, and local industrial unions are urged to support this program by resolution, publicity, financial assistance, and communications to their respective Members of Congress, and cooperate with the Committee for the Extension of Labor Education toward this end."

Railroad labor: "Our association endorses the principle and objectives of this proposed legislation."

Through this bill labor is asking for better access to and more training in the use of the modern tools of facts and reason. This will promote orderly collective bargaining and peaceful industrial relations. It will likewise promote wider and wiser exercise of the rights and responsibilities of citizenship in the community, State, and Nation.

HOW THE SERVICE WOULD WORK

The bill would extend to some 42,000,000 wage and salary earners a program similar to that carried on by the Agricultural Extension Service for families of 6,000,000 farm operators.

Instruction would be provided at times and places and in forms convenient for wage and salary earners.

Teachers would be drawn from institutions of higher learning cooperating in the program.

Requests by groups of workers for classes would be worked out with these institutions and presented to State boards for approval.

Approved requests would be incorporated in a State plan and budget to be presented to the Secretary of Labor. Upon approval, he would request the Secretary of the Treasury to release from funds earmarked for the several States, payments to the cooperating institutions.

Sums deemed by Congress to be adequate to meet the demands for this service are to be appropriated and in each instance matched by at least 25 percent from sources within the State.

WHAT IS ASKED FOR BY WORKERS

This list is based on specific requests from workers, reported by universities, unions, and teachers of labor education classes.

Basic courses: Economic problems of American industry; economics of individual industries; labor legislation and law; social security; collective bargaining; history of the labor movement (related to economic and political history); consumers' problems; current national and international events; health and safety; government; community programs; public relations.

Tool subjects: Parliamentary law; public speaking; shop steward training; time and motion studies; grievance procedures; publicity workshop; radio workshop; writing; techniques of workers' education.

Other services: Research projects; exhibits, pictorial material; conferences; library services; moving pictures; occasional speakers.

NEED FOR THE BILL

Typical reports from universities conducting labor extension programs:

Wisconsin: "Winter off campus service is needed. Field staff should be placed immediately in 9 cities to serve 35 cities and towns in those areas. Estimated teaching staff needed is forty-four. Summer and winter institutes on campus are in demand. Training for union leadership requested. Research and preparation of printed material for union use and more audio-visual material are needed immediately."

State College, Pennsylvania, 1946: "Provided a week's summer training on its campus for 400 steelworkers. Is repeating this program for 1947. Textile and hosiery workers and many other unions are planning similar institutes. AFL, CIO, and railway organizations are making inquiries about educational services. At request of steelworkers, extension classes in union halls were undertaken, autumn 1946. More than 75 locals requested classes in contract administration, grievance and adjustment procedures, and related subjects leading to improved industrial relations. Penn State lacks resources to meet more than a fraction of these growing demands."

Chicago: "Because of lack of staff we reached less than 5 percent of the union members who want to attend classes. Requests for case materials have come from 60 leading universities. Five international unions have asked for text materials. None of these requests can be adequately filled unless we have assistance in the form of grants."

Michigan: "Classes held in 300 union halls 21 college or university campuses in 43 cities We believe there is tremendous need for extension of more informal types of educational programs through additional personnel in areas of: (a) community services; (b) socio-economic problems (national and international); (c) local and State government

"More printed and visual materials are needed. The training program for people from other institutions and unions engaged in labor education should be started. Except for the year 1944–45 we have not dared carry on any kind of promotional program because with an inadequate budget we cannot extend our services beyond trying to care for the most pressing requests."

Rhode Island State College: "Classes requested by workers: Trends in labor legislation, mediation and arbitration, methods of handling grievances, railway labor legislation, introduction to principles of stewardship. Requests from local unions and other groups are increasing but cannot be met with present resources.

"At present more than 75 colleges and universities are conducting some type of labor extension service.

"As the above reports show, they cannot begin to meet the need that exists. Many of them are aware of the need of a pooling of experience and information so that improvements in teaching methods and materials worked out in one institution may be immediately available to all."

THE LEGISLATIVE BASIS FOR THE BILL

"A bill to broaden the cooperative extension system as established in the act of July 2, 1862, the act of August 30, 1890, and acts supplemental thereto, by providing for cooperative extension work between colleges receiving the benefits of these acts and other qualified colleges, universities, and research agencies, and the United States Department of Labor

"Be it enacted, etc., That in order to broaden and further develop the cooperative extension system as established by the act of July 2, 1862, the act of August 30, 1890, and acts supplemental thereto, and to aid in diffusing useful and practical information among the wage earners of the United States and increase the resources and facilities available to them, there shall be established in cooperation with colleges receiving the benefits of the aforementioned acts and other colleges, universities, and research agencies as designated in the several States a Labor Extension Service in the Department of Labor, administered by the Secretary of Labor.

"It is declared to be the policy of the Congress that the purposes of this program shall be to enable the Secretary of Labor, in accordance with his duty to promote the welfare of wage earners, through a program for the dissemination of useful knowledge to provide a means by which the Nation may conserve the creative capacities of workers, who, together with farmers, comprise the Nation's basic productive asset."

Depleting Our Resources

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 16, 1947

Mr. SHAFER. Mr. Speaker, there have been appearing in recent days, from various New Deal columnists, jibes at me and other Republicans, as well as some old-time Democrats, who have pointed out the illogic of allowing oil to be shipped to Russia while at the same time spending hundreds of millions of dollars to stop Russia, through the Truman plan, the Marshall plan, or some other high-falutin plan.

The truth is, all these so-called plans, to which the name of some Democrat is given in order to enhance both his prestige and the prestige of the plan itself, are nothing in the world but new-fangled ways of depleting our natural resources and causing more inflation in the United States.

In connection with my recital of the illogic of sending oil to Russia, while at the same time this Nation spends money in a moral war with Russia, I pointed out that we made the same fatal mistake in dealing with Japan before we were involved in World War II. The defenders of the late Franklin D. Roosevelt were quick to take up the cudgels in his defense, but the truth cannot be hidden by voluminous words. The sad truth is that our diplomacy under President Roosevelt was filled with errors of judgment that have cost our Nation untold lives and still are costing us dearly in prestige abroad.

It is often said that those who mention these matters are exercising "hindsight," as if to leave the impression that there were no other alternatives for Mr. Roosevelt at the time he made the faulty decisions. But anyone can go back and look at old newspaper files to see that there were alternatives and that this Nation did not have to ship gas and oil and steel and pig-iron and scrap metals to Japan. As a matter of fact, members of the President's own party urged him as late as 1940 to put the economic squeeze on Japan, but he chose to go right ahead, lending money to China and sending what amounted to war materials to Japan.

I have recently read an article by Constantine Brown, the columnist from the Washington Evening Star, which reveals some research on Mr. Brown's part and brings out clearly the fact that those who are now accused of "hindsight" when they indict Roosevelt's judgment actually had foresight too, but that they were scorned at the very time they should have been heeded.

Mr. Speaker, under permission to extend my remarks, I include the article by Mr. Brown which appeared in the Washington Star issue of July 11, 1947:

HISTORY IS SEEN REPEATING ITSELF IN UNITED STATES STAND ON OIL SENT RUSSIA

(By Constantine Brown)

Those who heard Acting Secretary of Commerce Foster explain to Chairman WEICHEL, of the House Merchant Marine Committee, last Wednesday why the administration will not yield to congressional pressure to halt oil exports to Russia, felt that history was repeating itself.

In 1940 when the United States was exporting large quantities of gasoline and scrap iron to Japan, Members of Congress made direct representations to Secretary of State Hull to stop consignments. He told them an embargo would invite serious friction with Japan.

When Senator Gillette, of Iowa, called on the Secretary of State with the suggestion to introduce a resolution to prohibit further exportation of war materials, Mr. Hull became disturbed and warned the Iowan: "Senator, I must ask you to refrain from such an action. You will rock the ship of state."

HULL'S WORDS RECALLED

Mr. Hull pointed out that the Japanese would consider as a cause of war any interference with their normal trade with the United States. Our relations with Japan were strained, Mr. Hull told Senator Gillette confidentially, but there was still hope that by careful handling and patience difficulties could be straightened out, if this country did not give the warmongers in Tokyo cause to go on a rampage.

The resolution was never presented. We continued to do normal business with Japan, and our gasoline—converted into high-octane fuel in Japanese plants—and our scrap iron were returned to American soldiers and sailors at Pearl Harbor, Guadalcanal, Iwo Jima, and other battle sites in the Pacific.

Wednesday Mr. Foster said publicly what Mr. Hull had said off the record to Senator Gillette. He stated that an abrupt halt to oil shipments now would create chaos in the economies of friendly powers, and suggested that such an action might have far-reaching diplomatic repercussions.

According to official reports from the USSR, oil production in the Soviet Union has considerably increased in the last 12 months. Russian reports indicate that it even exceeds prewar production. Hence, the export of American oil can make no difference to Soviet industries, which have at their disposal large oil centers inside Russia, to say nothing of the oil fields which the Soviet controls in Rumania, Austria, and Poland.

But what is important is Russia's need to import oil into Siberia, where there are no known petroleum deposits. In that part of the empire Russia is reliably reported to be constructing important military establishments. It was disclosed to a number of Senators, at a secret briefing last month, that information had been received that a number of military air stations are being built in Siberia, while a large number of Soviet submarines are patrolling off the American Pacific coast. The latter would explain the need for oil for Diesel engines.

PURCHASES NEGLIGIBLE

The Soviet has been purchasing a negligible quantity of oil from this country, Mr. Foster maintained. The Acting Secretary of Commerce estimated Russian purchases in the first half of 1947 at 730,000 barrels. This, he added, is not a disproportionate part of the total world consumption.

But the situation justifies a certain amount of concern when one bears in mind that the oil was shipped from the west coast for consumption in Siberia and, in all likelihood, as the Senators were informed, is being used exclusively for military and naval purposes.

The shipment of 730,000 barrels to Russia for her industries would be a drop in the bucket. But the sale of such a quantity for use exclusively in Siberia, could be of real assistance to the Russian armed forces. This might explain Mr. Foster's alarming suggestion that an embargo might create diplomatic friction with Moscow.

In spite of all entreaties Russia has turned down the Marshall plan, which might have given her many times 730,000 barrels of oil. Yet, presumably on advice from the State Department, the Commerce official suggests diplomatic complications.

One Way to Radicalism

EXTENSION OF REMARKS
OF
HON. T. MILLET HAND
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 16, 1947

Mr. HAND. Mr. Speaker, the Atlantic City (N. J.) Press has recently printed an editorial entitled "One Way to Radicalism." The philosophy of the editorial is worth thinking about, and I am including it in the RECORD, and inviting the attention of the membership to it. The editorial follows:

ONE WAY TO RADICALISM

A phenomenon of the hour is the protest against rising costs—of everything from biscuits to automobiles. Folks talk sourly against higher rents, higher taxes, and higher everything. If employers, they dislike higher wages and salaries; if employees, the higher prices fixed by those who pay the higher salaries.

And the class affiliation makes no difference. If we live by the sweat of our brow, the rich should pay the higher taxes; if by clipping coupons, the Government tax collectors are scorned just the same, the high prices resented, and a Roosevelt is cussed to high heaven.

Ironical, indeed, if while we talk of Marshall plans and apppropriate billions to stop

the spread of communism abroad, we should be unconsciously sowing the seeds of communistic progress in our own homeland—with price decontrols, tax reductions, OPA elimination, and other steps in encouragement of inflation.

However, let's avoid too much emotional dejection. And remember the old Republican battle cry of the dinner pail era, "When prices and wages are high the country is prosperous."

In this conclusion there may be more than a modicum of truth. Money doesn't last long; no. A man's grand income just flies away in the weekly purchasing; yes. But we do seem to have more things than ever.

Probably not as much happiness. They say that is not purchased with money.

But what the statesmanship guiding our American affairs should be careful of is that the inability to keep money in the pocket does not breed discontent.

Address by Hon. Owen Brewster

EXTENSION OF REMARKS
OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 16, 1947

Mr. JAVITS. Mr. Speaker, under leave to extend my remarks I include the following speech by the Honorable OWEN BREWSTER, United States Senator from the State of Maine, delivered on July 5, 1947, at the closing session of the Fiftieth Annual Convention of the Zionist Organization of America. This speech dealt with the problem of Palestine, the satisfactory solution of which may help to relax materially international tensions which threaten the peace of the world.

In view of the fact that even now the problem of Palestine is being investigated by the United Nations special committee, a fact which underscores the international import of the subject, I think it is fitting that this powerful speech should be included in the Appendix of the CONGRESSIONAL RECORD.

Mr. Chairman, Dr. Silver, distinguished guests, and friends, it is surely an inspiration to stand before an audience such as this. You can understand why I was most happy to yield my time to the gentleman who immediately preceded me in your entertainment, to listen a little longer to those golden notes that have demonstrated the unity of our ideas.

I am also happy to be on the same platform with my colleague in the Senate. Senators sometimes seem to be some distance apart, not only geographically, but ideologically. [Laughter.] Here is a subject on which we are in full accord. [Applause.]

As Senator MURRAY has so appropriately pointed out, the overwhelming sentiment of Congressmen and Senators in both parties has been in favor of the Palestine resolution. Yet in spite of the practically unanimous endorsement of the Palestine resolution which we read, we still find ourselves suffering from the frustration of a State Department that refuses to go forward with what is so evidently the overwhelming sentiment of the American people. [Applause.]

It is appropriate, as Senator MURRAY pointed out, that strongly as we condemn the action of Great Britain and its foreign office, its colonial office, regarding Palestine, we must hold to account our own administration for failure, in spite of all the favors granted to Britain and others, to achieve this thing which, above all others, contributes, not only to justice to a great race, but also to serving, in my judgment, the interests of the foreign policy of the United States. [Applause.]

If our foreign policy has any sense left to it, it will see to it that Palestine is made into a Jewish commonwealth without delay. [Applause.] I hope that Senator MURRAY may speak with the same eloquence and earnestness to those more immediately concerned in the formulation of this policy in the executive department. I do not challenge the good faith or the good intentions of the President or of the Secretary of State. What I ask simply is that after 24 months of frustration through action and inaction, we shall now expect results worthy of the great cause in which we are engaged. [Applause.]

I am happy to be here tonight fresh from a dinner which I enjoyed on Zion Hill in Dexter, Maine, where I was born. Perhaps that explains my devotion to this cause. [Applause.] I also claim, with Dr. Silver, to be preordained a Zionist by selection of my place of birth on Zion Hill. [Laughter and applause.]

I was delighted when John Gunther in Inside USA selected my devotion to Zionism as one of the outstanding characteristics of my public and private life. [Applause.]

I came under the influence of the silver tongue of your great leader 25 years ago. [Applause.] If there had been any doubt in my mind, he resolved it with the wisdom and the fervor which he revealed. Since then, it has been my pleasure to serve as I might in advancing this great cause. You are highly privileged to have had him as your leader—one who is recognized throughout the world because of his vision and his statesmanship; one to whom all of us in Washington are proud to pay tribute in this zenith of his devotion to the cause. [Applause.] His world-wide leadership approaches the day when the great cause of Zion will come into its own and be ordained by all the nations as a vision that has been converted into a reality.

While we sometimes may seem dismayed and discouraged, while sometimes it seems as though the way is long, while sometimes it seems as though we have been wandering in the wilderness, for more than the 40 years of that long journey from the darkness of Egypt up to the bright hills of Palestine—let us not lose heart.

I come to you fresh from Palestine where 10 weeks ago this very day I was privileged to alight and spend the day there with Mrs. Goldie Meyerson, the great political leader. [Applause.] We traveled about Palestine and visited a colony that was established there 25 years ago. Thus I saw at first hand the fruits of your devoted labor and contributions. I also saw there 50 young children who had been brought from the displaced-persons camps of Germany, whom I had seen 2 years earlier in Germany, and now was privileged to see them brought back to life from the dark ghosts that were stalking there in the shadows of the graves of those they had loved. Here they were in the brightness and light of Palestine, there upon the hills, in a colony that was bringing them back to a realization of the great love.

Yet the joy of that day was overshadowed by the thought of the thousands who remain in the displaced-persons camps.

Only in the past few weeks I filed in the CONGRESSIONAL RECORD a report given to me by Col. Julius Klein covering conditions there in Germany in the displaced persons camps, and in the associations of our soldiers with the Nazis, and the extent to which they are being indoctrinated with Nazi ideas and ideologies as a result of the associations that are going on; and warnings of the peril and what must be the reaction of the thousands in the displaced persons camps to see our own soldiers becoming infected with the disease of nazism as a result of that association. I was happy today to read that a distinguished rabbi in Germany and a clergyman of another faith had joined in denunciation of those associations which are bringing about the corruption of our youth. [Applause.]

So I come to you to bring you reassurance as to the progress there in Palestine, in spite of the dismal stories that are told, and to assure you of my continuing profound faith that this great cause is going on in spite of all the opposition which may be generated by men of little minds.

As we wander in these days, as you contemplate the 50 years of your labors in this wilderness of doubt and of despair, you must realize it comes to you primarily as a challenge to your faith, as a test of whether or not you are worthy of all those throughout the hundreds of generations who have handed down this great vision, and whether now, as we come to the very threshold of the promised land, you can maintain your faith and be worthy to see your comrades.

I am reminded of a small boy up in Maine, a barefoot boy, fishing from a bridge over a little brook. A shiny automobile stopped at the bridge. I suppose we could say a cosmopolitan New Yorker was probably inside. He said to the little boy, "Sonny, can you tell me the way to Rumford Falls?"

"No; I can't."

"Can you tell me the way to Westbrook?"

"No; I can't."

"Can you tell me the way to Waterville?"

"No; I can't."

The New Yorker said, "Well, sonny, you don't know very much, do you?"

The little boy answered, "No; but I ain't lost." [Laughter.]

That is what we need to say to our sometimes devious diplomats who seek with siren tongues to deceive the electorate. We have to assure them we still know the objective we have in view and that no words can confuse or bemuse us in the achievement of this goal. Diplomats use words in many ways, as Senator MURRAY pointed out. It is high time we here in America should accumulate some of that shirt-sleeve diplomacy that speaks and says exactly what it means and does not deal other cards under the table. [Applause.]

Words are very funny things. I knew of a young lady up-State who asked to have her genealogy developed. An authority in this field discovered that one of her uncles had perished at Sing Sing under somewhat dubious circumstances. [Laughter.] She did not think that was very desirable, and asked if he could not fix it up a little. So he brought back a report which stated that this particular uncle had occupied the chair of applied electricity at a great American institution. [Laughter.] And had died in harness. [Laughter].

That is the way I feel about some of the utterances of our diplomats. I think it is high time we held them to account. They can discover very serious obstacles in very little things. They can give us a million reasons why a thing cannot be done. They can hide behind shadows that are without substance of any kind.

There was a spinster lady who had a cottage on one of the rivers in Maine. She was disturbed to find boys swimming along the banks in front of her cottage. She asked the chief of police to tell them to go away. Two days later she called up and said, "Chief, it is still very unsatisfactory. Out of my second-story window with a spyglass, I can still see those boys." [Laughter.]

That is the way it seems to me these diplomats are operating. If we have any doubt about it, simply read the words of Bartley Crum—[applause]—a member of the fifty-seventh variety of Anglo-American commissions that we have had to evade this problem. He has written a record of the devious

course of our diplomacy that has never been successfully denied. As long as that record written by Bartley Crum stands unchallenged, our administration must recognize that it faces serious questions as to its capacity to deal with matters of this kind. [Applause.]

Why do I have this faith regarding Palestine in the face of all the discouragements of recent years? If I may paraphrase the words of a very great man, there is no power on earth that can resist an idea whose time has come. In my judgment, that is the story of the great Zionist dream of Palestine. It is about to be realized even though, as always, it is darkest before the dawn.

Secretary Marshall wrote to 30 Congressmen one short month ago that it was premature to formulate an American policy regarding Palestine. What an amazing statement. American policy regarding Palestine was formulated in the Coolidge Anglo-American Treaty of 1924, following out the policies enunciated by Woodrow Wilson and by every one of his successors in the White House, down to the very present day. [Applause.] How can anyone dare to say that there is any necessity of formulating an American policy regarding Palestine. That policy declared in no uncertain terms that Palestine should be developed as a Jewish homeland. [Applause.] The ignorance of General Marshall is understandable in view of his preoccupation with many matters, but it is unpardonable in the utterly inadequate briefing of his devious subordinates. It is only a question of time until they must be repudiated in order to justify the good faith of the administration. [Applause.]

Now I come to what seems to me the significance of this present time. Senator MURRAY has given you a complete and accurate history of the development of this great idea. But now we come to the present and to this very spot where the United Nations are now assembled to deal with the problem of peace throughout the earth. What do we find?

Under the Truman doctrine regarding Greece and Turkey, we find it was necessary to detour the United Nations, perhaps for the reason that the prospect of a Russian veto of the Greek Border Commission seems to doom to frustration any action on their part.

Then we come to the Marshall plan for Europe, and the debacle in Paris this past week, perhaps necessary because of the fear that the Economic Commission of the United Nations might be under the domination of Russia and her satelites and so render nugatory the great objectives he had in view. Yet, here again, in these two great momentous issues concerned with the peace of all the world, it has been necessary to go around the United Nations. If this policy is to continue, then perhaps it will be necessary to erect a pyramid instead of an office building, over here on the banks of the East River, as a melancholy monument to another vision of world peace that passed this way in vain.

But Palestine has been referred to the United Nations, and here is the challenge of the vigor and virility of the United Nations to do justice in this cause. And justice here requires only that the pledge of 54 nations in the mandate given to Great Britain shall now thus belatedly be redeemed. [Applause.]

It will be something far more than the problem of justice to the Jews. That is the problem of whether good faith still continues among the people of this earth. At the very time that Palestine in its meager 10,000 square miles was pledged as a homeland for the Jews, there was also a pledge of more than a million square miles to five Arab nations. That has since been accomplished under the careful midwifery of the United States and Great Britain. They now have the effrontery to challenge their foster parents with war upon our countries if we shall not yield to their demands regarding Palestine. Can anyone conceive of greater effrontery than of a Grand Mufti fresh from his residence in Berlin—that the United Nations shall consider the worthiness of their cause?

Perhaps we can understand Britain's seeking of Arab friendship on the verge of the great war, although, as Senator MURRAY said, Winston Churchill challenged that in words still ringing down the corridors of history when he said that the good faith of Great Britain was a more potent weapon than all the Arabs in the world. He said that the White Paper was a plain breach of a solemn obligation, and that the day would come when Britain would rue that act.

What did they gain for it? Did they gain the aid of a single Arab in the painful struggle through which we have passed? Ibn Saud declared war in April of 1945, 1 month after the collapse of the Hitler regime and 2 months before Hirohito took the air. That was the aid we got from Ibn Saud in return for the White Paper. It seems to me he has been abundantly repaid by the $1,000,000,000 which I read in the paper today he is to receive as a result of the oil concession in Saudi Arabia. It does not seem to me that we need to give him Palestine as well. [Applause.] In his kingdom he will not allow a Jew, and he has never visited Palestine. So it seems to me his views regarding Palestine in the light of the last quarter of a century of achievement do not need serious consideration by the United Nations.

What do we see beyond? My time is running out. I asked Dr. Silver how long I should speak and he said what a great President of Yale said on a sunny May afternoon when the boys had to attend chapel. He said, "You know, no soul is saved after the first 20 minutes." [Laughter.] I rather suspect there are no souls here that are in need of saving. I think you have by your dedication throughout the past 50 years demonstrated your right to consideration in this cause. I think some of you have been at it that long, although I am sure the ladies are a little more recent acquisition. [Laughter.]

My proposition is simply this—that not only justice to the Jew under the Anglo-American Treaty of 1924 dedicates and declares our policy, but that American foreign policy at the present time insistently requires that we shall see to it that Palestine becomes a Jewish commonwealth, as obviously the only way in which the pledge of a Jewish homeland in Palestine can be realized. [Applause.] Let's pray that this will be. Also, it is the only way in which there can be any assurance that we shall continue to have access to these precious and indispensable oil reserves in the Middle East. All through the story of Palestine runs the theme of oil. Let us face it as a fact.

Our action regarding Greece and Turkey can only be justified upon the ground that our vital national interests are immediately involved. In no other way can they justify our action, pouring in hundreds of millions of our money, with a potential promise to back it up with military might—unless our vital national interests are involved. Surely, if Greece and Turkey are vital, Palestine is more important yet, because through Palestine runs the very sacred pipe line which Lebanon and Syria tell us in the very reports today are the means of their rising in the family of nations to a new era of prosperity and progress. Yet those very pipe lines run through Palestine. Rights to them were given by the British mandatory within the past 3 months without regard whatsoever to the rights and interests of the Jews and of the other occupants of that land.

This is why it seems to me it is time for the American people to insist that those in authority in our Executive administration shall take cognizance of these plain and simple facts. If Arabian oil is vital to our people, as we are told within the past week, the 500,000 barrels a month are coming to redeem our shortages upon the Atlantic seaboard, for each month in the remainder of this year.

If they establish this pipe line to Arabian oil, there are two policies which they may follow. One is by insisting that all nations live up to their pledges, without delay and in good faith. That means that the United Nations—practically all of whom were parties to the League of Nations, with the single exception of the United States—consider the mandate as to the future of Palestine. The United States became a party by the Anglo-American Treaty of 1924.

Where do our Arab friends stand? They have given concessions to oil companies on the oil that lies beneath their soil. They are being paid, as they boast in the paper today, more than a billion dollars for those rights. Yet they now demand the right to dictate regarding Palestine. They have not a single vestige of a claim. As Lawrence of Arabia pointed out in a letter to Winston Churchill, he said the pledge regarding Palestine was warranted and just. The leader of the Arabs at that time similarly gave his sanction to the act. Yet, these Arab muftis would now undertake to repudiate their own pledges and would demand that the Jew must be sacrificed, as it was said in the House of Commons, to the imperialistic rather than humanitarian policies.

The time has come to call a halt. That is why I end, as I began, with the declaration that Palestine within our day is going to become a Jewish commonwealth. [Applause.] I say that not only because it is right, not only because it is just, not only because it is a consecration of the loving labors of all the millions here in America who have contributed to this great cause, not only because of the hundreds of millions of dollars poured into redeeming that land to make it blossom, literally, like the rose. I rode about there, first, where the Jewish colonists have redeemed it; then, side by side, the land deserted by the Arabs and denied to Jews by the British who seem to be intent on keeping Palestine always a subordinate among the nations.

It is a curious thing. Palestine is almost the only country in the world that does not ask for aid. The Jews have gone in there. They are self-supporting. They are self-respecting. You and your associates throughout America have made that possible in one of the greatest demonstrations in modern life of the capacity of a people for sacrifice for a high and holy cause. [Applause.]

If they would come to us and tell us that they were perhaps infected with the virus of communism, if they would come and ask us for $4,000,000,000 in a loan, then America would spring into response and our State Department would insist that something be done. But when Palestine comes to us and asks only that they shall be free and independent, that they would be happy to relieve us of more than a million displaced persons in Europe now dependent upon our charity and help, that they will be delighted in the next decade to take them over—and the record of the past 25 years is a sufficient guarantee that they are entirely capable of that pledge [applause]—they cannot understand language of that character. They do not know what it is to have a country offer to help us. So they shy aside.

I suggest that our cartoonists, our satirists, those capable of doing justice to this cause, shall point out not only the futility, but the farce of America refusing one country in this world which offers to help us out. [Applause.]

They are deliberating over in Europe today as to how many billions they shall ask

us for to help them out. We are deliberating as to how many billions we can afford to give them. Yet the one country in the world which asks for nothing but an opportunity to be free, in accordance with the pledge made by all the nations, must stand as a mendicant at our door; and our State Department cannot even do it justice to say they will formulate a policy. [Applause.]

These are some of the reasons for the faith that is in me. I could continue without end, speaking from the inspiration I have gathered in the past week from Zionists, speaking on my visit to Palestine twice in the past 3 years. But assuring you certainly as there is a God in Israel, certainly as the sun rises in the east and sets in the west, Palestine is going to be a free and independent Jewish commonwealth, either under this administration or under the one that will certainly succeed it.

(The assembly arose and applauded.)

Air Reserve Endorses Unification

EXTENSION OF REMARKS
OF
HON. A. S. MIKE MONRONEY
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 16, 1947

Mr. MONRONEY. Mr. Speaker, at its first postwar national convention, the Air Reserve Association of the United States placed itself squarely on record in support of unification of the armed services with the unanimous adoption of a resolution which concisely states the case for unification. Because of the concise accuracy of that resolution representing another strong evidence of the American public's support of the proposal of unification, I am inserting it in the Appendix of the RECORD:

RESOLUTIONS ADOPTED AT THE NATIONAL CONVENTION OF THE AIR RESERVE ASSOCIATION OF THE UNITED STATES AT MEMPHIS, TENN., NOVEMBER 18–20, 1946

Whereas the strength of national security forces under present unsettled war conditions is of extreme importance; and

Whereas it appears that there is a growing tendency in some quarters to economize at the expense of national safety requirements: Now be it

Resolved, That the Air Reserve Association place itself on record as favoring a strong air force in being, supported by a strong air reserve, maintenance of a research and development program adequate for development of weapons superior to those of any possible enemy, and maintenance of an aircraft industry capable of proper expansion during wartime; and the Air Reserve Association requests that the United States Government take the action necessary to maintain a defense program and a sufficient air force to meet all foreseeable emergencies; and

Whereas unification of the armed forces is a question that should be decided on its own merits; and

Whereas it is unthinkable to attempt adequate national defense under the present uncoordinated command; and

Whereas the effective strategic employment of air power during World War II is justifying its recognition as military power in its own right; and

Whereas an adequate defense set-up demands the establishment of an autonomous air force; and

Whereas the formulation of an adequate air-defense program has been delayed due to the inability of the Air Forces to act independently in their present subordinate position: Now, therefore, be it

Resolved, That the Air Reserve Association favors the immediate establishment of an autonomous air force; and

Whereas economy in military organizations is necessary in order to obtain maximum defense per dollar invested; and

Whereas the experience in World War II has shown the necessity for one supreme coordinated command of military services: Now, therefore, be it

Resolved, That the Air Reserve Association favors a single department of defense with coordinated land, sea, and air components; and furthermore be it

Resolved, That action be taken by Congress at the earliest possible moment in order to eliminate the present delays in the reorganization of the Army Air Forces.

Also, Mr. Speaker, I am inserting in the RECORD a resolution adopted by an outstanding aviation group, the National Aviation Clinic, and vigorously endorsing unification.

Resolution 4—National Defense

Resolved, That the National Aviation Clinic strongly favors, and again urgently recommends, the immediate establishment of a Secretary of Defense with three Under Secretaries for the Army, Navy, and Air Power.

Rural Life Sunday

EXTENSION OF REMARKS
OF
HON. EDWARD O. McCOWEN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 16, 1947

Mr. McCOWEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Joseph W. Fichter, of Oxford, Ohio, chaplain of the National Grange and master of the Ohio State Grange, delivered during Rural Life Sunday coast-to-coast broadcast under the auspices of the National Grange over the Mutual Broadcasting System, from Hamilton, Ohio, May 11, 1947:

It is fitting that the Sabbath Day be selected as the time for taking stock of rural life. On this day, when our thoughts are turned to God, we reflect on the meaning and purpose of life and ask ourselves whether we are giving proper direction to the great gift of life which has been bequeathed to us.

Furthermore, it is fitting that the Grange cooperate with the Church in observing Rural Life Sunday, for the Grange is interested in spiritual matters as well as in economic, educational, and social questions. The Grange, however, is nonsectarian and scrupulously refrains from interfering with the religious opinions of its members.

The origin of Rural Life Sunday is in the Rogation Days, which were designated by the early church for the purpose of offering special prayers to God for His blessing on the fruits of the soil. Rural Life Sunday, as a world-wide day of prayer, was instituted at a meeting of the International Association of Agricultural Missions in 1929. The fifth Sunday after Easter was selected as the time for the observance, and all groups were urged to endeavor to make the day fulfill its possibilities for the rural life of the world.

Following the suggestion made in 1929, Granges throughout the land have observed Rural Life Sunday. In some places Grange members attend the local church as a group, and participate in the special service appropriate for the occasion. In other places special meetings are held in Grange halls, with a member of the clergy or someone else interested in rural life as a speaker. The theme running through all of these meetings is the responsibility of all—on the farm and in the city—as stewards of God's holy earth.

Today this Nation-wide network broadcast of a typical Rural Life Sunday program marks a milestone in the observance of the day. Assembled here are members of the local Grange and of the local church, who have met to worship together and to consider the relationship of rural life to the Nation and to the world.

Down through the ages prophets, poets, and sages have urged the people to hold fast to the virtues inherent in rural life. But their exhortations have been as a voice crying in the wilderness.

Within recent years, however, we are beginning to realize the folly in our neglect of rural life. We have begun to see that in our search for wealth, power, and temporary pleasures in the city we are losing the security, freedom, and happiness that were once ours on the farm. We have become aware that the soil, which is a vital source of food for people in the city as well as in the country, has been depleted to the danger point.

Today there is a revival of concern for rural life. With the realization that city populations are not reproducing themselves, we are becoming aware that the continuation of the human race depends upon the rural areas.

There is nothing to be gained by stirring up a spirit of antagonism between city and country. The welfare of the city is dependent upon the health, prosperity, education, and spiritual attitude of the countryside; and likewise the well-being of the city is good for the farm community.

It is unfortunate if city people reach conclusions regarding political, economic, and social issues through a process that takes into account only the temporary and easily apparent selfish interest of the city. Also, it is unfortunate if farmers pursue a similar process.

It is much better if all of us, city dwellers and farmers, consider ourselves members of one human family, making our homes or and nurtured by God's holy earth. All of us, in one way or another, are engaged in occupations which contribute to the production of food, raiment, homes, and other elements of civilization.

With such a perspective, we shall realize that one of nature's basic laws is mutual dependence and that no one is exempt from it; that no one person or one group can expect always to be so powerful as to be sufficient unto itself.

If we think of living as members of one human family and if we seek an acquaintanceship with and an understanding of life as manifested in nature, we shall learn to distinguish between the essential and the less essential. We shall learn that the soil is necessary to life everywhere. While realizing that prosperous cities can contribute to the prosperity of farmers, we shall at the same time be aware that in the last analysis life can go on without cities but it cannot continue without the soil and the products thereof. Xenophon, the ancient Greek writer, said, "When agriculture flourishes, all other pursuits are in full vigor; but when the ground is forced to lie barren, other occupations are almost stopped, as well by land as by sea."

Were it not for the food which moves daily from the farms, people in the cities would soon go hungry and no amount of money or sophistication could satisfy their hunger. To

a great extent, the fertility of the soil has been depleted through the furnishing of food for the cities. The cities have been developed in large measure by people who were born and reared on the farms. As boys and girls from the farms have gone to urban communities, they have taken with them a large investment in the cost of their rearing and of their education and in the quality of their integrity and spiritual life, all of which has been furnished by the farm homes and rural communities. Furthermore, as city populations have so far not reproduced themselves, the physical continuance of life in the cities has been dependent upon immigration from the country.

Thus, life, soil fertility, and money have constantly flowed from the country to the city. This one-way stream cannot continue forever. If we expect the cities to continue to exist, the country must be replenished. We must not forget that one of nature's basic laws is mutual dependence.

The cities can do their part in this plan of mutual dependence by sharing with rural communities some of the money that has been transferred through the process which I have mentioned, from the country and concentrated in the cities. As a result of this transfer of people and money to the cities, the people remaining on the farms are no longer financially able to maintain facilities for health, schools, churches, libraries, and recreation as good as those in urban communities. It should be possible for teachers, preachers, physicians, and others in rural areas to have incomes and living conditions as good as those in the cities.

This can be possible either by an increase in the relative share of the farmer's income or by forms of taxation whereby taxes can be collected on the basis of the ability to pay and distributed on the basis of need.

Furthermore, the cost of conserving and restoring of the soil is an obligation which should be shared by the city.

For many years, the average income of the farmers has been less than one-half of that of city residents. Even in 1945, a year of relatively high farm prices, the income of persons on farms averaged only $743 compared with $1,294 for persons not on farms.

The great increase in living costs during the last few months has created the impression that the farmers are receiving the benefit from these high prices. It is true that farm prices are higher now than they were in 1935–39, which is the base period that is so frequently used in making comparisons, but we should remember that farm prices during that period were 16 percent below parity. Although farmers are receiving more for their products now than formerly, a report released by the National Industrial Conference Board last week points out that by December 1946 the latest date for which the board had available figures, "the farmer was paying 94 percent more for all commodities for family maintenance than he did on the average in the 1935–39 period, 63 percent more for all commodities used in production, and 238 percent more for farm labor." The report of the board states that "to maintain prewar living standards, families of moderate income in large cities must now devote about 42 percent of their expenditure to food, as compared with 35 percent in 1935–39."

A study made by the Federal Trade Commission in 1936 revealed that the growers of Texas cabbage received 14.5 cents of the consumer's dollar; the grower of Florida grapefruit 24 cents; the grower of California oranges 33 cents; and the grower of Maine potatoes 46 cents. There is nothing to indicate that the farmer today is receiving a greater share of the consumer's dollar than he received in 1936.

Ways and means of encouraging the family-type farm must receive our attention. The family-type farm and the rural community constitute an ideal environment for better living. The farm home is the best place for normal living, which is the kind of living that all of us should seek to attain.

We cannot afford to accept the assumption there will be fewer and fewer people on the farm in the future. I realize that some economic conditions and some other developments have given us reason to take this assumption for granted. We should not fall into the defeatist attitude of accepting these conditions, but we should attempt to alter them.

Soil conservation and all that it implies—the planting of trees and the building of our depleted soil—should be a major concern of all the people, both in the cities and in the country. Perhaps land heretofore considered as wasteland can be made into fertile soil for the raising of crops and for the building of homes. Swamps can be drained and desert lands can be watered through the use of power machinery. Perhaps these places can be offered to our young people to encourage them to establish themselves on the land. It is encouraging that a million returned veterans have selected farming as their occupation.

The farm is not only the seedbed of the race but it is the place where democracy and wholesome family life are best nurtured. Parents and children do not go their separate ways, but through work and recreation the normal conditions of family life prevail. By sharing in the work of the farm and home, all learn the responsibilities as well as the benefits of democratic living. The virtue of thrift is acquired. Independence of thought is encouraged. Farm life develops integrity. The farmer can be a personality, with enough detachment from the surging mass of humanity and the rush and glitter of artificial life to enable him to think calmly and objectively. He shares in the joys and sorrows of his neighbors. It will be unfortunate for democracy if fewer and fewer people live on the family-type farm.

Modern man, influenced by the materialistic philosophy which says that the main purpose of life is the production and distribution of material goods, has lost much of the human and cultural values of rural life such as simple living, freedom, security, the appreciation of the beauty of nature, the association with lifelong friends, and a strong family life.

Material progress is not bad in itself. It is eliminating drudgery and isolation. But labor-saving devices should be used to provide more leisure time which should be devoted to the advancement of the cultural and spiritual phases of life.

If the business of farming completely absorbs us, we have overlooked the chief attractions of rural life. A way of life should be our main interest. Instead of allowing ourselves to be overcome by the materialism of this machine age, we should capitalize on the opportunities for normal living which surround us on the farm.

Displaced Persons Problem

EXTENSION OF REMARKS
OF
HON. JOHN J. DELANEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 16, 1947

Mr. DELANEY. Mr. Speaker, the problem of the displaced persons is that of the resettlement of a million men, women, and children. At present these people are living in camps in Europe created for them when the Allied armies liberated them from Nazi exploitation and persecution.

Originally there were approximately eight millions of these persons who were made homeless during World War II They had fled from persecution or possible extermination or were taken to Germany, from all of the Nazi-dominated countries of Europe, to help build the war machine. Only one million have survived. Because of political and social conditions, they do not wish to return to their original homes, many of which are now under Communist domination. Of them, 21 percent are children, 13 percent are over the age of 44. Contrary to popular opinion, which has been formed on the basis of the magnitude of the concurrent and connected Palestine question, and the fact that 6,000,000 Jews were exterminated, most of these people do not belong to the Jewish race. About 20 percent are Jews, 65 percent Catholics, and 15 percent Protestants.

The United States is at present caring for about 60 percent of these people, as they are in the United States zone. The cost to the United States in 1947 will be about $130,000,000. As a member of the International Refugee Organization, which will take the place of the separate funds by the countries involved, the United States will pay a share amounting to $73,500,000.

Although membership in the International Refugee Organization will in no way commit the United States Congress to any policy on immigration, the two matters are related because at present the immigration laws of the United States do not permit the settlement here of many of the refugees who would like to come here, who would probably make good United States citizens, and who must go somewhere.

The problem until now has been one which has taxed the imagination, patience, and resourcefulness of soldiers, diplomats, and administrators. In the future, policy with regard to these refugees will have to be determined by the legislators.

There are four possible solutions, only one of which seems humane and sensible, to the question of providing homes for these displaced persons:

First. We could by force repatriate all of those now in the United States zones. Our soldiers with the aid of the German police could, at the point of bayonets, load them into boxcars or trucks and transport them to the countries of eastern Europe, or, likewise by force, collect them in order to have them fetched by the authorities of those countries. Russia has demanded their repatriation. To date the United States has refused. The use of force would be necessary.

Second. As a second possibility we could close the camps for displaced persons and let them struggle for themselves in a land where they have been, and, from definite indications, still would be persecuted. The International Refugee Organization offers a temporary remedy from this, but it will be an annual question.

Third. Another temporary solution would be maintenance of the camps, segregated from the economy and govern-

ment of Germany and paid for by the American taxpayer, either partially or wholly. The effect on the DP's, as they are called, would be to condemn them to a continued life of uncertainty with dissipation of their skills and their energies.

Fourth. The only alternative with any seeming permanence of solution which seems consistent with American principles would be to combine with our efforts—already being made—to resettle as many of the people as possible in Europe and Latin America, an effort to solve justly the Palestine question, and, primarily, a willingness to do our share in resettling some of these people in the United States.

Some of them we already have. But under the existing quota laws it is impossible for the number of these displaced people that are allowed to find refuge here to approximate the number that wish to do so. Moreover, on the basis of specific calculations as to age, ability, and adaptability, the thought is advanced by disinterested investigators that these people would make good, responsible American citizens, many of whom are needed for their special skills.

H. R. 2910 accepts the fourth alternative.

RESETTLEMENT POSSIBILITIES

Resettlement in Europe is expected as a possibility for only a few of the displaced persons. The fact that they fled persecution or annihilation—some of them are the sole survivors of their families—would indicate that they would have small reason to wish to return to their former homelands. The fact that they fled countries which are now chiefly Communist dominated and are still afraid to return to them means that most of eastern Europe is eliminated as a possible home for them. Germany was the country in which many of them were singled out for particularly brutal treatment. They cannot be expected to wish to settle there. England has opened her doors to an unusual number of immigrants as a temporary measure; but there is much uncertainty as to how long England's economy will be able to support any large number of additional persons. The rest of western Europe is also limited in capacity, although it is expected that some thousands will be distributed among the remaining countries.

Latin America is expected to absorb many thousands of displaced persons. It is the attitude, however, of those who are struggling to find a solution to this problem, that the Americans can scarcely hope to promote successfully efforts in this direction unless they themselves are willing to do a fair share.

Settlement of the question of Palestine, which might care for, eventually, some 20 percent of the displaced persons, is a matter involving various countries in a political, social, and economic tangle. The part of the United States in this matter can be pursued much more logically if this country has already made evident its good faith in sharing the larger problem.

THE UNITED STATES VIEWPOINT

The attitude of the United States toward the problem of the displaced persons involves some conflicting thought. Primarily the United States has been considered, at least in the eyes of most of its citizens, and, to some extent, abroad, as humanitarian in its viewpoint. Not only has it been regarded in the past—because of its very foundations and methods of settlement—as a haven of refuge, a land of freedom for the oppressed, a land of opportunity for the independent-minded, but also it has extended a helping hand to the unfortunate and has expected to do so in varying types of disaster. In this case a solution rather than temporary aid—already given—is necessary. These people want the chance to help themselves. They are not only not unwilling, as some have supposed, but anxious for the opportunity to pursue their own trades, to build again for themselves a home and a career and a permanency for their families. Many of them would like to come to the United States. The possibility of their making good citizens is offered as a good one judging from their background of adaptability, of industry, of their desire for independence.

The United States immigration laws are such that at present only certain numbers of persons from each country can come to stay here permanently. Many of those who must resettle somewhere and who wish to settle here can not do so under the present law. The emergency is considered a temporary one and one that is not likely to be repeated. The immediate question facing the United States is whether the legislators will see fit to relax the immigration laws, perhaps temporarily, in order to help to take care of a desperate situation, not only by actual assistance but also by example.

Modernize Our Presidential Election—IV. Count the Votes as Cast

EXTENSION OF REMARKS

OF

HON. CLARENCE F. LEA

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 16, 1947

Mr. LEA. Mr. Speaker, recently the Nation was shocked on learning that minor election officials out in Kansas City had used their position to make a theft of votes by counting them contrary to the way they were cast. A few hundred votes, or possibly a few thousand, were involved in the election to nominate a candidate for Congress.

In the Presidential election of 1944, 21,384,797 votes, with the approval of the law under which we elect the President, were counted exactly contrary to the way they were cast.

Mr. Dewey carried 12 States, having a total popular vote in that election of 9,894,187. Of these Mr. Dewey received 5,252,834, or 53 percent of the total vote of those 12 States, while the other candidates, principally Mr. Roosevelt, received 47 percent of the popular vote, but no credit for the electoral votes.

In a Nation-wide vote there was a total of 48,025,684. Of this number, Mr. Roosevelt received 25,602,505. In the electoral college Mr. Roosevelt received credit for the total votes of 36 States, with an aggregate vote of 38,131,947, or 12,528,992 more popular votes as represented in the electoral college, than he actually received.

Of the popular votes thus credited to Mr. Roosevelt, 16,743,444 were votes cast for Mr. Dewey and other candidates in the States he did not carry.

The total popular vote of the Nation which, in the ultimate computation, was not represented for the candidates for whom cast, was 21,384,797. Thus, in the election for President in 1944, over 44 percent of all the popular votes cast were not credited for the candidates for whom cast, as they were counted in the electoral votes. Even worse than that, like the Kansas City case, they were computed the opposite of the way they were cast.

The difference, of course, in the two cases is that the Kansas City counting was illegal, and the Presidential counting is legal. The illegitimate effect, however, was the same—taking votes from one candidate and crediting them to another.

Each State is given electoral votes mainly in proportion to its population. Yet the Constitution does not require the allotment of votes within the State to the minority candidates for whom they were cast. That permits this travesty on justice by allowing them, in effect, to be computed exactly the contrary to the way they were cast.

I, with other Members who have proposed similar resolutions, am seeking a system for electing the President by which the vote will be counted as cast. Is it not time that such a crude method of conducting the Presidential election as we now have should be terminated?

The fundamental features of the plan of an election we propose are to do away with the Presidential electors, the State unit vote, and to abolish the practice of disfranchisement of minority votes. We propose to accomplish these purposes by directly abolishing the Electoral College and the Presidential electors. We propose to retain electoral votes as a just means of preserving the States' relative strength among the States in the election of President. In order to do this we propose to let the people vote directly for the President. Each candidate would automatically share in the electoral vote of the State in proportion to his popular vote in the State.

The basis of this plan is the popular vote of each candidate reduced to a percentage of the popular State vote. By multiplying the total electoral vote of the State by the percentage of the popular vote received by the candidate, we give him the exact proportion of the electoral vote of the State to which he is entitled.

In this way we establish the electoral vote as a common unit for each State and a fair method under which every vote for every candidate is taken into consideration in the final count.

Table I, which I present, is intended to illustrate the operation of this plan by showing the popular votes of all candidates of all the States and then the percentage of popular votes to which each candidate would have been entitled based on the election returns for 1944.

TABLE I.—*Popular votes and percentages for candidates, 1944*

States	Popular votes						Total	Percentage of popular votes

COMPARISON OF ELECTION RETURNS UNDER PRESENT AND PROPOSED PLANS AS APPLIED TO THE ELECTION OF 1944

I present table II showing the election returns of 1944, as measured by electoral votes, and what would have been the returns had House Joint Resolution 124 been part of our Constitution.

The first two columns of figures in this table show the result in each State as between the two main candidates at that election. Mr. Roosevelt carried 36 States, with their 432 electoral votes; Mr. Dewey carried 12 States, with their 99 electoral votes.

A glance at the first two columns of figures will show how illogical is our system of counting votes, under which the minority votes in each State contribute nothing to the candidate for whom cast. All minority votes are counted as if cast for the plurality candidate in each State.

Then if we look over to columns 3 and 4, in contrast, we will see what would have been the results, as measured by electoral votes as between these two candidates, had each one of them received a proportion of the electoral votes equal to his proportion of the popular votes.

Under the present plan of computation as shown in column 1, Mr. Roosevelt received 432 electoral votes. Under the proposed plan as shown in column 3 he would have received 300.726.

Then looking at the vote received by Mr. Dewey, we find that his total was 99 under the present plan; under the proposed plan, as indicated in column 4, his electoral vote would have been 223.529.

Under the proposed plan Roosevelt would have received 131.274 electoral votes less than he received under the present plan. Dewey would have received 124.529 electoral votes more than he did receive. The plurality of Roosevelt instead of being 331 would have been 77.197.

Neither candidate received any credit for millions of votes which were cast for him in States where he did not have a plurality. Glancing at the last four columns of figures, we see credit given for a minority candidate in every State where in proportion to his popular vote he received as much as only one one-thousandth of a percent of one electoral vote of the State. The minority candidate is entitled to this credit, and there is no reason why those votes should be computed as if cast for the plurality candidate.

The method of computing these votes is simple. Divide the total popular vote of any candidate in the State by the total vote of the State, and we get the percentage of his popular vote. Multiply the total number of electoral votes of the State by the candidate's percentage of the popular vote and we get the exact vote to which the candidate is entitled.

The computation of fractional numbers is not carried farther than three points beyond the decimal as a matter of convenience. Ordinarily fractional numbers beyond that point are immaterial. As a matter of precaution, however, House Joint Resolution 124 provides that the computation shall be carried further if by so doing it would change the result of the election. In case there should be a tie as between two candidates, then a resort to these minute fractions would break the tie.

As a further protection against the possibility of a tie vote and hence a deadlock in case there is a tie, the candidate receiving the largest number of popular votes shall be elected. These provisions remove the possibility of a deadlock. They forever remove the necessity for the election of a President in the House of Representatives on account of a deadlock in the electoral college.

A striking, if not an appalling, feature in the election of 1944 is the fact that over 21,000,000 votes were never credited to the candidates for whom cast. They were in effect credited to those for whom they were not cast.

Dewey received 222,285 popular votes for each of his electoral votes; Roosevelt received only 59,263 popular votes for each of his electoral votes.

Such discrepancies are characteristic of Presidential elections. These discrepancies demonstrate the fact that electoral votes under the present system do not and cannot accurately reflect public sentiment. The discrepancies result primarily from the fact that minority votes are not counted as cast. Votes credited to the plurality candidate in effect credit him with all votes which were cast for his opponents in every State he carried.

Minority votes are thus disregarded in computing the aggregate result. This, despite the fact that it is perfectly apparent that the aggregate number of minority votes of one of the candidates in the Nation may exceed the plurality votes of another candidate. For instance, one plurality candidate who carries an average plurality of 30,000 in each of 26 States will have a less aggregate vote than a minority candidate who carries 22 States by the average majority of 50,000 each.

Pensions of Postal Employees

EXTENSION OF REMARKS
OF

HON. OLIN D. JOHNSTON

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, July 16, 1947

Mr. JOHNSTON of South Carolina. Mr. President, I ask unanimous consent to have printed in the RECORD a letter dated July 7, 1947, addressed by Abraham C. Shapiro, president, Empire Branch 36, National Association of Letter Carriers to the editor of the New York Herald Tribune and published in that newspaper on July 10, 1947. The letter refers to the pensions of postal workers.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

POSTAL PENSIONS—CONGRESS URGED TO ACT NOW FOR RETIRED WORKERS

To the NEW YORK HERALD TRIBUNE:

With Congress set to adjourn by July 26, letter carriers and other postal employees are renewing their efforts for passage of the Langer-Chavez-Stevenson retirement bill.

Unless Congress acts favorably on this measure, 700 New York City retired carriers will be compelled to exist on substandard pensions for another year against the high cost of living. With no increase in their meager annuity since 1930, retired employees are forced to seek light employment to augment their earnings during their twilight years.

The Senate has held the Langer-Chavez bill (S. 637) on its calendar since mid-May; the companion measure in the House, the Stevenson bill (H. R. 3872) on its calendar since mid-June.

Retired letter carriers, after faithful service for 30 or more years carrying the heavy mails, look to Congress not to forget them again. This bill provides for:

1. An increase of only $6 in the weekly pension; and

2. Widows' and suvivors' benefits—for the first time.

3. A comparative annuity increase for active carriers who will retire. Present maximum annuity, $1,200, is insufficient to maintain a carrier and his wife, now reaching the age 60 retirement mark; an increase in such pensions by 20 percent will encourage retirements (or else he will work until age 70 limit or death before then), which in turn create vacancies to be filled by substitute carriers, additional substitutes will be appointed to take their places, predominantly veterans. With jobs becoming scarce, it would be wise for Congress to set the pace to retain a high level of employment nationally.

4. A 1-percent increase in pay-roll deductions into the retirement fund—from 5 to 6 percent.

This bill will not cost the Government any additional money. The latest Civil Service Commission actuarial report pegs the cost of this bill at $39,000,000. Based on the 1947 annual Government-employee pay roll of $4,000,000,000, the 1-percent additional deduction would total $40,000,000, which more than covers the cost of the bill.

The demand is very modest; the need is so great and long overdue to deserving employees who never enjoyed a high salary mark to save for that rainy day.

There are at present 100,000 retired Government employees throughout the Nation on the retirement rolls. They would receive a $300 or 25-percent increase, whichever is smaller.

A new formula in determining the annuity for an applicant for retirement is created in

this bill, giving credit for years of service instead of a flat minimum of $1,200.

ABRAHAM C. SHAPIRO,
President, Empire Branch 36, National Association of Letter Carriers.

NEW YORK, *July 7, 1947.*

Safeguards Against Judicial Dictatorship

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, July 16, 1947

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Charles M. LaFollette, Chief of Counsel for War Crimes, Nuremberg, Germany, entitled "Safeguards Against Judicial Dictatorship."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. President, ladies, and gentlemen, I am honored by your invitation. I hope I shall say one or two things which will be worthy of your intellects and the integrity and high purpose which has motivated our hosts who have called this meeting.

The representatives of the prosecution in opening the case at Nuremberg against the 15 Nazi Ministry of Justice officials and judges, who are the defendants, succinctly stated the issue and the problem, as we saw it, as follows:

"Two facts stand out when we study the crimes charged in this indictment. First, the diabolical novelty presented by the designed use of a nation's system of justice and its machinery by the governing power of a nation, as a weapon of destruction, an instrumentality of murder, kidnapping, slavery, torture, brutality, and larceny. Second, the mass character and therefore the enormity of the crimes committed by these defendants with this new weapon—this headman's axe fashioned from the scales of Justice in a forge, stoked with national greed and racial bigotry and hatred, fanned by blasts of directed propaganda and shaped by the calculated blows of designedly infamous legislation, controlled and dominated courts, and a studied effort to make ineffective or to eliminate completely, the defensive aids customarily enjoyed by defendants in the courts of civilized nations."

I hope you will agree that we have stated the issues accurately.

However, the trial of this case is still going on. The defendants have not yet had the opportunity to present their defense. Therefore a proper regard for the ethics of our profession precludes me from presenting here the detailed evidence which has been produced to support the substantive charges alleged in the indictment. Likewise, it seems to me improper to propound here, before arguing the same before the judges of the tribunal, the theories of law which the prosecution believes have been sustained by its proof. But I do believe it is proper to offer my observations about the existing condition in pre-Hitler German judicial practice, procedures, concepts, and government policy, which I feel made it so easy for the Nazi plotters to fashion the headman's ax which they used.

It is my opinion first, that the traditional power of the pre-Nazi German judge to control the proceedings during the trial was too great as contrasted with the rights of defendant and his counsel to adequately combat any usurpation of that power. And second, that the control exercised by the state or land ministries of justice over the appointment, promotion, and disciplining of the judges was potentially so strong that the domination of the judge, by men with evil purposes, was an ever-present, if not fully realized, danger.

Before specifically discussing these two contributing causes of the perversion of German justice under Hitler, I must, in fairness to myself, make a few preliminary remarks.

First, and above all things, I am not a blind or youthful American who is insistent that the American system of choosing and controlling judges results in a perfect administration of justice. In fact, as you may know, in the United States there is no fixed over-all pattern controlling this matter. The judges of the Federal courts, the courts of the United States, are appointed by the President by and with the consent of the concurring majority vote of the Senate for life during good behavior. They can be removed only by impeachment. The judges of the courts of the several States are elected, but the terms of their office, the manner of their selection and the methods which provide for their removal, follow no set pattern and are so varied that no purpose can be served by elaborating upon them. Indeed, except for the check of Senate approval, which I consider to be of great value, the method of appointing and controlling the members of the Federal judiciary does not differ too materially from that of many European countries.

From this it follows that my subsequent remarks about appointment and control of judges are not made completely outside of the context of United States procedures.

Again I am not dogmatic on the subject of systems of economics. Nor am I blind to the fact that those who have the most to gain or lose under any economic system make it their business to resort to pressure or artifice to protect from loss by changes sought to be effected by the people through democratic methods, that which they possess be it property or power.

Finally, I am not a boy, filled with the fervent ardor for an idea which accompanies his first cerebellic exercise. I am aware that the procedural methods and powers which we, in my country, have afforded to a defendant in a criminal case to insure him, as much as possible, against the whims, preconceptions or errors of the trial judge are expensive in time and money to operate and very often lead to a miscarriage of justice, in that an enemy of society in fact is found in law to be guiltless. I also understand that the orderly existence of a society and its progress toward a better way of living together can be adversely affected by such a result.

However, I am convinced that the safeguards which I have mentioned and under which I have learned to work make it increasingly difficult for any designing group of men in the future to let loose upon the world that which the Hitlerites turned loose and to capture a system of justice to facilitate such an adventure.

Let me return now first to a consideration of the power which the German judge had before Hitler to control the conduct of a criminal trial. He controlled the presentation of evidence, which included the power, if he cared to use it, to call for the production of witnesses. He controlled the examination of witnesses although, as a matter of judicial courtesy or largesse, he could grant to the prosecution or the defense the right to address questions after he had finished exercising his prerogative. Therefore the judicial result rested upon the integrity of the presiding judge. If he was objective and honorable, a proper result was obtained, but if he was not then the holocaust which was let loose upon the world by Hitler was not only negatively countenanced but actively served by a judge who possessed such power.

Hitler and his satellites saw clearly that here was a system made to order for their purposes. The special court, a recognized pre-Hitler device, was re-created and expanded. Then a studied and, believe me, effective program of filling those courts with proven Nazis as judges was followed. The people's court was also created; the same procedure was followed in choosing professional judges as was followed in the case of the special courts, and lay judges were not chosen until or unless either the army, the air force, the SS and the SA branches of the party, or all of them, were consulted and their approval obtained.

There is German documentary proof for every statement I have made.

The system of criminal procedure was there. The Nazis seized it, as the whole world and the German people must have known they would do, if they did not choose to ignore all they had learned from history about the way in which evil, designing men have always acted.

Does this concern us here, Germans and Allies alike? Do we not need to reexamine the basic concepts of a system so easily perverted? Listen to the facts. Did the Nazi government decree that the Jew was subhuman and must be exterminated? If so, then the Nazi judge decided that no witnesses need be called to testify in open court against him—the Gestapo report was enough; that no witness could be called or examined for him—his guilt was self-evidence because the party and national policy decreed it; that he could not be heard to testify for himself—for the party and national policy decreed that he, being a Jew, could not give trustworthy evidence. The Jew was exterminated. Did the party and national policy decide that Poles should be exterminated? Then the Nazi judge, operating the made-to-order German system, followed the same process. The Poles were exterminated. Did the party and national policy decree that under the "Nacht und Nebel" policy French civilians should disappear forever? Then the Nazi judge, operating this made-to-order system, followed the same process. The French civilian disappeared forever. Did the party and national policy decide that Communists, Social Democrats, and other opposing German nationals should be eliminated because they stood in the way of world conquest? The Nazi judge, operating this made-to-order system, followed the same process, and the Communist, Social Democrat, or other opposing German national was eliminated. I agree with you, of course, that these were evil judges, but I will not let you forget that their power to accomplish their purpose, which all thinking mankind now knows was evil, was made possible by the judicial traditions and system which were conveniently ready at hand for their use.

Again, the Nazis, availing themselves of article 48 of the Weimar Constitution, that dangerous anomaly, a dictatorship device in a democratic constitution, which its creators had thought, honestly and hopefully—but oh! how foolishly—they could pick up or lay down at will without endangering the existence of a democratic society, proceeded quickly to eliminate the state ministries of justice so as to concentrate all administration of justice into the hands of the Central Government—the Third Reich. But this act would not have had such disastrous results had it not been true that prior to that time the power of the ministries of justice of the German states to dominate the appointment, promotion, and discipline of the judges within their state jurisdictions had existed as a traditional accepted policy. The only device

used as a protection against complete control of the administration of justice over the whole German Nation by any one group within the Nation had been the device of decentralization into state control. Thus, the Nazis, by decreeing centralization of the administration of justice, were able by that one stroke to acquire dictatorial domination over the whole nation.

Now, let us see what happened after that accomplished fact.

First, the act reforming the civil service was passed. It eliminated Jews and half-Jews from any participation in any and all phases of the administration of justice. It also furnished the club of economic power by which all other judges or prosecutors who refused to obey were beaten into submission or driven from office. Then followed the open and avowed removal of judges whose decisions were not consistent with Nazi ideology and current positions. Finally, the ascendancy of Himmler and the SS and the Gestapo and of Kaltenbrunner and the Reich security main office over the judges, prosecutors, and, indeed, the Ministry of Justice itself, became an accepted fact. All of this is established by German documentary evidence.

Does this concern us here, Germans and Allies alike? Are the means, which I described, which are the naturally resulting ones from the German concept of judicial administration which existed when Hitler seized power, of no concern to you? Then listen to the facts. If Himmler and the SS and Gestapo decided that Russian soldiers should be exterminated in order to insure the thousand years undisturbed existence of the Lebensraum, which was to be gained in the east, then the ministry of justice was ordered not only not to interfere with the Nazi policy, but also to aid affirmatively the success of the policy, by operating drumhead courts in the eastern territories. Shoud Hitler and Himmler decide that French Nacht und Nebel prisoners should be turned over to the tender hands and mercies of the Gestapo after their terms of imprisonment were ended, then the judges and prison officials, with the approval and often at the express order of the Third Reich ministry of justice officials, obeyed. When Hitler, Goebbels, Himmler, and Bormann decided that any German who murdered a downed Allied flyer should not be punished by German judicial process, then Thierack as minister of justice, ordered all indictments or investigations of such cases turned over to him for quashing and the Nazi judges and prosecutors obeyed. If German nationals were found, who had the temerity to question the probability of ultimate German victory, then the Nazi-controlled judge was ready to exterminate them, with a death sentence manufactured out of whole cloth under the prodding of the Nazi ministry of justice.

There is the record as it is written: Those that can hear, let them hear. Those that can see, let them see. Those who can read, let them read.

O man, how much longer must history repeatedly show you that the control of the judiciary has ever been an essential element in the pattern of dictatorship—be it that of a king, a religious hierarchy, a political hierarchy, an emperor, or a police state? How long will it be before you shall learn, O, man, that if you are to have progress, not mere change, then you must devise checks against the executive domination of the judiciary and also practical courtroom procedures which will enable you to control the exercise of autocratic power by the judge in the trials of the facts to which the law shall be applied?

I am not impressed by the argument against such checks of the religious, political, or economic zealot who says:

"Normally, I would agree, but this time it is right for me to destroy the independence of the judiciary because that which I advocate is good for the people, therefore it is necessary to destroy anything which interferes with my purpose and my plan."

That, my friends, has been the cry always through history of the zealot and his equally vicious imitator, the expedient rogue.

Can you so soon forget that that, too, was Hitler's cry?

Surely today, when no spot on earth has escaped the effect and far too many have felt the direct impact of the Hitlerian dictatorship, we will give some thought to leading the peoples of the earth into an understanding of the value to themselves of methods which shall insure progress under law, administered with checks, effectively devised against the capture and perversion of the judicial system which administered that law.

I now frankly admit a glaring personal inconsistency. I hate dogma and the zealot who first evolves and then enslaves himself with his dogma. Yet, I, too, have a dogma, and I, too, am a zealot.

With all my being I am convinced that no lasting progress is ever made by man when wrongful means, which always include force in some form, are used to attain an end. Therefore, I am convinced that mankind must be taught that this is an immutable rule of living. And, because I believe that this is true, I also know that the first step to a peaceful world is an awakened and sustained determination to set up checks against the power of any man or group of men to impose a course of conduct upon other men. Obviously, and logically, these checks must, and therefore should be established before the power is seized. This in turn demands that mankind shall learn, and having learned, accept as true, the fact that freedom from forced acceptance of other men's views is desirable and valuable. And, again, if and when man learns that truth, then he must act, he must establish a system of checks against the power of any man or any group of men to enforce their views upon other men. Then only will the system be effective. Then only will man obtain some increased measure of protection against the zealot and the rogue.

The time for speech making is over. If you believe, then act. If you do not understand, and believe, then prepare to go through all this holocaust again.

The time to act is now. Mankind in most of Europe and America still has a relative degree of free will. He can either learn from history and act and initiate a new civilization, or he can fail to learn from history or learn from history, but fail to act, in either of which events he can prepare to perish or to languish in slavery. Permit me, then, because I feel this thing so fiercely, to borrow an expression from the rough but expressive parlance of the world-flung fraternity of gamblers, "It is time (for mankind) to put up or shut up."

My experience in the trial of the Nazi justice officials has convinced me that my conclusions are sound. Therefore, it is time for us to quit talking about the evil effect of wrongful force in the world and do the constructive work of devising means of protecting ourselves agaisnt the causes of the wrongful use and the conditions which permit it to break out.

If we fail to do that, then let us at least be honest. Let us, who now occupy positions in which we could exercise leadership if we would, step down from the positions which we now occupy and let some other men take over. Men who will have the wisdom and courage to render the plain people of the world the leadership and the service which they so ardently seek and so richly deserve.

Bean Growers in Distress

EXTENSION OF REMARKS
OF
HON. DAYTON E. PHILLIPS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 15, 1947

Mr. PHILLIPS of Tennessee. Mr. Speaker, I rise to call to the attention of the Congress the critical situation facing the farmers of Johnson County, Tenn. The Johnson County farmers planned for 800,000 to 900,000 bushels of snap beans—5,000 to 6,000 acres were planted in snap beans. The market has collapsed, and the price per bushel has fallen to 60 and 75 cents. The cost of production is set at $1.35 a bushel, which includes the return on the land, the labor, and the cost of harvesting. The growers are suffering a heavy financial loss. Beans are rotting in the fields. Bean pickers are idle. A Government labor camp, with a considerable investment and the necessary migratory labor to harvest the beans, is located in the county and will be a great loss to the Government if their services are not used. It has been necessary for farmers to plow under probably 500 acres of beans. The production and marketing administration has the machinery set up in Nashville, Tenn., to come to the aid of these farmers under the price-support policy of the Department of Agriculture. It is my understanding that the Commodity Credit Corporation has more than $500,000,000 at its disposal, coupled with the ability to borrow additional money to take care of a situation of this kind and it has also been called to my attention that in the agricultural fund, known as fund 32, there is sufficient authority to help the bean growers. The Department of Agriculture could come to the assistance of the bean producers under the Emergency Appropriation Act of 1948, by virtue of this act the Department could contract to purchase the beans for the world market and pay when the general appropriations bill is approved. I urge that the Department of Agriculture come to the immediate relief of these distressed farmers. We are asking the farmers to virtually feed and clothe the world.

Under leave to extend my remarks in the RECORD, I include the following article from the Johnson City (Tenn.) Press-Chronicle of July 13, 1947:

BEAN MARKET COLLAPSE PUTS JOHNSON IN DILEMMA—"CORNER COUNTY" IS PICTURE OF DESOLATION

(By Sue Thomas)

MOUNTAIN CITY, July 12.—Collapse of Johnson County's $1,500,000 bean market has thrown about 2,500 laborers out of work, made a comparative ghost town of Mountain City, sent farmers into their fields to plow under an estimated 500 acres of the tender green vegetables ready for marketing, and left many in a dilemma as to whether to continue planting this season.

Publicized in many newspapers and magazines as the leading bean market in the Nation, many Johnson Countians are beginning to believe that publicity might have been their downfall. Opening of markets

in Ozark, Mo., and points in Ohio probably played havoc with the local market by creating an oversupply—the only conclusion that farmers and buyers have reached for the sudden tumble of prices.

Mountain City's two bean markets presented a dejected picture yesterday. Floors, usually filled with from 15,000 to 25,000 bushels, were empty. A few farmers straggled into town to see what the score was. Buyers twiddled their fingers and scanned the late market prices just arrived in the morning mail.

The hard labor of weeks and months in preparing for the crop is "gone with the wind."

Although disheartened and dissatisfied over the slump from $3 a bushel at the market opening 2 weeks ago to 60 cents this week, most of the farm people are taking it in fine spirit.

AVERAGED $2.25 A BUSHEL LAST YEAR

Last year's crop averaged $2.25 a bushel, which probably spurred growers to increase production several hundred acres. About 6,000 acres were planted.

Growers draw their labor from a Government labor camp of 152 Bahamans and 350 migrant workers, which is augmented by approximately 1,500 native laborers plus the work farm families do themselves.

Halting of work has left the pickers more in a daze. They are unaware that there may be little more work.

At the labor camp, the Bahama Negroes are making a holiday of the shut-down. Congregated in groups they idly sit and gossip with a "crap" game occasionally tossed in to liven things up.

Yesterday, out of the 152 Bahamans located in the camp, only 20 went to the field to work. Growers just didn't check them out.

They have little to worry about though. They are under contract and get $15 a week until September 1 whether they work or not.

On the migratory side of the camp, which draws Negroes largely from Florida and Georgia women took advantage of the let-down to wash. Negro children romped and played, and the men sat lazily looking on.

Laborers were trucked to fields Monday afternoon and Tuesday. Then, work began dropping off with a price drop. When Wednesday's low bid brought growers only 60 cents for which they had paid 45 cents to have picked, work was halted completely.

Brookshire McQueen, owner of about 200 acres, pulled about 100 laborers from the fields the middle of the afternoon Wednesday when word reached him of the price tumble.

Two of the county's largest growers—Don Grindstaff and W. A. Potter—quit picking Thursday. They own about 350 acres of beans, and had planned to plant an additional 150 acres, bringing their total crop to 500 acres.

OTHER CROPS ARE BEING PLANNED

"There's nothing doing now," Grindstaff said as he walked over the empty floor of the market. The heavy loss is pinching, but he managed to smile. Determined not to be outdone, he, like many others, is preparing the land for other crops. He began turning under a 40-acre tract of beans Thursday. "It will go in buckwheat," he said, "if I can get the seed." If he doesn't get the seed, it will be grassed. Others plan planting of wheat.

It was a tragic sight Friday to pass field after field that had been plowed under, and a more tragic sight to view a tractor in a 40-acre plot plowing under the thrifty vines loaded with the tender snap variety, especially when the retail market price has been running about 2 pounds for 25 cents. A bushel basket of beans averages about 30 pounds.

Farmers have two purposes in plowing the beans under. One is to prepare the land for a crop that will probably mean more money, and the other is to rid it of the bean beetle.

The county agent's office is one of the busiest places in the mountain town. County Agent Vernon Sims and his co-workers, George Peters and W. D. Snyder, are putting their heads together with the growers in trying to work out a solution to save the market not only for this year, but in future years.

Sims estimated this year's crop (had it all been harvested) slightly over the 700,000-bushel mark sold last year. He said only about 10 percent had been harvested.

The agricultural group has one aim in view and that is to obtain a sufficient amount for the vegetable so that farmers will make a slight profit above expenses.

"The growers are going to suffer a terrific financial loss until prices are restored," Sims said. "Beans are rotting in the fields," he said.

PRODUCTION COSTS ARE TABULATED

Approximate cost of production is set at $1.35 a bushel, based on the average production of 150 bushels to the acre, or $203 a 150-bushel acre.

Break-down of expenses runs something like this:

Rent of land, $25 an acre; seed (1 bushel), $13.20; fertilizer (700 pounds to the acre), $13.30; preparation, seeding, and cultivation, $15; dust and dusting (100 pounds in three applications), $24; harvesting and marketing (biggest single cost), $112.50.

Assistant County Agents Snyder and Peters are having plenty of worry, chiefly over labor. Snyder is in charge of local labor, and Peters, the migratory labor.

"It seems funny," said Snyder, "the first of the week, we couldn't get sufficient help, now there is plenty."

Some 15 buyers representing brokers and canning companies all over the country are also afflicted with "bean headache"—a disease no amount of aspirin will cure. Some of them were twiddling their fingers, others kept indoors.

One broker paid $2.75 a bushel when the price was up, shipped the products to Cincinnati and got $2.25 a bushel.

Two buyers interviewed—Homer Stalcup and Vernon McEwen—could advance no more reason for the price drop than the growers and Extension Service personnel.

"All we can say is, there is no market for the beans," Stalcup said.

McEwen, who is a broker and a grower combined, went a little farther. He explained the markets were glutted and that Johnson County farmers could not afford to take less than from $1.31 to $1.35 a bushel to break even.

"It costs more to produce beans this year," McEwen continued. "Labor is more expensive, fertilizer is higher, and the cost of dusting to keep down the bean beetle is an expensive item."

R. H. Howard, manager of the Tri-State Market—largest of the two—was found in his office looking out over the deserted floor. One lone basket stood on the auction block.

Auctions were held yesterday afternoon, but it was the same routine cry—no beans and less money.

"Oh, yes," the manager said, "we will continue to have sales. Some growers will sell regardless of price, not because they want to, but because they must get what they can out of their crop."

None of those contacted could give a clear, definite reason for the sudden slump.

Farmers ordinarily are protected under the Production Marketing Administration, which gives them a floor ceiling of $1.15 a bushel. At the present, it is reported the floor ceiling is in effect, but Congress has not appropriated the money for the payment, which means no ceiling.

Where Will Prices Settle Down?

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 16, 1947

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Kiplinger magazine for July 1947:

WHERE WILL PRICES SETTLE DOWN?

There is general agreement that prices are too high, but those who assume that prices will return to the prewar level are in for a surprise.

The chances are that prices will settle down, after a few years of steady decline, to a level substantially higher than the prewar period, though lower than the March 1947 peak. The best bet for the 1950's lies somewhere between 35 and 50 percent above the 1939-40 bench mark.

"Too high," when applied to prices, means different things to different people. Superficially, most people mean that a house which cost $6,000 before the war is selling for $11,000 or $12,000, that bread which sold for 8 cents before the war broke in Europe is now up to 12 cents, or that a pound of butter which cost 40 cents during that lull before the storm costs at least 75 cents and sometimes $1 postwar. Similarly, a Ford car—that old symbol of low prices—which sold for $849 in one city early in 1941 fetches $1,261 6 years and one war later.

"Too high" also may mean to most people that when wholesale prices hit their top in March they were almost exactly twice as high as in August 1939. Farm commodities were three times as high, food two-and-one half times as high. Other commodities had risen 65 percent. The cost of living soared almost 60 percent during the boom.

But such conceptions of too high, based on comparisons with prewar price indices, are far too simple. Reference to them is more nostalgic than revealing. Specific prices are too high only in relation to other prices. Price tags have risen and fallen many times in the country's history, leveling off for a reasonable length of time at stable levels. Some of these levels were higher, some lower, than the preceding level. Thus, from 1923 to 1929 the cost of living index averaged 75 percent more than it had in the years before World War I. Then from 1935 to 1940 it averaged 19 percent less than it had from 1923 to 1929.

Realistically, when we speak of prices as being too high we ought to mean one or more of the following things:

A particular price is too high in comparison with some competing price. For example, in the past 10 years lumber prices have risen 170 percent, although cement is up only 26 percent and brick and tile only 43 percent. Lumber is too high in relation to competing building materials.

The price of a certain commodity may be too high in relation to its cost of production. To illustrate, the price of lumber was so high in 1946 that the number of small saw mills in Oregon multiplied 10 times. So much new production was stimulated by the price that the market was broken locally.

Prices may yield profits too high to keep the economy operating. Excessive profits, if salted away instead of going into plant expansion or inventory, serve no economic function. Money in a corporate bank account employs no workers and moves no goods.

Prices may be too high in relation to consumer income, out of which the buying public takes goods off the market. By early

1947 prices were up so much that the volume of goods being bought was shrinking, and inventories were becoming overloaded. Hence, the President's Council of Economic Advisers recommended in January that a 5- to 7-percent cut in the average of prices was needed to restore a balance between supply and ability to buy.

Balanced prices in the postwar period will not necessarily mean prewar relationships. For instance, cotton-textile wages, after long depression, have risen much more than the wages of auto workers or the makers of electrical equipment. Therefore, cotton cloth will remain more expensive, comparatively, than refrigerators or autos—unless there are violent changes in material costs.

One widely current but evidently erroneous idea about future prices is that they will continue their inflationary trend. This school of thought pays much attention to the size of the national debt and the amount of money in circulation, but neither of these indicators is strong enough to support a conclusion of inflation from now on. The debt is being managed better than skeptics of the thirties thought it could be, and there is just about the right amount of money in circulation for a national income of our present size.

Another popular notion, also unsupported by evidence, is that prices will return to the prewar level because that was the last normal period. But prices did not return after World War I, and are much less likely to do so this time.

The chief reason for an even higher price level after this war is that wages are not so flexible now as then. Wage reductions are made only under very unusual circumstances, and history shows that such cuts are only temporary. Labor's income—that is, the price it receives for its work—is the biggest factor in national income. Including the income of farmers and small proprietors, labor income makes up more than four-fifths of the national income and is the chief determinant of prices.

Another floor under wages is Federal legislation on minimum pay and maximum hours. Though present wage rates are well above the law in nearly all industries, still this legislation, combined with the basic bargaining power of unions, makes a great drop almost impossible.

However, this does not mean that prices will or must stay as high as the modern wage level. The productivity of labor is expected to rise enough to offset much of the effect of fatter pay envelopes. Output per man-hour is already increasing from its wartime position and is at least 5 percent more than last year. New machinery and new production methods developed during the war, plus the drive on management to cut costs, will result in exceptional increases in output for the next few years.

It now appears that the change in productivity will follow the pattern it set after World War I, when productivity rose about 30 percent in the first 4 years. A little arithmetic with the latest wage increases and the expectation that productivity may rise 30 percent by 1950 allows the conclusion that labor costs will rise about 40 percent.

There is always the chance that organized labor will capture the gains in man-hour productivity by winning proportionate wage increases, but that chance is slim because the market for labor will be falling during the same period, somewhat limiting labor's bargaining strength.

A second difference between this time and last is rooted in farm legislation. The Steagall amendment, guaranteeing farm prices of 90 percent of parity this year and next, is not now holding up the price of any important commodity. But it could do so in the recession which is expected before that time runs out.

More important, the mood of Congress is to keep on the books some kind of legislation for supporting farm prices. It might be done by crop loans, for example, under which the Government merely takes over the pledged crop if market prices fall below the set loan price. By the mid-fifties such loans could be a strong element in maintaining high prices, particularly if farm surpluses start rotting in the fields and Congress goes back to restricting production.

A third major difference between the two periods under comparison is that more and more prices have become rigid in their behavior. Economists call them "sticky" prices, without referring to the kind of illegal price-fixing with which the Antitrust Division is concerned. What the economists mean is that more and more goods are falling into the category of "administered prices"—those which a company puts up or down on the basis of its own considerations, rather than on the basis of pure, sensitive competition.

Buttressing this trend toward "sticky" prices is the sweep of State and Federal laws dealing with prices. Retailers cannot cut prices on nationally-advertised brands; manufacturers cannot give discounts to one distributor without giving the same deal to others; and chain stores are curbed in their use of "loss leaders," such as cut-rate cigarettes. If these laws are enforced—and there is much pressure for both enforcement and extension—they would add much rigidity against lower prices.

Of course some prices will come down while others go up. The general level of prices should be thought of as a result of these movements, not as a goal to be attained. No past level should be thought of as sacred, to be set up again by arbitrary action. It is the relationship that counts. For instance, much of the early boom in farm prices, during 1940 and 1941, was a healthy thing for the economy. It brought agriculture into a better balance than that of 1938 and 1939—better for the entire economy, not just the farmers.

The things to fear is that prices will not adjust smoothly. Out-of-line prices too often do not fall until there is a drop in consumption and a drop in production. However, in the one case on record of a major change in price level (after World War I), the change was achieved without much jumping around—without much waste motion in the economy. The index of wholesale prices for all commodities dropped from 167 in May 1920 to 91 in January 1922, then settled at an average of nearly 101 during 1923.

The prospect this time is for an even smoother downward curve and leveling off. After a 10-percent drop in wholesale prices and a 5-percent drop in the cost of living, by the end of this year, prices will probably go on down at that rate for some months, gradually curving off to stability. (During so-called stability prices may be expected to rise very gradually—about 1 percent a year.)

Within the general downward movement of prices, certain specific things are bound to increase in price. Rents, which rose only 5 percent during the war because of strong controls, will go up firmly when controls are lifted. So will freight rates, gas, and electricity.

How much better off we will be when prices settle at 35 to 50 percent above the prewar level depends on many factors other than price statistics. If the adjustments result in full employment, the new level will be known as a prosperous one.

Certainly agriculture will be better off, helping the whole economy; also, the public debt can be paid off more easily with the inflated dollars. On the other hand, people living on fixed income, such as pensions and annuities, will be pinched in the 1950's.

It is too early for a sweeping generalization, but the portent is favorable for a well-balanced economy. Certainly there is nothing unfavorable in the fact, alone, that prices will remain higher than the familiar prewar standard. It is the balance, not the level, of prices that pays off.

Tax Reduction Now Invites Disaster

EXTENSION OF REMARKS

OF

HON. JOSEPH C. O'MAHONEY

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Wednesday, July 16, 1947

Mr. O'MAHONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio speech which I made yesterday evening on the subject Tax Reduction Now Invites Disaster.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

TAX REDUCTION NOW INVITES DISASTER

(Radio broadcast of Senator JOSEPH C. O'MAHONEY, of Wyoming, over the American Broadcasting System, at Washington, D. C., July 15, 1947)

There are three principal reasons why the income-tax reduction bill which the Senate has just passed for the second time should be vetoed by the President and the veto sustained by the Congress. If this bill should become a law it would undermine the whole structure of American policy at home and abroad.

1. It would repudiate the traditional American principle that taxes should be levied in accordance with the capacity to pay.

2. It would cripple the ability of the Government to manage its stupendous public debt at the very moment when, for the first time in 17 years, the Government is out of the red and in a position to begin to reduce that national debt.

3. It would make it extremely difficult if not impossible for the people of the United States to lead the world to economic rehabilitation and permanent peace.

Of these three reasons, the third is the most important, for neither the little people of America, the millions who are at the bottom of the economic scale nor the few hundred thousands who are at the top can reap even the slightest benefit unless the economic structure of the world is restored and the basis of permanent peace firmly laid.

The road to tax reduction is the road to economic chaos and to war, for it threatens our own economic stability and unless the economic stability of the United States is maintained a third world war will be inevitable.

Tax reduction now will make it impossible for the world to disarm. Without economic stability here at home, the United States cannot lead the way to permanent peace and the world will continue to prepare for war. The four billions of tax reductions promised in this bill will be expended over and over again in the maintenance of a military establishment.

There is no future for the people of the world except upon the basis of permanent peace. The supreme duty of the people of America is to concentrate all their efforts on winning the peace.

I shall have more to say on this phase of the subject in a moment, but let me now

show that this bill gives preferential treatment to the very wealthy in violation of our tradition that the ability to pay is the just measure of taxation. I assert that this bill is intended to shift the burden of taxation from the few wealthy to the backs of the poor. It provides a bonanza for those in the high income-tax brackets but only a pittance for the poor, dollars for those in the top brackets and pennies for those at the bottom.

PREFERENTIAL TREATMENT FOR WEALTHY

Prior to the war, the little people of America whose annual net income before personal exemption was $2,500 or less paid no income tax. This was because the Congress allowed personal exemptions upon the theory that it was in the public interest to maintain living standards of those at the bottom of the scale. This policy was changed when we became involved in the great war and personal exemptions were lowered. The new income-tax reduction bill makes no pretense of going back to prewar standards, but increases the spendable income of those who receive $10,000 a year or more in vastly greater proportion than it increases the spendable income of those who receive less than $10,000. The increases of spendable income for the wealthy range from 4½ to 13 percent while the increases of those who receive less than $3,000 a year range from only 1 to 2 percent. Every suggestion to restore the exemptions formerly allowed to those in the low-income brackets was rejected because the determined purpose behind this bill is to relieve the rich at the expense of the poor.

Twenty-six million taxpayers, according to the report of Chairman MILLIKIN, receive less than $2,000 a year. There are only 681,000 who receive $10,000 or more. To the latter high-income group at the top of the scale, this tax reduction bill gives benefits ranging from $45 to $125 per thousand of income as compared with only $9 to $25 per thousand for those at the bottom. The whole point of this bill is to transfer the burden of the cost of government from those individuals who are making huge profits to the backs of those whose incomes now are admittedly too low to enable them to meet the increased cost of living.

THREATENS FINANCIAL STABILITY

So much for the shift of the burden of government from the extremely wealthy to the poor. Now let me discuss the threat which this bill contains to the financial soundness of our country. I undertake to say that this bill, if enacted over the forthcoming veto of President Truman, will endanger the capitalistic system and by that I mean the system of private property.

During the whole period of the depression, with all its "deficit spending," the national debt was never even as much as $50,000,000,000. Now it is two hundred and fifty-eight billions. This debt is the measure of what the Government borrowed to fight the war. It is greater by almost one hundred billion than the total national income. In other words, if the total income of all the people this year were to be paid upon the national debt, it would still not be extinguished, but would be three times as great as the total debt accumulated throughout the depression.

Every year the United Press publishes a list of what it calls the billion-dollar corporations. This list, made public in the Scripps-Howard papers on Friday, July 4—a significant day—includes the great giants like the Metropolitan Life Insurance Co., General Motors, United States Steel, American Telephone and Telegraph, Standard Oil, and so forth. There are 45 of these corporations with assets of more than a billion dollars each, running up in some cases to four, five, and even eight billion dollars. If all the assets of all of these giant corporations were added together and applied on the national debt, the Government of the United States would still be in the red to the amount of $158,000,000,000, or more than six times as much as the total debt incurred during the Roosevelt years of Government spending.

Let us not delude ourselves in the belief that tax reduction, according to the pattern of this bill, will be an aid to small business. It will not. It is confined to income-tax reductions for individuals, and the principal beneficiaries, as I have already pointed out, are the few wealthy persons in the upper brackets.

This bill contains no reduction for any corporation. It contains no provision to stimulate new independent enterprise, but serves only to cut the revenues of the Government for the benefit of those who need tax relief least.

On June 30 last, for the first time since the depression struck this country in the middle of the Hoover administration, we had a surplus in the Treasury. It was only $754,000,000. If we intend to reduce the national debt our first policy must be to maintain a surplus. We cannot afford to risk going in the red again. We cannot afford to reduce our receipts until we are sure we can substantially cut the cost of government. President Truman reduced the budget of 1947 $20,000,000,000 below the budget for 1946. In preparing the new budget for the fiscal year 1948 which began on July 1 last, he cut it five billion more. Six months ago at the beginning of this Congress the Republican majority predicted that it would cut the President's budget by some four and one-half to six billion dollars. It has failed. The present Congress has not passed a legislative budget. It has not even passed all the major appropriation bills. Eight of the 12 are still pending in the Senate and it is evident now that the appropriations this year will not be materially less than those estimated by the President. Not having been able materially to cut the cost of Government, we cannot afford to cut the receipts because that will mean going back to deficit spending.

We shall never be able to pay the national debt unless we begin reducing it now while we have 60,000,000 people employed. Unless we begin to reduce the debt while we have money in the pocket, we shall never pay it and if this debt is not paid, the system of private property cannot endure and totalitarianism will take over. I do not hesitate to say that from the point of view of every property owner in America, big or little, this tax-reduction bill is the most reckless and wanton attack upon the American system ever made. America can withstand her open foes, but she cannot sustain an attack by the shortsighted greedy who are willing to reduce the receipts of their Government at a time when every principle of fiscal stability demands that we apply every possible dollar to the reduction of the national debt.

BILL THREATENS INTERNATIONAL PEACE

Let me turn now to the third reason why this bill should be vetoed. The economic stability of the United States is the last surviving hope of mankind. If we risk economic catastrophe here, the whole world will go communistic. Peoples everywhere who cherish the hope of maintaining a democratic society in which the individual controls his own economic and political destiny are looking to this country to lead the way.

The dictators of the Soviets are looking to this country to fail. The whole explanation of Russian policy lies in this fact that Marshal Stalin and his associates are confident that capitalism is too greedy to save itself. They are counting on another depression in America. They have seen socialism advance in England. They have seen communism rise in Italy and in France. They have followed a deliberate policy of repudiating the agreements they made at Yalta and at Potsdam in the hope of preventing economic rehabilitation in Europe because they know that chaos is the stepping stone to communism.

We here in America stand between the misery and starvation which stalk Europe upon the one hand and the atom bomb upon the other. If Europe is not rehabilitated, then let the United States prepare for war. Communism is on the march and there is no defense against it except the humanitarian high-mindedness of democratic peoples.

The summons which Secretary Marshall and President Truman have extended to the peoples of Europe to help themselves has been repudiated by Russia because Russia knows that such a program will be an effective bar to the spread of communism. The Marshall program is the rallying call of democracy and freedom. It cannot be permitted to fail.

This is not a program designed to put Europe on relief and to contribute both our money and our goods to its support; it is a program to restore the productive capacity of Europe. The war destroyed that productive capacity and we played a major part in that destruction. We won the victory, but we cannot abandon the peace.

Your tax dollars fight for peace. They fight for the system of private property and political liberty and unless we put them to work, freedom and peace will be impossible.

Money expended to promote production is an investment. Money expended in war and in preparation for war is waste.

We stand at the crossroads of history. For the second time in this century America has the opportunity to lead the world to peace. It failed after World War I and the result was the appalling and destructive World War II. If we fail now, the experiment in free government which began upon this continent in 1776 will also have failed because mankind cannot withstand World War III.

National Maritime Union Member's Opinion on Communism

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 16, 1947

Mr. ROONEY. Mr. Speaker, under permission granted me by the House today, I include in my remarks the following article which I found in the July 11, 1947, issue of the Pilot, publication of the National Maritime Union. In this article one Lawrence E. Smith, rank-and-file member of the National Maritime Union, in his own way writes his opinions about communism, which he says gives him indigestion. I am always similarly affected by it. While Smith's writing is not couched in the best of the King's English, it is a forthright statement of a real American member of the National Maritime Union and I commend him for it. It reads as follows:

To the Membership:

As a rank-and-file member of our great union, I'm forced to write my viewpoints on this issue of communism that is leading to the apex that it gives me indigestion, especially at pork-chop time and this issue is one that every true American and alien rank-and-filer of the NMU must give their honest attention and voice. And to start my blast, my opinion of the American Communist is that he is an opportunist with his hands stretched out, his voice full of poison, his head wrack in Ism and one that does not

appreciate the true meaning of rank and file (because how can he say that his patron saint Uncle Joe from across the sea and his communal favors a voice of his rank-and-file national public with their trades unions which to my opinion are only dues-paying unions to their membership and with a mute voice).

God, how lucky we rank and filers are under our own uncle, Uncle Sam, that he gives us the freedom of free speech, religion, with the pursuit of happiness, and a free way to make our livelihood even if some prefer the boxcars to get to them. Our American way of life has been a struggle of hardship, wars and civil war, hard times with drought and depressions; still our standards of living are unequal to none. The isms that make communism whittle down to a point are fascism, anarchy, which the two combined forms a program of jealousy and hatred toward other peaceful nations that are enjoying the progressiveness of their forms of government with their better ways of living. This is unknown to the najority of U. S. S. R. national public by the censorship of its communal by fed propaganda which through this, they are serfs without claims.

So think, think, and think you opportunists, Would you really turn your ship over to Moscow? Your reward, form your own opinion as a traitor (proverb) once a traitor always a traitor. Communism with its idiocy of world revolution to divide the family, abolish religion, and its many other theories to wreck human mankind must be stopped and with a capital S.

And now with respect to space in the Voice of the Membership, our ship voted on the strike referendum; my vote was "YES" with capital letters and the members of this crew voted 100 percent condemning the Taft-Hartley bill by sending a telegram and a letter to President Truman with our signatures to veto this drastic bill against American labor.

LAWRENCE E. SMITH, No. 176454.

Europe Is Worth Saving and Can Be Saved

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 16, 1947

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by E. L. Woodward from the New York Times magazine:

EUROPE IS WORTH SAVING AND CAN BE SAVED—AMERICAN AID CAN HELP TO STRENGTHEN AND PRESERVE AN ECONOMY RELATED TO OUR OWN

(By E. L. Woodward)

LONDON.—There is a popular belief—a modern version of the old legend of the Sibylline Books—that the opportunities of history occur twice; in other words, an individual, a nation, or a group of nations may be given a second chance of recovery from a mistake. A third or fourth chance is unlikely.

Although it is dangerous to read events in this way, few European observers can avoid seeing in the present situation some kind of analogy with an American proposal made at a time of European crisis 16 years ago. In the summer of 1931, when financial panic in central Europe seemed to threaten the world's credit system, the American Government suggested a moratorium of a few years on all intergovernmental debts. The immediate effect of this proposal was a sudden revival of confidence of which advantage might have been taken for rapid and drastic action. The British Government—a labor administration under Ramsay MacDonald—at once seized the occasion. The French Government—MM. Laval and Flandin—hesitated, discussed, bargained, and the favorable moment was lost.

Once again an opportunity has come to Europe through a gesture by the United States. The circumstances now are far more difficult than in 1931, the demands upon imagination and will power are greater, and the sacrifices involved are more severe.

It would be out of place for an English observer to speak of the large political adjustments necessary on the American side if this new grand design is to be realized in its fullness. All Europeans, however, should acknowledge that the offer carries with it for the American people restraints and sacrifices of a kind which not every European nation has been willing to bear, even in former days of prosperity. The American Government would not be justified in asking for such sacrifices unless it was not reasonably clear (a) that the American people benefit by European recovery, and (b) that European recovery is conditional upon American help.

It is possible by elaborate statistics of imports and exports and the balance of trade to show how the United States must benefit materially by European recovery and must lose by a permanent European collapse. There is no need to tabulate these figures because a much simpler demonstration can be provided by looking at a map.

This Europe which America is being asked to save is part of a civilized area, the world's most civilized area, which has developed on and from the eastern and western shores of the North Atlantic Ocean. The European regions principally concerned do not form a vast land mass out of reach of direct American approach and capable of economic self-sufficiency. In other words, the peoples to be helped cannot just accept American aid and upon this foundation build up an economy which will be of no benefit and bring no return to those who have provided the means of recovery.

The Europe which faces America across the Atlantic has often been described as a peninsula of peninsulas. From the Baltic port of Koenigsberg to the Black Sea port of Constanza is a diagonal of 800 miles. Every great European capital except Moscow is west of this line. Owing to the long sea lanes stretching inland from the Atlantic, not one of these capitals is more distant from a port open to ocean-going steamers than Pittsburgh is from Atlantic City or Buffalo from New York. Nine European capitals, 10 if Istanbul is included, are within 30 miles of the sea; five are themselves seaports.

The present-day significance of these facts is complicated but not lessened by the introduction of air transport; an even more significant change came centuries ago when improvements in navigation opened the way to new continents, and the Atlantic Ocean came to serve Europe and America as the Mediterranean had served Greece and Rome.

From the date of the first European settlements in America and the arrival of the first cargoes of American produce in European ports, there has been a community of interest between all the nations living around this oceanic region and possessing easy access to it. Specialization of labor in Europe has been determined by the possibility of maritime trade.

In modern times the interrelation of American and European life is such that Europe—the Europe of the peninsulas—would wither and die if any unforeseen calamity weakened American energy and creative power, while the American economy, although it could survive, would be confused and debilitated by a total European collapse. In other words, the interest of the United States in Europe is not as starkly a matter of life or death as is the interest of Europe in the United States, but it is nonetheless of the highest importance.

It is unnecessary to discuss the nature of the present European collapse or to recount in detail the measures of an economic kind which should lead to recovery. The facts are obvious and the public has been told enough about the technical requirements for restoring the "circulatory system"—the exchange of goods and services—proper to a maritime civilization.

If the problem were one for technicians alone, the reconstruction of Europe would be a complicated business, but it would not be outside the range of mathematical calculation. Every politician, however, knows, and, for that matter, every salesman knows, that you cannot express human behavior purely in terms of mathematics—the exact statement of size.

As soon as you leave statistics and enter politics, that is to say, as soon as you try to get things done, you must take account of what are commonly called historic conditions. "Historic" is perhaps a misleading word since it may be taken to imply things past and over, events, tragic or otherwise, of interest to students but without immediate reference to life. The real meaning of the term is very different. In the jargon of today history is "dynamic"; it is the sum of the past acting on the present. Historic conditions are thus hard, knobby facts against which only the foolish and the unwary will bump their heads.

Historic conditions, for example, determine why Wall Street is narrower than Fifth Avenue, and this difference in width is not less real because it is the result of things which happened in New York generations ago. It is no more possible to elude this momentum of history, this action of the past upon the present, then it is possible to stop or turn within a few feet a car going at full speed. Every driver knows that if he fails to take account of momentum he is liable to a fatal skid.

What, then, is the historic momentum of Europe, or to change the metaphor, and to assume that this knowledge of the local situation is to be used by the politicians as the local knowledge of the pilot is used by the captain of a ship, what are the particular rocks or shoals to be avoided if the ship is to be brought safely to harbor?

Nationalism is by the far the most dangerous of these obstacles. In a last analysis this nationalism is the product of European geography—the geography of these highly articulated peninsulas. Within the closely packed areas west of the Koenigsberg-Constanza line there have been bloody battles for every place of strategic or economic importance and for every frontier. The body politic of Europe carries the scars of these past battles. A glance at an atlas will show the number of towns and ruins bearing more than one name.

A similar historical shorthand can be read in old maps of America, but the old names have become antiquarian curiosities. Suppose, however, that millions of Americans still talked of Fort Duquesne and implied by their talk that they were asserting claims of right over a city which millions of others call Pittsburgh. This kind of thing actually happens in Europe.

It is a waste of time to say that it ought not to happen. Nothing can undo past facts of this kind or annihilate the cumulative influence which they have exerted over so many years.

European recovery, therefore, cannot be considered only in mathematical terms, so many calories, such and such a number of units of horsepower, so many tons of coal. If these units of power are in German control, a Frenchman regards them as a threat to French national existence; if they are in

Polish control, a German thinks they will be employed to the detriment of Germany. Hence the politician has to warn the economist of the risk of going too far or too quickly in binding human beings to economic convenience.

It looks easier to impose uniformity than to provide for diversity, but every conjuror who has tried to iron out this European diversity has failed. In the long run economic forces will prove stronger than armies, yet as the old saying goes, the mills of the gods grind slowly. Americans do not find it easy to think in these "historic" terms about Europe. Indeed there is often a subconscious element of forbearance in the American attitude toward Europe; a mixture of imitation and amusement at the conservatism which clings to old and bad ways.

For mutual understanding therefore, it is a good thing on the American side of the Atlantic to remember that Europeans may be equally bewildered at the "historic" conservativism of the United States, as shown, for example, in the difficulty of getting rid of obvious anomalies in the Federal Constitution. An attachment to established political forms and a sentimental preference for a particular way of life are not features limited to Europe.

Again in moods of impatience at the slowness with which long-established societies discard habits and fears and animosities of the past, it is necessary to take account of the demonic consequences of war. After a terrible 6 years Europeans stand one to another much as North and South stood on the American Continent at the end of the Civil War. Indeed, the European position is far worse owing to the bewilderment caused by Hitler. There were in America differences of principle between the two sides; each of the beligerent parties had leaders of unquestioned nobility.

The last European war had no such extenuating circumstances. It was not a conflict between two rights but a direct struggle between right and wrong. There were no figures among the Germans or their Quislings whom posterity will admire. Therefore, forgiveness and compassion are difficult and the restoration of mutual confidence between Germans and non-Germans, between patriots and collaborationists, must take years.

There is also another political factor of a general kind which is hindering European conciliation. East of the Koenigsberg-Constanza line the U. S. R. R. is spread over an area far larger than that of the "peninsula" of Europe. It is tempting—perhaps the temptation is itself dangerous—to draw an analogy from the old Mediterranean civilization and to observe that the potential military threat to the modern oceanic successors of Greece and Rome is at the circumference and not at the center.

The temptation is greater because the Russians are behaving as though they did not want European recovery on the terms—a lessening of social strains and tensions—which alone would make recovery possible. There is no country within range of Soviet interference in which the domestic situation has not been envenomed by Russian policy.

The rasping effects of Communist propaganda, the deliberate confusion of issues by Communist parties everywhere, and the contempt for western standards of public and private liberty must lead one to doubt whether it is really possible to find any basis of collaboration with the U. S. S. R.—unless something more than a merely tactical shift takes place in the Russian attitude.

Such a conclusion is both economically and politically disheartening to the last degree, but the time has passed for more bargaining with Russia. The taxpayers and consumers of America cannot be asked to make sacrifices in the interest of any power which continues to sabotage recovery outside its own borders.

So much, then, in bare outline, for the political zones of which account must be taken in large schemes of European reconstruction.

Nevertheless, if Europe cannot be remolded in a day and if full allowance is made for the unruly wills and affections of human beings, the mathematical expression of European requirements—the truths stated in the "language of size"—are not less real. Europe needs at once certain things which can be weighed and measured, loaded on ships, and valued in terms of money. No one who has seen the visible evidence of dislocation is likely to underrate these quantitative needs.

Furthermore, in many respects, there is no question of riding roughshod over national habits of life which have a deep symbolic meaning. The question is irrelevant because old ways are gone.

Measurable economic aids to Europe are those linked directly to politics. American opinion can rightly go a long way in insisting that the passionate small-scale hatreds of Europeans cannot be allowed to stand in the way of economic reconstruction. Sensible Europeans themselves realize the folly of using the present moment as an occasion for paying off old scores or grabbing slices of territory.

Mr. Molotov is alone among the Ministers of the great powers in supposing that economic cooperation can be hedged around by the ancient walls of exclusive national sovereignty or, for that matter, by notions of security which date back to the military conditions of the age of Louis XIV. Public opinion in the democratic states, large and small, is ready to back much larger plans for coordinating action without respect to frontiers.

The problem for the politician, therefore, is to find "the most that the traffic will bear," that is to say, the maximum of international economic cooperation which can be "put across" without causing political difficulties likely to aggravate the economic confusion. Once more a glance at the map will show that the sharpest controversy may well occur over the restoration of the productive power of Germany, and especially of the Ruhr.

Anyone wishing to keep in view the interlocking of economic and political issues in Europe would be advised to concentrate upon this latter reason. The liquidation of the once powerful Junker element in the eastern agricultural lands of the Reich is now complete. These Prussian figures can hardly recover a predominance which they had already surrendered to Hitler, but there is a danger to peace if the control of the Ruhr falls again into evil hands. In the famous phrase of centuries ago about the Papacy as "the ghost of the Roman Empire sitting crowned upon the grave thereof," a Fourth Reich might well grow up among the ruins of the Third Reich if the productive forces of this part of western Germany were at the disposition of a group of men who, for Marxist or non-Marxist reasons, rejected the principles of domestic liberty.

A satisfactory settlement of the Ruhr question is no easy matter. Indeed, at this point, one might put in a word of sympathy for the politicians (on both sides of the Atlantic) responsible for solving—and solving quickly—these complicated issues. It is inevitable that mistakes should be made. The actual routine business of foreign affairs is much heavier than at any previous time in modern history. The situation is more complicated, there are more facts to be marshaled, assessed, and kept in mind.

In 1913, for instance, the number of telegrams and dispatches received at the British Foreign Office was under 70,000; in 1938, the number was over 223,000. Today it is greater. Consider what this means for a Secretary of State if he is to read and digest only a small fraction of the information supplied to his department.

It is thus not to be wondered at that politicians so often content themselves with rough guesses. They cannot be expected to know the undertones and nuances of every subject which comes before them, and yet they are the targets both of expert criticism and of a dangerous kind of popular grumbling resulting from the oversimplification of issues as they are stated by headline writers and cartoonists.

For these reasons it is most desirable that—within limits of the possible—democratic countries should continue the "bipartisan" approach to matters effecting European restruction. These matters may divide democratic from nondemocratic countries, but within the region of free institutions they cannot properly be the subject of disagreement on ordinary party lines.

The only distinction which really counts in Europe today is that between liberty and totalitarianism; "parliamentary" socialism and "parliamentary" capitalism are much nearer to one another than either is near to communism.

There is another point to be considered. I should not call it final, because the ramifications of this problem of European recovery are endless. The restoration of Europe and the return of balanced health throughout this modern oceanic economy cannot be thought of in terms of the North Atlantic alone. The United States is a Pacific as well as an Atlantic power. Great Britain is a member of a world-wide commonwealth.

Four western powers are responsible for the welfare of territories in Africa larger than North America. The great oil fields of the Middle East are as important to Americans as to Europeans. Political confusion in Indonesia has a direct effect in increasing the security of essential commodities in Europe. Economic and political chaos in India would be hardly less of a handicap to European recovery.

In many of these extra-European regions an inexperienced and oversanguine minority, excited by political nationalism, is faced with administrative problems which hitherto have baffled western skill. It is irrelevant to the crisis of today that the vast populations of the Far and Middle East may move in the long run toward stability. What is wanted is that they should move toward stability here and now, but even the most optimistic observer cannot fail to notice that here and now the movement is mainly in the opposite direction.

This general picture is very somber. There is no use pretending it to be otherwise. And yet if you live in western Europe you do not find despair. A tour of the universities of Europe would convince most doubters that Europe is worth saving and can be saved. The younger generation is neither defeatist nor sentimental. There is much more self-help than self-pity, and the prevailing mood is very far from being one of twilight preceding the dark.

What, then, is the sum of it all? The answer, as so often, can be extracted from the very difficulties of the problem. I venture to suggest that if Europeans were like bees or ants, whose capacities can be assessed just because they fall within narrow limits, most of the present technical obstacles to recovery would disappear. So, also, would most of the chances of recovery.

The hope of the present and of the future lies in the waywardness and unpredictability of human action and especially in the endless powers of adaptation possessed by the heroes of the European past (a pretty rough past, taking all in all).

Not so very long ago in the time-scale of history, a handful of Europeans landed on the American Continent. They were alone. They had few of the instruments and gadgets which we take for granted. They had no idea of the size of the country in which they were trying to establish themselves. A modern expert, complete with graphs and statistical tables, could have demonstrated the certainty of their failure. Nevertheless, they were the founders of American civilization.

All or most of the facts may be against Europe, but if Europeans refuse to accept these facts and decide to remake them as they have remade so much of the world, Americans should be the last to refuse their help in such an impossible enterprise.

The Loyalty Bill

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 15, 1947

Mr. PHILBIN. Mr. Speaker, I desire briefly to present my views concerning the so-called loyalty bill, H. R. 3813. In the first place I commend and compliment the able committee and its chairman for painstaking, diligent work on this measure. I am very sorry that I find it necessary to disagree with some of their conclusions, and specifically with the bill in its present form.

It is generally agreed by all that it is not only desirable but necessary in these days of impending crisis to secure loyalty, absolute and unqualified, on the part of all Government employees. The threat and reality of organized Communistic infiltration urgently require the most careful scrutiny of those holding Government positions in the present and future. It is imperative that we keep the Government service unpolluted by radical doctrinaires preaching communism, fascism, or other alien un-American political tenets. The Government is duty bound to protect itself against corruption and subversion within its very structure just as it seeks to protect the body politic from contamination by practitioners of poisonous ideologies. To keep these doctrinaires out of the Government is an obligation arising from the necessity for self-preservation of the state. Private persons do not customarily engage employees when they know such employees are planning to burn down their homes, or their factories or lay waste to their farms. By the same token it is fundamental and basic that Congress should move to protect the Government and people against the inroads of cunning, resourceful apostles of Marxism and every brand of totalitarianism. There is undoubtedly unanimous opinion in this House concerning the validity of these principles and aims.

On the other hand, free men and women of a democracy are entitled to their opinions and must be guaranteed not only the right of free speech, free thought, free assembly, free association, but also must be secure against abridgment of or infringement upon their constitutional rights. The language of this bill does not afford these guarantees. To the contrary, it denies individuals who are charged under its provisions the right to appeal from the action of an administrative officer or board, the right to be confronted by witnesses against them, and the privilege of cross-examination which is accorded to a common thief under our ordinary judicial procedure. This bill strips the courts of final jurisdiction over the precious right of an American citizen to earn his livelihood and vests it exclusively in the hands of an entrenched bureaucracy. It encourages star-chamber proceedings, lettres caches, inquisitions, and persecutions of individuals for their opinions by an administrative board which are entirely irreconcilable with customary constitutional safeguards. It gives a powerful bureaucrat or bureau the power of life and death over a man's employment and leaves the individual helpless and defenseless to know the source of character of the evidence against him, the persons rendering it, or the means of combatting it.

The provisions of this bill remind me more of antiquated courts-martial procedure wherein the accused is presumed to be guilty by members of the court before his trial commences. His conviction usually ensues ipso facto without a real trial.

Such procedure is the antithesis of justice. It is an anomaly in our judicial system. In my opinion, it cannot be defended on any grounds. So far as I am concerned, every citizen of the Nation has a definite, concrete, inalterable right to be secure in his constitutional rights. Whether an individual is a Communist or not, there is no justification for denial of his or her constitutional rights. Instead of limiting traditional procedure which zealously protects and safeguards the rights of the accused, the Government should set a high example of conformity with the mandates of the Constitution and the long-established principles and practices which our courts of justice and agencies of Government have followed since time immemorial. Despite what some bureaucrat may think, despite what some entirely well-meaning opponents of communism or fascism may think, an administrative body should be no more exempt from the requirement of recognizing the constitutional rights of the individual than is the Congress or the courts of justice. It is by this type of piecemeal whittling at the fabric of representative government, at the principles of constitutional law, and at the impartial administration of justice that we may encourage and spread radical ideas and sentiments of rebellion against the Government.

I think that this bill should be recommitted for further study and for the express purpose of writing into it adequate safeguards for the liberties and rights of free American citizens who may be employed by the Government. In its present form I am in conscience constrained to vote against the bill. While I agree with its main objectives, I cannot support it so long as it does not provide guaranties for the accused of full constitutional opportunity to defend himself or herself against charges—comprehensive and comprehensible specifications; fair, impartial hearing; right to hear all the evidence presented in any given case; the right to representation by counsel, confrontation of witnesses, and the right of cross-examination; and review by the Federal courts. If enacted in its present form, this bill will strike a body blow at civil liberties in this country at a time when we should be building, not destroying, confidence in and respect for the Constitution and our democratic Government.

The Loyalty Bill

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 15, 1947

Mrs. DOUGLAS. Mr. Speaker, certainly no person who is disloyal to the Government of the United States should be permitted to work for it. There can be no question about that. If new legislation is shown to be necessary to permit the Government to get rid of employees who are actually disloyal to the United States, I will certainly support it. If this bill were that kind of legislation, I would be for it. A simple reading of this bill and the committee report reveals, Mr. Speaker, that the true purpose of this bill is something quite different.

This bill would set up in the executive branch of the Government an independent five-man board, with sweeping authority to recommend the dismissal of any Federal employee whose ideas seemed unorthodox or whose views it disagreed with, and woe be to the administrator who failed to follow its recommendations. This is a bill to legalize a wholly irresponsible inquisition into the thoughts and opinions of a million and a half Americans who work for the Federal Government.

Let me back up that statement. The Loyalty Review Board, which this bill would set up, would become the absolute arbiter of the loyalty of Federal employees. It would prefer the charges, hear the evidence, and render the final verdict. In other words, it would be the prosecutor, judge, and jury. The standards against which it is directed to judge employee loyalty under this bill are so broad that they could be made to fit anyone who ever had a progressive idea or who ever advocated a social reform. Let me name one standard which the bill sets up:

> Sympathetic association with any * * * organization, movement, or group * * * designated by the Attorney General as totalitarian, Fascist, Communist, or subversive.

What constitutes sympathetic association would be entirely up to the Board itself to decide.

Having charged a Government employee with disloyalty under this vague standard, the Board under the terms of this bill would not have to show the employee the evidence against him or tell him specifically what it consisted of. By the language of the bill, the Board is instructed not to reveal the source of its information. Furthermore, it would not have to prove its charges. The burden of proving the charges to be false would remain entirely with the employee. In other words, Mr. Chairman, under this bill the accused would be guilty unless he could prove himself innocent, and do

so without knowing the charge against him.

I am sure, Mr. Speaker, that the sponsors of this bill did not consciously intend to introduce into the administrative procedures of the American Government the principles of justice developed and utilized by the Nazi rulers of Germany before the war. Nevertheless, Mr. Chairman, if this bill should pass, employees of the United States Government would be subject to dismissal from their jobs and to continuing persecution under virtually the same standards and procedures employed by the Nazi government in dealing with its employees and its citizens.

I take no comfort in the fact, Mr. Speaker, that employees convicted under this bill would be penalized merely by dismissal from their jobs, for a person convicted and dismissed for disloyalty to his Government would find it difficult, indeed, to find any other employment. Discharge under this bill would be virtually an economic death sentence to the employee involved. Mr. Speaker, this is a bill to institute a far-reaching and irresponsible witch hunt in our Government service and to drive from public employment every self-respecting person who really believes in the American birthright of freedom of speech, thought, and conscience.

I have said, Mr. Speaker, that I am in favor of punishing any Government employee who is really disloyal to the United States. It is only fair to recognize that the first four standards set forth in this bill for judging employee loyalty are perfectly proper ones, and I agree with them. But upon inquiry I discover, Mr. Speaker, that each and every one of these standards prohibit activities which are already specifically prohibited by existing law. We already have laws, Mr. Speaker, against sabotage or espionage. We have laws against treason, sedition or the advocacy thereof. We already have laws against the disclosure of confidential information by Government employees. Riders to current appropriation bills deny Government employment to anyone who advocates the overthrow of the Government by force or violence or who belongs to an organization of such advocacy, and provide criminal penalties for any employee who falsely swears he does not advocate such overthrow of the Government, or belong to such an organization. The fifth standard in this bill requires undivided loyalty to the United States Government. But, Mr. Speaker, so does the oath of office taken by every Federal employee. Dismissal from the service and, I believe, other penalties are already provided for the violation of the oath of office. So, Mr. Speaker, this bill is entirely unnecessary in order to make illegal any real acts of disloyalty on the part of our public servants. The Federal Bureau of Investigation and the Department of Justice at the present time have full authority and responsibility for prosecuting any Government employees who violate the standards I have just mentioned. The only thing this bill adds to existing law, in terms of prohibited activities, is the sweeping and insidious ban against membership or "sympathetic association" with certain groups, organizations, or movements; and the unheard-of grant of authority to the Attorney General of the United States to designate what organizations, groups, or movements are to be proscribed under this act.

Mr. Speaker, this is a frightening piece of legislation because it strikes at the very fundamentals of American liberty. I have not discussed the question, Mr. Speaker, of the wholesale spying and intimidation which would result from the investigation of each of our one and one-half million Government employees which the bill would require. Nor have I discussed the curious extravagance evidenced by the sponsors of this bill in proposing to spend some $30,000,000 on such an investigation in a stringent economy year when no concrete need for such an investigation has been demonstrated. These are important considerations but the preservation of basic American freedoms of thought and conscience, the preservation of political liberty and the American concept of justice are more important.

If it should be passed, its effect would be felt far beyond the Federal service. The designation by the Attorney General of any organization as subversive would certainly go far toward destroying such an organization. Thus the Attorney General is given the final and arbitrary power to so proscribe any American organization, any political movement or group of people without a hearing and with no appeal permitted. I cannot believe, Mr. Speaker, that the Congress will approve any such totalitarian grant of authority to a Government official. And I cannot believe the Members of this House will vote to introduce into Government administrative procedures the odious totalitarian justice which this bill would inaugurate.

Resolution of the City of Newark, N. J.

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 16, 1947

Mr. ROONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herein a duly certified copy of a resolution passed on July 2, 1947, by the Board of Commissioners of the city of Newark, N. J., urging the Congress to restore to the appropriation for the Federal Public Housing Authority the amounts recommended by the Bureau of the Budget. It is concrete evidence of some of the harm caused by the penny-wise pound-foolish economy program of the majority party. The resolution reads as follows:

Whereas the United States House of Representatives has passed the Government corporations appropriation bill (H. R. 3756) with reductions and restrictions in the appropriation for the Federal Public Housing Authority which might destroy the public housing program if enacted; and

Whereas the appropriation in this bill of insufficient funds to pay the amounts due to the Newark Housing Authority under its contract for annual contributions would be repudiation of a Federal obligation to the payment of which the faith of the United States was solemnly pledged; and

Whereas this bill would reduce by two-thirds the payments in lieu of taxes to the city of Newark in spite of the fact that the city has amply fulfilled its obligation to contribute by granting tax exemption to the public housing projects; and

Whereas this bill would require the Newark Housing Authority to expend its reserves for repair and maintenance on the basis of which bonds have been sold to private investors: Therefore be it

Resolved by the Board of Commissioners of the City of Newark, That this board urges the Congress to restore to the appropriation for the Federal Public Housing Authority the amounts recommended by the Bureau of the Budget; and be it further

Resolved, That the city clerk be, and he is hereby, instructed to send copies of this resolution to the United States Senators and Congressmen from New Jersey, with the request that they work to accomplish the purpose of this resolution; and be it further

Resolved, That the city clerk is hereby instructed to send copies of this resolution to the members of the Appropriations Committees of the United States Senate and of the House of Representatives.

JOHN B. KEENAN,
RALPH A. VILLANI,
JOHN A. BRADY,
M. ELLENSTEIN,
Board of Commissioners of the City of Newark, N. J.

Memorial to the Late Honorable Roy H. Williams, of the Supreme Court of Ohio

EXTENSION OF REMARKS
OF
HON. ALVIN F. WEICHEL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 8, 1947

Mr. WEICHEL. Mr. Speaker, the death of the Honorable Roy H. Williams, of the Supreme Court of Ohio, removed one of the outstanding members of the bench and bar of the State of Ohio. He was a most distinguished son of Erie County, a good neighbor with a kindly word, and his friendly encouragement to young members of the bar will be a lasting memory. Along with his host of friends throughout the country, I want to add my humble tribute, and include a memorial to the late Honorable Roy H. Williams, of the Supreme Court of Ohio:

MEMORIAL OF THE LIFE, CHARACTER, AND PUBLIC SERVICES OF ROY H. WILLIAMS

Your committee appointed to prepare a memorial of the life, character, and public services of the Honorable Roy Hughes Williams, a member of this court at the time of his death, submits the following:

Death came suddenly and without warning to Judge Roy H. Williams in Columbus, Ohio, on December 18, 1946, 4 days after the Supreme Court had recessed for the Christmas vacation. While he had been ill a year or so before his death, he had fully recovered and returned to the bench where he had resumed his full share of the work and responsibility of the court throughout the fall term of 1946.

Judge Williams was born in Milan, Ohio, on September 1, 1874, the son of Charles Ronald Williams and Helen Hughes Wil-

liams. The Williams family was of Welsh ancestry, the eighth ancestor, William Williams, having landed at New Salem, Mass., in 1629. Judge Williams' father, a native of Lorain County and a teacher by profession, was killed in an accident when the judge was but 5 years old. Left fatherless, he made his home with his grandparents on a farm and spent his early boyhood days in and around Milan, the birthplace of another great American, Thomas Alva Edison.

Judge Williams attended Milan High School and Western Reserve Normal School. He then matriculated at Oberlin Preparatory School, and while attending that school went to work for the Western Union Telegraph Company, stringing wires, in order to have sufficient funds to obtain a higher education.

He later entered Oberlin College, where he continued his studies until the sophomore year, when he transferred to the University of Michigan, at first majoring in literature and later pursuing the study of law. He graduated from the University of Michigan Law School in 1897. Judge William L. Hart, a present member of this court, was one of his classmates at Michigan Law School.

Upon graduation from Law School, Judge Williams was admitted to the Ohio Bar in 1897, receiving the second highest grade in the State bar examination out of a class of eighty-five. After practicing for three years in Sandusky, he was elected to his first public office, prosecuting attorney of Erie County, in which capacity he served from 1901 to 1907.

His service as prosecuting attorney was marked by his vigorous prosecution and conviction of bridge contractors under the Valentine Antitrust Act. His work in these cases was ever remembered by the voters of Erie County.

In 1914, after eight years in private practice, he was elected Judge of the Court of Common Pleas of Erie County, which office he held for 10 years. On that bench he had the distinction of being the first Judge in Ohio to impanel the first jury of twelve women on the very day the 19th Amendment to the United States Constitution became effective.

In 1924 he was elected judge of the court of appeals of the sixth district and served as judge of that court for 10 years. During this period that court rendered more than 1,200 written opinions, of which Judge Williams wrote over 350, many of which are reported in volumes 17 to 49 in Ohio Appellate Reports.

With such an experienced judicial background on both trial and reviewing courts Judge Williams was elevated to the Supreme Court to fill an unexpired term. He was reelected in 1936 to a full 6-year term—the only Republican candidate for any State office elected that year. He was reelected in 1942 for another full 6-year term, which he was serving when he died.

Attesting his popularity before the voters of Ohio, it is to be noted that in all three of his initial elections to the Court of Common Pleas, the court of appeals, and the Supreme Court of Ohio, he ran against and defeated an incumbent judge then serving on the bench.

Had he lived until next month, it would have been half a century since Judge Williams first took the oath of practicing law, of which the last 32 consecutive years of his career were served in a judicial capacity.

This is but a brief outline of his public service, and is purely biographical and statistical. It does not portray the character of Judge Williams, either as a jurist or as a man.

Coming to the supreme court with his long experience on both the trial and reviewing courts, he was unusually well-equipped to handle matters presented to the State's highest tribunal. He was of a deeply conscientious nature and put forth painstaking efforts on every case. He never shirked or avoided any duties imposed upon him. To him every case was important with the sole aim to do justice. He knew that the law springs from reality and so avoided the use of abstractions and epigrams to decide disputes.

Throughout his lengthy judicial career he interpreted the law as a guide for the conduct of society and a guaranty of its fundamental rights. He held the view that the Constitution and the common law were to be liberally interpreted to meet the needs of the time. He understood and respected the sovereignty and the dignity of the common man whom he believed was the ruler of his own life and government. These conceptions were developed because the Judge believed deeply in upholding the rights of his fellow men.

He was not the type of jurist who would make hurried judgments or reach quick decisions, but, on the contrary, arrived at his conclusions only after deliberately analyzing and carefully weighing all arguments presented. His opinions were direct and simple, unadorned with rhetorical flourishes. To him the precedent was a guidepost, but not conclusive one.

Time and again he maintained that justice in an ever changing world could not be achieved if the law was static. This interest led him to a study of the work of great jurists such as Marshall, Taney, Hughes, Holmes, Brandeis, and Cardozo.

His opinions showed great research, and an acute analysis of law and fact. One need but read, for example, the opinions in *City of Cleveland* v. *Ruple* (130 Ohio State, 465); *Matz, Administrator* v. *Curtis Cartage Co.* (132 Ohio State, 271); or his dissent in *Federal Housing Authority* v. *Guckenberger* (143 Ohio State, 251), to understand that he did not take the line of least resistance. His opinions were not "unconfined and vagrant," but were "canalized within the banks" and proper limitations. His reported opinions on the supreme court are found in volumes 129 to 147 of Ohio State Reports.

In recognition of his judicial work and public services, the University of Bowling Green, Ohio, conferred upon him its doctor of laws degree in August 1944.

During the long time he was on the bench, Judge Williams never forgot that he was a lawyer and those who appeared before him were his brothers in a learned profession. Never did he attempt, by remark, question, or innuendo, to criticize or embarrass those who pleaded their causes before the court. All inquiries were put in a courteous, kindly, and direct manner. Harsh or intemperate words or language were unknown to him. His kindly, gentlemanly, and dignified attitude will long be remembered and beloved by the bench and bar of Ohio.

Socially and in conference, Judge Williams showed the same kindness, thoughtfulness, and consideration which he possessed while on the bench. While firm and strong in his convictions, disagreeing, and dissenting when he felt others were wrong, yet he always respected and gave due deference to their opinions.

Judge Williams was a modest and unassuming man, but his gentleness of manner and his kind expression and softness of voice gave confidence to all who met him. He was a man of the deepest integrity and was utterly devoid of religious prejudice and nationalistic hatred. His wants and habits were simple, and even wealth would not have changed his mode or manner of living. He personified simplicity.

His love for humanity led him into many fields of civic endeavor, and he became a leader in many fraternal orders and organizations. He was past lieutenant governor of Ohio Kiwanis; one of the organizers and the first President of the Ohio State safety council; a member of the Scottish Rite, and Knights Templar; a member of the Knights of Pythias, Elks, Maccabees, and Sons of the American Revolution. He took great pride in the charitable undertakings of the Loyal Order of Moose, which organization elected him to national supreme governor in 1938. Judge Williams was a deeply religious man, and he and his wife showed a continued interest in the work of the Presbyterian Church of which they were both members.

During World War I, while serving as judge of the Court of Common Pleas of Erie County, although 44 years of age, he voluntarily enlisted as a private and was sent to Camp Knox for training. While this service was short because of the end of hostilities, he always showed a great interest in the affairs of the American Legion and other veterans' organizations.

Judge Williams was married to Verna Lockwood on December 7, 1898, and until his death 48 years later, she was his constant helpmate and companion and inspiration. They took great pride in their home in Sandusky. They were interested in exceptionally selected furnishings and the home portrayed the characteristics of tranquillity and a well-planned life. Peace and quiet prevailed not only in the physical surroundings but in the habits of the household.

The loss of Judge Williams was a great shock to Mrs. Williams, but the treasury of her memories of their close association and the high esteem with which he was held by his fellow men will ever be far more comforting to her than anything we could say here.

Judge Williams' record is written not only on the pages of the law reports, but is found in the heart and spirit of those who knew him intimately. All who met him were of one accord—there was, there is, no kindlier, gentler man.

The day before his death Judge Williams was engaged in writing an opinion and making plans for the future. It seems appropriate, therefore, to conclude this memorial by quoting from the poem written by Dr. S. Hall Young, a Presbyterian missionary, and sent to Mrs. Williams recently. May the thought expressed serve as an inspiration to all those who travel the same road traveled by Judge Williams.

Let me die working,
Still tackling plans unfinished, tasks undone,
Clean to the end, swift may my race be run,
No lagging steps, no faltering, no shirking,
Let me die working.

Let me die thinking,
Let me fare forth still with an open mind,
Fresh secrets to unfold, new truths to find,
My soul undimmed, alert, no question blinking,
Let me die thinking.

Let me die giving,
The substance of life for life's enriching,
Time, things, and self to heaven converging,
Let me die giving.

Publication of Anti-Semitic Statements

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 16, 1947

Mr. DAVIS of Georgia. Mr. Speaker, on July 2 Mr. Alfred Schwartz, adjutant of Atlanta Post, No. 112, Jewish War Veterans of the United States, forwarded to me a resolution adopted by that post with reference to House bill H. R. 2848. As a representative of the post, Adjutant Schwartz asked for my cooperation in opposing this bill.

On July 7 I wrote him asking for permission to insert this resolution in the CONGRESSIONAL RECORD, which permission was granted on July 10.

I insert herewith the resolution referred to.

I feel that action of this kind by this post of the Jewish War Veterans of the United States is worthy of more than passing notice. The membership of this post of Jewish War Veterans have, of their own volition, announced that they want no special treatment—are seeking no special favors or consideration that are not granted to or enjoyed by every other American citizen. In this day and time, when it is the rule that most organized groups seek special treatment, special favors, and concessions, it is refreshing and inspiring to see a patriotic organization such as this come up with a forthright declaration that they are seeking no special consideration and will accept none, but on the contrary repudiate any attempt to enact special legislation in their behalf, and demand to be treated simply as American citizens.

I regard this as one of the finest examples of patriotism and Americanism which has been set by any group, and I commend it to the consideration of the House.

The resolution follows:

Whereas there is now pending, in the United States House of Representatives, the Buckley bill (H. R. 2848) purporting to prohibit the publication of anti-Semitic statements; and

Whereas said bill is poorly conceived and poorly drafted, since by singling out anti-Semitic libels for prohibition it invites invalidation by the courts as "special legislation," thus making the constitutionality of said bill highly doubtful; and

Whereas the bill is so vague and ambiguous as to be unenforceable; and

Whereas it is inimical to the best interests of the United States to pass legislation of this nature for the benefit of any special group, religion, race, or creed: It is hereby

Resolved, That Jewish War Veterans Post, No. 112, goes on record as being unalterably opposed to the passage of this bill, and that a copy of this resolution be sent to the Representative of our District in Congress.

ARTHUR WEISS,
Commander.

Attest:

ALFRED SCHWARTZ,
Adjutant.

Labor Extension Service

EXTENSION OF REMARKS
OF

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 16, 1947

Mr. MADDEN. Mr. Speaker, I have this day introduced a bill to broaden and develop the extension system as established by the act of May 8, 1914, and acts supplemental thereto. This bill will aid in extending useful and practical information among the wage earners of the United States and increase the resources and facilities available to them. It will establish a labor extension service in the Department of Labor, administered by the Secretary of Labor. It will greatly aid the creative capacities of workers who, together with farmers, comprise the Nation's basic productive assets.

I wish to extend for the benefit of the Members, a few questions and answers which will simply and concisely reveal the contents of this legislation.

Question. What is the labor extension service bill?

Answer. A bill to establish for wage and salary earners a publicly supported Labor Extension Service in the United States Department of Labor.

Question. How would the service operate?

Answer. Through a cooperative plan between the Department of Labor, colleges and universities in the States and local groups of wage and salary earners requesting this service.

Question. What kind of services?

Answer. Classes and discussion groups for wage and salary earners who need to know more about their everyday problems in industry and in their communities. Institutes and forums, motion pictures, library services, research projects, help with the conferences and exhibits. Under this plan, workers would be able to secure teachers in labor history, labor economics, collective bargaining, labor journalism, labor-management relations and civic and community programs.

Question. How did the plan start?

Answer. This plan has been discussed by labor organizations and other interested groups for the past 10 years. The National Committee for the Extension of Labor Education was formed a year ago to frame such a bill and organize support for it. On the committee are officers of a number of international labor unions, education and research directors, persons from labor education agencies, and from interested colleges and universities. The committee serves as a clearing house through which all groups concerned may cooperate for this legislation.

LOCAL PLANNING

Question. How can a local union get labor extension service?

Answer. By having an education committee which—

First. Decides what services are needed.

Second. Draws up a request for these services and confers with the nearest college or university which is cooperating with the State labor extension board making sure that the local requests are forwarded to this board.

Question. Will such services benefit organized workers only?

Answer. No. Any group of workers may apply for these services.

STATE BOARDS

Question. Who will be responsible for the labor extension service in each State?

Answer. A State labor extension board, consisting of at least 9 and not more than 15 members, working in cooperation with approved institutions.

Question. Who will appoint this board?

Answer. The Governor of the State will choose the majority from a panel submitted by bona fide labor organizations State-wide in scope. The other members will include the head of the State labor department or industrial commission, representatives of institutions participating in the program, someone whose main work is in adult education, and, where possible, someone from the field of workers' education.

Question. What will be the duties of the State Labor Extension Board?

Answer. The Board will:

First. Receive the local requests.

Second. Approve the services given by cooperating universities and colleges.

Third. Make sure that funds are spent without discrimination of race, color, creed, sex or national origin.

Fourth. Submit plans and reports to the United States Secretary of Labor.

Question. How will the cooperating institutions be selected?

Answer. First. The State boards, following local requests from groups of workers, will determine which institutions will develop and offer services for which these funds may be allocated.

Second. Standards set up by the Department of Labor for these services will have to be met by these institutions.

Third. Through local extension centers conveniently located and through the use of union halls, wage and salary earners in every part of a State may be serviced.

FEDERAL OFFICE

Question. Where and how will the labor-extension service be set up?

Answer. In the United States Department of Labor, under a director of labor extension directly responsible to the Secretary of Labor and appointed by the President with the advice and consent of the Senate.

Question. Will the director have advisers?

Answer. Yes. The bill provides for a National Labor Extension Council of 15 members "to advise the Secretary of Labor and the Director in formulating general policies."

Question. Who will serve on such a council?

Answer. A majority will be chosen by the Secretary of Labor from a panel submitted by bona fide labor organizations national in scope. The other members will be appointed by the Secretary of Labor from cooperating institutions conducting labor-extension services, from workers' education organizations, research agencies operating in the field of social science, and someone whose chief interest is adult education.

FUNDS

Question. How much money is needed for this service?

Answer. The bill provides for an initial sum to be determined by the Senate Labor and Welfare Committee for the first year; doubled the second; tripled the third year and each year afterward.

Question. How will the money be divided?

Answer. Every State meeting the necessary requirements will receive funds based on the number of wage and salary earners in that State compared with the total number in the United States.

Question. Will these services be entirely paid for by Federal funds?

Answer. No; Federal funds will cover three-fourths of the cost; one-fourth will be provided locally.

Question. How will this contribution be raised?

Answer. It may be provided by the State Legislature, by cooperating institutions, by local groups from their own budgets, by moderate fees, or by contributions, such as rent of space, equipment, light, heat, or janitor service.

SERVICES LONG OVERDUE

Question. Is there a precedent in Government for this service?

Answer. The Morrill Act of 1862 and other acts of Congress provide agricultural extension services for families of 6,000,000 farm operators, costing in Federal funds $23,500,000 a year. This is the first bill to provide a labor-extension service for 50,000,000 wage and salary workers.

An Interrupted Dream

EXTENSION OF REMARKS
OF
HON. JOHN W. HESELTON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 16, 1947

Mr. HESELTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following syndicated article by Mark Sullivan entitled "An Interrupted Dream" which appeared in the newspapers of Monday, July 14, 1947. Mr. Sullivan's article is timely and interesting, as usual, and of especial interest is his quotation from the recent address of our colleague the gentleman from New Jersey [Mr. CASE].

AN INTERRUPTED DREAM
(By Mark Sullivan)
RUSSIA AND THE HOPE OF ONE WORLD

For reasons which are understandable, our heads of Government refrain from speaking about our relations with Russia as starkly as the facts are. This official restraint prevents our people from fully grasping the attitude of the Russian Government, and the breach into two worlds which it harshly emphasized last week. Understanding of the condition is imperative, for it puts our people under the necessity of changing their thinking about one world.

Our Government, acting in the interest of cooperation for world recovery, proposed that the countries of Europe get together for mutual self-help toward economic recovery. We said that after the European countries had done this, we would help—contribute funds, food, machinery, every sort of aid.

The proposal, called the Marshall plan, was hailed by Britain and France, but Russian Foreign Minister Molotov warned them against the plan, tried to intimidate them. They went on, nevertheless, invited 22 European governments to a conference at Paris. Sixteen of the governments accepted and the conference is now in session. Eight governments, with Russia, are not present—the eight that are closest to Russia's borders and are in varying degrees of willingness and duress subject to Russian domination. Their absence, and the reasons for it, tell the story. In the case of two, the reason came out.

In the case of Poland, an official statement of the Polish Embassy in Washington, July 2, said, "We would like to take part in discussions relative to * * * the Marshall plan and eventually to present suggestions of the Polish Government." A few days later the Polish Government declined to participate in the conference.

The case of Czechoslovakia is stark. At first that Government announced that it would participate in the conference, and sent a plane load of technicians to Paris. A few days later the Czech Prime Minister and Foreign Minister flew to Moscow and had an interview with Stalin. From Moscow the Czech Prime Minister telephoned his Government at Prague that it must withdraw its earlier acceptance. In doing this, the Czech government said officially: "Acceptance of the invitation might be construed as an action against the Soviet Union."

Both Czechoslovakia and Poland wished to take part in the conference. Both could have made important contributions to the recovery of Europe, and both desperately needed the help from Europe and the United States that the Marshall plan assured. Both countries were forced by Russia, in the most humiliating way, to refuse.

Why did Russia thus make plain the breach between her and the Western World? An answer that receives much credence in Washington is that Russia could not afford to have the Marshall plan succeed, could not afford to have the world see cooperation between America and western Europe, it would lessen her hold on Communists in every country. Especially she could not let the Marshall plan succeed in helping the countries under her domination. Success would show them the way of escape from their subservience.

While our Government continues its restraint, occasional signs emerge which show that it recognizes the facts. In the magazine Foreign Affairs last week is an article which, while anonymous, is generally supposed to have been written by a high official of the State Department. The article contains a warning: "There can never be on Moscow's side any sincere assumption of a community of aim between the Soviet Union and powers which are regarded as capitalist." The United States "must continue to regard the Soviet Union as a rival, not a partner, in the political arena."

The ominous condition which America must grasp was put in clear words by an able young Congressman, Republican CLIFFORD P. CASE, of New Jersey: "No longer can we avoid the conclusion that Russia's purpose is the opposite to our own—to create confusion, perpetuate disaster, and bring chaos everywhere beyond her borders, in the hope that eventually democracy will be destroyed throughout the world. It is time for us to face the fact that we must act, not only without Russia's help, but in the face of her stubborn opposition * * * that our dream of one world, in which peoples of conflicting ideologies will live together in peace, cannot now be realized."

Admission of Displaced Persons to the United States

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 15, 1947

Mrs. BOLTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of July 15, 1947:

IT'S NOT TIME THAT'S LACKING

Senator VANDENBERG came out of yesterday's bipartisan conference with President Truman with the announcement that it seemed "all but impossible" to adjust the immigration laws at this session to admit displaced persons. If this is true, the Stratton bill and one of similar intent in the Senate will die. Something else will die, too. We have posed as a great humanitarian Nation. In loans and gifts, made and projected, we act in a humanitarian manner, but our kindliness, down to the present moment, seems to be for far-away peoples. We turn chilly at the prospect of admitting, by an adjustment of quotas, within a space of 4 years, the equivalent of one stranger for each 350 of our present population. The strangers would be of several faiths and various national origins. The overwhelming majority of them would be refugees from communism, which most of us don't like, either. What will die if these bills die is the refugees' faith in us.

Congress is in a hurry to get home. The refugees, who have spent two or more years in camps, without homes, are probably in a hurry to get somewhere, too. The proposal to let some of them in by diverting unused quotas has been before the Eightieth Congress since January 6, when President Truman included it in his message on the state of the Nation. The Stratton bill has been in the House since the beginning of April. There has been time enough.

The program of the Stratton bill is a little thing to do for those who stood with us in the late war, and stand with us now. It is much more of a thing to do for ourselves, for these would be carefully selected immigrants, many of them bringing skills we need. Congress can find time for this measure, or for a compromise between this and the Senate bill, if it wants to. If it does want to, it can make many more than 400,000 friends for us; it can increase our own self-respect; it can answer the critics who call us hard-hearted hypocrites.

Europe's Displaced Persons

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 16, 1947

Mr. KLEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Herald Tribune:

NOT IMPOSSIBLE

Congressional leaders have told President Truman that "extreme legislative difficulties" make conclusive action now in behalf of Europe's displaced persons "all but impossible." It is our conviction that this issue calls for the impossible. Provision for the human beings displaced by the war was and is a first responsibility of the peace. The war against the Nazis was fought to preserve a civilization in which the dignity of the individual is basic. Yet for 2 years these individual victims, most of them nationals of our allies, have wandered homeless or have been supported by international charity in the vacuum of internment camps. Thousands are in the very concentration camps from which the Allied armies rescued them. Pleas for more time in which to rerescue them have a very hollow sound.

Ira C. Hirschmann, who knows the problem of the displaced through special missions and work with United Nations Relief and Rehabilitation Administration, points out that of the 850,000 for whom resettlement is the only hopeful solution, 170,000 are children under 17 years of age. Surely there is no part of the peace making more important than to provide these young recruits for

democracy the minimum prospect of a home and useful occupation. Eighty percent of the displaced are Christians. Common humanity requires that this predominantly Christian Nation take the lead in allowing a fair share of them to start a new life here. Twenty percent are Jews, for whom a Palestinian settlement may yet offer opportunity. If it does not, again, common humanity requires that these most tragic of refugees not be left stranded at the scene of unparalleled pogroms and persecution.

The Stratton bill would admit 100,000 of the displaced here every year for 4 years; all would be carefully screened in accordance with established immigration safeguards against admitting criminals or prospective troublemakers, invalids, and paupers. The President last week reiterated in an eloquent special message his request for some such measure. The bill's principle has the support of the State Department, of church, labor, civic and veterans' groups through the country. The chief opposition comes from persons and organizations still overwhelmed by isolationist timidities. Recognition of the measure as an essential part of the Nation's accepted international policy, and as itself dictated by humanity, justice, and love of peace, will far outweigh the opposition. We urge that the leaders of Congress hurdle the difficulties, do the all but impossible and see this measure through.

State Department: Stupid in Public Relations, Kiplinger Magazine July 1947, the Changing Times and Text of Secretary Marshall's Speech to the Conference of Governors at Salt Lake City

EXTENSION OF REMARKS

OF

HON. FRANK BUCHANAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 16, 1947

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

[From Kiplinger Magazine of July 1, 1947]

STATE DEPARTMENT: STUPID IN PUBLIC RELATIONS

These words are addressed to the man I met on the diner out of Columbus some weeks ago. I didn't get your name, but you are the man who put down the newspaper as I barged into a seat across the table, and you started a conversation about Greece and Turkey, and how they meant nothing to you. You said you were plenty occupied with your own business and you were satisfied to let the State Department take care of foreign affairs without any kibitzing from you. I didn't agree with you on the matter of your indifference, and I'd like to say a few things about what's wrong with the State Department, and why it is your business.

You think the future of your kids is in your hands. Well, that isn't quite true. Whether your kids will have to go through another war depends partly on you, but also on your State Department. That Department directs the arrangements which turn out for either peace or war. It's your peace or your war, and so it ought to be your State Department.

The State Department is going to ask the American people to spend billions of dollars more in foreign countries. They have the plans drawn up. They have reasons why it is a good idea, not only for the foreign countries but for you. They have ideas on why it will be a good investment, for peace and good business later on.

But you haven't heard enough from the State Department on what the whole program will cost or why the price should be paid. You've heard the first few chapters, but you need to know the whole story. You need to know what it will cost, how much taxes it will take, what it means in business planning, how much of your product should be sold in foreign markets, how it will affect the tariffs, whether it means more or fewer depressions, and finally whether it means your children will do business or fight a war.

You're not the only one who hasn't been taken into confidence. Members of Congress who have to decide the final questions haven't been able to get the State Department to talk honestly about what's coming. The program just grinds out, piece by piece, accompanied by the hand wringing of diplomats and the State Department wail that nobody understands.

I want to make it clear that this is not a criticism of the ability of the men in the State Department, and it's not a beef about their policy. Those are different matters. What I'm talking about is an attitude toward the public, and I'm saying that this attitude is stupid.

The standard attitude of many key officials in the State Department has been, and still is, that you and millions like you are too dumb to comprehend what their work is all about. This attitude originated in Old World diplomacy, when diplomats fixed the affairs of nations in high secrecy, then called upon the people to do the paying and the fighting.

Now, in this country your State Department apes the Old World diplomats. Your State Department tells you what it has done, but not what it is cooking up. Policies in the making are hush-hush. You will be told in due course, but you mustn't bother your mind while big policies are cooking. You just take what's cooked and like it.

There's a State Department booklet, an inch thick, to impress on departmental officials and employees the rules of secrecy. Many of the rules are proper, but the effect is also to withhold information which you ought to have. Secrecy is a fetish, and it works against you.

Our foreign policies, whatever they are from time to time, have only as much strength as the public support behind them. Diplomats and other high officials can plan as much as they please, but their plans go for naught if Congress and the public do not back them up. Only through public support do policies get guts.

And yet, in the face of this fact, the State Department officialdom goes around maintaining its secrets, mumbling that the public doesn't understand, and doing very little to make the public understand. The State Department has more "trouble" with Congress than almost any other department. It is always on the defensive, even in its appropriations. The result is that policies arranged by the State Department often do not have support in Congress, or with the public. No wonder you are so indifferent. And no wonder Congress, by State Department standards, is so often "difficult."

The influence of our State Department in the world is now at an all-time high. It has great opportunities for either peace or war. Its opportunities are sometimes undermined, however, by uncertainty about support at home. The State Department officialdom faces outward, toward the world. It should also face inward, toward our people, people like you. If it does not soon reform, and face inward, it will stub its toe and the Nation's toe, and the pain will be yours and your kids'.

W. M. K.

TEXT OF THE ADDRESS BY MARSHALL

I have welcomed the opportunity to meet with you gentlemen again but not the obligation to make a formal public statement. During the war years it was possible for me to talk off the record and also to discuss matters in a rather definite manner.

I always felt that you not only gave me your confidence, but that the Army derived a very definite benefit from the more intimate knowledge of its problems that I felt free to communicate to you.

I express again my appreciation of the support you gave me in those difficult days and the meticulous manner in which you respected my confidence.

I little thought in my last meeting with some of you—I believe at Mackinac Island—that I would return again in a totally different capacity and with problems and responsibilities that are in some respect much more difficult than those that were mine during the war.

It is unnecessary to tell you gentlemen that reestablishing the peace has its difficulties, or that it is necessary that I be very careful in what I say publicly and when I say it.

If it had been practicable for me to talk to you off the record and in great confidence, there is much that I would like to discuss with you. However, I must confine myself to the necessities of the time and the occasion.

PUBLIC UNDERSTANDING ASKED

In accepting my new responsibilities it is probably fortunate, though it did not seem so at the time, that I had little opportunity to go into all of the details concerned with the critical negotiations, discussions, and actions in which I was soon to participate.

Probably if I had had a full realization of the enormity of the task and its requirements, I would have suffered considerably in morale. As it is, I have reason to be really very grateful for the generous support which has been given me and the sympathetic understanding with which my various efforts have been regarded.

I will say right now that the greatest problem I feel we have to deal with is in bringing the American public to a general understanding of the conditions involved at home and abroad which influence all negotiations and therefore all efforts to reestablish the peace and prosperity of the world.

Prejudiced points of view are of course objectionable in all such matters, but it is very hard to avoid a degree of prejudice under real provocation, and particularly when one is remote from the scene of difficulties. Also it is very difficult to reduce the problems to a simplicity of statement that is understandable to our citizens generally.

MOSCOW CONFERENCE CITED

I can judge this I think rather accurately by my own difficulties when I first took up the burdens of preparation for the meetings in Moscow.

That experience, incidentally, has guided my language to a considerable extent in the various public statements I have had to make. State papers and State pronouncements must be couched in diplomatic, at least dignified, phraseology, and unless one is a master of the English language, such as Mr. Churchill, for example, it is very difficult to combine these requirements with the urgent necessity of making impressively clear to the ordinary citizen the matters under discussion.

These gatherings of the executive heads of the States on which our Government is founded are emphatic reminders of the function of the States of our political life. That function has a very special significance today when one considers the present world problems.

Thinking back on the developments of our Federal Union, on the doubts and difficulties which preceded the final union of the Colonies, on the remarkable productive effort which followed on the solution of the early difficulties, and on the high degree to which the States have continued to main-

tain their own individual personality and institutions, Americans should have a keen and sympathetic understanding for the efforts now under way in Europe to overcome the limitations of national barriers in the approach to a solution for common economic problems.

And their understanding will strongly influence, in fact will determine, the decisions which this country will be called upon to take with relation to the outcome of these discussions.

NATION AT TURNING POINT

There is no blinking the fact that this country now stands at a turning point in its relations to its traditional friends among the nations of the Old World. Either it must finish the task of assisting these countries to adjust themselves to the changed demands of a new age, or it must reconcile itself to seeing them move in directions which are consistent neither with their own traditions nor with those of this country.

In this latter case, the United States would be faced with a radical alteration of its own position in the world. I ask you to consider most carefully the implication of such a development for the future prosperity and security of our country.

There are many who are in doubt as to the course which this Nation should now pursue. They feel that the aid granted thus far to the countries of Europe has been piecemeal, and certainly not fully effective. And they wonder whether we are pursuing the right course.

These reactions are understandable. It is true that the efforts to put European countries back on their feet have thus far been largely to meet a series of crises and therefore of a somewhat disjoined character. It is also true that they have been far more beneficial than is generally realized.

The uncertainties of the immediate posthostilities period were such that no one could have predicted accurately the course of developments or devised adequate, coordinated approaches to Europe's problems.

An immense amount has been accomplished by what this country and others have already done to help Europe overcome the effects of this war. However, a great part of the problem of postwar adjustment in Europe still awaits solution. No one clearly foresaw, and no one could have foreseen, the outlines and the magnitude of the problem while the smoke of battle still hung over the scene.

BETTER PLANNING POSSIBLE

It is now possible to calculate more exactly the needs which must be met, and the sources from which they must be met, if this adjustment is to be completed. Furthermore, the urgent need for a carefully coordinated European effort is now widely recognized.

The meeting in Paris called at the initiative of the Foreign Ministers of France and Great Britain constitutes an auspicious beginning to the accomplishment of this task.

The representatives of European countries there assembled deserve to feel that their work will be followed in this country with genuine sympathy and good will. For we are intimately concerned with the solution.

In Washington we are studying with the greatest of care the implications of the various possible solutions from the standpoint of the interests of the United States. But whatever course is adopted will affect the lives and fortunes of people in every State of the Union.

It is imperative that the attitude taken by our Government toward this problem, as in all great questions of foreign affairs, be in intimate accord with the feelings of the Nation at large.

To make up its mind this country will need facts. One of the results of the meeting being held in Paris and of the studies now being made by the Government will be to bring out all the facts. With the facts before them I am confident of the response of the American people.

With your help I feel it will be possible for our Government to find a course of action fully consistent with our own national interests and yet equally considerate of the incalculable stake which this country has in the preservation of European civilization.

Address of Gov. Robert F. Bradford

EXTENSION OF REMARKS
OF
HON. JOHN W. HESELTON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 16, 1947

Mr. HESELTON. Mr. Speaker, under leave to extend my remarks, I include a speech made over Station WSPR, Springfield, Mass., on July 6, 1947, by the Honorable Robert F. Bradford, Governor of Massachusetts, under the auspices of the Polish-American Congress, Inc., western Massachusetts branch:

Thank you, Dr. Smolczynski. I deeply appreciate your invitation to participate once again on this important program which is designed to bring home to the American public the true condition of Poland and the acute problem confronting those Polish leaders who are seeking justice and freedom for their country. Your organization is to be commended for the intelligent and energetic manner in which it is working for the restoration of a government in Poland under which the people of that nation may enjoy happiness and liberty.

It was only a few weeks ago that the Polish people celebrated a day of great significance in the history of their country—the anniversary of the promulgation of Poland's first liberal constitution in 1791. It was an occasion on which the hearts and minds of thousands of American citizens of Polish ancestry turned naturally to the land of their birth. The sentiments which stirred the hearts of these men and women—the thoughts which filled their minds—doubtless combined sadness with pride. And also, I am sure, confidence and hope and determination—the characteristics of a nation which refuses to accept defeat.

There is little need for me today to speak of the strong bonds which have existed for so many decades—and still exist—between Poland and the United States. The history of the two countries bears ample testimony to this warm friendship. It is a friendship nurtured during long years of peace and tempered in the furnace of war. It is a friendship which has fostered mutual admiration and respect, one which will not be shaken by passing storms.

In recent years, Poland passed through one of the dark periods of her history. An enemy sought to destroy her. But though forced to suffer the deepest agony, she maintained her dignity, her integrity, and her existence. Poland fought with all the force and gallantry at her command, and although overwhelmed, she was never completely conquered. The story of her resistance is one of the bright chapters in the sordid history of war.

Within her borders, despite the presence of the invader, and on the scattered battle fronts of the world as well, indomitable Poles refused to accept defeat. They continued their struggle for justice and freedom wherever a blow could be struck in the cause which they held to be more dear than life itself.

To those who understand the Polish people and their history, this high valor and devotion to principle came as no surprise. The spirit behind this noble struggle was but a natural outgrowth of their deep-seated belief in justice and tolerance and liberty. The meaning of democracy was known and respected in Poland hundreds of years ago. But in those distant days, the shining example which Poland gave to Europe merely aroused the suspicions and hatred of rapacious neighbors who fell upon her repeatedly. In fact, it was only a few years after our own American Colonies had won their liberty that Poland suffered a blow which virtually wiped her off the Continent.

But there was that in the spirit of the Poles which rejected annihilation. The flame of freedom could not be extinguished. Poland could be trampled upon, partitioned, grievously hurt, but she would not be exterminated. So, from the ashes of that terrible defeat, she rose again slowly and painfully to regain the stature of a republic and to take her place among the nations of the world. This was in our own time and the Polish Republic began its stern task of recovery, hopeful that in a world at peace it could grow and prosper.

However, the respite was to prove all too short. The Second World War broke out and it was Poland which first sustained the blow—a blow which fell with terrific force and the speed of lightning. Poland was the target of a vicious man imbued with a cruel idea. In little more than a month, she lay prostrate under the heel of a warlord whose design was not only to crush a weaker neighbor but also to use his victim as a symbol of the bitter destiny which would overcome all who dared oppose him.

But Poland still was not dead. The fury and tenacity which marked her hopeless struggle were not wholly exhausted even when the enemy had completed his invasion. Beneath the surface of apparent defeat there still burned the spirit and the will and the ability to resist and to fight. The magnificent uprising in Warsaw bears eloquent testimony to the indestructible spirit of the Polish people. It did not succeed. But it presented to the world a flaming badge of courage—inspiring evidence that love of liberty is a living force which brute power cannot crush.

This spirit of Poland still animates her people as today they strive to meet the challenge of a world seeking the way of true peace. Devastated by war, terribly injured by an enemy which imposed ruthless punishment on her, Poland is now struggling back to her feet. She is beset not only by her internal difficult problems, but by exterior forces as well—forces of questionable design which make her rehabilitation all the more difficult to achieve.

Because we have a warm affection for Poland, because of her long tradition of democracy, because so many thousands of her sons and daughters have contributed to the greatness of our own land, we are deeply touched by her plight and moved to give her aid. Poland needs our moral support. She needs material help from America. We must stand by her in this troubled hour and insist that she be accorded justice and the full opportunity to live as a free country.

Control of Natural Gas Industry

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 16, 1947

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from

the Pittsburgh Post-Gazette of July 14, 1947:

THE GRISLY BILL

From the consumer's viewpoint, the Rizley bill which the House passed without amendment on Friday might better be known as the grisly bill. Opponents of the legislation have charged that it reduces control of the Federal Power Commission over the natural gas industry, tending to increase profits of the pipe-line companies at the consumer's expense.

The bill would prohibit FPC from exercising any authority over natural gas in the field. It would prohibit FPC from determining the "end use" of gas, an important consideration in Pittsburgh where in time of shortages FPC has been able to insist upon gas deliveries to homes first instead of industries.

Further, the legislation would change the rate-making structure so that hereafter FPC could no longer consider the operator's investment cost as the basis for rates but would have to substitute for this the "prevailing field price" of gas. It would also transfer from FPC to the Interstate Commerce Commission jurisdiction over persons engaged in "transportation of natural gas by pipe line solely for others for hire and not engaged in the selling of natural gas."

The net effect of the bill is to increase the power of State utilities commissions at the expense of FPC. And State utilities commissions are not able to exercise the sort of control a Federal agency provides for the public's protection.

The bill now goes to the Senate, where it should be defeated.

As its first session draws to a close it becomes increasingly clear that the Eightieth Congress has seemed more concerned with special-interest legislation than with measures in the public's interest. It could find time for things like the Rizley bill and the wool grab but couldn't get around to vote on such matters as a long-range housing program and national health insurance, to mention only two major items that now have no chance of passage.

World War I Veterans Are Nearing Pension Age

EXTENSION OF REMARKS
OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 16, 1947

Mr. VAN ZANDT. Mr. Speaker, when the armistice of 1918 was signed there were 4,757,000 men and women wearing the uniform of our armed forces, with an average age of 25 years. Today there are 3,727,000 veterans of World War I alive, with an average age of 54 years. According to the Veterans' Administration, 137 World War I veterans are dying daily.

From the standpoint of benefits received from the Veterans' Administration, 433,210 veterans of World War I are receiving disability compensation or a pension by reason of being permanently and totally disabled.

Since the average age of World War I veterans is 54 years, it is recognized that before long Congress will have to decide if the traditional policy of granting pensions is to be followed with respect to this group. This Nation has paid pensions to its defenders in the Revolutionary, Mexican, Indian, Civil, and Spanish-American Wars and lesser campaigns and expeditions. These pensions, covering the period from 1818 to the present, have ranged from $6 monthly to over $100 in certain cases requiring the constant need of an attendant.

The basic requirements for these pensions included honorable discharge following service during the active prosecution of the war and a specified number of days for such active service.

Since we are speaking of the earlier conflicts in the history of this Nation, it is interesting to observe the following figures in regard to the number of veterans of past wars in receipt of pensions. The figures are as follows: Civil war, 154; Indian wars, 971; Spanish-American War, 115,072. From the age standpoint, the average age of the Civil War veterans is 100 years, and it is realized that the 154 remaining Civil War veterans will soon answer the last call.

Spanish-American War veterans, who include veterans of the Boxer Rebellion, Philippine Insurrection, and China Relief Expedition, number 139,000 living today, with an average age of 71 years, and with a daily death rate of 27.

With further reference to the veterans of World War I, we must recognize that they are the only group reaching or nearing retirement age that have not been recognized through the enactment of pension legislation by the Congress.

It is true that certain World War I veterans are receiving compensation or pension benefits, but it must be clearly understood that compensation is paid for service-connected disabilities and pensions only when a person is totally and permanently disabled and unable to earn a livelihood.

During the Eightieth Congress, now in session, several bills have been introduced to provide pension benefits for aged and disabled veterans of World War I. H. R. 677 provides pension benefits to aged and disabled veterans of World War I on a basis comparable to existing pensions for veterans of the Spanish-American War.

Under the provisions of H. R. 677, a veteran must have served 90 or more days between April 6, 1917, and November 11, 1918, and have received an honorable discharge. He must have a disability that handicaps him in the performance of manual labor to the extent he is rendered wholly or partially unable to support himself. The following monthly rates apply to varying degrees of disability:

10 percent	$24.00
25 percent	30.00
50 percent	42.50
75 percent	60.00
100 percent	75.00

Veterans who are totally disabled and who require regular aid and attendance will be paid $100 monthly.

Under the provisions of H. R. 677, a World War I veteran, when reaching the age of 65, is presumed to be permanently and totally disabled and eligible for a pension of $75 monthly.

It is interesting to learn that, while the average age of the World War I veteran is 54, there are 65,541 World War I veterans who will attain age 65 during the year 1947, 29 years after the war ended.

The following table will show the number of World War I veterans reaching 65 years of age between 1947 and 1962, inclusive:

Year:	*Total number of veterans 65 or over*
1947	65,541
1948	76,324
1949	88,824
1950	104,039
1951	128,492
1952	226,648
1953	342,451
1954	480,557
1955	633,166
1956	795,759
1957	989,149
1958	1,213,656
1959	1,468,867
1960	1,752,502
1961	2,060,158
1962	2,209,002

According to the above table, in 1962, 44 years after the end of World War I, there will be 2,209,002 alive who have attained 65 years of age. In other words, this figure represents about one-half of the total number of veterans who served in World War I.

While it is true that the initial cost of H. R. 677 will amount to about $770,000,000 annually, it must be remembered that this year over 50,000 World War I veterans will die and the number will increase in 1948 and subsequent years as the veteran's average age increases.

From the standpoint of providing the necessary funds to pay pension benefits to World War I veterans, let us remember we have sent millions of dollars to foreign countries with many similar appeals now pending and little question has been raised as to where the money is expected to come from to pay these international hand-outs. If we can assist the people of every foreign nation and organize societies to aid displaced persons in Europe, why not give some attention to the plight of the defenders of American ideals and institutions, who in 1917 followed President Wilson's advice and donned American uniforms "to fight a war to end all wars—and save the world for democracy"?

H. R. 677 should be enacted as an expression of gratitude owed by this Nation to the veterans of World War I.

Administration of Relief to Germany

EXTENSION OF REMARKS
OF

HON. HAROLD F. YOUNGBLOOD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 16, 1947

Mr. YOUNGBLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by O. R. Hauser, national president, American Relief for Germany, Inc., who toured Germany under OMGUS travel orders to survey the need for and administration of relief to Germany:

On March 14 I took off at LaGuardia Field, N. Y., on an American Overseas Airline four-motor plane. Midnight March 15–16 I landed in Templehof Airport, Berlin, Germany, and forthwith registered with the Office of Military Government, United States. At the outset I wish to pay tribute to the American military government, particularly to the Office of Public Health and Welfare, for having given every assistance to my mission, which, as stated in the travel orders issued by the office of the commanding general, was to "Survey the need for and administration of relief to Germany." My travel orders were received also by the military governments of the British and French zones, who likewise extended every courtesy and cooperation through their divisions of public health and welfare. I also gratefully acknowledge the aid and assistance given me by the Laender and Stadtregierungen, especially the ministries of social welfare.

I went to Germany to get a first-hand picture of the actual living conditions of the German people and to bring this picture back to the United States. Four thousand feet of motion pictures taken by professional photographers will tell the story. After a preview of these pictures in Washington, D. C., before United States Senators, Congressmen, and representatives of the State and War Departments, these pictures will tour the country accompanied by a sound report. It is my hope that they will stimulate greater giving through the agencies licensed to operate relief in Germany.

MOTION PICTURES WILL TELL

I visited the homes, schools, offices, waiting rooms of railroad stations, sleeping quarters for transients, hospital wards, children's homes, orphanages, Altenheime, refugee and displaced-persons camps, camps for returned prisoners of war, also two internment camps for political prisoners—Dachau and Karlsruhe. I made most of these trips alone in order to see what I wanted to see and to enter into the heart of the German people. I actually penetrated into the depth of every need and was able to feel the pulse of the German nation.

The physical destruction of buildings, 60 percent of city housing destroyed, which means 5,500,000 living units, rendering 20,000,000 people homeless, including 4,000,000 children; the demolition of entire blocks and sections of the cities, miles and miles of nothing but ruins of walls and rubble of brick, ashes, and twisted steel and iron, the apathetic, blank look in the eyes of the people moving and living amidst these ruins, the sight of old women with picks and shovels engaged in rubble clearance, large crowds at street intersections trying to get onto streetcars crowded beyond capacity, the steady flow of hungry and tired-looking masses of humanity in the direction to and from the railroad stations, the sight of hundreds of tired wanderers, often entire families, trying to gain entrance into transient sleeping quarters to spend the night on straw sacks, the waiting rooms amid the ruins of railroad stations crowded with desperate people from everywhere going nowhere, the expression of bitterness and hoplessness in their faces when asked whither they were bound—all of this you will see in the pictures which will tell their story more eloquently than the power of speech.

And more also, these pictures will take you to the refugee camps, to the camps of prisoners of war returned from Russia housed in barracks temporarily to receive sufficient nourishment furnished by our help so that they may gain strength enough to return to their homes and families, and into the hospital wards of such camps where I received first-hand the tragic story of treatment at the hands of the Russians from returned prisoners who appeared to be nearer death than life on their hospital cots. You will be taken into the barracks of former prison camps where hundreds and thousands of homeless Germans, Yugoslavs, Sudeten-Germans, refugees and expellees from the Baltic States, East Prussia, Silesia, Posen, Pommern, and Poland have found temporary housing. You will be taken down into the subterranean living quarters in air-raid shelhomeless Germans, Yugoslavs, Sudetenoxygen, families have found refuge who had lost their homes in the terrific bombardments. You will see a so-called bunker (concrete air-raid shelter two stories underground) housing 130 people in Stuttgart, among them 50 children, crowded together, almost every child showing symptoms of tuberculosis. With these pictures I will give you the most heartbreaking story of mothers who with their children are living in the basements under their ruined former homes, the children undernourished and tubercular, the mother a mere shadow, the father still a prisoner of war. In March when I arrived it was still cold and I found such families under the cover of featherbeds and rags, all damp and moldy.

"CREEPING DEATH BY HUNGER"

You say that I must be exaggerating and I admit it is all an unbelievable nightmare which has haunted me and is still haunting me, but this all is not the deepest or most far-reaching distress of the German people. All of these tragedies of life strike a comparatively limited number of the entire population. The great, deep anguish of the German nation is the daily, steady, perpetual hunger of the masses. I have called it "der schleichende Hungertod" (a creeping death by hunger). Suppose 10,000,000 people receive packages from abroad and suppose 15,000,000 have rescued something of substance, as a piece of jewelry or some clothing or some silverware, and can barter with such treasures, giving up one after another rather than to face starvation; there are still 40,000,000 and the 14,000,000 expellees and refugees who have nothing but what they can obtain with the ration coupons and their earnings in marks. I have looked into the faces of these hungry masses as they came to and fro at railroad stations. Some of the people whom I observed at the Dahlem substation of Berlin Ringbahn on the 16th of March, the day of my arrival, I have seen again at the end of 2 months still coming and going but with a still less steady step, feebler and hungrier looking than 2 months earlier. When I arrived in Germany, the daily standard of nutrition was 1,200 calories. When I left it was eight hundred to nine hundred.

TEN DAYS ON GERMAN RATIONS

For 10 days I have forced myself to live on the German rations, staying away from the dining rooms of the military officers' billets and clubs. I have gone into the few reestablished German eating quarters. I beheld the mostly elderly people pulling out their ration coupons, looking at them as if calculating, "Can I afford it and will they reach," and finally tearing off the required number, handing them to the waiter or waitress in order to see placed before them, as an example, four tablespoons of dehydrated potato with one tablespoon of hash placed in the center thereof and a small slice of dark bread made of rye and corn. I testify that after eating this meal my stomach felt as hungry as before I sat down. Indisputable evidence is my loss of 24½ pounds of weight at the end of my first 2 weeks in Germany, although, in fairness, I must admit that some of this loss was due to the chagrin and nerve strain caused by the perpetual, constant sight of tragedy.

THEY ASKED FOR IT

This is the comment you hear again and again. A large part of the American press is hostile to every attempt to help the German people. There is talk of the collective guilt. Are they guilty—the children of Munich, for instance? Out of 55,000 school children, 6 to 14 years old, 15,000 sick, afflicted with tuberculosis, bronchitis, and scabies, 30,000 undernourished and exposed to disease; or even in a less-destroyed city, Wiesbaden, 60 percent of the school children undernourished—that means hungry. Are these children guilty?

COLLECTIVE GUILT

I have found no one in Germany who had a word of condonement for Hitler. To admit the guilt of Hitler is not to admit the guilt of the German people as a whole. "They should have resisted," it is said. In the first place, only 43.9 percent had voted for Hitler March 5, 1933. After he had usurped power there remained a strong movement of resistance. What effect must it have had on the German people to see one foreign government after another accept the Hitler regime officially as fully trustworthy. Sir John Simon and Anthony Eden were received by Hitler March 24, 1935; the American Under Secretary of State, William Philipps, December 1935; September 4, 1936, Lloyd George, victor of the First World War, who refused to help the democratic Germany in its problems of unemployment and economic distress, but saw fit not to refuse Nazi Germany his recognition; and to crown it all, the visit of Foreign Minister Molotov and the conclusion of the German-Soviet Russian pact on August 24, 1939.

If there is to be talk of collective guilt, let all be included who between 1933 and 1939 did not offer defiance to Hitler, and remember that to do so in Germany meant Konzentrationslager and almost certain death. Let the war criminals be punished. Those guilty of overt acts of crime and cruelty should have been dealt with long ago by prompt and exemplary punishment. All the rest who are held behind the barbed wires of internment camps should be released. Among these are the trained talents in all fields of human effort, and these are sorely needed for the rebuilding of the German economy.

CONCLUSIONS

Germany needs a central government, a stabilized currency, raw materials for its civilian production, seed and fertilizer for its agriculture, assurance of protection by the western nations against permanent enslavement by Russia. The menace of the spread of communism is not imaginary. The Russian Sector Radio Station in Berlin is so powerful that it drowns out the programs of the American Rundfunk.

SELF-INTEREST COMMANDS ACTION

It is ultimately in the interest of our own political economy and in the interest of western democracy that we tackle the problem of rehabilitating the German economy. The problem of saving Germany is tied up with the entire European economy. Europe will not live unless its industrial heart is restored and its Korn-Kammer (Pommern and Posen) in effective operation. The people of Holland, Belgium, Luxemburg, France, the Russian-controlled regions of southeastern Europe and of Poland need the productive coal and steel industry of Germany and all of Europe needs a 100-percent rehabilitation of agriculture.

HOOVER'S HORSE-SENSE RECOMMENDATION

Important as our emergency relief action is and will remain for a long time to come, more important is the immediate action of our Government on the recommendation of former President Herbert Hoover to the effect that a large enough one-time appropriation be made by the American and British Governments on the basis of a long-term loan to be amortized on the import-export principle. We are spending over $200,000,000 a year in the American zone of occupation now without improving conditions. Are we going to repeat in Germany the mistake we made domestically during the years of depression when we slowly but steadily spent millions for relief, pauperizing the masses

instead of promptly in businesslike manner tackling the job of reemployment of labor in industry revived through adequate large-scale subsidies? We are not helping Europe by pauperizing Germany. The Germans do not wish to be recipients of alms. If given seed and fertilizer for agriculture and raw materials for civilian production, by the endless circle of export of products made of such raw materials against import of new raw materials the German economy will be rehabilitated and the German, instead of being dependent upon aid charged to the American taxpayer, will support himself by the work of his hands. This is the hope of every German. The German people have no desire for a revival of militarism. The terrible effects of war are round about them. Everywhere you hear expressed the hope that the Americans will not withdraw from Germany until peace is assured.

Perhaps the greatest contribution which I was privileged to make was the strengthening and upbuilding of the morale of the German people by holding out to them the hope that our voluntary agencies will do much more than they have done towards emergency relief and that we will strengthen the hands of our Government by educating public opinion to the facts of living conditions in Europe so that, backed by enlightened public opinion, our statesmen will courageously tackle the job of leading the United Nations in a sane program of European reconstruction and rehabilitation.

May the United States of America assert her economic and moral strength in leading the United Nations in the direction of world peace!

May we, the plain citizenry of this country, ban from our hearts and minds all hatreds and build an American Christian consciousness of moral responsibility for our brothers of all lands and nations. As long as suffering calls for relief let there be no racial nor religious barriers to our charity! Let all good Americans be united for peace on earth, good will to all mankind.

How Free Is Enterprise?

EXTENSION OF REMARKS
OF
HON. CARROLL D. KEARNS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 16, 1947

Mr. KEARNS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Sharon Herald, Sharon, Pa.:

HOW FREE IS ENTERPRISE?

This is the land of free opportunity and private enterprise, sure enough. But our nonlegal guess is that Jimmy Petrillo's threat to set up his American Federation of Musicians in the recording business is a little too free and private even for the economic climate that nurtured the Horatio Alger legend.

What Mr. Petrillo hints at doing would force the present rceord manufacturers out of business by monopolizing the services of all union musicians—which means the services of virtually all professional bands and orchestras and most of the instrumental soloists. It would force the union musicians to work for one recording company if they wanted to make records.

Mr. Petrillo presented this new idea to a congressional subcommittee with some reluctance. He said the AFM would rather remain a labor union. But we believe that, if James Caesar could get court permission, it might be an instructive experience for him if he turned employer.

It is Mr. Petrillo's laudable ambition to give employment to all of the 216,000 members claimed by his union. (We think, though, that he should make it clear sometime that many of those members are part-time musicians who gain their principal livelihood from nonmusical jobs.) But while the AFM president might be able to force the present recording companies out of business and compel his boys to work for him, he couldn't coerce the public into buying all the records they turned out.

Music, as art or business, is highly competitive. Yet many, perhaps most, AFM locals do not require auditions or proficiency tests for membership. The skilled union members rise to the top and the less skilled brothers remain below. There's nothing Mr. Petrillo can do about that.

Thus, mass employmen' in music is hard to achieve, however just and proper it is in theory. Mr. Petrillo can force a theater manager to hire musicians he doesn't need, doesn't want, and won't use. But he can't force the public to listen to music that is full of squeaks, clinkers, and sour notes. So he has to use threats and maneuvers against the employers before he can make general promises to the membership.

If he were boss of the recording field, however, Mr. Petrillo would have nobody to threaten. Instead, he might conceivably run into a little labor trouble. For he would have to set the fees for the performers who make records. Unless he wanted to put money in the members' pockets with one hand and take it out with the other, he would have to set fees which allowed him to at least break even. There would be no more dickering by top orchestra leaders with several recording companies for the best deal they could get.

This is not to say that Mr. Petrillo doesn't have a case for his membership on many points. It is obviously unfair, for instance, that a disc jockey can make a six-figure annual salary by playing records for which the performing musicians received only a single modest fee. But a policy of made work and feather bedding doesn't seem the best cure fo- this condition.

Mr. Petrillo has hurt his men's cause by his defiant, dictatorial attitude and by his own unfairness. In fact, he has hurt the cause of all labor. For his past performances certainly contributed to the public indignation which gave rise to laws restricting the power of unions. If he now goes ahead with his proposal to solve the musicians' problems by creating a record-making monopoly, somebody is pretty sure to throw the book at him even harder.

Saving Public Money

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 16, 1947

Mr. DONDERO. Mr. Speaker, I offer for the RECORD a condensed article from an editorial by John S. Knight which appeared in the Detroit Free Press of May 11, 1947.

I believe every man in business life should realize that the credit of the United States is limited. We can only furnish world leadership if we are a strong, solvent nation. The amount of the public debt should convince anyone that we are no longer a rich nation and, therefore, economy in government must be the first order if we are to survive and preserve our freedom and self-government.

The article follows:

JOHN S. KNIGHT SAYS

Saving public money isn't a very exciting subject for an editorial, but in these days, at least, it has the virtue of being different. It is considered modern to sneer at economy and to brand as reactionary anyone who questions huge appropriations for nonessential functions of government.

To an alarming degree, the metropolitan press smears Members of Congress as visionless, little men when they challenge foreign loans and swollen departmental budgets. Along with the growing concentration of industry and the disappearance of individually owned firms, industrial management has become as careless about government expenditures as it is cautious about its own. The business executive who insists that lead pencils and typewriter ribbons must provide the maximum use sees nothing inconsistent in howling his head off for Federal funds to finance his pet local project. The prevailing delusion is that somewhere, somehow, the money can be found to reduce taxes, balance the budget, curtail the national debt, and bail out distressed nations all over the world. In the United States, which is the sole remaining major citadel of capitalism in the world, the press should encourage, not condemn, reductions in the cost of government. It should discourage States and municipalities from leaning upon the Federal Government for support.

It is high time that we came to a true realization of the financial perils that lie ahead and swung into action against waste in government, whether it be local, State, or National.

Modern Luddite

EXTENSION OF REMARKS
OF
HON. CARROLL D. KEARNS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 16, 1947

Mr. KEARNS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Washington Post under date of Saturday, July 12, 1947:

MODERN LUDDITE

Mr. James Caesar Petrillo is feeling his oats again. After bowing in unprecedented humility to the Supreme Court decision upholding the Lea Act, he is now busy devising new ways to plague employers and potential employers. It may be necessary, he thinks, for the American Federation of Musicians to counteract unemployment by prohibiting musical broadcasts over radio chains and by refusing to make commercial recordings. It is even possible, he adds, that the AFM may enter the recording business itself. On the basis of his past success Mr. Petrillo, barring legal complications, is just the man to put on the kibosh and make it stick. Congress owes him thanks for his frankness if for nothing else.

It is easy to rail at Petrillo as the personification of an unprincipled labor boss taking out his spite on society. But the case is not so simple. Mr. Petrillo represents in effect the displaced persons of a greatly overstocked profession. He is the modern symbol of resistance to technological change on the part of persons who see their jobs evaporating through greater use of recordings, "canned" broadcasts, movies, and juke boxes. It cannot be challenged that these mass media have

brought more music—and more good music—to millions of Americans. But as the taste for music has been cultivated, the number of live musicians required to cater to it has greatly diminished.

Mr. Petrillo would answer this dilemma by forcing more widespread employment of musicians through restriction of technological advance. Carried to its extreme, that would mean that no new invention could ever be applied when it meant displacing a worker. Such a practice, which is a form of feather bedding, would soon chill incentive. In Mr. Petrillo's own union is to be found part of the solution. The great majority of AFM members are not full-time musicians. They have come to the realization that there is not enough work to go around for the number of qualified professionals and have adjusted their lives accordingly. They know there is no real security or satisfaction in made work. Mr. Petrillo would earn a great deal more sympathy for the plight of displaced musicians if he sought to ease their transition into other fields instead of merely striving to perpetuate a situation which in reality no longer exists. In this respect, moreover, society has an obligation.

New Coal Contract

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 16, 1947

Mr. HARRISON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorials.

The first is from the Staunton (Va.) Evening Leader of July 9, 1947, and the second is from the Staunton (Va.) News-Leader of July 10, 1947:

[From the Staunton (Va.) Evening Leader of July 9, 1947]

WHO'S LOONY NOW?

Without any amplifying statement, John L. Lewis asked that question late yesterday after the most favorable contract he has ever obtained from coal-mine owners had been signed and sealed. The president of the United Mine Workers was in high glee, as he had every right to be. There are some who believe that his union membership now has a working agreement under which it is immune from provisions of the recently enacted Taft-Hartley labor bill. As the contract is being interpreted at this time, if the miners are not able or willing to work, there is no contract, and hence the union cannot be sued for breach of contract.

Who's loony now? It would seem that an affirmative answer would apply to the mine owners themselves for signing such a document. Virtually, they have given Lewis complete immunity from provisions of the labor bill.

Coal is expected to advance from 75 cents to $1 a ton; steel about $1 a ton. The miner will receive the highest pay in the history of the industry, and also work the least number of hours. His welfare fund is raised from 5 to 10 cents per ton. Three hundred thousand northern and midwestern miners have been ordered back to work by Lewis, but representatives of southern mines employing 100,000 did not immediately sign, and hence these fields remained idle today.

No one, this early in the life of the new contract, definitely can predict what may happen, but it is interesting to speculate along such lines as these:

The contract practically ignores the National Labor Relations Board, the Government agency which carries out the law. As an example, it can force an employer to bargain with a union if, among other things, the workers vote for the union to represent them and the union reveals to NLRB, and maybe to the public, its financial set-up. A union and a boss do not have to go to NLRB, if they do not want to. Lewis and the mine owners did not do this, because the owners agreed that Lewis' union represented the miners; therefore, Lewis did not have to get NLRB assistance to prove it. Since he did not, he does not have to tell anyone how much money his union has or who in the union draws how much pay.

As for disputes which may lead to strikes while the contract is in existence, Lewis and the owners agreed to settle that subject themselves. But suppose some hotheaded miners, without approval from Lewis, go out on a wildcat strike. The new law says an employer can sue a union for striking like that while a contract exists. Could a mine owner sue Lewis' union? No; according to at least one lawyer expert on the new law, because the contract says that any time miners are not "able or willing to work" there is no contract. Since the owners signed this, they seemed to give up any right they have under the law to sue for a strike that violates a contract.

The new law says a boss or union who wants to end a contract must give the other side at least 60 days' notice, but the new contract states that if the Lewis union or the owners want to end a contract, the side wanting it must give 30 days' notice. Is that contrary to the new law? We will have to wait and see what happens. If there is a threat of a big coal strike, the Government can try to use the new law to delay it, although it cannot stop it. Under the law the President—if he thinks a big strike will hurt national health or welfare—is supposed to be able to delay it at least 80 days, with the help of court injunctions against a strike. But what could the Government do if, after a contract ended and the courts ordered "no strike," the miners decided they individually were not willing to work and stayed home? It is an old custom for Lewis' miners, without direct orders from him, to stay away from work if a contract ends and no new one is signed.

In the new contract there is also the question of the check-off system. That is where, until now, the mine owner could deduct workers' union dues from their pay check and turn them over to the union. Until now this was done through agreement with union officials because individual union members had no voice in this. The new legislation declares the owner no longer can do this without approval from the individual workers in writing. The new contract says the union will provide the owners with this O. K. in writing from the individual union members. Since Lewis' union is a pretty tight outfit, it is not likely any individual miner will refuse to turn over his written consent to a union official. In addition to this, the new contract asserts the mine owners will check off not only union dues but also initiation fees and assessments. In explaining how an employer now can check off anything from a worker's pay, the new law mentions only dues. It is silent on initiations fees or assessments. So is it all right—since the law does not say anything about initiation fees and assessments—to include them in the check-off?

Who's loony now?

Lawyers may go loony endeavoring to interpret the Taft-Hartley law in relation to the new coal contract. The consumer of coal and steel may go loony trying to pay higher prices. Congress may go loony in a probable attempt to write another labor law, or strengthen the present one. Mine owners may go loony when what they have done begins to be revealed through actual practice.

Lewis? No; he is not loony. By obtaining what he asserts is the best contract under which the miner has ever worked, he has ingratiated himself even more deeply in their affection, won a higher degree of their blind loyalty, and, through surrender by the mine owners, has made the Nation's lawmakers look like a class of elementary school children.

Congress may enact laws, but it is not long before Lewis, by one means or another, finds a way to circumvent most of them.

In obtaining a contract that voids one of the essential provisions of the new labor law, the Richmond News Leader feels that the public should extend its thanks to Mr. Lewis for being frank. That newspaper, in part, puts it this way:

"In the arrogance of his greatest victory over shortsighted opportunists who manage the coal mines * * * Lewis has shown the American people the true nature of his demands. * * * What is behind it? Dictatorship—bold, defiant dictatorship. Lewis intends to place the United Mine Workers above the Statutes at Large of the United States. Other men may be compelled to respect the law of contract. The miners must be exempt. Thank him for presenting that ultimatum clearly."

[From the Staunton (Va.) News-Leader of July 10, 1947]

"WHO'S LOONY NOW?"—LET'S WAIT

By his latest victory over the soft coal industry, John L. Lewis has once more proved himself more powerful than the Government and has so inflated the cost of the Nation's principal fuel that the feared depression may come with a crash comparable to that of 1929.

The man could not be exerting his power for the sake of his miners, hypnotized by one wage increase after another and by the repeated spectacle of tail-twisting staged by their union boss, for each raise is offset by higher living costs. Lewis is evidently drunk with power, as blind as Samson, and willing to topple the whole economic structure to prove that not even the Government can curb him.

The new labor-management relations law may have been circumvented in part by Lewis in dictating a contract clause saying the miners were binding themselves to work only when willing and able. While this clause may free unions from financial liability for strikes during a contract period, it will not free them and their leaders from the criminal penalties of the new law. Nevertheless, the surrender of the mine operators to a demand intended to nullify the law of the land was a craven performance, as was the capitulation in general. The American public has been sold down the river for the sake of maintaining coal and steel production, regardless of cost.

Coal is going up from 67 cents to $1 a ton. The operators and steel manufacturers themselves don't yet know how much, for the calculations run into hundreds of millions of dollars. Every industry and transportation line using coal and steel must raise prices. The other big unions, which got only one-third of what Lewis did when they negotiated or struck for increases early last spring, are certain to seek a further pay hike. And "in the middle" are the poor and the millions on fixed incomes.

How much longer our economy can withstand this inflationary spiral without crashing is anybody's guess. It begins to look like the Florida boom of the early 1920's. It finally became evident that the Florida bubble had to burst, and it did. The arrogant and all-powerful Mr. Lewis may have stuck the pin in the present prosperity balloon, though the rubber may give awhile before the explosion comes. It is too soon to answer his smart crack, "Who's looney now?" made when the northern contract was signed.

For another slant on the mine contract, see Mr. Sokolsky's column in this issue. He has disregarded the dangerous and highly inflationary effect of another increase in the price of coal, the short working hours demanded, and Lewis' defiance of the new Labor Law. He is also in error as to the relative wages of miners and industrial workers.

Independence Day Address of Hon. Clifford P. Case

EXTENSION OF REMARKS
OF
HON. JOHN W. HESELTON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 16, 1947

Mr. HESELTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address by my colleague, Mr. CASE of New Jersey, at Plainfield, N. J., on July 4, 1947. This is the address referred to by Mark Sullivan in his syndicated article of Monday, July 14, which I have inserted in another extension of my remarks this day.

For the people of New Jersey, and particularly those of the section in which we live, the celebration of Independence Day has always had a peculiar significance. During the Revolution, both the Continental and British armies crossed and recrossed the State and many major engagements were fought on New Jersey soil. While no conclusive battles were fought in our particular locality, there were several engagements of importance, the chief of these, perhaps, being the battle at Springfield. British forces, under a Hessian general, raided and burned that town 167 years ago but failed to advance beyond the American line and were forced to retreat to Staten Island, never again to venture into the State.

Our immediate vicinity was, of course, the scene of important activity during the greater part of the war. It was a most strategic location, equally distant from New York and Trenton and from Newark and Perth Amboy, and on the most likely paths of any British advance. A principal encampment of one of the Revolutionary armies was at Middlebrook, just a few miles to the west. General Washington himself was in command of this army in the early summer of 1777. His headquarters was in the Nathaniel Drake House in what is now the city of Plainfield. His scouts kept watch over the activities of the British and Hessian troops from their lookout at Washington Rock. Our Army held this position off and on for several years and it was at Middlebrook that General Von Steuben, brought to America by Benjamin Franklin, joined the Army in the spring of 1779, after it had kept its quarters there during the preceding winter.

History records at least one significant engagement in this immediate area, the battle of the Blue Hills. Sir William Howe, at New Brunswick with 17,000 men, was anxious to draw General Washington, with fewer than 6,000, into battle. Howe advanced up the Raritan to Millstone, hoping to lure Washington out of his position at Middlebrook. Washington, however, realizing the advantages of his prepared position, preferred to wait for the British to advance. Uncertain of success, Sir William finally commenced to withdraw. At that point, Washington sent General Greene, with three regiments, in pursuit and at Quibbletown, now New Market, he caught up with the enemy and inflicted important losses.

An interesting speculation is the probability that the Stars and Stripes were flown for the first time while Washington was in camp with his troops at Middlebrook. The flag was adopted by the Continental Congress on June 14, 1777, and the Army remained at Middlebrook until the following July 3.

Many incidents of interest are recorded as occurring during the Revolution in the area where we now live and not a few of historical importance. It is entirely right that all of us should, as we do, reflect upon this history with pride and satisfaction.

And we take just pride and satisfaction also in the contribution made to our national history and development in the years which have followed. In all our country's wars, as in its peacetime activities, the residents of New Jersey and of this section have played their full part.

Today we honor those who have made their contribution of service and sacrifice in the war just ended. To those of you who have served and who are now back among us, we make public acknowledgment of our deep sense of appreciation. To the loved ones of those who have fought and who will not return, our hearts go out in gratitude and in sympathy beyond any power of ours to express.

You who have fought in this war and are now back with us, and that smaller but glorious company who have fought but will not return, have done well the task which was set for you to do. It would be pleasant if we could report that the task of laying the foundation for an age of progress, security, and peace had been performed as well. But, though hostilities have ceased, peace is not yet assured. Indeed, the peace has not yet even been made.

A peaceful world will be realized only if we are willing to work for it, to sacrifice for it, to devote to it all our energies, with the same unity of purpose which brought us victory in the fighting war.

Wherever we cast our eyes, the prospect is grim. All Europe lies prostrate. China is deadlocked in civil war. Much of the rest of Asia seethes with unrest. Uneasiness pervades the countries in the great continent to the south of us. Vast areas of the world, especially many of those countries we have thought most highly civilized, are so destitute and despairing that the fantastic promise of communism that it alone can bring order out of chaos has an ever wider appeal. And deep in the mind of everyone is the foreboding thought of the unearthly power of atomic energy and the incredibly horrible developments in the field of germ and chemical warfare.

The United States is the only democratic nation with physical strength and material resources sufficient to have even a chance to restore the world to peace and stability under any system which we would accept as tolerable. And the task has been made vastly more difficult by the policies and practices of Soviet Russia.

Our task will be much more difficult. Still it is not an impossible one.

No one who has ever tasted freedom will voluntarily accept dictatorship. No one who has ever known the material benefits of a free economy will ever turn to a totalitarian economy if there is any chance whatever for him to avoid it.

I have no fear of the choice that the peoples of the world will make if they are given the chance to make a choice. If we will it lies within our power to give them that chance.

Already we have given much in money and in goods to prevent starvation and suffering in foreign lands. Both for reasons of generosity, and because our own interests require it, we will continue such relief measures as are necessary.

Under the program announced by Secretary Marshall the countries of Europe are now engaged in studying how they can most effectively develop and utilize their own resources in cooperation with each other and how we can help them rehabilitate themselves. Russia, as you know, was asked to participate in this and again has given a clear indication of her unwillingness to do so. The rehabilitation of Europe without Russia's help—indeed against her opposition—will be a most difficult task but it must be accomplished. No venture since the close of the war holds more promise of success than this. It has my own complete support and I know that in taking that position I am doing what you want me to do.

The time has come to recognize facts and to speak plainly about them. In the present situation one such fact is that, ever since the surrender of Japan, Russia, with obviously deliberate intent, has done her utmost to block every effort the nations of the world have made, under our leadership, toward the establishment of peace and stability. In the organization of the United Nations and its functional agencies, in the creation of machinery for the control of atomic energy, in the establishment of a United Nations police force, in the rehabilitation of the war-stricken countries of the world, in everything which needed doing, we have been opposed, delayed, held up to ridicule and scorn, and frustrated by Russia and her satellite states. Her apologists have long claimed that fear of aggression on our part was at the basis of Russia's attitude. I cannot accept that explanation. I cannot credit the Soviet leaders with the stupidity to believe the United States has any interest in imperialistic expansion. The only credible explanation is that the Russians believe that their totalitarian form of government and philosophy cannot exist in a world in which democracy also exists and that, therefore, the democracies must be destroyed. No longer can we avoid the conclusion that Russia's purpose is the opposite of our own—to create confusion, to perpetuate disorder, and to bring on chaos everywhere beyond her own borders, in the hope that eventually democracy will be destroyed throughout the world.

It is time for us to face the fact that we must act not only without Russia's help but in the face of her stubborn opposition.

It is time for us to face the fact that our dream of one world in which peoples of conflicting ideologies will live together in peace cannot now be realized. Russia has offered us only the choice between one world dominated by totalitarianism and two worlds, one totalitarian and the other a world in which free peoples may live under whatever system they may freely choose. In these circumstances there can be no doubt what our decision will be.

Much has been said of late about appraising our own resources and limiting our assistance to other lands to that which we can spare. Obviously, there are limits to our food production and, if our own economy is to remain stable, our exports of foodstuffs must be wisely dealt with—much more wisely, indeed, than they have been in the past. But the great need of Europe is for the tools and other things which will enable her again to become productive, and our experience in the war proves clearly that there is practically no limit to the amount of such things which we can produce. The emphasis, therefore, should not be on the limited nature of our resources but upon our willingness to do our utmost. I know it will be sufficient.

With the exception of Germany, the people of Europe have already shown extraordinary powers of recuperation. If we assist them to the limit of our ability I am confident we shall be amazed how soon their rehabilitation becomes an accomplished fact and astonished at the relatively small amount we shall have to expend. With the combination of the American and British zones of Germany, and I hope also the French zone, for economic and administrative purposes,

great improvement, if not completely successful rehabilitation, in that territory will also result.

And from all this will come what we most fervently desire, the orientation of the nations of Europe toward the west and democracy rather than toward the east and totalitarianism. Even such states as Poland and Czechoslovakia will not long be able to resist this attraction.

But, while the peoples of the world are striving desperately to rebuild their shattered homes and factories, to restore their lands to productivity, and to reestablish their institutions, what assurance is there that they will be permitted to do so in peace and free from outside aggression? Eventually, of course, the United Nations, if it is successful, will be the reliance of all nations for the maintenance of a peaceful world. We must continue, as we have done, to support it in all its aspects and to work for its strengthening and development.

But, during the formative years of the United Nations which lie immediately ahead, potentially aggressor nations must be made to understand that they will not be permitted to succeed in using force as an instrument for advancing aggressive ends. Here again we are the only democratic Nation potentially strong enough to check an aggressor. Unfortunately, our military strength has fallen away. Our Army has been disbanded, our sea and air strength is dwindling so rapidly that it cannot long be considered either a shield against possible attack or any check whatever to a powerful aggressor nation.

For a few years our monopoly of the atomic bomb and the availability of millions of veterans of the last war will be some assurance against a direct assault, but that is, at best, a temporary condition. The most qualified witnesses tell us that in from 4 to 10 years our monopoly of the atomic bomb will no longer be a fact. We still have time in which to develop our military strength to the point where we need not fear challenge by any would-be aggressor—but we have no time to waste.

This problem has been studied by many people over the last several years. The results of these studies are available to us. We are now at the time for decision.

One month ago a commission of distinguished Americans, appointed by the President, made the report of their investigation of the measures necessary to be taken to insure the maintenance of our military strength at a point adequate for our protection and for the discharge of our international commitments. They dealt particularly with the question whether, as a part of that program, any form of universal military training should be adopted. The Commission, after the most thorough consideration, unanimously recommended that, as a part—though only a part—of a comprehensive program, a plan for compulsory military training, under a commission with a majority of civilian members, and a civilian head, was essential. This decision was reached notwithstanding the Commission's appreciation of the objections which have been made to such a program, many of them by the most sincere and intelligent citizens, and of its cost in money, and of certain other disadvantages.

The Commission recognizes the disadvantages faced by the United States or any democracy in warfare in the atomic age. It recognizes that we shall never start a war. It recognizes that in any future war the destruction of our industrial potential must be any aggressor's first concern. It recognizes that we shall be struck with lightning speed and devastating force and shall have no period of months or years in which to gather our forces and prepare our counterblows, that wide areas of our land will be laid waste at the outset, and that one of our primary needs is to have throughout the country numbers of men trained to deal with the immediate devastation, sabotage, panic, fire, radioactivity, disruption of utilities, communications, and transportations—and even to meet the onslaught of the enemy's suicide troops. And, in addition, that we must have also reserves of trained men ready for swift counterattack. It concludes that only universal military training will enable us to meet this need.

A careful study of this report and of the other available evidence, both for and against the proposal, has brought me to the conclusion that the Commission's recommendation should be adopted. Unless it is adopted, I am satisfied we shall fail to attain the security which we must have for ourselves, and shall be unable to assure for the other nations the security which they must have, if a world of the kind which seems to us fit to live in is to be reestablished and maintained. I respect the views of those who deeply fear that this and other preparations for our military security will increase the likelihood of war. But I disagree utterly with such views. On the contrary, I am convinced that our recognition of the danger, and our preparation adequately to meet it, offers the best hope—indeed the only hope—that war will not occur.

The speaker on a similar occasion marking the close of World War I had a much simpler and more pleasant task than I. Then the world looked serene and a long period of prosperity and peace, for this country, at least, if not for the world, seemed assured. We know that that is not the prospect today. We know we have only a chance for peace, only a chance, indeed, for the continued existence on this planet of the human race. Yet the people of America have never failed to meet the challenge of any real emergency. In this ultimate emergency I am confident we shall not falter nor fail to meet its inexorable demands.

New England and the Presidency

EXTENSION OF REMARKS

OF

HON. NORRIS COTTON

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 16, 1947

Mr. COTTON. Mr. Speaker, under leave to revise and extend my remarks in the RECORD, I include therein an address by Dr. Frederick Taylor Wilson delivered at Dover, N. H., on New England and the Presidency:

Suppose we consider together the subject "New England and the Presidency." Of the 32 different individuals who have taken the oath as President of the United States only 5 of that number were native New Englanders. Those 5 were the 2 Adamses, John and John Quincy, natives of Massachusetts; Franklin Pierce, a native of New Hampshire; and Chester A. Arthur and Calvin Coolidge, both natives of Vermont. I need not remind you that Arthur was a New Yorker when he became President and that Coolidge was a citizen of Massachusetts when he, like Arthur, was suddenly elevated from the office of Vice President to the Presidency on account of the death of his Chief. It will not be pleasing to your pride for me to also remind you that of your 5 native sons who have reached the Presidency only 1 of that number, John Adams, became President as the immediate first choice of the American people. Let us look at the record.

John Adams, who proposed the name of Washington as our leader in the Revolutionary war, served as Vice President during Washington's two terms as President. He had been the voice of the Revolution as Washington had been its sword and Jefferson its pen. He had a just claim to the high office Washington was leaving. But John Adams defeated Jefferson, of Virginia, by only three electoral votes in his first race for the Presidency in 1796 and 4 years later was defeated for reelection as President by Jefferson by a still larger electoral vote. Jefferson was Vice President during the 1797–1801 period.

John Adams, like his son John Quincy, the only son of a President yet to be President, was essentially a patriot and statesman but woefully lacking in the ways and wiles of the successful politician. The father and son born in houses, still standing, near each other, were each Harvard graduates, and each lived for many years in the same Quincy house as an ex-President, and now their bodies rest near each other in the basement of the old church where each one had long reverently worshipped.

John Quincy Adams, a Puritan in conscience and conduct, was always unhappy over the fact that he was a minority President. He was chosen as President in the contest before the House of Representatives in 1825, though Andrew Jackson of Tennessee had received far more popular and electoral votes in the Presidential election of 1824. Though Adams wished to be his own successor in 1828, the odds were against him and he was snowed under by Jackson. John Quincy Adams, after a 2-years rest, went back to Washington where he served as the only ex-President thus far to become a Congressman. He was holding that office when he died in the Capitol in Washington 17 years later. Though no greater scholars or more unselfish leaders have served the Nation than these two great men, father and son, they stand alone as the only native sons of Massachusetts yet to reach the White House office.

Franklin Pierce was one of the eight lesser lights in the White House in the 24-year period between the end of Jackson's 8 years there in 1837 and the eventful election of Abraham Lincoln in 1861. Pierce, a Bowdoin College man and son of a former New Hampshire governor, was handsome and attractive in a social way but ineffective as President. Put forward in a convention deadlock at Baltimore in 1852 as a dark-horse nominee by Virginia slave-holding Democrats, he could never have been a popular President even in his own native New England. Pierce won distinction in the Mexican War and came out of that war a brigadier general, though he had entered it as private soldier. The slavery issue, upon which Ixion wheel so many political careers were broken, was, also, the ruin of Pierce. When he signed the Kansas-Nebraska Act it meant his deathknell as a popular political leader. By a strange turn of fate Pierce had as his opponents in the Presidential campaign of 1852 Winfield Scott, the Whig nominee who had been a general in the United States Army when Pierce was a private soldier, and John P. Hale, the nominee of the Free Soil Party, like Pierce a native of New Hampshire and also an alumnus of Bowdoin College.

It is doubtful that Chester A. Arthur, who was born in a Baptist parsonage in northern Vermont, ever dreamed of being President before the bullet of the mad Guiteau laid low the gallant and handsome Garfield. Arthur had been given the Vice Presidential nomination by a tired and homesick Republican convention in Chicago, after it, weary over the fruitless effort of New York and other State to force Grant again upon the country, had suddenly over his protest made Garfield its Presidential dark horse nominee. Arthur had been removed by President Hayes from the only high political office he ever held before being suddenly nominated for the Vice Presidency as a sop to the Grant faction of which he was a part. Arthur, a Phi Beta Kappa graduate of Union College at Schenectady, N. Y.,

was a tall, handsome man, greatly sobered by his high and unexpected duties as President. Like others before him, who became President on account of the death of a President, Arthur was disappointed in not having become his own successor and died an unhappy man on account of it.

Calvin Coolidge, the shrewd and taciturn Vermonter who mounted round by round the ladder of political success until he finally reached the Presidency, was a strange political figure. An Amherst graduate, he located early in life in nearby Northampton, Mass. The swearing in of Coolidge as President in a plain Vermont farmhouse at the hands of his own Justice of Peace father by the light of an oil lamp was one of our most democratic scenes. The sudden death of President Harding out in San Francisco lifted Coolidge into immediate fame and he, like Theodore Roosevelt, was able later to win the Presidency in his own name. Coolidge was aptly called a Puritan in Babylon by an admiring biographer.

Though New England has not furnished the Nation Presidents in proportion to its influence otherwise in our history, the ones it has furnished have all been highly educated gentlemen and great patriots and you may well be proud of their places in American history. May your future human contributions to our national life, like these heroes of yesterday, be blessed in character with the strength of your granite hills and in vision with the wideness of the ocean that beats upon your rock-bound shores.

Legislative Reference Service

EXTENSION OF REMARKS
OF
HON. MITCHELL JENKINS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 16, 1947

Mr. JENKINS of Pennsylvania. Mr. Speaker, during the last few months there have, from time to time, been rumblings of vague charges made against some of the personnel of the Legislative Reference Service of the Library of Congress; while they never have been substantiated, they ought not to pass without some word of refutation.

I rise to call the attention of the House to two of the outstanding men who are working for us in that department, both of whom I have known personally for years, long before I became a Member of this body. So often we do not fully realize the quality and capacity of our staff and when we do realize it, we do not always give it the recognition it deserves.

Many of you know Ernest Griffith as the genial and cooperative director of our Legislative Reference Service. I doubt if many Members know much of his background and qualifications. Since coming to his present position, he has resolutely put aside all considerations of whatever may have been his previous party affiliations or predilections in order to give Congress, as a whole, the most accurate and unbiased information and analysis on public questions of which he and his staff are capable.

As an authority on government he ranks among the very best, being the author of a number of books on that subject. For many years he served as the national chairman of the Research Committee of the American Political Science Association. A man of wide contacts and broad horizons, he is a keen analyst of world affairs. For example, as early as 1942 he foresaw and predicted the present Russian policy and prophesied that Russia would insist upon controlling everything east of a Stettin-Trieste line. As an economist, he has written and lectured widely, and, in addition to his theoretical knowledge, has had the practical experience of the business world and the requirements of meeting a pay roll as manager of a theater for a 5-year period. This was during the time in which he served, also, as head of the University Settlement, Liverpool—incidentally, as the successor to Frederick Marquis, now Lord Woolton.

He is a graduate of Hamilton College, Clinton, N. Y., and holds his doctorate from Oxford University.

I know of my own personal knowledge that he is a completely loyal American. In the first World War he volunteered for service in the Naval Air Corps. During the war that has just finished, he played a leading part in successfully organizing and carrying through the War Bond, Blood Donor, War Fund, and Red Cross Campaigns in the Library of Congress.

He is a man of many civic interests; a member of the Citizens' Planning Committee, set up by the District of Columbia Commissioners; for 3 years he has been president of the Council of Social Agencies for Washington. He has served as chairman, locally, of the National Conference of Christians and Jews, and, nationally, as treasurer of the Wilderness Society. He is an officer of his church and teaches a Sunday school class of 100 high-school boys—one of the largest, if not the largest, of its kind in the United States.

Incidentally, his favorite hobby is mountain climbing, and in his younger days he held a number of records for speed and endurance. He still climbs vigorously and incidentally plays basket ball or tennis twice a week, although celebrating his fiftieth birthday this past year.

My own experience with the Legislative Reference Service leads me to the conclusion that Ernest Griffith has gathered there, an inspired, a truly remarkable staff—one which is a hundred percent loyal to Congress and willing and anxious to give us their best effort.

Before sitting down I want also to pay special tribute to another member of this staff who is well known to me personally. George B. Galloway is a real American, a man devoted to the public interest, a man who even before becoming staff director of the Joint Committee on the Organization of the Congress, had a national reputation as a student of American institutions. After graduating from Wesleyan University, in Connecticut, where I first knew him almost 30 years ago, he became one of the small but distinguished group of scholars trained by the Brookings Institution, in the years in which it conducted a graduate school. He has been a contributor to several of the encyclopedias, is on the research staff of the Twentieth Century Fund, and is the author of many books and articles. His work in connection with the Reorganization Act is well known to all of you. He is now giving most of his time to our House District Committee, working on the problems of Washington. Last, but not least, he was this past month honored by New York University for distinguished public service.

Address of Hon. Edward Martin

EXTENSION OF REMARKS
OF
HON. HARVE TIBBOTT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 16, 1947

Mr. TIBBOTT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of United States Senator EDWARD MARTIN at the annual State encampment, Veterans of Foreign Wars, Harrisburg, Pa., Tuesday evening, July 15, 1947:

Commander Shroyer, comrades, and my fellow Americans, it is good to foregather here with my own kind of folks, men whose devotion to America has been shaped by wearing its uniform in battle.

I know we share the same concerns, the same fears and the same high aspirations for our country's future. We have the same desire to see her strong and able to take care of herself in this time of uncertainty when the world once more seems to be choosing sides for—we know not what.

It is as true today that these are the times that try men's sculs" as it was in 1776 when Thomas Paine rallied his countrymen to the cause of independence.

In this time of world cleavage between two dominant philosophies, the Nation has a right to call once more upon its veterans—the men who sacrificed the most for their country—for help. I should like to propose to you and to other veterans across the country—to go out and preach America to the faint of heart and to the indifferent.

Teach them that our system stresses the freedom and dignity of the individual. Its foundation is that government is the servant of the people and not their master. Teach them that the controlling philosophy in Europe and Asia makes the state the master and the people its servants.

Preach that our kind of life emphasizes self-reliance while dictatorship emphasizes dependence upon a central, all-powerful government. The continued existence of our kind of world depends upon freedom and self-reliance. A republic such as ours cannot be maintained by weaklings. People who must lean upon a powerful leader will not be strong enough to sustain our kind of government, or to fight for it as each generation of Americans has fought.

In recent years there has been some drifting away from the philosophy which built America. There has been excessive concentration of power and authority in Washington, a centralization which has tended to drain away some of the precious freedoms of our people.

Let us regain these freedoms because they will make us stronger to face the growing world conflict of ideologies.

Preach this lesson first. It is the most important of all.

Another point upon which the Veterans of Foreign Wars and I see eye to eye is the necessity for preparing our men to meet an emergency. I refer, of course, to the universal training of our youth.

I know this is unpopular with many mothers. I know that some are opposed to military training because of religious convictions. I know that it is also unpopular with some of my fellow Members of Congress and with many politicians. The politicians tell me that advocating such a course loses votes. Well, I've been in public life and in politics for many years. But I have yet to see the day when political expediency will turn me away from what I believe is best for my country.

I know that properly trained manpower is the best defense this country can have—today, tomorrow, or at any time in the future. We have been under fire, you and I. We know that an untrained man is far more likely to be killed or wounded than one who has been taught to take care of himself. We know—and this is something you veterans can preach to the mothers—that the properly trained man has a much better chance of coming back alive and whole.

We know also that the stronger we are the less chance there will be of any other nation picking on us. Trained manpower is a potent factor for peace.

Soviet Russia has compulsory military training behind its iron curtain. Today it is drilling and teaching its young men to fight and to defend themselves. It has a much larger standing army than we have.

In view of this, it is not surprising that every Communist in America opposes training—that is, training for the American youth.

Pick up the Daily Worker or any other Communist propaganda sheet and you discover indignant opposition to America's building its strength to defend itself. By word of mouth, this same propaganda is spread to the mothers and fathers. The Communists say that for us to prepare is warmongering. I suppose it would be much nicer to wear rose-colored spectacles and just drift.

Never do you hear a word of complaint from them that Russia is warmongering because Russia has compulsory training. Never, in fact, do they even mention that Russia has such military training.

To me that is very, very queer. I don't mean that all Americans who oppose universal training are quislings or Communists, but I do mean that all quislings and Communists oppose military training.

I hoped that Congress would enact a bill for such training this session. I have been disappointed in this hope. Now we shall have to wait until next year. In fact, we may have to wait for many years unless you veterans go out and preach the need for this kind of preparation

There are some other things I should like our veterans to help educate our population about—the matter of depressions, for instance. The Communists and their friends spread the poison that the Soviet system is better than ours because we have had depressions and they never do. That kind of an argument can make considerable impression upon some people, if the seed is sown when the ground is right.

But there is another side to all this—the way the Russians solve unemployment and prevent depressions. The answer is the slave labor system, men permanently behind barbed wire, working as slaves of the state until they die. There are more permanently enslaved workers in the Soviet Union—and I do not use the term as a mere figure of speech—than there were unemployed in the United States at the very depths of our depression.

Our unemployed had a chance to come back, and did come back. Slave labor in the Soviet has an opportunity only to die, and does die.

Who are these slaves? Some are men who dared to voice criticism of communism. Some are priests, some are intellectuals, some are workers who protested their working conditions and wages.

Their ranks include, for instance, men who criticized the Soviet form of government and the Soviet leaders far, far less than the Communists and their fellow travelers in this country have criticized the American form of government and its leaders.

One system's inalienable right to speak out freely is obviously another system's one-way ticket to a Siberian slave camp. Go out and preach that to your fellow Americans who are indifferent to the blessings we enjoy here.

In this connection it should be mentioned that the Soviet Union has shipped thousands of its soldiers, men who had been Nazi prisoners of war, to the slave camps after Germany hoisted the white flag. These men had surrendered because they had no other course except death.

Just imagine, if you can, this parallel situation. Suppose when we had beaten the Japs and recovered the heroic prisoners of Bataan, we had sent them to slave camps instead of treating them as the gallant men they were. The thought of this shocks you. It shocks me, too.

But it has actually happened in Russia. And why? Well, it seems the Russians felt these men had been contaminated by being exposed to the culture of the western world—to a higher standard of living and greater comfort than the Soviet system was offering.

Our country, with the highest living standards in the world, does not fear that kind of competition from any other country. Go out and preach that to the Nation.

Then there is another matter of vital importance. That is the necessity of keeping our Nation financially sound if we are to remain strong and a beacon of freedom to the peoples of the world. In 1929 the individual's share of the Federal tax was $27 per person. Today it is $286 per person. The cost of Government and our debt have gone up and up.

Even Uncle Sam does not have a bottomless pocket.

We have seen what has happened to Britain, not so many years ago the richest and strongest power on earth. Today the British lion is poor. He is fighting desperately to hold his head above water, and to keep from becoming just another small, bankrupt country.

Certainly no one in Britain dreamed of anything like that as recently as 25 years ago. Very few in America today feel it will come to us. But it did happen on the other side of the Atlantic Ocean and we must prevent it from happening here. If we are careless, it can happen.

That is why I urge you to preach to the country the need for maintaining our financial stability and of reducing the cost of government.

Finally, I have this in mind.

I believe in the potentialities of the United Nations. I believe that, given a fair trial it will work. I believe we should do all we can to assure that opportunity.

But if it does not work, if its path is strewn with booby traps and vetoes so that it cannot succeed, then it will be incumbent upon us to assert our leadership for a peaceful world. It will be our duty to organize the peace-loving nations of the earth into a force so powerful and so strongly united that no aggressor will dare challenge our freedom.

We all hope and pray that America may be spared the horrors of another war. But I say to you that we must never lose sight of our first objective—to be so strong and so well trained that no alien philosophy and no alien force will dare to tangle with us.

Keep our country's muscles strong and its powder dry.

Preach that.

United States Foreign Relief

EXTENSION OF REMARKS OF

HON. JOHN DAVIS LODGE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 16, 1947

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Herald Tribune for July 13, 1947:

UNITED STATES FOREIGN RELIEF TOTAL IS TWENTY BILLIONS FOR 2 YEARS—FIGURE COMPRISES GRANTS AND PLEDGED LOANS; $7,215,000,000 IN GIFTS TO THREE CONTINENTS; REPAYMENT DEPENDS ON REHABILITATION

WASHINGTON, July 12.—The United States has made grants and pledged loans totaling more than $20,000,000,000 for the relief and rehabilitation of foreign nations in the two post-war years.

This is what George C. Marshall, Secretary of State, had in mind when he told the Women's National Press Club on July 1 that "historical records clearly show that no people have ever acted more generously and more unselfishly than the American people in tendering assistance to alleviate distress and suffering."

At the request of the Associated Press, the International Economics Division of the Department of Commerce compiled a complete account of the loans and gifts.

SEVEN BILLIONS IN GIFTS

Outright gifts to prostrate peoples in Europe, Asia, and Africa now amount to $7,215,000,000. Of this, individuals and institutions gave $1,500,000,000 worth in parcels and money. (The data on private gifts is obtained from reports of banks and other organizations having a remittance business, from records of postoffice money orders and parcel post and from reports of philanthropic institutions.)

Loans comprise $12,871,000,000 of the total. They have been made generally, for a 20- to 30-year period. They bear interest of 2 to 3½ percent.

One high State Department authority says that whether these loans will ever be repaid depends on the ability of the borrowing nations to get back on their feet economically. He says the future economic health of Europe depends largely on the ability of the Continent to agree on some plan for joint rehabilitation such as Secretary Marshall has proposed.

To get an idea of the enormous sums involved in these loans and gifts, recall that the public debt of the United States in 1932 was only $19,487,000,000.

All the goods which this country exported between 1932 and 1939 cost somewhat less than $20,000,000,000.

Chief recipients of the gifts have been the countries of eastern and southern Europe. Western Europe comes next and Asia third. Great Britain has been by far the largest borrower.

Most of the goods exported to the loan countries have been food, fuel, and clothing. Machinery, steel, and other hard goods have been exported mainly through the United Nations Relief and Rehabilitation Administration in the form of gifts.

TWENTY-NINE MILLION SIX HUNDRED THOUSAND TONS OF COAL

Here are some facts cited by the State Department expert:

This country shipped overseas 29,600,000 tons of coal in the year ended June 30—all

but 3,000,000 tons to Europe and North Africa. In average prewar years the country exported only 50,000 tons of coal annually.

The United States exported 14,500,000 tons of bread grains, nearly all of it wheat, in the last year. To Italy went 1,276,000 tons, to France 682,000 tons, and to Greece 376,000 tons. Average prewar year exports to all those countries totaled only 36,400 tons.

All exports—both consumer items and hard goods—are steadily mounting, both to the loan countries and to the gift countries. In June the United States was exporting at the rate of $1,400,000,000 worth of goods a month—an all-time record.

Here are the gifts made by the people of America through their Government:

UNRRA: $2,700,000,000. This is 72 percent of all UNRRA donations. Largest recipient of UNRRA help was China, with $530,000,000. Two Russian Soviet republics, the Ukraine and Byelo-Russia, received large grants.

Post-UNRRA relief: $350,000,000, which this Government will distribute as it sees fit.

International Refugee Organizations: $75,000,000. This is 45.75 percent of the IRO budget. It will help care for 1,200,000 homeless and destitute persons.

SIX HUNDRED AND TWENTY MILLION DOLLARS TO PHILLIPPINES

Philippine grants: $620,000,000. This comprises three funds, administered by the Philippine War Damage Commission. To pay private claims for war damage, $400,000,000 is provided; for public rehabilitation, two funds totaling $220,000,000.

Civilian supplies distributed by the Army and Navy: $1,200,000,000. These goods were given away chiefly in Germany and Japan. They were basically a military expense, necessary to prevent disease and unrest. It is the intent of this Government to exact payment when the countries can pay.

Italian civilian supplies: $135,000,000. This sum was made available to the Army through lend-lease channels during the occupation period.

Chinese postwar lend-lease: $620,000,000, to enable the Chinese to disarm the 1,000,000 surrendered Japanese soldiers on their soil and reoccupy captured areas.

Scientific and cultural aids to Latin America: $15,000,000. With this we share the expense of sanitation and public health programs and various projects for the development of industry and agriculture and for the exchange of students.

The 11 items the Commerce Department lists on the loan schedule follow:

Export-Import Bank: $2,476,000,000.

International Monetary Fund: $2,750,000,000.

International Bank: $635,000,000. (Available for loans as soon as they can be arranged.)

British loan: $3,750,000,000.

"Pipe line" lend-lease: $1,350,000,000. The United States extended credit in this amount to nations which at the war's end had contracts for lend-lease goods that they wished to have completed and delivered.

Surplus property sales credit: $1,100,000,000.

RFC loan to the Philippines: $75,000,000.

Maritime Commission ship sales credit: $165,000,000.

Greek-Turkish loan: $400,000,000.

Silver commodity loan: $50,000,000. Silver for the minting of coins was transferred to India and some Dutch possessions, to be paid back in kind.

Congressional credit to China: $120,000,000, from a $500,000,000 fund established by Congress in 1942 for Chinese assistance.

Of the $20,000,000,000 which the United States has given, loaned, and committed itself to lend, $15,739,000,000 has been disbursed.

What have been the results of this vast outpouring?

A State Department official who bears much of the responsibility for the administration of the program said in reply to this question: "Unlike other wars, this one was followed by no mass starvation in Europe and no serious epidemics. It is true that many of the nations ravaged by the war still are in dire condition. But if we had allowed them to freeze and starve * * * they would have tended to embrace extreme political philosophies. * * * It is true that our help has not yet averted this danger. But if we had not helped them, where would they be now?"

GIFTS AND LOANS TO FOREIGN NATIONS

WASHINGTON, July 12.—The following table lists United States gifts and loans to foreign nations since the war ended, as compiled for the Associated Press by the Commerce Department. Figures are in millions of dollars. In the first column is the amount to which we have committed ourselves; in the second is the sum actually disbursed:

[000,000 omitted]

	Total	Disbursed
GIFTS		
Personal and institutional remittances	$1,500	$1,500
UNRRA	2,700	2,550
Post UNRRA relief	350	-------
International Refugee Organization	75	-------
Philippine grants	620	45
Civilian supplies distributed by Army and Navy	1,200	1,200
Italian civilian supplies	135	135
Chinese postwar lend-lease	620	620
Aid to Latin America	15	15
Total gifts	7,215	6,065
LOANS		
Export-Import Bank	2,476	1,595
International Monetary Fund	2,750	2,750
International Bank	635	635
British loan	3,750	2,050
"Pipe line" lend-lease	1,350	1,350
Surplus property sales credit	1,100	900
RFC loan to Philippines	75	60
Maritime Commission ship sales credit	165	165
Greek-Turkish loan	400	-------
Silver commodity loan	50	50
Congressional credit to China	120	120
Total loans	12,871	9,674
Total loans and gifts	20,086	15,739

NOTE.—In instances where loans have been partly repaid, only the amount still outstanding is given here.

Our Filipino Veterans—Let Us Give Them What Is Their Due

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 16, 1947

Mr. DINGELL. Mr. Speaker, the well-known Filipino journalist, lawyer, and economist, Mr. Vicente Villamin, is quoted as having said that it was the Rescission Act of 1946 which deprived the Filipino veterans of most of their well-earned rights and benefits. The restoration of these rights, to which the Filipinos are entitled, is included in the Missing Persons Act which, on June 16, passed this House unanimously. That was the first step in the direction of justice and it is hoped it will become basic in our law covering benefits for veterans. This bill, to quote Mr. Villamin, "should be a complete omnibus bill." I subscribe fully to these sentiments and expressions. I ask unanimous consent to include a pertinent and forceful editorial captioned "Our Good Faith at Stake," which was gleaned from the Washington Star of July 15, 1947:

OUR GOOD FAITH AT STAKE

A bill is pending in the Senate Armed Services Committee which should be reported out and passed before adjournment as a matter of good faith. So far as known there is no opposition to it. It is in danger, in the closing days of Congress, because it has been given no place on the leadership's legislative priority list.

During the war we followed the practice as a Nation of continuing the pay and allowances of men in the armed services who were, in line of duty, absent from their regular posts—such as prisoners of war. Filipino soldiers were included as Americans in this category. Many of those who stood with our forces on Bataan were captured, sent to prison camps and some of them never came back. The War Department adjudicated and met claims for arrears in pay (the Filipino private on Bataan drew $9 a month) of some 1,400 living Filipinos and about as many who were dead.

But in enacting the law which severed our ties with the Philippine Commonwealth and recognized the independence of the new republic, restrictions were written into the statute barring further claims (with some exceptions) of Filippino veterans. The restrictions were interpreted as applying to the missing persons and that interpretation stopped the work, then in progress, of completing payments under the missing persons law. The House corrected this mistake, for certainly it was a mistake, by passing unanimously and without debate the same bill which is now pending in the Senate Armed Services Committee, under which valid claims, under the missing-persons law, would be paid. But unless action is taken soon, the bill will perish from inaction.

The results would be unfortunate. The members of the Philippine Army were entitled to the same treatment as American soldiers, in respect of pay due them while missing. This was recognized by Congress, approved by the War Department. The present corrective legislation is recommended by the War Department. It is merely to meet a just obligation. The money involved is not nearly so important as the principle and if the principle is repudiated by inaction we shall unnecessarily raise, in the minds of the Filipinos involved, a question of good faith on the part of this country. It would require a minimum of effort by the Senate to dispose of this bit of unfinished business, with credit to ourselves.

Drive for Federal Sales Tax

EXTENSION OF REMARKS

OF

HON. HERMAN P. EBERHARTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 16, 1947

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following articles from the Chicago Sun:

[From the Chicago Sun of July 6, 1947]

ABILITY TO PAY UNDER FIRE—BIG BUSINESS GIVES AID TO KNUTSON IN DRIVE FOR FEDERAL SALES TAX

(By Griffing Bancroft)

WASHINGTON.—The growing drive for a Federal sales tax appeared certain today to

become one of the basic issues in the next session of Congress and in the 1948 political campaigns.

Both sides, it was learned, have been laying the ground work carefully for this battle.

1. Chairman KNUTSON, Republican, of Minnesota, of the tax-writing House Ways and Means Committee, has named a special tax-study committee composed chiefly of big business spokesmen who favor shifting the emphasis in Federal taxes from the ability-to-pay income levy to a sales tax.

2. Some committee Democrats, who were not even consulted on the formation of this group, have declared open war on it. They are letting it be known that they intend to end the last shred of pretense of the long-standing custom of drafting tax bills on a bipartisan basis.

The Knutson committee, said to be the first non-Government group called upon to draft legislation of importance since the writing of the famous Smoot-Hawley tariff during the Hoover administration, already is at work.

It is headed by such men as Roswell Magill and John W. Hanes, of the Tax Foundation, a Wall Street group frankly seeking tax relief for big business, and John Cheever Cowdin, long-time tax spokesman for the National Association of Manufacturers.

These three have repeatedly urged a Federal sales tax, as have a total of 6 members of the 11-man committee. The views of the others on taxes are not publicly known, but it is believed that virtually all will support this form of revenue raising. Two of the group are St. Paul, Minn., industrialist friends of KNUTSON.

No doubt has been left in anyone's mind that the function of this group is to draft the proposed revision of the Federal tax structure which has been promised by both parties for the next session of Congress.

Democrats, however, have mostly refused to cooperate with the present closed sessions of this extragovernmental tax-writing group. Three to date have publicly challenged its authority.

These three are Representatives DINGELL (Michigan), FORAND (Rhode Island), and EBERHARTER (Pennsylvania). The three form the progressive vanguard of the Ways and Means Committee, but every indication is now that most, if not all, of the other Democrats on the committee will go along with them on this issue.

These Democrats, it was learned, already have started the work of drafting their own counterproposal to what they call the expected Knutson-Cowdin tax bill.

Their plans for a revision of the tax structure would call for higher exemptions before which income taxes would be paid and a curtailing, rather than an expansion, of Federal excise or sales taxes.

Their contention is that a sales tax falls with equal force on rich and poor alike and is therefore a retreat from the theory that taxes should be levied on the ability to pay.

They hope to be able to carry their fight directly to the people by declaring that the Republican plan is for the relief of Wall Street and the wealthy, while the Democratic tax plan is for the relief of the average wage earner and the poor.

These Democrats concede that the success or failure of their drive may hinge on one man—Representative DOUGHTON (Democrat of North Carolina), veteran former chairman of Ways and Means and a leader of the more conservative elements of the party.

When the nongovernmental tax-drafting group was set up by KNUTSON, he indicated that it had been approved by DOUGHTON. While the North Carolinian himself is noncommittal on the whole matter to date, his friends report that far from approving the new group, he simply told KNUTSON that since Republicans controlled the committee he, DOUGHTON, did not plan to fight it.

KNUTSON originally had named 10 men to the group. At DOUGHTON'S request he added one more suggested by DOUGHTON—Clarence H. Poe, Raleigh, N. C., editor of the Progressive Farmer.

[From the Chicago Sun of July 7, 1947]

ABILITY TO PAY UNDER FIRE—PROBE OF WALL STREET ROLE IN DRIVE FOR FEDERAL SALES TAX SOUGHT

(By Griffing Bancroft)

WASHINGTON.—Demands for a full-scale public airing of alleged Wall Street influence on tax legislation in the Republican Congress were voiced in Democratic quarters today.

The move followed the single-handed action of Chairman KNUTSON (Republican, Minnesota) of the House Ways and Means Committee in appointing an 11-man group—heavily weighted with industrialists favoring a Federal sales tax as against the present ability-to-pay income levy to draft basic changes in revenue laws.

Led by Representative DINGELL (Democrat, Michigan), Democratic members of the Ways and Means Committee, are laying plans to challenge its authority and to couple this challenge with public demands for an investigation.

When the new extra-governmental group held its first meeting, KNUTSON promised its members that Congress would reimburse them for travel and other expenses. This would require a congressional authorization and when KNUTSON seeks it, the Democrats plan to make the rafters ring with demands that alleged "Wall Street dictation" be ended.

At the same time these Democrats are demanding that members of the group register as lobbyists, as others who seek to influence legislation do, and make a full accounting of how much money they spend and where it comes from.

Their contention is that such publicity would furnish leads showing that the influence of big business on vital tax legislation is on a huge scale.

They are particularly anxious to "smoke out" the powers behind the Tax Foundation, a group which works for tax relief for the higher echelons of industry and for which two members of the Knutson group are public spokesmen.

A study of the background and affiliations of the 11 members of the Knutson-appointed tax committee shows them to be for the most part ultra conservatives. Six of the 11 are on record publicly favoring a Federal sales tax, 4 have not made their tax views public, and only one is known to oppose a sales tax.

The group is chairmanned by Roswell Magill, member of a New York law firm, professor at Columbia University, and a director of the Tax Foundation.

Magill was an assistant to former Secretary of the Treasury Henry Morgenthau, Jr., until he broke with the Roosevelt administration in 1938 over economic policies. He publicly urges a Federal sales tax.

Other members of the new committee studying tax revision are:

John W. Hanes, chairman of the Tax Foundation, a New York investment banker and all-out sales-tax advocate. He, too served in the Roosevelt administration but broke with it at about the same time Magill did. Hanes and Magill were the only two non-Government witnesses called by KNUTSON to testify on the tax bill in the present session. Both favored the Knutson measure to give 20-percent-income-tax cut to all brackets of income-tax payers.

John Cheever Cowdin, chairman of the board of Universal Pictures, a director of a dozen other large corporations, and for a long time the tax spokesman for the National Association of Manufacturers. He also is a sales tax advocate.

Matthew Woll, vice president of the American Federation of Labor and the only nonbusiness spokesman on the group. Woll has publicly urged higher corporate taxes and lower levies in the bottom income-tax brackets.

Frank Carlson, Governor of Kansas and formerly a Republican member of the House Ways and Means Committee. During his time in the House he fought for a Federal sales tax.

Clarence H. Poe, of Raleigh, N. C., editor of the Progressive Farmer, whose views on taxation are not known. He was appointed at the request of former Ways and Means Chairman Doughton (Democrat, North Carolina).

Norris K. Carnes, St. Paul livestock dealer, a friend and fellow-stater of Knutson. He has never publicly expressed his views on taxation.

John L. Connolly, St. Paul manufacturer and one of the authors of the Twin Cities Plan on Postwar Taxes. He has urged a sales tax and opposed any increase in exemptions for income-tax payers.

Carlson Samuel Duncan, economist of the Association of American Railroads, one of the most powerful lobbies in Washington.

E. H. Lane, Altavista, Va., manufacturer who appeared before the Ways and Means Committee in 1942 to urge a Federal sales tax.

Wright Mathews, Dallas, Tex., attorney whose views on taxation are not known.

[From the Chicago Sun of July 8, 1947]

ABILITY TO PAY UNDER FIRE—GOP PREPARES TWO PLANS IN STRATEGY FOR SALES TAX—PROPOSED FEDERAL LEVY WOULD BE DISGUISED AS EXCISE IMPOST, PAYMENT FOR THE WAR

(By Griffing Bancroft)

WASHINGTON, July 7.—Long-range Republican strategy to enact a Federal sales tax in the next session of Congress now has been formulated. It consists, basically, of two major plans:

1. The proposed levy will not be called a sales tax, but instead will be referred to as "broadening the excise taxes."

2. Attempts will be made to gain popular support by trying to make the new levy appear as a special tax to pay for the war.

Excise taxes are Federal imposts now levied as sales taxes against so-called luxury goods, such as liquor, tobacco, and other commodities. To broaden them by placing them on more commodities would, in effect, be imposing a general sales tax.

This long has been advocated in some GOP circles, but on May 28, at a special meeting of the House Ways and Means Committee, Chairman KNUTSON (Republican), of Minnesota, gave this program his full support and disclosed the forthcoming strategy. According to the official transcript, KNUTSON said:

"It is the hope of the committee to be able to shift much of the burden that is now being carried by the income group over to excises, at least in part.

"Obviously, if we are going to extend the excise field we will have to include a great many items that are not now included. Perhaps the revenue can be set aside into a fund that could be called the war retirement fund."

Democrats for the most part contend that any such shift from the income taxes, which are levied on the basis of ability to pay, to the sales tax, which falls on rich and poor alike, would benefit the wealthy at the expense of the poor.

As previous articles in this series have related, these Democrats already are at work with a counter plan which would lay the emphasis in the new tax structure on income-tax relief for the lower-bracket taxpayers.

Republicans, however, have set up a special non-Government tax committee

headed by Roswell Magill, New York lawyer and sales-tax advocate, to draft their bill, which is expected to seek the bulk of Federal revenue from some form of a sales tax.

Magill and John W. Hanes, chairman of the Tax Foundation, a big business organization seeking tax relief, were the only two non-Government witnesses to testify this session on the Knutson tax bill to give the bulk of income tax relief to higher-bracket taxpayers.

Both favored the bill and both, under questioning by the committee, said they favored broadened excise taxes.

In fact, a transcript of those hearings last March show that Hanes, who also is a member of the Magill tax-writing group, let the cat out of the bag and openly espoused a sales tax.

It was while he was being questioned by Representative GEARHART (Republican, of California), a long-time sales-tax advocate. The transcript at this point reads:

"Mr. GEARHART. As I pointed out in my examination of Mr. Magill, I think that we should take the emphasis off income taxes as the principal source of income just as much as we possibly can, not for the purpose of doing away with revenue, but of recapturing it some place else, through a comprehensive system of excise taxes for instance.

"Have you given any particular thought to a comprehensive manufacturers' excise tax—an excise levy at the manufacturers' level?

"Mr. HANES. I am not prepared to talk about that at the moment, as I am not familiar with it. But in the past I have always felt that there was something to be gained from a general sales tax, if you wish to call it that, because I would rather speak of an excise tax—I would rather speak frankly and call the excise tax what I think it is, a direct sales tax.

"For that reason I have advocated a sales tax because I think we have to get the revenue where the revenue is, and we are going to be pressed very hard for revenue in the next few years.

"Mr. GEARHART. I have carefully avoided the use of the phrase 'sales tax' in discussing manufacturers' excise tax. I think there is a distinction there. The distinction turned on the point where you levy the tax. If it is at the manufacturers' level that is one thing. If it is at the retail level that is another thing."

Occupation of Germany

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 16, 1947

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio broadcast by George E. Reedy:

The United States is embarking on its most important international venture, with both arms strapped tightly to its side. It is the occupation of Germany, which is supposed to end with that country restored to a respectable position in the world.

The policy for that venture was laid down yesterday in a State Department directive to Gen. Lucius D. Clay. He is the military governor in Germany. Today he must be wondering whether his Government thinks him a magician, or a card sharp.

He has been ordered to bring the German people to an adequate standard of living and to put the nation back on its economic feet. At the same time he has been ordered to resist the imposition of any outside form of government, including our own.

This is a glib phrase which at first blush seems to be the finest fruit of democracy. Carried to its logical conclusion, however, it places the good general in a spot where he must almost help bring another dictatorship to Germany.

Suppose, for example, that we are actually serious, and permit the German people to choose their own form of government. What happens if they demand another Hitler? And a revived Nazi Party? Do we help them out? Do we?

As another alternative, suppose they demand a communistic government, under the rule of the Soviet Union. With the international situation being what it is today, do we just bow to their decision, and tell them to go right ahead? Do we?

Of course, democracy is something that can't be imposed from the outside. To that extent, the State Department's directive is just a waste of words and of paper. No man can be forced to accept democracy. It is something that must come from within himself.

At the same time, however, every effort should be made to convince the German people that democracy is the best way of life. There can be no compromise in this. Two generations of our men had to fight Germany because it was not done before.

On the other side of the ledger is the obvious fact that the Soviet Union is not going to handicap itself in their part of Germany. It is doubtful whether the Communists would even make a pretense of keeping their hands off. They are too realistic for that.

The effort to democratize Germany should be carried on in every way possible. The modern world can no longer permit irresponsible militarists to lead such a powerful nation to its own destruction, and the destruction of the rest of us.

This does not mean that a repressive government must be established. The job can be done by democratic means. But it can only be done if we stand firmly on our rights as an occupying power and refuse to bury our heads in windy phrases of keeping our hands off.

This is no time to close our eyes and imitate blind moles burrowing through the earth. We are engaged in a bitter struggle for the preservation of a form of life we hold dear. Germany is one of the great prizes of that struggle and should be treated as such.

Celebration of First Anniversary of Philippine Independence

EXTENSION OF REMARKS
OF
HON. C. JASPER BELL
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 16, 1947

Mr. BELL. Mr. Speaker, under leave to extend my remarks, I am inserting an address of Ambassador Joaquin M. Elizalde, delivered at the Shoreham Hotel, Washington, D. C.; an address by Hon. Carlos P. Romulo, permanent representative of the Philippines to the United Nations, at the Independence Day banquet and ball held by the Filipino community of the city of New York; and an address delivered by Philippine Consul General Melencio, at the Shoreham Hotel, Washington, D. C. These addresses were delivered on July 4, 1947, in celebration of the first anniversary of Philippine independence:

ADDRESS OF AMBASSADOR JOAQUIN M. ELIZALDE, JULY 4, 1947, SHOREHAM HOTEL

Fellow citizens, ladies and gentlemen, today we have come together to celebrate Independence Day. It is the Independence Day of 18,000,000 Filipinos. It is the Independence Day of 145,000,000 Americans.

I need not tell you that this is more than mere coincidence. It was a design, woven out of our common devotion to the principles and concepts of freedom.

We observe today one of the greatest and most unselfish acts of recorded time—the free grant of sovereignty to a dependent people by a great and powerful nation. America, at the height of her power and authority in the world, gave to the Filipino people the title to their own land, the right to be the masters of their own fate, the right to be an equal at the council table of nations.

That event took place on the Fourth of July a year ago. It was an event which will be marked in the records of mankind as a milestone on the forward road of freedom.

But America did more than grant us independence. Coming, as it did, on the heels of the terrible destruction of our homeland, the grant of independence might have been a mockery, if America had not at the same time stood ready to help us with the essentials of national existence.

A year ago, as the American flag dipped downward in Manila, to be replaced by the proud emblem of the Philippine Republic, we became a free nation.

But we were a free nation with few of the economic means of survival.

Our industries had been destroyed. Our potentialities for export, on which our economy had been based, were only beginning to recover from the zero point to which war reduced us.

The bitter struggles which had raged in our homeland during the 4 years of Pacific war had wiped out our transport, our communications, destroyed our roads, razed our cities, killed and maimed hundreds of thousands of our people, and swept away more than 70 percent of the national wealth.

The war set us back no less than 50 years.

But our people, traditionally courageous and devoted to the nation, neither faltered nor abandoned hope.

New elections were held in the best democratic tradition. Under the magnificent leadership of President Manuel Roxas, the heavy task of reconstruction was begun.

With American help, we repaired our most vital roads, acquired essential transport, reestablished our communications, provided relief to the needy, and met on a score of different circumstances the heavy problems confronting us.

We reestablished our free school system, the bedrock of our democracy. Today 3,000,000 of our young attend the public schools, one-third more than before the war.

We spread far and wide, knowledge and information about current events, through the activities of a free press and radio. Today we have more than a score of daily newspapers, mostly in Manila, and three major radio stations serving the nation.

Air-travel facilities were reestablished and expanded, until today there is more air travel than ever before in the history of the Philippines.

We have begun the mountainous job of rebuilding and repairing our homes and factories and office buildings. We have only made a beginning, but we have begun.

I could enumerate many more of the achievements of the past 12 months, of the progress that we have made in the first year of our independence.

But this is not an occasion requiring the recitation of such a record. I wanted merely to indicate that we have taken joy in our freedom, and new resolve to work, repair, and produce.

That is our national slogan. That is our national preoccupation. In this, as I have said, we have had the generous assistance of our former sovereign, now our friend and ally, the United States.

Yet, while we have been occupied with the stupendous tasks of rehabilitation and reconstruction, we have not been unaware of what was taking place in the rest of the world.

If we had learned one lesson from the war, we had learned that we were a part of the world, that peace was indivisible, and that we had a responsibility for the preservation of that peace.

We have maintained our faith in the principles of the United Nations, and have shown in every way our devotion to the program of cooperation with other peace-loving peoples of the world.

We have seen the sharpening edges of ideological struggle in the world. We have not shrunk from that conflict. We have not hidden our heads in the sand. We have assumed our proper responsibilities to mankind and to our national conscience and principles.

We have stood by the side of the United States on every issue of principle in which America has championed the ideals to which both our nations are devoted.

We have caused our voice to be heard abroad, and it has been heard and respected by our sister nations. The peoples of the Orient, who have watched our emergence into independence, are today our good friends and neighbors. The peoples of those countries pin great hopes upon the leadership of the United States, and find in our independence a good warrant for that leadership.

So this year has not passed its turbulent course unmarked by activity on our part. It has been a fateful year, a critical year in our destiny.

We are proud and happy that we mark our anniversary on the same day that marks the anniversary of the United States.

I may say to our American friends, that in any struggle over the principles to which both our countries subscribe, the Filipino people will be arrayed on the side of America.

On this day our thoughts are naturally turned to the future rather than to the past. We face grave and desperate problems and, as one looks around, one can see nothing but more difficulties and hurdles to overcome.

The record of the past year is one to inspire faith in the ability of our people to succeed despite the great handicaps that are found in the present situation.

The Government of President Roxas, with convincing support from the 18,000,000 Filipino people, has combined good common sense with a spirit of high patriotism.

Our progress, in the midst of the terrible devastation of war, gives us courage. Proudly and confidently we face the future.

THE FIRST MILESTONE

(Address by Ambassador Carlos P. Romulo, permanent representative of the Philippines to the United Nations, at the Independence Day banquet and ball held by the Filipino community of the city of New York in celebration of the first anniversary of Philippine independence, at the Waldorf-Astoria, July 4, 1947)

The anniversary we observe today is a two-fold one: it is, in a manner of speaking, both a birthday and a wedding anniversary. The selfsame hour that witnessed the glorious birth of the Republic of the Philippines witnessed also the solemn ritual of our people's indissoluble union with liberty.

This also is a double anniversary. It sheds its benign light with equal splendor on the American people and the Filipino people. It symbolizes their single victorious purpose in war as well as their resolute common purpose in peace. It holds for both the same joyous memory of fulfillment and the same inescapable challenge to vision and enterprise.

Anniversaries are for looking backward. They are for taking stock of the things we have done as well as of the things we have left undone, and we pause in our endeavors in order that we may measure our achievement by the yardstick of our original purpose.

But anniversaries are also for looking forward. They are for fixing the vision anew on the goal that lies ahead, and we pause in order that we may measure the distance we have yet to travel by the yardstick of our collective will.

I emphasize the sober mood of inventory far more than I do the inebriate sense of simple rejoicing and glory, and for a good reason. This, after all, is for the American people the one hundred and seventy-first anniversary of their independence, while it is only the first anniversary of our own. Americans can look back upon many long years of consistent and fruitful endeavor in freedom, and they can afford to rest, as it were, upon the laurels of wealth and power they have won. We, on the other hand, have many long years of travail ahead of us, and we can ill afford to be distracted from our labors by any emotional excursions empty of content.

In observing this Fourth of July, we Filipinos have this significant advantage: that for our generation independence is much more than a mere memory hallowed by tradition and custom; it is, instead, a precious experience which we have lived and shared, and therefore a powerful source of direct encouragement and inspiration. Not by rote nor by the testimony of historians do we know that this indeed was the hour of our freedom, but rather by the personal knowledge of the vision we have pursued, the sacrifice we have borne, and the suffering we have endured. For us "the rockets' red glare" and "the bombs bursting in air" are matters of first-hand experience denoting Bataan and Corregidor, Leyte and Lingayen; and when we sing of beholding the radiance and feeling the throb of "glorious liberty", we know that the words have reference to something our own eyes have seen and our own hearts have felt. The quickened pulsation of the blood tells us better than any twice-told story of heroism the true meaning of independence.

In the mood of inventory to which I have already referred, I propose now to examine the true meaning which independence should hold for our people. I would say, first of all, that independence has become for the Filipino people an opportunity rather than a privilege, and that it implies moral obligations more than it assures juridical rights. While independence may appear to be a privilege to those who do not possess it, it is an opportunity to those who do. And those who do possess it shall make nothing of it until they realize that independence has positive value not as an end in itself but as a source of imperative moral duty.

In its narrowest sense independence means living by one's own effort. However, in the world as we know it, independence of this sort is neither possible nor desirable. It is not possible for any nation, however rich or powerful, to live by itself alone, nor is it desirable that it should do so even if it could. It is an ancient tenet of religion that all men are brothers; it is an equally self-evident truth of modern science that all nations are neighbors. Yet neither religious tenets nor religious truth has canceled the essential merit of the ideal of independence: that every nation, like every man, must strive for a certain measure of freedom by being self-sufficient in the primary essentials of life, secure in the conditions of peace and order which make life supportable, and rich in the attributes of respect and dignity which make life worth living.

Measured by these tests, our young republic may be said to have made remarkable progress in the brief span of 1 year. Rising from the wreckage of a destructive war, our people have wrestled with the problems of political reorganization, economic reconstruction, and social regeneration with high resolve and enthusiasm. The Government of the Republic is functioning on a sound constitutional basis. The will of the people continues to be expressed in periodic elections as provided by law. The basic civil liberties which are guaranteed to the citizens by the Bill of Rights are meticulously respected by the agencies of the State and by the courts. Freedom of speech, of the press, and of assembly remains unimpaired and is in fact upheld by the government under conditions which might have induced a less enlightened leadership to establish restrictive regulations or even punitive measures in the ostensible interest of peace and order. For the first time in nearly two decades there is in the Philippines today a real party of the opposition whose existence is generally recognized to be essential to any genuine form of representative government.

In the field of economic reconstruction, the most encouraging sign is to be found in the upward trend of productive enterprise. An impending rice famine has been averted by increased production of this staple cereal supplemented by imports from Siam and the United States. The production of copra has risen to prewar levels, while the production of abaca, or Manila hemp, is now 60 percent of the prewar output. Crop loans to private producers and government-owned corporations devoted to the encouragement of the production of cereals and of the principal export commodities, including sugar, are certain to bring about a more speedy restoration of the national economy than was at first anticipated.

American financial and material assistance has been assured and is now being extended in accordance with the Philippine Trade Act and the Philippine Rehabilitation Act. This has made possible the initiation of a large-scale program of public works construction, including public buildings, schools and hospitals, railways, roads and bridges, post and telegraph offices, harbors, and air navigation facilities, weather observation and lighthouse service. Furthermore, our government is now ready to resume the program of light industrialization which was rudely interrupted and set back by the war, including the reopening and expansion of cement and textile factories, sugar and oil mills and refineries, lumber mills and fertilizer plants, and the development of water power. The acquisition of surplus property worth half a billion dollars has greatly facilitated the restoration of essential public services. In addition, the discussion of the Japanese reparations program has advanced to such a stage that the Philippines may soon confidently expect the transfer from Japan of a number of important industrial plants and equipment.

The entry of foreign investment capital, especially American capital, and the extension of American technological assistance are also assured under these enactments. At the same time, our government, by establishing the Reconstruction Finance Corporation and by assisting other banks and credit institutions, is giving every encouragement to Filipino citizens to apply their skills and talents to the exploitation of the country's natural resources.

The Philippine Government has secured budgetary loans from the United States which were needed to help tide the country over the current period of financial stringency. There are two things worth noting about these loans; first, that the state of utter economic prostration in which the Philippines found itself at the end of the war would have necessitated such loans whether the country were independent or not; and second, that the economic potentialities of the Philippines are such that these loans will be repaid as soon as the productive capacities

of the nation can function normally and the system of tax collection is restored and reorganized. The United States has extended loans and outright gifts to various countries of the world, and I believe that Americans will agree with us when we say, quite candidly, that no country is better entitled to such assistance than the Philippines. At the same time, we also dare to affirm that few among these beneficiary states are in a better position to pay for every cent received than the Philippines. We wish to reassure the American people that these loans are gilt-edged investments guaranteed by collateral of the soundest character. The Filipino people, furthermore, consider them as investments in good will that will be repaid in full, with substantial interest, in kind. It is only necessary to add that the Philippines should be given sufficient time to settle these obligations—an extension of from 3 to 5 years, perhaps, to allow for the rehabilitation of productive enterprise.

The upward trend of the cost of living, which is a postwar economic malady not confined to severely devastated countries like the Philippines, has not only been arrested but shows encouraging signs of leveling down. Increased production will hasten this process. In the meantime, the government has sought to relieve the tense agrarian situation by the enactment of a new tenancy law providing for the unprecedented 70–30 crop-sharing plan; that is, 70 percent for the tenant and 30 percent for the landlord. The government has also launched a new attack on the agrarian problem by purchasing private landed estates for redistribution to the farmers and by reviving the prewar program of establishing agricultural settlements in new areas. In the field of labor-management relations, the government has prevented or cut short several major strikes through mediation and arbitration by the court of industrial relations, while at the same time permitting the growth of a labor movement that is more extensive and more vigorous than any existing in the Philippines before the war.

Despite its difficult financial position, the Philippine Government has accomplished prodigious feats of social regeneration. It has provided schooling for a greater number of Filipino children than before the war. It has distributed relief to the needy from UNRRA supplies and other foreign sources as well as from voluntary domestic contributions. It has reopened hospitals and public dispensaries throughout the country. It has approved a veterans' bill of rights under which a veterans' board has been created to administer pensions, educational benefits, and hospital facilities to veterans, war widows, and orphans. By persistent and effective representations to the American people and Government, the administration has secured appropriate recognition and reward for our valiant guerrilla fighters, and stands an excellent chance of obtaining similar concessions for Filipino veterans of the USAFFE.

In reciting the efforts and achievements of the government of the republic during the first year of its existence, it is not my intention to ignore the shortcomings and difficulties, the entire complex of the multitudinous problems which continue to plague our people and government today. There are serious problems of criminality and gangsterism, of graft and black marketeering, of shortages and inflation, of unemployment and low wages, of disease and deteriorating public health, of agrarian unrest and military operations against armed dissidents, of slow-moving treason trials and of insufficient faith in government. Though I will not attempt to gloss over these matters, I feel bound to declare that most of these criticisms are made in deliberate disregard of the facts which condition the existing situation. Foreign critics, but especially American critics, speak of the situation in the Philippines as if the country was not twice ravaged and laid waste in the space of 4 years, as if the Filipino people were unscathed by the ruthless acts of a brutal occupation, indeed, as if the war that despoiled our country and people had been solely of our own making and responsibility. A sense of proportion would seem to dictate that conditions in the Philippines be viewed in the proper perspective and that the faults of government be considered against the background of the almost total collapse and disorganization of Philippine life as the result of war. Without condoning instances of corruption or incompetence, such an attitude would give praise or blame as the facts require. Judgment would be tempered by sympathetic understanding, and a sick nation, no more than a sick man, would not be required to give performance equal to that of one which is hale and sound.

The inadequacies of Philippine life today are not peculiar to the Philippines. Most countries have them in a greater or lesser degree, including those that suffered no direct physical or moral damage from the war. There is hardly any criticism now being leveled at the Philippines which cannot, with equal justice, be leveled also at the city of Chicago or the States of Mississippi or Missouri or South Carolina, and this latter without the partial justification which exists in the case of the Philippines. Furthermore, our critics would most certainly have a much sounder basis for judging the conditions in the Philippines today if they were to read up on the history of other countries—like the United States, for instance, on July 4, 1777—1 year after their independence. They will find that the picture was nowhere pretty at any time—certainly not of the United States where there also was great insecurity of life and property and where there was a movement supported by respectable people to replace the Republic with a monarchy and make George Washington a king.

It is not my purpose to excuse the faults of our Government by citing the faults of another. My purpose rather is to show that we Filipinos are ourselves sharply aware of these deficiencies, and that our frank recognition of their existence is in itself a beneficient act of conscience, which constitutes the first step in the process of healing. We know these shortcomings to exist, we do not avert our eyes from them, nor do we wish to conceal them from the eyes of others. We are confident that the conscience of the nation, reacting to every evidence of negligence or incompetence, corruption or abuse, will fashion the necessary remedies in accordance with our laws and constitution, and in the interest of a more perfect democracy.

For the things that have been accomplished so far, the credit goes, in the first instance, to the recognized leader of the Filipino people, President Manuel Roxas. A man of solid achievement in Philippine public life, trained almost from young manhood for the responsibilities of leadership, he has sought to put our nation on its feet by methods of self-help supplemented by every available assistance from the United States of America. Faithful to our country and our people, loyal to our constitution and our laws, he has held before his vision, in admiration and as guiding star, the liberal, humane, and democratic institutions of American life.

This faith in America, this admiration for American institutions, account in great part for the strong pro-American orientation of our foreign policy. In a score of public addresses since his induction into office, President Roxas has underscored the fact that the Republic is, in his own words, "committed to the cause and international program of the United States of America," whose friendship is "the greatest ornament of our independence and raises us far above the level of our intrinsic power and prestige." Such sentiments, one might add, come natural to a man who is one of the finest products of the American public-school system in the Philippines, and who has served with courage and distinction under the American flag in defense of American ideals.

This spirit of intimate collaboration and alliance has already been enshrined in, and validated by, a number of treaties and agreements. But over and above such written affirmations of common purpose are the sentiments of mutual faith, affection, and gratitude which have outlived the moment of political separation and which are so deeply rooted in the minds and hearts of both our peoples that there shall be no need whatever of reducing them to the form of a polite diplomatic instrument. The Filipino people know, as the American people should know, that the independence of the Philippines was a historic act of mutual consent and consideration between two peoples, and that its ultimate success or failure will depend equally upon the capacity of the Filipinos and upon the willingness of the Americans to exhibit continuing evidences of their friendship and esteem.

Such evidences of improved relations between the Philippines and the United States have been of a most encouraging character. The relations between the American troops stationed in the Philippines and our civilian population have eased up considerably as a result of the sincere efforts of the authorities on both sides, especially Maj. Gen. George F. Moore, to reduce or remove the causes of friction. Even more heartening are the new proofs of generous consideration which the United States Government has shown in giving heed to the claims and grievances of our Filipino guerrillas and veterans of the USAFFE. The cloud of misunderstanding and resentment arising from the failure to give appropriate satisfaction to these grievances is fast lifting, and we have every hope of resolving all remaining issues in an atmosphere of mutual regard and consideration.

The commitment of our young republic to the cause and international program of the United States of America has a wider implication than is apparent at first glance. That policy commits us with equal force to the cause of the United Nations of which the United States was one of the principal organizers and of which the Philippines is a loyal member in good faith and in good standing. We have, since San Francisco, given to the organization our full and ungrudging allegiance. By express will of our people and government, we are pledged to continue giving of loyal support to the United Nations. We shall do so, not merely because it is our desire to honor our signature on the Charter. We shall do so because in our hearts we know that in the United Nations lies the last great hope of mankind—for peace and justice, for prosperity and survival. More potent, in the end, than any aggregation of troops and armaments or system of fortifications or treaties of military alliance is the establishment of one world which shall stand as the bulwark of the security of all.

The independence of the Philippines has imposed another obligation of supreme importance upon the Filipinos. We were the first country in Asia to break through the wall of colonialism which has been built for centuries around that rich and populous region. We have a duty to lead the way, and to continue leading the way, until that wall is crumbled completely and all the oppressed and exploited nations are free. The President of the Philippines, realizing the historic responsibility of our people in this field, has expressed on various occasions his wholehearted support of such a policy and has given me a special commission, in his official letter of instructions, to give it the most emphatic endorsement. Insofar as I personally

shall have the opportunty and the power to give expression to this desire of our people, and to comply with the President's instructions, I shall endeavor by word and deed, in the councils of the United Nations or elsewhere, to support the legitimate aspirations of all peoples to freedom and independence. For I consider that it would be disgraceful for us Filipinos, having won our freedom, to remain silent or to stand apart in selfish isolation while the angushed voices of our less fortunate brethren in Asia cry out for liberty.

I said, in the beginning, that it was my purpose to speak to you on this occasion in a mood of sober reflection. The nature of the work we have done, as well as of the work we have yet to do, certainly requires an attitude of honest self-examination. The nature and magnitude of the problems that beset our young republic compel us to gather our forces anew for a supreme exertion of heart and mind and muscle. There must be no relaxation of effort. While yet the injuries of a long and blood battle remain, we must face the challenge of another equally arduous and exhausting.

Though our republic is young, our people are old in the endurance of battle and in the experience of suffering. The centuries of our history have taught us lessons in patience, in courage, and in determination to which no exhortation can add one jot of meaning. The future can place no burden upon us more onerous than we have borne in the past. A generation that, like ours, has already borne the crucifixion of the Japanese occupation can bear any responsibilities which the future may bring. We know the measure of our strength as a people, and by this strength we shall measure the remaining tasks that await us in buttressing our independence and in establishing upon a more stable foundation the Republic of the Philippines.

OPENING ADDRESS DELIVERED BY PHILIPPINE CONSUL GENERAL MELENCIO AT THE FOURTH OF JULY CELEBRATION, SHOREHAM HOTEL, WASHINGTON, D. C., JULY 4, 1947

Your excellencies, esteemed guests, countrymen, the Fourth of July has a double meaning to the Filipino people, the meaning it has to the world at large and its significance to us as the day when our Republic was born.

In relation to world history, this day recalls to mind the outstanding episode in the inspiring record of the American people—the struggle of the Thirteen Colonies, the American Revolution, the adoption of the American Constitution, the emancipation of the slaves, the Spanish-American War to aid weaker peoples in their struggle for freedom, World War I to vitalize the principle of self-determination and to make the world safe for democracy, and World War II to liberate weaker nations from the clutches of totalitarianism.

In relation to the Philippines, the day recalls half a century of Filipino-American association, harmonious, fruitful and mutually beneficial. The consistent policy was one of altruism and helpfulness—that the Philippines was for the Filipinos, not to be exploited, but to be developed under America's benign guidance; that the country was to be prepared for self-government and eventually for independence. That was the course set and it was faithfully adhered to. A year ago today, the political bonds were severed and the American flag was hauled down in glory, amidst tears of joy and of sorrow—sorrow for the separation that was taking place, joy for the freedom that had come at last.

For the past 12 months we have been paddling our little banca through the reefs and shoals of heartrending devastation. Not far away, America's powerful ship of state stands by, cheering us on to our allotted destiny, ready to come to our succor if the winds and storms of uncertain fate should be too strong for our yet feeble arms.

This is true friendship in action, and it is reciprocated by 18,000,000 people to whom the American flag will ever be the symbol of American altruism and generosity.

Thus it is that we may well dedicate this celebration to the most beautiful comradeship in the annals of nations—the comradeship between strong and mighty America and a weak and prostrate Philippine Republic.

But we will not be weak and prostrate long. Amid the wreckage and the desolation that one sees wherever he turns in the Philippines, Filipinos stand uncowed and brave. Under our determined, gifted, and patriotic leader we shall rise again from our prostration—slowly and painfully perhaps, but rise again we will and shall. Even now, with the limited means at our command, we are making considerable headway. We are reconstructing homes that have been wiped out; industries that have been leveled to the ground, roads and bridges and public buildings that have been wantonly demolished. The schools are open again. We are mending economy so we can be self-supporting again as we were before the war. And we are stimulating our nation's productivity so that the balance of trade will again be in our favor as it was in 1941, before the Nippon juggernaut dripping with cruelty and blood rode roughshod from one end of our archipelago to the other and destroyed everything they could lay hands on.

Yes, from the debris of the old, we mean to erect a new and robust nationality characterized by fortitude, industry, prestige, achievements. This is our resolve. We feel a new sense of growth, a quickening of the national energy. We shall fortify our minds and spirit for all the travails of nation building. We shall fashion a strong democracy, a democracy which will surely succeed because its architects are all products of the democratic institutions implanted by America in our land. With the fine qualities and the innate genius of our race, we shall yet make our republic a modest monument to America's guidance and example.

We can do no less than this. It is the mandate from thousands of the flower of our manhood who have been mowed down side by side with Americans beneath the folds of the Stars and Strips. It is the mandate from hundreds of thousands more of Filipinos who were massacred and exterminated in cold blood by the enemy in vengeful retaliation, for no other reason than that we refused to make common cause with them in their misguided defiance of democratic civilization.

In our valiant efforts at reconstruction we shall never forget to be grateful for all the aid we are getting now—for the war-damage payments being processed, for the surplus property being turned over to us, for the funds for public works, for the loans we have been granted, for the military assistance agreement recently concluded.

In return we have given America a part of ourselves as it were—special rights for Americans in our own land, and naval and military bases for the security of our two Republics. We wish we could do more.

It is in this spirit that we celebrate this day of days for us. It is in this spirit that we are gathered here in thankfulness for the freedom that is ours at last. Year after year, wherever they may be, Filipinos will foregather in much the same manner as this, blessing America's name and revering her flag. Year after year, in the hearts of an entire people, will be the prayer: May America be always strong and always mighty.

The Box Score on Naval Aviation

EXTENSION OF REMARKS
OF

HON. EDWARD H. JENISON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 16, 1947

Mr. JENISON. Mr. Speaker, in view of the imminent action of the House of Representatives on the proposal to unify the armed services of the United States, I believe every Member of the House would find information of utmost importance in a communication published today in the Washington Post. It is written by Mr. Stuart B. Barber, a World War II Reserve naval officer, whose military experience qualifies him to speak with authority. Mr. Barber calls attention to factual information brought to light in a voluminous but little read study by the joint Army-Navy assessment committee assigned to assign credit for the destruction of Japanese naval and merchant vessels during the war in the Pacific.

In weighing the merits of the unification proposal as now drafted, there is ample reason to fear that one of the war's most effective services—naval aviation—will be jeopardized. Just how effective that service was, and how essential it is to the maximum power of our national defense, is well outlined in Mr. Barber's statement, which follows:

NAVAL AIR RECORD

A COMMUNICATION

Buried deep in a small article in the Post of July 6 was the briefest mention of the contents of one of the most authoritative and revealing documents on the Pacific war. This was the report of the Joint Army-Navy Assessment Committee assigning credit among the several services for the destruction of all Japanese naval and merchant vessels sunk during the war.

The burial of this news was not the fault of the Post, but was another of the brilliant feats which give rise to the suspicion that Navy public relations men do not have sense enough to come in out of the rain. The committee's report was published by the Navy Department as 180 pages of dull tables, with utterly no explanatory text, and was apparently released to the press without explanation, expansion, or comment on its contents. No newspaperman could be expected to turn into a tabulating machine to figure out what the report said.

One would hardly know from this treatment of a report which shows so conclusively the Navy's wartime achievements that the Navy is engaged in a great struggle with the Air Force over theories, weapons and methods of warfare. Or that the joint committee had spent innumerable months of work to reach its unanimous and proven findings for the principal purpose of shedding light on which weapons and methods were successful. Nor, from the principal emphasis given in the report to submarines, would one be able readily to discover how naval aviation stacked up against the Army Air Forces, which is the heart of the interservice struggle. I have extracted some data on this point from the report, and present it herewith.

The Pacific war was a sea and air war. The major Japanese strategic target was the shipping on which the Empire depended for its industrial life. It is highly relevant,

therefore, to a study of the relative effectiveness of the various services' weapons in strategic warfare to study their relative achievements in the war against Japanese shipping.

The United States Navy sank 78 percent of all Japanese ship tonnage lost; the Army Air Forces 15 percent. The Navy sank 87 percent of all Japanese warship tonnage lost; the Army Air Forces 6 percent. The Navy sank 87 percent of all Japanese tanker tonnage lost; the Air Forces 7 percent. Forty-five percent of all Air Force merchant-ship sinkings were in the last 6 months of the war, after the Jap merchant fleet, largely destroyed by the Navy, had already been forced back to its home waters. Most of the Air Force tanker sinkings were in the last few months of the war when the Japanese no longer had access to their oil fields.

Most of the Navy sinkings were by submarines, which accounted for over half of the Jap tankers and other merchant ships sunk, plus 30 percent of the warships, or specifically for over 5,000,000 tons of Japanese vessels. It should not be necessary to labor further the submarine contribution to the war; sinking ships was their job, and they did it magnificently with a relative handful of men. What is more important is to compare the respective contributions of naval aviation and the Army Air Forces to see what lessons may be found therein.

Carrier aircraft sank, single-handed, 40 percent of the Japanese navy's tonnage. Combined with other forces they sank about 875,000 tons of Japanese warships, or 48 percent of the total lost. Carrier aircraft were in on the sinking of 6 battleships, 13 cruisers, 13 carriers, 29 destroyers, and 13 submarines. Of these 79 major vesseis the carrier planes polished off 62 without assistance, including 5 battleships, 10 cruisers, and 10 carriers.

Army aircraft were credited with a full or partial share in the destruction of only 22 vessels of the same classes; in only eight of these cases were they unassisted and all eight of these were destroyers, the smallest of these classes of vessels. Army aircraft did not strike the major blow that sank a single enemy battleship, cruiser, or carrier (as against 25 for our carrier planes), though they assisted in five of the sinking of these heavy ships. Even the Navy and Marine land-based planes has as good a record against warships as Army planes; they sank four destroyers and four submarines unassisted, and were a major factor in the sinking of four battleships and cruisers.

United States Navy carrier aircraft sank 76 Japanese tankers, amounting to nearly 400,000 tons. Army aircraft sank less than one-fourth this tonnage. The carrier sinkings, furthermore, were concentrated in the period from February 1944 to January 1945, and thus exerted maximum effect on curtailing the Japanese fuel supply at the time most critical for Japan. During this period carrier planes sank 15 times the tanker tonnage destroyed by Air Force planes.

It was during this same period that the Japanese merchant marine as a whole was taken off the high seas. It was the cumulative injury suffered during this period that induced thoughtful Japanese leaders to begin work for surrender before the B–29 raids first began, because they saw that with their shipping reduced to a fraction their military and industrial machine was already crippled beyond hope of recovery. This is attested by reports of the strategic bomb survey.

In this important 12-month period the Army Air Forces accounted for only 300,000 tons of Japanese merchant vessels, or one-thirteenth of the total sunk by all forces. Carrier aircraft sank 191,000 tons in 2 days at Truk, and 100,000 tons at Palau 6 weeks later, to equal the Air Forces year total during the first 2 months of the 12.

It is commonly regarded that the capture of the Philippines marked the complete military and strategic defeat of the Japanese. This campaign lasted from September 1944, through January 1945. During this period 1,975,000 tons of Japanese merchant shipping were sunk, but only 8 percent of this by the Air Forces.

During this same 5-month period carrier planes, alone or in cooperation with surface ships, sank 787,000 tons of merchant shipping in the Philippines, against 105,000 tons by Far East Air Force; 322,000 tons of enemy warships against 32,000 tons by FEAF. The carrier forces sank over 100,000 tons of shipping at Manila on September 21–22 alone, the same amount again on November 13–14, and 158,000 tons in the China Sea on January 12 alone. The most credited to the Far East Air Forces in any entire month is 57,000 tons of merchant and naval vessels.

It is from the Far East Air Forces, led during the war by General Kenney, that have come the most strident claims of Air Force superiority in the war at sea. Let us examine the record. From the beginning of the war through January 1945—38 months—the Far East Air Forces were credited with sinking only 330,000 tons of merchant shipping unassisted, plus some 40,000 tons with the assistance of other forces. This total was far exceeded by the career forces in the 3 months of September to November 1944 alone.

The Far East Air Force record against major Japanese warships is negligible: 4 destroyers sunk unassisted, 7 with the help of other forces, plus Air Force assists in the sinking of two light cruisers damaged in the Leyte battle. And a host of small patrol craft, but no submarines.

The principal FEAF claim to fame was the attack on the convoy off Lae in March 1943. The whole available air force was thrown into this battle against approximately 25 ships, most or all of which the Air Force claimed to have sunk. This tonnage was far exceeded by naval aircraft on each of over 20 different days during the war.

The lessons to be drawn from the foregoing are these:

1. Army Air Forces claims and statements may generally be taken with a large grain of salt.

2. Navy claims, particularly aviation claims made through the lackadaisical surface-minded Navy public-relations organization, can safely be considered conservative.

3. Naval carrier forces, being highly mobile, can penetrate deep into enemy territory to seek out the most important and vulnerable targets. Air Forces planes are tied to land bases, which can be moved forward only very slowly and with difficulty. A major reason for the Army Air Force failure to destroy much shipping, particularly tankers, was the inability of Air Force planes (other than heavy bombers whose accuracy was seldom adequate to hit targets as small as ships) to reach this shipping. This was particularly true in the Philippines campaign, when Far East Air Force immobility was embarrassing. The carrier force had repeatedly to attack Japanese reinforcements en route to Leyte, with which the Air Force could not cope from its limited bases ashore. This resulted in delaying for 3 months the first Navy attacks on Tokyo.

4. Naval carrier planes are capable of attacking small, fast-moving targets such as ships with great accuracy and efficiency. This efficiency was so great that naval aviation's successful campaign against Japanese warships and major merchant vessels required only 10 percent of the total attacks made by naval planes.

5. These factors of mobility and accuracy are applicable not only to attacks on shipping but to attacks on all types of small land targets located on or near coasts, including vital strategic targets such as bridges, power stations, rocket-launching sites, and camouflaged or partly buried factories, which cannot be seen or hit accurately by high-altitude Army long-range bombers. These are the targets of tomorrow's war.

6. These facts are pertinent to the unification controversy, and to the struggle over methods of warfare will continue even under unification. It is no secret that the Air Forces wish and intend to restrict the development and employment of naval aircraft, by one means or another, in directions that will prevent the full application of their potentialities to the strategic and atomic air warfare needs of the future.

For many purposes naval planes and methods are superior for strategic attack to those of Air Force bombers. Naval aviators fear, the Air Force enthusiasm in behalf of unification confirms, and the private statements of Army airmen illuminate the intent, that the present unification bill is designed as a major means of facilitating this restriction. Army airmen generally affect contempt for naval aviation. The figures quoted herein suggest that this affected contempt may well be sired by an Air Force feeling of inferiority to naval aviation in some of the more important aspects of air warfare, or by an equally dangerous ignorance of the comparative capabilities of the two air services.

STUART B. BARBER.

ARLINGTON.

New Soft-Coal Contract

EXTENSION OF REMARKS

OF

HON. BURR P. HARRISON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 16, 1947

Mr. HARRISON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Winchester (Va.) Evening Star of July 11, 1947:

NEW SOFT-COAL CONTRACT

Thoughtful citizens will view with alarm the new soft-coal contract promulgated by John L. Lewis and the Nation's coal operators. Superficially, it is an ordinary agreement, but the consequences are not limited to the participants. The effect will be felt by the entire economy of the Nation. Specifically, coal, a basic commodity, will be increased in price approximately $1 per ton. Everything made by industries which use coal as fuel will cost more to make, and as a result will cost more to the public. In one industry, steel, the increase is estimated by the Wall Street Journal at $5 per ton. This will be reflected in every article made of steel or in which steel enters. Another of the very many examples of the accumulative and expanding effect concerns rail freight. Since the railroads use coal as fuel, every article carried will cost more to carry. With such a substantial increase in the cost of so basic a commodity as coal, the upward price spiral is automatic.

So much for the effects. What of the principals to the agreement? Did they have in mind the consequences to the public or did they act solely upon their respective private interests? Concerning Mr. Lewis, little need be said; his past actions give a reasonable clue. On the other side, the leading representative was Benjamin F. Fairless, president of United States Steel, who spoke for the mines controlled by that giant corporation.

Mr. Fairless, seeking peace at any price (so long as the price will be paid by the consumer), met every Lewis demand, and even agreed to that which Representative HARTLEY, coauthor of the recently enacted labor law, feels "clearly reflects collusion between the mine operators and the United Mine Workers with the intention of violating the law." He warns that the operators face

criminal prosecution. If such is the case, it should start, we think, with Mr. Fairless, who, defending his actions as hopeful it would bring industrial peace," virtually compelled acceptance by the lesser operators. According to discerning Washington correspondents, many feel his action resulted from the fact that United States Steel is wallowing in orders and is hopeful of vast profits. Able Mark Sullivan, of the New York Herald Tribune, seems to sum up Mr. Fairless' attitude: "He appeased what he feared." Continues Mr. Sullivan: "But even if the appeasement achieves what he hoped for (industrial peace), a different kind of tragedy can come to America as a result of the course he took—boom-bust inflation."

The entire affair is sordid and shameful, and the public has been shown that it can expect little more consideration from Mr. Fairless than it has received from Mr. Lewis. To this newspaper it seems apparent that, in this case at least, big business and big labor are conspiring to benefit themselves at the expense of the Nation as a whole. "The public be damned" seems to be the order of the day.

Universal Military Training

EXTENSION OF REMARKS
OF
HON. DEWEY SHORT
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 15, 1947

Mr. SHORT. Mr. Speaker, I am against peacetime conscription for the following reasons:

First. It is a radical departure from our American system and adopts the very thing that has brought nations of the world to ruin. Every country that has had compulsory training, such as our recent enemies—Germany, Italy, and Japan—has ended in a heap of rats, rubble, and ruin. Coercion and compulsion are repugnant to freemen.

Second. When men are forced against their will to enter military training, the nation is lulled into a false sense of security. France had conscription, built the Maginot line, and thought its Army was unbeatable, but they were run over in a few weeks' time.

Third. If we are to improve both education and health of our citizens, it must start from birth and not when boys reach the age of 18. That is too late to form habits and attitudes which will continue throughout life.

Fourth. Military life is abnormal and artificial, and neither the minds nor the character of 18-year olds will be built by segregating them from the wholesome influences of home, church, school, and friends.

Fifth. This program will cost the taxpayers at least two billion or more dollars a year. This money could be better spent, sir, in scientific research and technological development. Instead of teaching boys to do squads right and squads left, saluting brass hats and braid, let them remain free to follow their own inclinations instead of being placed in an Army strait-jacket and forced to obey orders. Give them freedom in the laboratories to look through microscopes and dig into test tubes to discover more secrets we do not yet know. This is the thing that has made America great. Should we ever curb this freedom, God help us. Military obedience is imposed from without; self-discipline comes from within. Follow conscience and not the bark of a hard-boiled sergeant.

Under leave to extend my remarks, I offer the following letter addressed to me:

JULY 11, 1947.

Hon. DEWEY SHORT,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN SHORT: Receipt of Is Umtee the Answer? a reprint from the CONGRESSIONAL RECORD, is acknowledged with thanks. To those of us who feel convinced that Umtee is wrong, is an instrument of further destruction to our moral fiber as well as that of the world, it is heartening to find others of like mind, especially in public service, for I feel a swamping pressure being brought to bear to enact compulsory training legislation.

Because I attend the movies only occasionally I am struck by the fact that for the past 10 months there has each time been a "short"—longer if you please than any other of the news bits—planking for Umtee. Not one have I seen against. This is important. It is effective propaganda. I fear that it is being bought with my money and yours, and I have no effective defense or even fair chance except at the hands of the few who, like yourself, espouse what seems to be the unpopular role of defender. It seems to me that we are in the grip of circumstance when great emotional appeals overcome all our wisdom and intelligence to compel a great Nation to sink into the same kind of mire older nations have been in for generations. Where is the value of experience here?

As an ex-United States marine from the First World War I know something of military ways. I am not opposed to war if we can't avoid it, and I'm willing to carry my share of the stinking load. I am heartily opposed, however, to inflicting on helpless generations the burden of our ignorance and fumbling until we have exhausted other means.

Please accept this letter as an expression of gratitude for the position you have taken.

Very truly yours,
DONALD C. RUBEL,
Parrish & Co., Philadelphia, Pa.

Mr. Speaker, only a few from the many papers from all over America, do I offer these press comments on the Compton Commission Report. It goes to show that the people of this country have not been fully informed or made aware of what is going to happen to them.

The quotations follow:

The Portland Oregonian, June 3, 1947:

We are inclined to interpret the Commission's recommendation for universal military training as in effect a recommendation against it. How else can one view the priority given to scientific research, stockpiling, industrial mobilization, the perfection of a mobile striking force, and all that? It is like saying there should be a new coat of paint on the house but not ahead of a new roof, a new furnace, ceilings, and floors, when the financing of the entire job is obviously out of the question.

The Raleigh News and Observer, Raleigh, N. C., June 8, 1947:

France and Germany long compelled youth to undergo the compulsory training now proposed in the United States. Their experience shows its ineffectiveness.

* * * Democracy and compulsory military training cannot exist together. When compulsory military training in peacetime comes in at the door, democracy will go out the window.

The Brooklyn Tablet, June 7, 1947—Roman Catholic newspaper:

Nor did the Commission weigh the possibilities that future aggression in this country may follow the pattern so obvious in eastern Europe. At least one of the powers that is likely to plan campaigns of aggression against us is relying more upon subversion and internal weakness than upon atom bombs and bacteria. How the regimentation of our youth will safeguard us against this form of aggression is difficult to see. Universal military training is a negative thing sired by fear out of confusion.

Knickerbocker News, Albany, N. Y., June 4, 1947:

A year or so ago the general in charge of Army publicity was asked by a group of editors if he could lay down a course of youth training that would include the new influence of the atom bomb and he admitted that he could not. Unhappily, the report gives no acceptable answer to that $64 question.

Indianapolis Star, June 3, 1947:

In any future war it seems certain that millions of half-trained kids would be of no more use than millions of untrained kids. The kind of military organization today's warfare requires is an integrated team of men from industry, from scientific laboratories, and military professionals. To carry out their plans, we need a relatively small but highly trained Army, Navy, Marine Corps, and Air Corps ready for instant use.

Our military leaders admit that there is no defense against the atomic bomb except political statesmanship. Universal military training would not defend us. The bomb, our industrial power, and our scientific know-how gives us our present military advantage. But we shall never be safe until peace through the United Nations is made secure throughout the world.

Chicago Tribune, June 4, 1947:

The Commission fails to make out a case for a mass army as the best means of defense. In a war involving scientific horrors it would seem that defense and counterattack would most safely be entrusted to technicians rather than to semitrained youngsters.

With the enactment of conscription we should take another long stride toward military dictatorship.

Hartford Times, Hartford, Conn., June 19, 1947:

The parents of America also do not believe that universal training is the most democratic method of building an army unless and until the new volunteer system fails to provide the necessary manpower. Only grim necessity can make coercion democratic.

Chicago Daily News, June 3, 1947:

Their findings, however, are not likely to persuade anyone not already persuaded. * * * The fact is, however, that the technological revolution has been so rapid and is continuing with such speed, that there would be real difficulty in deciding what to teach young men even if we decided to train them. New specialties crowd us too fast.

New York Post, June 3, 1947, column by Samuel Grafton:

It is lame to say that by arming ourselves on the scale called for, we can contribute to the strength of the United Nations; for the United Nations was set up to make such individual displays unnecessary and was sold to us on the argument that we would save these costs. To say otherwise is like hailing a small outbreak of flu as a help to an immunization program.

Oregon Statesman, Salem, Oreg., June 4, 1947:

We confess to considerable skepticism as to the virtue of a 6-month basic training as a means of national defense. It would subject youth to the regimen of army life, to camp discipline; but in 6 months they could learn little of modern warfare.

Chicago Sun, June 4, 1947:

It can be argued with some force that by increasing our military strength we can acquire new bargaining power in international councils to secure peace. On the other hand, if the possession of atomic weapons and incomparable economic strength has not given us the necessary bargaining power is it likely that 6 months training of 18-year-olds would do so? Can universal disarmament really be attained by universal rearmament? Does the road to peace lie through the increase of military force at a time when a war-weary world cries out for relief from military burdens?

The Marshall Plan Versus the Truman Doctrine

EXTENSION OF REMARKS
OF
HON. JOHN C. KUNKEL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 16, 1947

Mr. KUNKEL. Mr. Speaker, under leave to extend my remarks, I include an analysis of my own on the Marshall plan in the Appendix of the RECORD:

On March 12 President Truman set forth the Truman doctrine in an address to the Congress. In my judgment, this attempted to establish a policy of indiscriminate intermeddling in any part of the world, in unlimited amounts, and unlimited in scope, whenever Russia or any other nation might act, either directly or through organized minorities, in any other country. When the Congress approved the Greek-Turkish loan and miiltary mission, this policy was substantially ratified. No matter what the terms of the Greek-Turkish bill were, every nation in the world, as well as the bulk of my own people, looked upon this as stamping an O. K. on the President's speech. I opposed this program. It gave to Russia certain control, not only over our foreign commitments, but, to some degree at least, over our own domestic policy. We were pledged to oppose all Russian action anywhere, except possibly in the Western Hemisphere, or else ignominiously to abandon the policy. Russia was in position, therefore, to force us to move or to retreat by acting when and where she saw fit to do so. Russia was able to damage our prestige or force upon us commitments and expenditures which could not be estimated even approximately, but which could easily run to five or ten billion dollars annually. The President's speech was directed straight at Russia.

This month our Secretary of State, George Marshall, has outlined what is known as the Marshall plan. Many people have asked me what are the essential differences between the Marshall plan and the Truman doctrine. There are two main distinctions or aspects. The Marshall plan is a reasoned approach to the international problem. It seeks to find out what the other nations can and will do before we undertake any blank check commitments, or even any obligations at all. Secondly, it is an obvious attempt to bail out the Truman doctrine. Since Truman's enunciation of it, this has already been demonstrated to be fallacious by the Russian coup in Hungary and by the progress made by the Communist movement in Italy and France, where the Communists now control the entire labor movement in both countries. We have not been able to do anything about this except to listen to some heated statements by the President. These have had no visible effect. Our prestige has suffered correspondingly. Secretary of State Marshall is seeking to substitute an intelligent program for the Truman doctrine. The latter has turned out exactly as predicted in my previous talks on this subject.

In one part of his speech at Harvard University Secretary Marshall almost directly contradicted President Truman, a most unusual thing for a Secretary of State to do. He said:

Our policy is directed not against any country or doctrine but against hunger, poverty, desperation, and chaos. Its purpose should be a revival of a working economy in the world, so as to permit the emergence of political and social conditions in which free institutions can exist. Such assistance, I am convinced, must not be on a piecemeal basis as various crisis develop.

President Truman's speech was aimed at Russia and at communism and contemplated intermeddling in every piecemeal crisis, stirred up by Russia whenever Russia saw fit to make trouble and force us to overextend ourselves.

In addition, Secretary Marshall's first concern is to learn how much the overall program will cost and whether others will help. President Truman never even thought of the cost until weeks after he had made our commitment to anti-Communist foreign aid. General Marshall demands that the European nations do three things: First, they must draw up a balance sheet of the resources and needs. Secondly, they must work out a blueprint of self-help. And thirdly, they must submit to the United States how much they need and how the United States can best help them to help themselves. He requires Europe to take the initiative to get together, to pool their resources and to present a workable plan. If Europe does that, and only if, then the United States will study Europe's plan and decide whether it is sound and whether it has a reasonable chance of accomplishing its intended purpose, and whether it is worth while for us to cooperate. The Secretary also opened the door for Russian cooperation with the rest of Europe in his plan. If Russia does not go along, then the Secretary of State offers western Europe, outside of the Soviet Union, the privilege of attempting to work out their own salvation for themselves. He recognizes that the misery of the countries in Europe is interconnected and that there can be no recovery for one without recovery of all. Impliedly, he recognizes the fallacy of our policy to date. We have been giving Europe a dole on the theory that Europe would be able to come back on its own. There has been little reconstruction or rebuilding of industry. Europe is not much more self-sufficient today than it was 2 years ago. Our money has merely tided them along. Most countries of Europe have not made much effort, nor have most European countries—in justice to them—had much with which to work. What we have sent to Europe to date has, for the most part, been wasted insofar as creating any material recovery in that area, or placing that part of the world on a self-sustaining basis.

I believe the Marshall plan has great possibilities. It will require a gigantic statesmanship in Europe. Can these European countries submerge their differences, outlooks, and viewpoints, and work together? Experience during the past years is not encouraging. The greatest source of failure lies in Europe itself. If Europe does not take these preliminary steps, then clearly our efforts would be futile, whatever they might be. Therein lies the soundness of the Marshall plan. We are to find out first. Only thereafter do we make commitments or take action.

If Europe proves that it can and will attempt the seemingly impossible, then the United States will be confronted with two questions. Can we afford to reconstruct Europe? We must learn of our own resources and of the cost of the program before deciding this. On the opposite pole is the further question: Can we afford not to reconstruct Europe, in view of what the failure to do so will have on our economic position?

Mr. Speaker, the above statement, in substantially this form, was presented by me over radio station WHP at 1:30 p. m. on June 29, 1947, shortly after the Marshall plan was adopted.

A Select Committee To Study Foreign Policy

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 16, 1947

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD I include therein a resolution which I introduced on January 3, 1947, creating a select committee of the House of Representatives to conduct an investigation of the economic and political foreign policy of the United States.

I wish to compliment and congratulate the leadership of this House upon the decision to establish a special committee with power to investigate both at home and abroad the requirements of war-devastated countries and the resources and the ability of the United States to assist in the economic rehabilitation of the world.

At this crucial juncture in world affairs such a committee will prove to be

of inestimable value in charting the course of the United States in the troubled months and years to come. The executive branch of the Government through special committees appointed by the President and through the State Department is conducting economic surveys. It is very gratifying to know that this will now be done on the congressional level and that the House of Representatives by means of a special committee will investigate and study prior to taking action.

I am including in the RECORD a resolution which I introduced in the Seventy-ninth Congress on November 29, 1945, and reintroduced it in the Eightieth Congress on January 3, 1947.

I hope the powers of the special committee will be sufficiently extensive to do what I have suggested in this resolution.

House Resolution 28

Resolved, that there is hereby created a select committee to be composed of 23 Members of the House of Representatives to be appointed by the Speaker, 1 of whom he shall designate as chairman. Any vacancy occurring in the membership of the committee shall be filled in the same manner in which the original appointment was made.

SEC. 2. (a) It shall be the duty of the committee to conduct—

(1) a comprehensive study of all phases, both economic and political, of the foreign policy of the United States, including a complete review of our interests in all parts of the world; such study to be made with respect to each foreign country and each geographical region, such as the Balkan States, the Middle East, Central and South America, and so forth; and

(2) an investigation of the Department of State and the Foreign Service of the United States.

(b) Such study and investigation shall be made for the purpose of enabling the committee to make such recommendations as it deems advisable with respect to—

(1) the formulation and execution of a realistic over-all foreign policy for the United States which will serve the best interests of the United States;

(2) improvements in the operation and administration of the Department of State and the Foreign Service of the United States;

(3) methods for securing accurate and up-to-date information concerning world conditions; and

(4) the communication of such information to be people of the United States.

SEC. 3. Such recommendations shall be embodied in reports to the House (or to the Clerk of the House if the House is not in session) which shall be made by the committee during the present Congress at intervals of not more than 90 days; the first report to be made within 90 days after the date of the passage of this resolution and the final report to be made on January 2, 1949.

SEC. 4. For purposes of carrying out this resolution the committee, or any subcommittee thereof, is authorized to sit and act during the present Congress at such times and places within or outside the United States, whether or not the House is sitting, has recessed, or has adjourned, to hold such hearings, to require the attendance of such witnesses and the production of such books, papers, and documents, and to take such testimony as it deems necessary. Subpenas may be issued over the signature of the chairman of the committee or any member designated by him and may be served by any person designated by such chairman or member.

Flying Saucers Prove United States Isn't Prepared for Surprise

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 16, 1947

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Joseph and Stewart Alsop:

FLYING SAUCERS PROVE UNITED STATES ISN'T PREPARED FOR SURPRISE

(By Joseph and Stewart Alsop)

WASHINGTON, July 13.—The flying saucers have served at least to pound one lesson home. That is that the United States has developed no effective warning system against surprise attack in this age of the new and terrible weapons. For if such a system had been in existence, the military authorities could instantly have ended speculation. They could have given those assurances which an effective warning system would instantly provide: "We know all that passes through the American air. You saw sunlight on the wings of high-flying aircraft—or you saw nothing—or you saw a meteor in the night sky." No such assurances were forthcoming. We do not have an effective warning system. We are not prepared for the worst.

Adequate defensive preparation for an all too possible worst will mean, in the opinions of those charged with planning for national security in this era of the atom bomb and the guided missile, two things. First, it will mean a radar umbrella extending over the whole continental United States, to give instant warning of any object which passed through the air over America. The incidental benefits of such an umbrella will be considerable; for example, it will undoubtedly serve to decrease air accidents. But its real purpose will be to flash in a moment to all defense headquarters news of the direction and weight of any enemy attack.

Such a system will be expensive. But the second prerequisite of an effective warning system will be more so. For advance warning bases, pushed out beyond the borders of the country, will also be necessary to provide those extra minutes or seconds for the launching of the American defensive counter-attack. To meet this dire necessity, very little has been done. The chain of joint American-Canadian warning stations and air bases projected along the Arctic frontier is still in the dream stage. One such base, at Churchill, on Hudson's Bay, does exist, for preliminary testing purposes. But its value even as a test base is doubtful.

Moreover, such bases, each in itself a major project, must be spaced at 200-mile intervals across the Arctic frontier. For the outer limit of radar range is 100 miles, and any gap might render the whole system valueless. Present estimates indicate that such an advance warning system will require an initial investment of at least a billion and a quarter dollars.

Yet unless the nightmare of surprise attack conjured up by the flying saucer scare is to become hard reality or unless a really secure world settlement is unexpectedly achieved, the money must be spent. The reason is simple. Very long-range supersonic aircraft and guided missiles have yet to be built, either by ourselves, by the Russians, or by anyone else. Yet such weapons are universally acknowledged to be possible, and therefore, unless there is a world settlement, certain to be built within a few years.

Moreover, intelligence reports indicate clearly that the Soviets are making an all-out attack, not only on the atomic problem, but on the whole vast mysterious area of the guided missile. In this total effort, the Soviets are being aided by no less than 7,000 hireling German scientists. Indeed, under Soviet supervision, the German scientists continued to manufacture the V-2's, the first successful supersonic missiles, in the eastern zone of Germany for some time after the war. One achievement of this continued experimentation was the A-9 rocket, designed first at Peenemunde during the furor in Sweden some months ago.

Employment of Aliens on Merchant Vessels

EXTENSION OF REMARKS
OF
HON. WILLIS W. BRADLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 16, 1947

Mr. BRADLEY. Mr. Speaker, the following survey showing the effect of that part of Public Law No. 27, Eightieth Congress, which limits the employment of aliens on board merchant vessels of the United States after April 1, 1947, has been compiled by union officials at my request.

It indicates a material shortage of American seamen which was not anticipated at the time of the adoption of the above-mentioned legislation:

REPORT ON EFFECT OF PUBLIC LAW NO. 27 ON EFFICIENT MANNING AND DEPARTURE OF SHIPS IN PORT OF NEW YORK MONTH OF JUNE 1947

A survey has been made of the vessels leaving the port of New York from June 1 to June 30, to determine to what extent the exclusion of alien seamen has affected the sailing of ships on time, and fully manned. In this 30-day period, 75 vessels have left short one or more of the ratings called for in the crew complement. Fifty ships have been forced to delay departures from 1 day to 10 days, in an effort to obtain as complete a crew as possible. During this period there was a sufficient number of seamen available and anxious to ship, but who were denied permission to do so due to Public Law No. 27, which went into effect on June 1.

For example, while 59 ships left without a full crew, they were short a total of 88 able-bodied seamen. Our survey shows that there were 108 alien seamen on the beach during this period with able-bodied seaman endorsements.

There were 351 alien seamen waiting to ship during this month period—282 of them (5 out of 6), have skilled ratings, such as fireman, cook, able-bodied seaman, etc.

Among them there are 175 men with from 2 to 10 years at sea; 118 with from 11 to 20 years at sea; 20 with from 21 to 24 years at sea and 39 with from 25 to 45 years at sea; 59 with over 20 years at sea.

There were 107 torpedoings among these men, during the war. One hundred and three are married to American citizen-residents and 70 have American-born children.

The following are the names, companies, dates, and ratings of vessels which sailed late or short-handed due to Public Law No. 27:

S. S. *Charles D. Poston*, United States Lines; was due to leave on June 18; finally left June 24; still short one able-bodied seaman.

S. S. *Richard M. Johnson*, United States Lines; due to sail June 21; sailed 4 days late,

June 24; waiting for four able-bodied seamen and one fireman-water tender.

S. S. *Leonardo Romero*, Polarus Steamship Co.; sailed 3 days late, waiting for four able-bodied seamen and one fireman-water tender.

S. S. *Joaquin Miller*, Cosmopolitan Steamship Co.; due to sail June 19; finally sailed June 21, short one able-bodied seaman.

S. S. *Knob Knot*, Fall River Co.; sailed 2 days late, short one able-bodied seaman and one oiler.

S. S. *Michael J. Monahan*, United Fruit Co.; sailed 2 days late, waiting for two able-bodied seamen.

S. S. *Beckett Hitch*, Marine Transport; due to sail June 9; finally left June 11, short a boatswain and two able-bodied seamen.

S. S. *George Pendleton*, Grace Line ship; due to sail June 4; finally sailed June 6, short two able-bodied seamen and one fireman-water tender.

S. S. *Eastern Guide*, Prudential Steamship Co.; was delayed 1 day; finally sailed short boatswain, two oilers, and two able-bodied seamen, on June 24.

S. S *Cape Ann*, United Fruit Co.; vessel sailed a day late on June 11, short two able-bodied seamen.

S. S. *Florida Sword*, Sword Line Co.; sailed a day late waiting for two firemen-water tenders.

S. S. *Manderson Victory*, United States Lines; sailed a day late, waiting for one able-bodied seaman, one oiler, one electrician, and one fireman-water tender.

S. S. *Santa Marta*, United Fruit Co.; sailed a day late, still short two able-bodied seamen and one oiler.

S. S. *Biddeford Victory*, United States Lines vessel; sailed a day late, waiting for two able-bodied seamen; one fireman-water tender, and one oiler.

S. S. *Logansport*, National Bulk Carriers; sailed a day late, waiting for two deck mates and one able-bodied seaman, on June 5.

S. S. *William Halstead*, Moore-McCormack; sailed a day late, on June 5, waiting for two able-bodied seamen.

S. S. *Santa Sofia*, Grace Line ship; sailed 10 days late, on June 16, still short three able-bodied seamen, one junior engineer, one oiler, and one fireman-water tender.

S. S. *American Ranger*, United States Lines; sailed 5 days late after waiting for a deck utility and two able-bodied seamen.

S. S. *Santa Catalina*, Grace Line; was due to sail June 6; finally sailed June 10, 4 days late, short one fireman-water tender and one oiler.

S. S. *American Merchant*, United States Lines; was due to sail June 22; finally sailed short a boatswain and deck utility man.

S. S. *American Traveller*, United States Lines; sailed 3 days late on June 25 still short an able-bodied seaman and one fireman-water tender.

S. S. *American Scout*, United States Lines; sailed 3 days late waiting for a carpenter, a deck utility, two able-bodied seamen, one oiler, and an engine utility.

S. S. *Mormacpenn*, Moore-McCormack; due to sail June 12; sailed June 14 short one deck utility.

S. S. *Mormacsun*, Moore-McCormack; sailed June 20, 2 days late, after waiting for a boatswain, deck utility and an able-bodied seaman and wiper.

S. S. *Santa Inez*, Grace Line; 2 days late on June 4; short one fireman-water tender and one oiler.

S. S. *Coastal Captain*, AGWI Lines; sailed June 20, 2 days late, still short a boatswain, two able-bodied seamen and a deck mate.

S. S. *Mormacoak*, Moore-McCormack; sailed June 25, 1 day late, short three junior engineers.

S. S. *Exford*, American Export; sailed a day late on June 26 after waiting for two able-bodied seamen.

S. S. *Mesh Knot*, AGWI Lines; sailed June 25, a day late, after waiting for two able-bodied seamen and two oilers.

S. S. *Mormacisle*, Moore-McCormack; sailed on June 24, a day late, short four able-bodied seamen and one fireman-water tender.

S. S. *Santa Ana*, Grace Lines; sailed June 18, a day late, short one fireman-water tender.

S. S. *American Forwarder*, United States Lines; sailed 1 day late on June 5, short 1 able-bodied seaman and one deck utility.

S. S. *Cape Alexander*, AGWI Lines; sailed on June 14, a day late, waiting for three able-bodied seamen, one oiler, one fireman-water tender, and one electrician.

S. S. *Exporter*, American Export; sailed a day late on June 11 while waiting for one able-bodied seaman.

S. S. *Santa Clara*, Grace Lines; sailed on June 25, a day late, short two junior engineers.

The following vessels sailed shorthanded in the month of June:

S. S. *Anchor Bend*, United Fruit, sailed June 21 short deck mate and able-bodied seaman.

S. S. *Attleboro Victory*, United States Lines, sailed June 14 short one able-bodied seaman.

S. S. *Cape Isabel*, United Fruit, sailed June 21 short one oiler.

S. S. *Cape Race*, AGWI Line, sailed June 11 short one able-bodied seaman.

S. S. *Creighton Victory*, Black Diamond, sailed, June 21, short one able-bodied seaman.

S. S. *Crown Diamond*, Marine Transport, sailed June 19 short two able-bodied seamen.

S. S. *Gainesville Victory*, Black Diamond, sailed June 10 short two able-bodied seamen and one deck mate.

S. S. *Gulf Mills*, Gulf Oil, sailed June 21 short one pumpman.

S. S. *James Wheeler*, Grace Line, sailed June 21 short two firemen-water tenders.

S. S. *Pacific Victory*, American export, sailed June 20 short two able-bodied seamen.

S. S. *Union Victory*, Black Diamond, sailed June 24 short three able-bodied seamen, one deck mate.

S. S. *West Linn Victory*, Black Diamond, sailed June 24 short one deck mate.

S. S. *African Moon*, American South African, sailed June 21 short one able-bodied seaman.

S. S. *Exchequer*, American Export, sailed June 21 short one deck mate and two able-bodied seamen.

S. S. *Nonpareil*, Lykes Bros., sailed June 21 short one able-bodied seaman.

S. S. *Kendall Fish*, Lykes Bros., sailed June 14 short one able-bodied seaman and one firemen-water tender.

S. S. *Arthur Riggs*, Polarus, ship sailed June 28 short a bosun, and one deck mate a day late.

S. S. *Augustana Victory*, United States Lines; sailed June 28 a day late waiting for a deck mate, four able-bodied seamen, and one junior engineer.

S. S. *Gainesville Victory*, Black Diamond, vessel, sailed June 28 short one junior engineer.

S. S. *Leader Loop*, North Atlantic & Gulf, sailed June 28 a day late short one deck mate.

S. S *Norcuba*, North Atlantic & Gulf, sailed June 27 short one deck mate.

S. S. *Parkersburg Victory*, United States Lines; sailed June 28, 2 days late, short one able-bodied seaman.

S. S. *T. J. Stevenson*, Stevenson Co., sailed June 27, a day late, waiting for one officers' steward and two able-bodied seamen.

S. S. *Union Victory*, Black Diamond; sailed June 24 short three able-bodied seamen, one deck mate.

S. S. *West Lynn Victory*, Black Diamond; sailed June 24 short one deck mate.

S. S. *Whittier Victory*, Moore-McCormack; sailed June 30, 2 days late, short one deck mate.

S. S. *Santa Eliana*, Grace Line; still waiting on June 30, waiting for three able-bodied seamen, two acting able-bodied seamen, one wiper.

S. S. *AGWI Queen*, AGWI Line; still waiting on June 30 for one chief electrician.

S. S. *Marine Perch*, American Export; left June 26, short one engineer, utility.

S. S. *Santa Maria*, Grace Line; sailed June 27 short one junior engineer.

S. S. *Mormacmoon*, Moore-McCormack; still waiting on June 30, already 2 days late, waiting to get three able-bodied seamen and two oilers.

S. S. *Belle of the Sea*, United States Lines; sailed June 28, a day late, short one deck mate.

S. S. *Mormacswan*, Moore-McCormack; sailed June 27 short an oiler.

S. S. *Stag Hound*, United States Lines; sailed June 26, waiting for one carpenter, one deck utility, one acting able-bodied, and one OS.

S. S. *Defiance*, Lykes Bros.; sailed 3 days late, June 28, short one FWT.

S. S. *Mormacelm*, Moore-McCormack; sailed June 14 a day late, short one able-bodied and two acting able-bodied seamen.

S. S. *James Bennett Moore*, United States Lines; sailed 1 day late, short one able-bodied.

Address by Hon. Francis J. Myers Before Pennsylvania Veterans of Foreign Wars

EXTENSION OF REMARKS
OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, July 17 (legislative day of Wednesday, July 16), 1947

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the RECORD an address entitled "Where Do We Go From Here?" delivered by me at the annual encampment of Veterans of Foreign Wars of Pennsylvania, at Harrisburg, Pa., on July 16, 1947.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I want to express my appreciation to your State commander, Mr. John U. Shroyer, for this invitation to address you today at your annual encampment. I have always had a high regard for the Veterans of Foreign Wars as an alert, effective, and vigorous organization, and I want to congratulate you all as members and delegates for the way you and your organization in the past have gone about the task of translating veterans' needs and desires into direct action.

It is because the VFW has shown such vigor as well as vigilance in the veteran's interest that I think I can today discuss some of the major issues facing us all, and particularly facing the veteran, and discuss them in the knowledge that if I can succeed in presenting a convincing and a reasonable approach to some of these issues that this organization and you delegates today representing it can be counted on not only to interest yourself in these problems—you have already shown great interest in the great issues facing America—but to proceed to do something about them.

Down in Washington, we in the Congress are now rushing pell-mell into the home stretch of a comparatively short but of a very turbulent session of Congress. It is the second full session since the end of the war. My own opinion is that it has not been a particularly productive session, but I do not want to dwell on that aspect or on my opinions because that might be reaching into the realms of politics, and I do not think politics deserve a place in my remarks at a meeting of this type.

I mean, of course, partisan politics. Any discussion of what this Congress, now in session, has done which I think it shouldn't have done or has not done which I think it should have done would, undoubtedly, be construed as partisan for the simple reason that I am a member of the minority party in the Congress.

But politics, properly speaking, means the science of government, means aspects of public policy, and therefore touches closely on any discussion today of anything and everything which affects our lives, our health and safety, our very existence as a nation.

I am going to touch on some of these things, but I want to assure you that I want to keep that discussion involving politics on the level of politics in the highest sense.

It may be something of a surprise to you, as it was to me, to discover that a lot of Americans, only two short years after the end of this last war, seem to believe that insofar as our veterans are concerned, everything has been taken care of and there remains very little for our Government or our country to do for veterans as such. Of course, this is not true; but, nevertheless, since we have appropriated billions upon billions of dollars for veterans and for their benefits, this impression seems to be gaining that the money in itself and by itself takes care of just about all of our obligations and so we can sit back now and forget about the veteran as such and devote all our energies to looking out for ourselves, conducting business as usual, politics as usual, and government as usual.

This complacent feeling is not only restricted to matters affecting veterans; it is, in fact, mushrooming out to such an extent that a lot of Americans, far too many Americans, are becoming complacent about everything, are settling back into deceptive security in the false belief that everything is going to turn out all right, so why worry?

Perhaps it is natural after a war as long and as hard and as bitter and as bloody and as costly as this past war that our people, burdened as they were by the strains and the worries and the sacrifices that war brought to them, should insist now, nearly 2 years after the end of that war, that they be given an opportunity to relax.

But, my friends, there is a happy medium in relaxing as in everything else. We in America, many of our political figures particularly, and many of our people, seem to think that letting down from the strains and the demands of war means going to the other extreme and relaxing with all our might—working, you might say, at this business of taking things easier and not getting excited.

I think America has relaxed a little too much, and I think you will agree with me.

Let's go back, say, 2 years or so, for a little perspective. The war in Europe was over but many of you and millions like you were still in Europe, still, for all practical purposes, at war. Hundreds and thousands and millions of the troops in Europe this time 2 years ago were headed for Japan. Others were headed home but with no idea when you would actually get home. I know you were pretty pessimistic about the prospects and the talk was going around that you weren't going to get home, either, because you would be sent to new stations in the Far East or otherwise kept abroad so that you would not come home to create an unemployment problem. I know how strong that conviction was among many of our troops in Europe 2 years ago. Of course, that talk was false, but it was a little bit hard, I imagine, for you to disregard it.

On the other side of the world, those of you who were there were being told, or you began thinking on your own, that you were going to be there for perhaps 3, 4, 5 years before the job you were doing—the dirty, bloody job—would be finished.

That was the dark side of the picture 2 years ago. There was a bright side, too. In nearly all your letters from home, no doubt, and in the newspapers you might have been receiving from home, and over the radio and in little documentary movies and in the magazines which might have found their way to you and in the speeches in the Congress you might have read if anyone in your outfit was able to come across a copy of the CONGRESSIONAL RECORD, you were being told how much all of us in America appreciated what you were doing and how we were going to see to it that when you got back nothing—nothing—would be too good for Joe. It would be an altogether different America from the America you left. It would be a different world. You wouldn't know the place.

Perhaps all that sounds a little hollow now, undoubtedly a good many of you have a let-down feeling. Things haven't quite worked out as rosily as we were convinced they would.

But there is one point about all of this that I insist you must believe. When the people of the United States—all of us—told you 2 years ago how wonderful it was going to be and what all was going to be done primarily in your behalf, they meant it. They really did; take my word for it, nobody was kidding.

Well, then, what happened to make some of those promises ring so hollow today? What happened to the homes we were going to have waiting for you? What happened to all of those postwar wonders in washing machines, television, and sleek automobiles, and snazzy gadgets that you were going to be able to buy? Our factories are turning those things out now in volumes but somehow, for some reason, the veteran is not on a buying binge. It is a very simple reason: he just doesn't have the money. Jobs are plentiful—in most parts of the country; that is, and in most of Pennsylvania, too, although not in all parts of the State—and wages are pretty high. Just imagine where you young veterans of World War II would be sitting today with your present income if prices were something like they were in 1939, if housing were as reasonable as in 1939.

I don't want to belabor the point because I think that each of you has thought more than once, thought often, of this very situation. Prices did not have to go as high as they have gone and housing did not have to shoot up to such ridiculous pricing heights that the veteran, even the comparatively well-to-do veteran, is priced out of the market.

Although there were plenty of warnings 2 years ago and last year that we were headed for just such in inflationary spiral as we are now experiencing, that we were relaxing—in this case relaxing controls—too quickly and that the result would be unfair to the veteran particularly, I sincerely believe that no one really expected things to get as bad as they are insofar as housing and prices are concerned. I sincerely think that everyone expected a certain degree of moderation would prevail. Unfortunately, however, everyone looked to the other fellow to practice that moderation and thought perhaps that if most prices remained stable, demand being as high as it is, the occasional individual here or there could raise his own prices a mite without really disrupting our economy. It was a surprise to those who operated on this optimistic theory to discover that after they raised their own prices a mite everyone was raising prices in turn and the result now is little short of chaotic.

In the meantime complacency took such a strong hold that we have had no action on long-range housing or long-range social and economic problems which cry for solution, which will be infinitely harder to solve as we let them go without attention.

The VFW has done an outstanding job, I think, in support of the Wagner-Ellender-Taft long-range housing bill, reintroduced this year as the Taft-Ellender-Wagner bill. It has done an effective job, too, I think, in spot lighting the needs of the veteran on education or on-the-job training subsistence allowances and it has otherwise done a fine job in representing the veteran. On some of these things your organization and the other veterans' organizations are meeting with great success, particularly when the veteran angle is clear and obvious. On other matters where the veteran shares with the rest of our citizens in programs designed to maintain and expand our prosperity and improve conditions generally—and I mean, particularly, the housing bill—the success is not as spectacular because of the failure of many of our officials in the Congress and in the legislatures to realize how closely bound up to the veteran morale and veteran need and veteran requirements some of these programs are. A great deal more education on this aspect of the problem would help to solve the problem. The VFW can be proud of its efforts so far in this direction.

Perhaps the most important single problem facing the veteran is the same problem facing everyone in America and everyone in the world, that is, the problem of achieving a real and enduring peace so that we can, for the first time in our history and in history, know that a peace so dearly won is going to last.

Two years ago the United Nations was being created in an aura of friendship of trust and of alliance among all nations except those which had so recently tried to bathe the world in blood. That San Francisco Conference was one of the most thrilling chapters in modern history. We ascribed to the infant organization it created all the virtues and few if any vices. Familiar with the failings of the old League of Nations—failings for which we were to some important extent responsible because of the refusal of this country to join the League a generation ago and help make it work—but, familiar with the failings of the old League, we were determined to avoid those mistakes this time. The charter which was drawn up at San Francisco was regarded by most people as solving all the problems of peace all by itself.

Of course, it didn't; of course, it couldn't. It has been with reluctance, however, that we have discovered the weaknesses in the charter, as they have developed because all of us wished with all our might that the charter would not develop weaknesses and that with it in operation we would just sit back and relax here, too, and let this question of peace largely take care of itself. You see, we all wanted so much not to have to worry all the time about world peace along with all of our other problems.

During the period, however, when we were almost convinced that world problems were just about all solved, we began to find in this country a renewal and a revival of the isolationist sentiment which almost resulted only a few short years ago in disaster for us and for the whole world. The feeling began to grow again in areas and among groups where it had once been strong that we did not have to devote much time or money or effort anymore to assuring peace because we had done our share and everything was in good shape. At the same time, a new trend developed with the end of the war for drastic Government economy. Here again the idea was that everything was taken care of now, that the United Nations was going to maintain peace, that the people of the devastated countries would suddenly, and as if by magic, revive their agriculture to the point where it could feed them and revive their industries to the point where their plants could provide them with the necessities of life and enough in addition so that they could engage again in foreign trade and help restore their economies. That was the comforting idea of those who hoped to see drastic Government economy.

The result of this hope—a false hope, a hope not based on realistic understanding of the colossal nature of the problems of reconstruction—was an overpowering drive to cut and cut and cut, to cut the Army and Navy and our Air Corps, our military research programs, our programs for relief and aid abroad.

These two forces, the reviving isolationism and the postwar reaction against high taxes and government costs, inevitably met and fell in love. Their partnership now provides us, and the world, with one of our greatest obstacles to achieving that real and enduring peace we all seek.

There are, of course, additional factors—the spectre of expanding communism, less as an economic force—that comes later—than as a political force, a force for the creation of chaos where none exists, for the exploitation and the ballooning and the encouraging of chaos and of misery and of hunger and despair where they do exist.

The historic Marxian-Trotsky theory that security for communism in any one nation—for instance, now in Russia—can be assured only by a world won for communism—is again on the march. Although Trotsky was banished and hounded and finally assassinated, the theory he left with the Soviet Union has lived on and is now, apparently, Russian policy.

I think we have an infinitely more attractive brand of political philosophy to sell to the men and women of Europe and the world than the Communists have. I believe, with further and expanded efforts on our part to show the peoples of Europe how firmly we stand committed to personal liberty and to individual economic as well as political freedom, we can win this war of ideologies, a cold and bloodless war which has in it, however, the makings of real conflict.

But we must do more than outfight the Russians economically; we must continue to make clear to Russia, and to all other nations, that we still stand committed wholeheartedly, unwaveringly, to a decent world, to the world we envisaged when the San Francisco Charter was being drawn up in such an aura of hope and of friendship, and that we are ready, at any time, to discuss fully and completely the issues which carry within them the seeds of possible conflict.

Unfortunately, Russia, within the United Nations and without, has shown no disposition, particularly in the last year, to discuss anything except on Russia's own terms, terms often absurdly indifferent to the realities of an atomic era.

We have made every effort—we have even been accused of going much too far and of appeasing her—to cooperate with the Soviet Union on solving the vital issues of atomic energy, of feeding Europe's starving, of restoring political self-determination to some of the former enemy nations, of finding common grounds for establishment of an international United Nations police force capable of maintaining peace, of finding common ground on the definition of what constitutes liberty and freedom and human rights. In every one of those instances we have failed to reach real accord. We have failed because the cooperation was a one-way street. Russia has conceded nothing, has budged on nothing.

Now had we not gone as far as we did to try to find a common ground with this rival colossus, had we given up trying to cooperate after the first half-dozen or dozen snubs and rebuffs, we might today be divided over whether or not we had really done our best to achieve real peace. I think now there is common agreement in America and among the peoples of all free nations—those who have access to the factual news of world affairs—that in the present mood of the Russian leadership cooperation and understanding are beyond achievement at this particular time. We know that now, although, here again, it is a decision we had to force ourselves to make and when we did make it we did so with the utmost reluctance, for we in America, and I think all free peoples, hate to concede that cooperation with Russia seems to be unobtainable at this time.

Where does all this leave us, and where do we go from here?

Members of the VFW, all of whom have participated in at least one bloody war overseas, and some of whom have participated in two or even three, are no more and no less involved in this dilemma than are all Americans, but you men, who have experienced war and know its curse first hand, are in a remarkable position to help the rest of the citizenry realize its obligations.

We must, of course, remain strong, powerful, alert, and mobile until the day is reached—God grant it be soon—that the true international cooperation we foresaw 2 years ago at San Francisco is made into actual reality.

We must, also, pursue unwaveringly the commitments we have made in Europe and elsewhere to see to it that free peoples, particularly those who fought so nobly with us in the past war, can retain control of their own destinies, their own futures, especially if that can be assured merely with effort and with dollars. It is a difficult road ahead, there is no doubt. It is not one to encourage complacency. It is a rocky road, and, yes, it is an expensive one to travel. We don't even have the guarantee that after we have traveled it, we will achieve our final aims of a free and decent and peaceful world.

But, my friends, do we have any alternative but to allow the world, by default, to sink into its own misery and despair, sink so low as to drag us, eventually, into the very conflicts we hope to avoid?

Isolationism and "economy," hand in hand, present us an attractive deception. We can't afford to be fooled by it.

You men, who have seen what those twin deceivers can bring us to, can be counted on, I am sure, to see to it that America never again drops its guard, never again crawls into its own self-sufficient shell unmindful of the dangerous waves lapping on our shores.

Rebuilding the National Integrity of Nations

EXTENSION OF REMARKS
OF
HON. JOSEPH R. McCARTHY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Thursday, July 17 (legislative day of Wednesday, July 16), 1947

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an able and informative address by the Senator from Nevada [Mr. MALONE] before the national convention of the Young Republican National Federation, at Milwaukee, Wis., June 7 last.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

American private capital investments in Asia, Europe, and South America, backed by American brains, ingenuity, and know-how, will gradually raise the standard of living of the world.

To encourage the investment and operation of such capital it is necessary to rebuild the national and international integrity of the nations of the world.

Each of the nations of the world should become as near self-supporting as reasonably possible. International trade breeds competition between nations and ultimately leads to war. This is the record over the last 2,000 years.

Congress does not know how to lend money; they only know how to give it away.

Private business not only knows how to lend and invest money, but it also knows how to collect it and to make the investments pay dividends.

Few remember that when America woke up after the Civil War it was England's businessmen and private investors who furnished the first substantial financing for our transcontinental railroads and heavy industries in this country because they knew that this Nation had integrity and that the country would grow and prosper.

The situation is now reversed. Our businessmen have the experience, the credit, and the know-how. The opportunities for profitable investment throughout the world are almost unlimited, providing the integrity of the nations members of the United Nations Organization can be established and maintained.

The objective is permanent peace while increasing the standard of living throughout the world.

It must be recognized, however, that the 55 different standards of living represented by the 55 members of the United Nations present a definite problem in trade relations.

A partial answer to the problem is the determination of the differential of the cost of production on specific products between this Nation and wherever our chief competition is located. That differential should be represented in this country by an import fee. Imports are not prevented by such an import fee, but the fees bring the goods in on the basis of an equal wage-standard of living level; as the standard of living wages are raised in other countries the import fees here are reduced in proportion—and when the standard of living of the competitive country approximates our own—then free trade is the immediate and automatic result.

Such a flexible import fee is included in the 1930 flexible tariff act in which it is provided that the President of the United States may at any time request the Tariff Commission to compute the differential of cost of production of any specific product between this country and such competitive nation—that amount can then be made the tariff or import fee by Executive order.

When money is loaned to foreign nations by the Congress of the United States, such loans should only be made to increase the productivity of that country—and should never be loaned to a government (as it has in the past) simply to pay the current running expenses of that government.

We should secure what we loan by taking a lien or mortgage on the increased production, and thus have a reasonable prospect that the loan will be repaid. This routine precaution is observed in connection with our own citizens.

We have put out approximately $17,000,000,000 through various agencies of the Government in so-called loans, gifts, and food supplies since the end of World War II and unless our policies are changed in this connection this is only a start.

I have learned about more ways of siphoning the taxpayers' money out of the Treasury and into the pockets of foreign nations during my 5 months on the floor of the United States Senate than I ever knew existed—it is incredible.

First, comes the direct appropriation by Congress loaned to a foreign nation; the Greek-Turkey loan is an example—second, there is the financing through the Export-Import Bank, as in the case of the loan to Mexico—third, treaties like the Italian agreement just ratified by the United States Senate in which it is provided that raw materials from Russia and other nations are proc-

essed by the Italian workers without wages of any kind as reparation payments, leaving someone (meaning Uncle Sam) to feed them while they are doing slave work for the Russians during a period of 7 years—fourth, the World Bank is set up to sell securities to the investors of this Nation, whose money is then loaned to the foreign nations, with every prospect that thousands of small investors in this country will lose as in the case of English investors through the Bank of England when the same thing was tried there many years ago.

The fifth method, even more dangerous than the first four, is the proposal by the State Department to divide the markets of this country with the foreign nations through the so-called reciprocal-trade program. More harm may be done to the economy and standard of living of this country by our State Department in Geneva during the next 3 months than Congress could repair in several years.

The cumulative result of these plans can only be greatly reduced wages and similarly reduced standards of living in this country.

If these methods are allowed to continue indefinitely we can easily spend ourselves into a form of government we would not knowingly vote for—some kind of a collective or authoritarian form that it could require generations of time to throw off, if in fact we could ever overcome it.

There is now in the course of organization a world trade organization which is supposed to operate by majority vote and establish trade relations throughout the world. It is difficult to see how we can win.

There is no better organization than the Young Republican National Federation to get into this fight and help straighten out our thinking.

Let us get our feet back on the ground and face this thing—we have no friends in the world today except through the protection or of the money that we can offer them. Every nation but ours is being intensely realistic and practical—other nations are working on every angle to improve their position.

England has just completed a trade treaty with Russia providing that she will, in effect, process Russia's raw materials—furnishing Russia with the manufactured goods that Russia needs, including jet planes and other heavy industrial machinery the Communists can use in case of war.

It is time that we adopted an American policy in furtherance of an American international policy geared to our national economy that makes sense and that we can continue to support through good times and bad.

It is time that we adopted a definite policy in the method of emergency feeding the people of any country, of appropriating the necessary funds and of notifying such nations that the required credit has been established through the proper agency in this country. When shipments of the supplies are made in the approved manner, then the invoice should be sent direct to the Treasury of the United States for payment—quit sending them the cash to be expended anywhere in the world and in any way they may decide.

Treat them like a groceryman treats a contractor whose payments for his work are delayed. The contractor gets credit; he does not get the money from the groceryman so he can go across the street and buy from his competitor.

Adopt a policy of loaning money to foreign nations, and only loaning for the purpose of increasing their productivity. Take a lien or mortgage on the increased productivity to run until the loan is repaid; loan the money for the purchase of industrial and farm machinery, equipment for the production of fertilizer and income-producing materials.

Handle it just like the people treat a good neighbor who has had a bad fire; loan him a team of horses and a plow, and maybe sign a small note at the bank to buy his seed corn and a few necessary things until he makes his first crop.

Put the wrecked nations in the way of supporting themselves, otherwise there is no end to their needs; they will be just as hungry next year as they are now.

There is no magic way to bring everybody up to our standard of living overnight. This thing of making war has been going on for 5,000 years of recorded history. The record shows that there has been almost continuous war in progress somewhere in the world all of those centuries. They are in progress right now, and more are in the making.

What can we do in the meantime? The answer is comparatively simple. Remain strong, make our system work, keep up our armed forces, and continue with our laboratory experiments in methods of warfare; keep our secrets to ourselves so that no nation ever knows just how strong we are. No one ever picked a fight on the street with Jack Dempsey. Establish and maintain the best intelligence system in the world and know at all times what other nations are doing. And get back to our business of making a living and minding our own business.

Entry of Displaced Persons Into the United States

EXTENSION OF REMARKS

OF

HON. HERBERT R. O'CONOR

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Thursday, July 17 (legislative day of Wednesday, July 16), 1947

Mr. O'CONOR. Mr. President, I request unanimous consent to have inserted in the Appendix of the RECORD editorials from the New York Times of July 15 and 17 and the Baltimore Sun and Washington Post of July 16 with regard to the question of legislation authorizing entry of a number of displaced persons into this country.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the New York Times of July 15, 1947]

IT'S NOT TIME THAT'S LACKING

Senator VANDENBERG came out of yesterday's bipartisan conference with President Truman with the announcement that it seemed "all but impossible" to adjust the immigration laws at this session to admit displaced persons. If this is true, the Stratton bill and one of similar intent in the Senate will die. Something else will die, too. We have posed as a great humanitarian Nation. In loans and gifts, made and projected, we act in a humanitarian manner, but our kindliness, down to the present moment, seems to be for far-away peoples. We turn chilly at the prospect of admitting, by an adjustment of quotas, within a space of 4 years, the equivalent of one stranger for each 350 of our present population. The strangers would be of several faiths and various national origins. The overwhelming majority of them would be refugees from communism, which most of us don't like, either. What will die if these bills die is the refugees' faith in us.

Congress is in a hurry to get home. The refugees, who have spent 2 or more years in camps, without homes, are probably in a hurry to get somewhere too. The proposal to let some of them in by diverting unused quotas has been before the Eightieth Congress since January 6, when President Truman included it in his message on the State of the Nation. The Stratton bill has been in the House since the beginning of April. There has been time enough.

The program of the Stratton bill is a little thing to do for those who stood with us in the late war, and stand with us now. It is much more of a thing to do for ourselves, for these would be carefully selected immigrants, many of them bringing skills we need. Congress can find time for this measure, or for a compromise between this and the Senate bill, if it wants to. If it does want to, it can make many more than 400,000 friends for us; it can increase our own self-respect; it can answer the critics who call us hardhearted hypocrites.

[From the New York Times of July 17, 1947]

LAST APPEAL FOR THE DP'S

The strong voice of Secretary Marshall has now been raised in a final plea to Congress to admit "a substantial number" of Europe's 850,000 displaced persons to this country. Congressional leaders offer only a plea in avoidance—that there is not time before adjournment to pass the Stratton bill, providing for the admission of 400,000 of these homeless and stateless refugees in the next 4 years. Mr. Marshall's answer is that it must be done if our national honor is to remain untarnished. Otherwise we shall stand before the world as a nation which fails to practice what it preaches and draws aside while urging others to come to the rescue.

There has been plenty of time to pass such legislation. It has been hanging fire for almost 7 months. The stubborn opposition to it is seldom openly formulated, but it seems to be based chiefly on the idea that lowering the bars to these immigrants would open the way for a Communist infiltration. Nothing could be farther from the truth. Most of these tragic people are fugitives from Soviet tyranny—Balts, Poles, Yugoslavs, Ukrainians, and others—who would rather die than return to the slavery and oppression they have known at first hand. Almost all of them are middle-class skilled workmen and tradesmen who would soon find a place among us. Russia demands their forcible return. There they would be ground to extinction as labor-camp expendables.

At least we will not consent to that. Secretary Marshall points out that if we permit them to remain where they are (and, incidentally, at a cost of $182,000,000 a year to our taxpayers), they will be a continual source of conflict and friction with Russia. But the Secretary's appeal is based on altogether higher and broader grounds—our professed humanity, the good opinion of mankind, and the old tradition of America as a home for oppressed and freedom-loving people. "That is the significance of the Statue of Liberty," he told one recalcitrant committeeman.

His plea before the House Judiciary Committee is backed by Secretary of War Patterson and Secretary of Commerce Harriman in equally strong terms. Many other countries, among them Great Britain, Belgium, Norway, Brazil, and Venezuela, are opening their gates while we refuse. The issue has become a test of our sincerity and moral leadership in the world. If we put up our own iron curtain against these helpless victims of chaos, it will not be they alone who lose. We, too, will lose something precious—the respect of our friends and our faith in ourselves.

[From the Baltimore Sun of July 16, 1947]

ARE WE TOO BUSY FOR THIS?

One outcome of the meeting of congressional leaders with President Truman was an agreement that the rush of legislative business made it all but impossible to take

action on a proposal to allow a substantial number of Europe's displaced persons to seek refuge here. Congress wants to close shop on July 26, and that supposedly does not leave time enough for its members to think about the 900,000 homeless refugees now wasting away in detention camps.

Is this Nation going to turn its back on a homeless multitude just on the flimsy excuse that we do not have the time now to think about them? After all the talking we have done about being the great humanitarian influence in the world, the champions of peace and good will, it would be a sorry spectacle if we did nothing to help the victims of Nazi slave labor and political oppression to find new homes. The liberation of Europe's uprooted and persecuted families was one of our primary reasons for going to war, and liberation does not mean freedom to rot in a detention camp.

Congress should never be so busy that it does not have time for such a matter. It costs us nothing to help people who only ask for the chance to help themselves. It does not even cost us much of our precious time. The issue of the DP's plight has been clearly presented. Any opposition to their entrance here has been discounted as mere prejudice against foreigners. Now Congress has only to decide whether this country will live up to its obligations and highly vaunted ideals or let the world know that we stand for America for Americans only.

President Truman may accept Congress' excuse that it is too busy to uphold our traditional policy of furnishing refuge for the oppressed, but the general public will not let our lawmakers off that easy. Anyone who has seen Congress in action is certain that our representatives are never too busy with political affairs to do something constructive, if they really want to.

[From the Washington Post of July 16, 1947]

TOO LITTLE TIME

Europe's 850,000 displaced persons seem doomed to sympathy but precious little action as far as the United States is concerned. Senator VANDENBERG'S announcement that bipartisan congressional leaders find it impossible to wedge in the Stratton refugee bill before adjournment must come as a cruel joke to the men and women who have already spent 5 or even 8 years of their lives in a homeless limbo. Statistically, no doubt, it is possible to show that Congress has its hands full with other matters without taking up the bill that would admit 400,000 refugees to this country within a period of 4 years. But these people are not mere statistics; they are 400,000 human beings with human aspirations, coldly classed under the label of "DP's." During the concentration-camp days many of them lived by sheer spiritual strength in the hope of deliverance. That hope cannot sustain them much longer when the verdict on the measure that would enable them to reestablish themselves is "too little time."

We have been generous, yes, in feeding and caring for DP's, the bulk of whom are in our zone in Germany. But this is an expedient which in the end may be far more costly than a permanent solution, for what the great majority of these people want is not a soup-kitchen existence as vagrants but an opportunity to earn their bread and lead constructive lives. Our ability to absorb refugees in the numbers envisaged in the Stratton bill within our quota system is beyond question. So, too, is the fact that these people, most of them anti-Communist and of the hardiest stock of Europe, would contribute greatly to the income and welfare of this country. The principal barrier is the necessary adjustment of immigration quotas and permission to employ unused existing quotas—plus the matter of time. We share a sense of the difficulties facing Congress in winding up the legislative session. We also know that Congress is capable of both speedy and humanitarian action when it sets its mind to it. Anything less in this case would be unworthy of the high principles the United States is upholding before the world.

Commencement Day Address by Hon. Francis J. Myers at Villanova College

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, July 17 (legislative day of Wednesday, July 16), 1947

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the RECORD a commencement-day address delivered by me at the annual commencement exercises at Villanova College, Villanova, Pa., on June 16, 1947.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

America is now in the midst of a mad rush to forgetfulness.

To many of you young men today receiving degrees—to most of you, I believe—this trend, this stampede in America to the mental comforts of a lost past must indeed be a baffling phenomenon. I say this because I know that many of you have lived through experiences which do not lend themselves to forgetting, and it must be hard for you to see how so many of your fellow citizens are forgetting so quickly things you cannot forget, things which do not deserve forgetting.

Let's see now, how long ago was it—3 years and 10 days ago—June 6, 1944, that American troops hit the beaches at Normandy? Was that really so long ago? That was within the span of the college careers of you men now graduating.

In normal times, in other years, it would not require much reminding to turn the minds of a college-graduating class back to something which happened in their freshman year.

Some of you were sophomores—those of you who were in school at the time—when the landings were made on Iwo Jima and the Philippines and Okinawa; when carrier task forces were hitting Formosa and Tokyo and Paramushiru. Those of you who were in school in those days were not spending much time on nuclear energy in your physics classes because we didn't know about the atomic bomb in those days and atomic energy was a subject of slight and casual concern to the average college sophomore.

The things that have happened in the past 3 years, in the past 2 years, are of such recent events, such immediately recent, acutely alive yesterdays, and yet to many Americans, to too many Americans, they seem to be catalogued now as ancient history. America is in a mad rush to forget.

This is a difficult year for commencement speakers because of this fact, because all the old rules and all of the old and traditional approaches of the commencement speaker are obsolete now.

The graduating class of Villanova College this year, as in all colleges, is composed not of starry-eyed youngsters, but of men who were rushed to maturity suddenly and by necessity and who have come back now to complete educations interrupted by the war. No one can give you sugar-coated descriptions of a world of milk and honey and love and brotherhood because you have seen the world. You have seen men and nations at their worst. You have seen power politics in action in its worst manifestations, in the slaughter of innocent people and in the strangulation of moral principle.

On the other hand, if I or any commencement speaker were to paint for you a picture all black in its tones, to reach into your own memories, to call up the horror you have seen and the bad you have experienced, and to say to you this is the future, you would be perfectly justified to reject that, too, because it would represent a defeatism and a cynicism out of all proportion, and a repudiation of all the things that you thought you were fighting for in those terrible days of those acutely alive yesterdays you remember so well.

Not only would you be justified to reject such a picture; I am sure you would reject it. It is a picture I have no intention of trying to paint for you.

Things are bad, and time is running out, and the prospects for the future are dim—yes, the old cliches apply. But there are in this country today perhaps 14,000,000 young men and women who have been through times far more terrifying and have kept their sanity because they knew there had to be something better ahead.

Whether he participated in the battles of World War II or not, every young man coming out of college today lived those years in close proximity with all their horror, and vowed, I know, to bend his efforts to see to it that wars indeed might be banished from the face of the earth.

Now's your chance.

I can think of no finer task to which you could dedicate your efforts. I can think of no finer group than a group such as this to set to the task. You may have been disillusioned often enough in recent years to have lost naïveté, but not sufficiently, as have some of your elders, to have lost all hope and all enthusiasm.

I mentioned earlier those acutely alive events of the past 2 or 3 years. There were some other aspects of those years—not quite so easily remembered today—the world-wide conviction of 2 years ago that this time there would be a submersion of intense nationalisms and the gradual emergence of a world committed to decency among men and among nations.

Today, in contrast, the headlines outline for us an unmistakable division of the world into new armed camps, into new power blocs, into new frontiers bristling with suspicions and hates as well as with arms.

Headlines oversimplify, of course, and most people recognize the fact. They are, however, symptomatic, and they are generally based on some substantial evidence.

The evidence on which the scare headlines of the last few months, the last year, have been based, has indeed been substantial, even though all of it by no means is scientific, factual, or supportable.

There is no denying the evidence that we face a prospect of a future war. Two years ago, a year ago, we might have denied it, and we would at that time have had a vast amount of accumulated evidence to support our denials. Good will then was a commodity which, although not world-wide in its distribution, was nevertheless apparently strongly established throughout most of the areas of the world.

There is little good will in the world today, and every nation in the world realizes it and is acting accordingly.

But the good will which existed 2 years ago, even a year ago, can still be summoned back—yes, there is yet time for that. And we must take the lead to reestablish this commodity as the world's number 1 value.

The Government of the United States has done, I think, its full share—more than its share—so far to build a world founded on decency. We have poured out billions upon billions of dollars without reluctance into agencies over which we had no direct control for the relief and rehabilitation of an entire world. In some instances, we have suffered the biting of the hand that feeds, but we have not withdrawn our hand and the succor it proffered. For that we deserve to have some pride, yes, but we have not asked for, nor should we have expected the groveling, elaborate gratitude of the beggar receiving a handout. We had a duty, a stern duty, to make available enough from our abundance to rescue the starving and the despairing and the hopeless victims of a war which should never have been allowed to start, of a war which we, a generation ago, had we been so inclined, might have helped to prevent.

We ignored our obligations a generation ago; we have not, so far, ignored them this time. I pray that we do not.

We have not been entirely altruistic in our generosity, for we had and still have, a tremendous and vital stake, a selfish stake, in the resurrection of a decent world, and up to now, we alone have been in a position to encourage the rebirth of such a world. But, although we have not acted entirely out of unselfish motives, we have been intelligent enough to recognize our obligations—to recognize where our selfish interest lay—and to act accordingly, and for this we deserve not gratitude, not idolatry, nor fawning thanks, but respect.

We deserve the world's respect for having done our part, and more, toward the establishment of a world in which men can be free from fear and from want and from despotism. That world is far from achievement, yes, but the starts have been made, and it was largely we who made those starts possible.

What now? Do we sit back and protest that because our efforts are in some cases misunderstood, in others suspected, in others feared, that we should retreat now behind our own iron curtain of self-defense and complete self-concern?

We cannot. We dare not. I am sure we will not.

In these days of atomic bombs and biological warfare, perfected to their horrible potentialities, we know—we must realize—that we are never safe behind any iron curtain no matter how thick its plates of armor. What holds for us holds true also for every other nation. Isolationism, unilateral action, either in offense or defense, must fail, and that is the story we must tell to a world which, confused as we are, frightened as we sometimes are, gropes for a solution and finds none in the international structures of other eras.

There are those who tell us that the world we sought has been lost irrevocably unless we begin to evidence a more cooperative spirit, charging that we have not shown cooperation and that we are to blame for the world's present sorry mess. I repudiate this thesis completely. As I said, I think we have done more than our part—not just in the feeding of the hungry, in the restoration of despairing populations, but in our evident willingness, demonstrated time after time, to submit to international controls the most basic concepts of traditional sovereignty. Nothing could be more cooperative than our proposal on the atomic bomb. It has been snubbed by one nation only, but by that nation whose agreement alone could make it work.

We have entered wholeheartedly into the entire structure of the United Nations, including all of its subordinate agencies. This cooperation also has not been echoed by that one other nation, which alone can join with us to make them work.

In my mail I frequently receive very sincere letters from Pennsylvanians and others, persons as seriously concerned as I am over the prospects for a future world without war, in which the opinion is expressed that if we were to extend anew the hand of cooperation to Russia which some think we have withdrawn, that there might be a possibility for reaching an understanding yet in time.

These letters are, I repeat, sincere. But too often they are based on the assumption that it is America which has held aloof, whereas, in fact, our record is one of continual effort to reach agreement and understanding.

It is too bad, I believe, that there is not the opportunity for the people of Russia to pressure their government as our people can and do pressure our government. A hot letter from a constituent can make a profound impression on any public figure. It would do the Kremlin good to receive a few.

We are trying to reach the average Russian through the only means of communication open to us—the short-wave radio. It would be the height of folly to cripple this program now, when there is yet time—a little time—to tell our story to a people which is, I am sure, not conditioned against us, but which is certainly undergoing tremendous pressure these days to suspect our motives and to question our sincerity.

In the meantime, we must continue our efforts through the United Nations, and in support of free nations and of free peoples everywhere, to see to it that all those who would cooperate among each other and with us are to be given the opportunity to retain control over their own destinies.

To some this sounds warlike. I think it is our only path to securing the real and enduring peace we seek and must have—a real and enduring peace which would replace this new era of nervous suspicions and unnerving belligerency.

And that is why I find so disturbing the current trend in the United States back to a lost past we can never recapture, to isolationism, because it is cheaper than international cooperation and causes few immediate headaches—but much more harrowing experiences later—to selfish individual interest at the expense of and in complete disregard of national and international interest, to false security behind an atom bomb which in itself breeds less rather than more security.

I know you young men, as you face your future, do so with some misgivings. You have been jerked around and tossed around and cruelly deprived of years of youth. You are worried.

But you've got something to give to help make a decent world.

Can we count on you to give it wholeheartedly, unselfishly, devotedly, because you know that otherwise there is no alternative but chaos?

With God's help, we will, we must, succeed in this greatest of all causes, and I am sure you will give that cause your utmost effort.

The Appropriation to Soil Conservation Service for 1948

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 17, 1947

Mr. MURRAY of Wisconsin. Mr. Speaker, the following is the official table showing the United States expenditures for this agency since its inception:

Appropriations and other funds available for programs of the Soil Conservation Service, U. S. Department of Agriculture, 1934 to 1947, 1948 budget estimates, and House bill [1]

Fiscal year	Appropriations and reappropriations				Other funds available [4]	Total funds available
	Salaries and expenses, Soil Conservation Service	Land utilization and retirement of submarginal land [2]	Water conservation and utilization projects [3]	Total		
1934	$287,313			$287,313	$1,777,264	$2,064,577
1935	275,839			275,839	13,595,914	13,871,753
1936	6,308,220			6,308,220	44,950,188	51,258,408
1937	22,613,715			22,613,715	25,783,156	48,396,871
1938	22,134,749	$9,594,719		31,729,468	14,691,911	46,421,379
1939	21,291,503	11,983,912		33,275,415	25,671,007	58,946,422
1940	21,255,422	6,315,458		27,570,880	18,369,896	45,940,776
1941	18,626,606	2,392,212	$580,000	21,598,818	14,395,916	35,994,734
1942	25,441,986	2,727,962	1,500,000	29,669,948	8,630,237	38,300,185
1943	23,811,516	1,523,162		25,334,678	1,095,809	26,430,487
1944	23,845,136	1,276,120		25,121,256	660,848	25,782,104
1945	29,637,248	1,250,000		30,887,248	298,288	31,185,536
1946	34,503,500	1,231,300	1,165,066	36,899,866	772,803	37,672,669
1947	44,723,000	1,559,000	700,000	46,982,000	2,817,719	49,799,719
1948:						
Budget	44,860,000	3,260,000		48,120,000	1,997,500	50,117,500
House bill	38,673,000	1,600,000		40,273,000	1,997,500	42,270,500

[1] Amounts for fiscal years 1934 to 1947 are adjusted, where necessary, for comparability with the appropriation structure in the 1948 Budget.

[2] Includes reappropriations, as follows: 1939, $8,213,000; 1940, $2,586,567; 1941, $1,245,134; 1942, $701,743.

[3] In addition, unobligated balances of funds from prior years available as follows: 1942, $580,000; 1943, $1,811,607; 1944, $1,520,298; 1945, $1,282,068; 1946, $415,883; 1947, $1,095,979; 1948 (budget and House bill), $1,042,576.

[4] Allocations and transfers, including Emergency Relief, Public Works, National Industrial Recovery, Civilian Conservation Corps, flood control, and other funds, made available to the agency for a national program of soil and water conservation and erosion control, including the development of water facilities, the construction of various improvements on land utilization projects, the acquisition and construction of water conservation and utility projects, and preliminary examinations and works of improvement for flood control purposes.

Prepared by Office of Budget and Finance, Budgetary Reporting and Statistics Section, June 17, 1947.

There are also annual Federal appropriations for soil conservation and soil fertility conservation to, first, agriculture experiment stations for soil work. These funds were not reduced at all for 1948. Second, Extension Service with its soil specialists who for 30 years have done this kind of work. Their funds were not reduced for 1948. Third, the AAA program where over $10,000,000 of their appropriation was used in 1946 for terracing and services, and over fifteen million were used in 1944 for the same purposes; and where a total of over thirty-three million have been used for terracing and service. Under the AAA there were one hundred and thirty-seven million used for fertilizer, mostly

phosphates, and over one hundred and eighty-six million of the Federal funds used for liming material. The one hundred and eighty-six million Federal expenditures for lime and one hundred and thirty-seven million spent for fertilizers makes a total of three hundred and twenty-three million spent for this purpose from 1938 to 1948, or less than 10 percent of the total AAA appropriations. The fertilizer and lime expenditures for 1947, however, were over 25 percent of the appropriation. Fourth, the TVA distribution of fertilizers largely in the South. This was distributed a few pounds to one individual and a carload to another free. Fifth, farm forestry has had an important place in soil conservation. Funds for the tree planting program were not reduced for 1948. In addition to the regular forestry program the AAA has also accomplished some work in this field and have used some $35,000 for seedling trees. Sixth, in addition there is the soil conservation service, where the appropriations for each year are shown in the above table.

The official table shows that the appropriation for the next fiscal year is the highest for any year except 1947. I have noted the propaganda sent out from Washington and the columns of the New Deal columnists. Their injection of cheap politics into the picture was not necessary, nor has it been helpful.

The facts are that the Eightieth Congress is cognizant of the soil problem. Any administration that discriminates against the livestock industry like it has against the livestock industry for these many years in order to oversubsidize soil-depleting crops; any administration that has not lived up to the law in supporting livestock products at not less than 90 percent of parity at the same time it puts a floor of 150 percent of parity under a soil-depleting crop; any administration that functions in such a manner as to reduce hog numbers from 83,000,000 to 56,000,000, as this administration has during the past 4 years; any administration that functions in such a manner that the sheep numbers of America have been reduced by 35 percent during the past 4 years; any administration that functions in such a manner as to reduce cattle numbers in the United States by over 4,000,000 head in the past 4 years; and an administration that lowers the duties and invites imports of livestock products and secures 30 percent of the custom receipts to be used as section 32 funds under the guise of disposing of surpluses, and then uses these funds to grind up tobacco for fertilizer, subsidize insecticides made of tobacco and pay export subsidies on tobacco, wheat, corn, and other soil-depleting crops is in a rather vulnerable position when it takes upon itself the responsibility of pointing a finger at the Eightieth Congress, or any group or any individual and accuse them or it of being antagonistic to soil conservation. Even some of our Democratic friends resented the cheap politics exhibited in connection with the agricultural appropriation bill. The soil and agricultural problem is a serious problem and should not be subjected to cheap politics. Agriculture, with 20,000,000 people on the farm out of a total population of 140,000,000, has a job on its hands to obtain anywhere near its share of the national income for itself.

Everyone knows that livestock farming goes hand in hand with soil conservation. Anyone really interested in soil conservation should realize that America should be self-sufficient so far as livestock and livestock products are concerned. The self-sufficiency in the United States for livestock products or for that matter for all agricultural products has not prevailed since 1925, and this disparity or lack of agricultural sufficiency was more pronounced from 1932 up to 1939. The war changed the export-import, as well as the general agricultural picture.

Our colleague, the Honorable HAROLD COOLEY, of North Carolina, has recently introduced H. R. 4150, the purpose of which is to coordinate the activities of the education work being carried on by the various agencies in connection with soils. The bill, H. R. 4150, will consider the coordination of the experiment station soil work; the Agricultural Extension Service soil work; the AAA soil program; and the Soil Conservation Service. While no hearings can be held this session, this bill will have complete and full hearings immediately after January 1, 1948. Our colleague, Mr. COOLEY, in the Seventy-ninth Congress introduced the Farm Home Administration Act, which later became law. This Farm Home Administration Act coordinated several of the direct loan agencies and consolidated these agencies. The legislation passed in regard to the Farm Home Administration has been constructive.

The House of Representatives appropriated $38,000,000 for the Soil Conservation Service for next year and $24,000,000 for the Agricultural Extension Service.

The land utilization and water conservation are a part of the Soil Conservation Service, and the amounts used under these programs are shown in the table.

The total appropriations for the Soil Conservation Service have been a little over $500,000,000 to date. The exact amount is $554,336,120.

The Palestine Problem

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 17, 1947

Mr. KEATING. Mr. Speaker, together with a number of my colleagues, I have today introduced a resolution stating it to be the sense of the Congress that the United States announce its continued adherence to the Palestine policy heretofore established both by the President and the Congress and its willingness to join in the carrying out of a solution to the Palestine problem along the lines of such policy.

In connection with the consideration of this measure, refraining with design from dealing with the deeply moving humanitarian considerations involved, I have prepared a brief, entitled "A Legal View of the Palestine Question," which deals only with the legal rights and obligations of the English, Arabs, and Jews in trouble-infested and strifetorn Palestine. I submit it to my colleagues with the earnest request that they study the legal points involved as prefatory to their consideration of this legislation.

In the preparation of this brief I desire to express my gratitude for the substantial assistance rendered by a distinguished lawyer of my constituency, Mr. Sol M. Linowitz, a member of the law firm of Sutherland and Sutherland, who, prior to his service in the Navy, for 2 years occupied with distinction and great ability the position of assistant general counsel of the Office of Price Administration.

In my opinion the contribution in painstaking legal research which Mr. Linowitz has made, with admirable restraint and detachment, to the cause in which he has manifested such an intense interest, cannot be overestimated.

Under leave to extend my remarks, I include my legal analysis of this international problem, as follows:

A LEGAL VIEW OF THE PALESTINE QUESTION

Barrels of ink and buckets of blood have been poured over the Palestine question. The vital nature of the issue has led to commingling of political, sociological, moral, and emotional considerations in various analyses of the situation. The legal aspects of the problem have to a large extent been shunted aside. Yet today, more than ever before, it is important to understand the relative legal positions of the English, Arabs, and Jews. Palestine is the tinder box of the post-Hitler world. Bombing and bloodshed are being written large in the country's day-to-day history. On whose side is the law in the Palestine picture?

This article will undertake to answer that question, and that question alone. Political aspects, which have loomed so large in the tragic Palestine story, will be ignored. Sociological and economic considerations will be dealt with only to the extent necessary to permit an informed decision with respect to legal rights.

The point of departure for a legal analysis of respective rights and obligations is the Balfour Declaration issued by Lord Balfour on November 2, 1917. The text of the Balfour Declaration follows:

FOREIGN OFFICE,
November 2, 1917.

DEAR LORD ROTHSCHILD: I have much pleasure in conveying to you, on behalf of His Majesty's Government, the following declaration of sympathy with Jewish Zionist aspirations which have been submitted to, and approved by, the Cabinet.

His Majesty's Government view with favor the establishment in Palestine of a national home for the Jewish people, and will use their best endeavors to facilitate the achievement of this object, it being clearly understood that nothing shall be done which may prejudice the civil and religious rights of existing non-Jewish communities in Palestine, or the rights and political status enjoyed by Jews in any other country.

I should be grateful if you would bring this declaration to the knowledge of the Zionist federation.

Yours sincerely,

ARTHUR JAMES BALFOUR.

For almost 30 years, English, Arabs, and Jews alike have indulged in partisan research and interpretation of this document and its genesis. The fact remains, however, that by itself the declaration was legally impotent. Great Britain had no sovereign rights over Palestine; it had no proprietary interest; it had no authority to dispose of the land. The declaration was a statement of British intentions and no more. It states that (1) England views with favor the establishment in Palestine of a home for the Jewish people; (2) Britain will use its best endeavors to facilitate the achievement of this object; and (3) nothing shall be done to prejudice the civil and religious rights of existing non-Jewish communities in Palestine, or the rights and political status enjoyed by Jews in other countries.

The importance of the Declaration lies in the fact that the preamble to the Palestine mandate issued by the Allied powers in 1922 specifically recites that Great Britain as mandatory is to be responsible for putting the declaration into effect. Significantly, it states that recognition has thereby been given to the "historical connection of the Jewish people with Palestine and to the grounds for reconstituting their national home in that country". The mandate is set up to effectuate these purposes, and the mandatory assumes the obligation of exercising the mandate in accordance therewith.

The mandate device utilized by the Allied Powers in the Covenant of the League of Nations was an innovation in international law. While President Wilson and General Smuts had conceived of the mandate as a trust arrangement, the other powers had accepted their mandatory roles as a convenient manner of obtaining desired territories. (Intimate Papers of Colonel House, (1928) pp. 293 et seq; Lansing, the Peace Negotiations, (1921) pp. 149 et seq.) It was therefore, hardly surprising that the administration of the various mandates was inevitably molded to the political aims of the mandatories. The British action in assigning mandatory functions to the colonial office was as frank an indication of this attitude as was their use of the mandated territory of Haifa as a naval base. The British conception and administration of the Palestine mandate must be recognized as part and parcel of this essentially uniform policy. I say this not in a spirit of criticism, but as a historical fact.

Article 2 of the Palestine mandate obligated the mandatory (1) to place the country under such political, administrative and economic conditions as would secure the establishment of a Jewish national home as laid down in the preamble; (2) to develop self-governing institutions; and (3) to safeguard civil and religious rights of all inhabitants of Palestine. Article 5 made the mandatory responsible for seeing that no Palestine territory was ceded or leased to, or placed under the control of, the government of any foreign power. The administration of Palestine was charged, by Article 6, with the obligation of facilitating Jewish immigration into Palestine under suitable conditions. Article 27 required the consent of the League of Nations to any modification of the terms of the mandate.

The touchstone for an analysis of what was sought to be achieved and the method for its attainment lies in the words "Jewish national home." In the report of Palestine Royal Commission (1937) at page 39, it is stated: "The primary purpose of the mandate as expressed in its articles is to promote the establishment of the Jewish national home."

Borrowed from the original Zionist platform at Basle, the words "national home" were novel in the field of international law. The unfamiliarity of the term spawned variegated interpretations of its meaning. By the application of established principles of legal construction, however, its intended meaning is readily ascertainable; the establishment of Palestine as a place to which Jews could emigrate with the understanding that if such immigration should prove to be large enough, a predominantly Jewish state or commonwealth would come into existence. Lloyd George, President Wilson, and countless others so understood the term, and their testimony offers an irrefutable "legislative history" of statutory meaning.

Thus at page 24 of the report of Palestine Royal Commission it is stated: "It would depend mainly on the zeal and the enterprise of the Jews whether the home would grow big enough to become a State. Mr. Lloyd George, who was Prime Minister at the time, informed us in evidence that if the Jews had meanwhile responded to the opportunity afforded them by the idea of a national home and had become a definite majority of the inhabitants, then Palestine would thus become a Jewish commonwealth."

See also Baker, Woodrow Wilson, and World Settlement, volume 7, pp. 256, 305. Also the London Times of March 5, 1914, quoted President Wilson as follows: "The Allied Nations with the fullest concurrence of our Government and people, are agreed that in Palestine shall be laid the foundations of a Jewish commonwealth." See also Miller, My Dairy at the Conference of Paris, volume 4, p. 263.

Everything in the mandate itself conforms to this interpretation. The mandatory is to take such steps as will secure the establishment of the Jewish national home (art. 2). The administration of Palestine is to facilitate Jewish immigration (art. 6). The administration is to facilitate the acquisition of Palestinian citizenship by Jews (art. 7). The Jewish agency, which is to advise with the Palestine administration, may itself undertake construction or operation of public works, services, and utilities subject to arrangement with the administration. (art. 11).

Of equal importance in this connection is the specific provision in the declaration and mandate for safeguarding the civil and religious rights of existing non-Jewish communities in Palestine. Read in the light of the contemporaneous preoccupation of the Allied Powers with the minorities in other lands, this provision could only signify the contemplated reduction of the non-Jewish communities to a minority in Palestine and the concern with the preservation of their rights as minority groups.

In the face of those facts, both the British mandatory and the Arabs have urged various interpretations designed to indicate a contrary policy. Without burrowing for motives, it is sufficient to observe that the British position has been to a large extent based on an interpretation of the particle "in" contained in the term "establishment in Palestine of a national home." From the Churchill white paper of 1922 until the report of the Royal Commission in 1937, it was urged that the use of the word "in" signifies an intention to establish a national home in a part rather than the whole of Palestine. To clothe a naked particle with such drastic significance appears to run counter to the whole mandatory scheme. By article 25 of the mandate, Great Britian is authorized, with the consent of the Council, to postpone or withhold application of the mandate provisions to Trans-Jordan. By clear implication, therefore, the mandatory could not withhold application of the mandate in the rest of Palestine or apply it only to a portion of western Palestine.

That a time came when political considerations became paramount seems apparent from the statement of the Shaw Commission in 1940 that the primary duty which is laid upon the Palestine government was one of holding the balance between the two parties in that country. There was no clear direction to assist either party in the fulfillment of their aspirations.

This should be compared with the letter accompanying the Balfour Declaration by Mr. Balfour to Lord Rothschild as a declaration of sympathy with the Jewish Zionist aspirations.

Then came the white paper of 1939, which provided for total future Jewish immigration to Palestine of 75,000; rigorous restrictions on land purchase by Jews; and ultimate establishment of Palestinian state with Jews as one-third minority. The Permanent Mandates Commission of the League unanimously held the white paper to be inconsistent with the constant interpretation theretofore placed on the mandate. A majority held that it was directly contrary to the mandate.

An argument extensively advanced by Great Britain to support its various curtailments of Jewish migration is based on a reading of article 8 of the mandate. The administration of Palestine is directed by that article while insuring that the rights and positions of other sections of the population are not prejudiced, to facilitate Jewish immigration under suitable conditions. This provision has been construed by the mandatory to authorize the limitation of immigration in accordance with the economic absorptive capacity of the country, a position with which I cannot seriously quarrel. But the difficulty is that discredited estimates of absorptive capacity have been relied upon to justify the restraints imposed.

Cultivable areas were estimated in the report of the Palestine Royal Commission on the basis of work methods of the average Arab peasant, not the advanced methods used by Jewish farmers. In adhering to this position, it has been necessary to overlook the fact that objective study now clearly indicates that, with proper development of the Tranjordan Valley and other natural resources, Palestine can settle several million additional persons.

For example, Dr. Walter C. Lowdermilk, Assistant Chief of United States Soil Conservation Service, estimated that if there were full utilization of the Jordan Valley depression for reclamation and power, at least another 4,000,000 persons could be absorbed in addition to the 1,800,000 already in Palestine and Trans-Jordan.

The Arab view of the declaration and mandate is based on two contentions: (1) Palestine belongs to the Arabs and cannot therefore become either the Jewish national home or a Jewish state; and (2) the McMahon-Hussein correspondence of 1915 precluded the establishment of a Jewish national home in Palestine. Without rehashing the pro and con arguments as to relative original sovereign rights of Jews and Arabs in Palestine, it may be noted that the Jews were at one time sovereigns of the land, were deprived of it by force, and have never renounced their right. Of more importance, however, the Palestine mandate—issued after the Allies had conquered the Turks and Palestine, and after the Arabs had fought with the Turks—specifically recites in paragraph 3: "recognition has thereby been given to the historical connection of the Jewish people with Palestine and to the grounds for reconstituting their national home in that country". Implicit in this recognition is the acknowledgment by the Allies of the validity of the Jewish claim to sovereignty. The quarrel of the Arabs today on this score is not, therefore, with the Jews but with the victorious Allies who in solemn proclamation recognized the prior Jewish rights to Palestine.

The second facet of the Arab argument is that England had, prior to the Balfour Declaration, already committed itself to the Arabs in the McMahon-Hussein letters in favor of the establishment of an independent Arab state in Palestine. The salient facts regarding this correspondence are these: On October 24, 1915, Sir Henry McMahon, High

Commissioner for Egypt, seeking to secure Arab assistance against the Turks, wrote a letter to Sherif Hussein of Hedjaz. The letter stated that insofar as England was free to act, she was prepared to recognize and support the independence of the Arabs within certain areas proposed by the Sherif of Mecca. The districts of Mersina and Alexandretta and portions lying to the west of the districts of Damascus, Hama, Homes, and Aleppa, were expressly excluded. The tortuous ambiguous language of the letter has been studied with painstaking care. It is sufficient to observe that Sir Henry McMahon himself, Winston Churchill, and two other Colonial secretaries, all agreed that the letter was not intended to refer to Palestine. Even King Hussein's son, Emir Feisal, accepted this view 4 years after the letter was written. On January 3, 1919, Emir Feisal and Dr. Chaim Weitzman (representing the Zionist organization) signed a treaty which dealt with the establishment of an Arab State, exclusive of Palestine.

Generally overlooked in the refined search for intentions, however, is the paramount and all-important fact that at the time England had absolutely no right of disposition and no legal or proprietary interest in Palestine, which was then a Turkish province. Regardless of what commitment England might have made, she was neither sovereign over Palestine herself nor was her action ratified either by Turkey (the then sovereign) or the League of Nations (the later sovereign). In the Treaty of Sèvres in 1920, Turkey renounced her rights to Palestine in favor of the Allies. The treaty did not become operative, however, and in the Treaty of Lausanne in 1923 (after the Palestine mandate), Turkey renounced all right and title to territories outside of the boundaries laid down in that treaty, "the future of these territories * * * being settled or to be settled by the parties concerned."

The web which has been spun about the McMahon letters, therefore, is of most flimsy construction and represents merely a loose collection of political threads.

This alinement of the respective legal position of the parties to the Palestine dispute leads to the following conclusions: (1) Jewish claims are predicated on a formal international document of unquestionable legal validity and supported by the terms and legislative history of the mandate; (2) the Arab position rests on a claim of prior sovereign rights rejected by the Allied Powers after World War I and on an interpretation of a legally ineffective letter from Sir Henry McMahon; (3) Great Britain, as mandatory, has not fully recognized the legal requirements of the mandate.

What avenue is available to the Jewish people to obtain the relief to which they are legally entitled? Their rights under the mandate are as third-party beneficiaries. Both the civil and the common law recognize the right of a third-party beneficiary to assert his legal position against a deprivation of contract rights. Nor is the position of the Jewish people that of a mere donee beneficiary. The recognition in the preamble to the mandate of the historical connection of the Jewish people with Palestine and the grounds for reconstituting their national home in that country constitutes sufficient basis for considering their position that of a creditor beneficiary who has been promised payment of a debt rather than a gift.

Clause 3 of the Atlantic Charter recites the determination of the signatories "to see sovereign rights and self-government restored to those who have been forcibly deprived of them." The Jewish people—recognized as a people in the mandate—were forcibly deprived of their rights to self-government. Their restitution is fully as important as the re-creation of any other state. The United Nations is the international forum before whom the rights of the Jewish people should be asserted. An earlier international body after an earlier world war pledged the restoration of the rights of which the Jewish people had been deprived. Achievement of that purpose has been frustrated. Now, after a second war, the nations of the world cannot achieve a lasting system of international law if the legal rights of the Jewish people are left without remedy.

The Townsend Convention

EXTENSION OF REMARKS
OF
HON. WILLIAM LEMKE
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 16, 1947

Mr. LEMKE. Mr. Speaker, the Townsend convention came and went. It made and left its impression on Congress. The delegates were as fine and as determined a body of men and women as ever came to Washington. They were interested in a human cause—interested in old-age security. They were interested in getting H. R. 16, the Townsend bill, brought up on the floor for disposition on its merits.

What little old-age assistance we have is the result of the Townsend movement. If the Townsend movement had never crystallized, the aged would, at present, be given very little, if any, consideration. It was this movement that made the Nation conscious of the duty of the Nation to the people who created its wealth—to the people who created the wealth with which we won World Wars I and II. The Townsend movement awakened and quickened our conscience to the Nation's duty to its elderly people.

The time has come for Congress to realize that the existing old-age assistance is not sufficient. It does not afford security. It does not give freedom from want or freedom from fear of insecurity. In fact, it is largely lip service wrapped in a bundle of red tape.

Under the present Federal law, the State must match, dollar for dollar, the amount paid to the aged by the Federal Government. If the State, as many States do, require the aged to assign their homes, or other property or interests they may have, to the State welfare board, in order to get assistance, then the Federal Government demands one-half of the amount recovered.

In other words, the present old-age assistance law is not a home preserver, but a home wrecker. It joins hands with the States that require the assignment of the home, and in some cases takes the home from the children after the parents pass on. This practice should be stopped. A Nation's strength depends upon its home owners.

The time has come that every Member of Congress be informed that under the present Old Age Assistance Act, some States still pay as little as $14 per month to aged individuals without any other income. Surely when the purchasing power of the dollar is only worth 37 cents, as compared with the purchasing power of the 100-cent dollar in 1937, we realize that no one, in any part of the Nation, can live on the American standard for $14 a month.

The phrase "Old age pension"—old age assistance—should be changed to "Old age compensation." We know that every person who has worked from the age of 18 to the age of 60, has created enough new wealth to last for the rest of his lifetime. It matters not what kind of work such a person performed. It makes no difference whether such work was agricultural, educational, industrial, or professional. The public got the benefit.

Again there are also those who are totally physically disabled. These are unable to make a living at any stage of life. They must be taken care of by the public. The best and cheapest way to take care of these, unless they are mental cases or living in penal institutions, is by direct assistance. Their disability is not voluntary. It is not their fault. They are in a world where human instinct tells us they should be taken care of, and life made secure and pleasant as far as possible.

The time has come for Congress to make an intelligent study and survey of this whole subject. It is a Federal responsibility. The Government, as a whole, is interested in the physical well-being of all its citizens.

If we enact H. R. 16, and a few other laws for human welfare, then we need not fear communism. Then we need not fear fascism or nazism. These isms all come from out of poverty. Poverty and misery are the seedbeds in which communism prospers and grows.

Give to the aged sufficient compensation for their past labor, so that their sons and daughters, brothers and sisters will be glad to take care of them. When that is done, there will be no room for communism or fascism. Love of country and love of Government will be spontaneous.

The trouble with the present old-age assistance is that there is so much red tape and so much waste and useless expenditures in the machinery that the old are almost forgotten. Some simple method of providing for the aged, without any red tape and without too many intervening expenditures, is what the Nation needs, and what the Townsendites are looking forward to.

There is nothing in H. R. 16 that need frighten us. This bill simply provides a method of raising the funds with which to take care of our aged. It devises a simple method by which these funds are to be distributed—a method of distribution where those who come under its provisions get the benefits, rather than a horde of intermediates.

If our form of government is to continue, is to keep abreast of civilization, if our form of government is to avoid communism, fascism, and nazism, it must again become interested in all of its citizens. It must assure them freedom from fear. It must assure them future security—freedom from want.

We must remember that those who created the wealth of this Nation are entitled to at least some return when they reach the age of inability—as a rule

the age of 60. Under our present Government we see billions voted for foreign nations, even billions for liquidators of other nations' people, but very little is being done for our own aged.

Our committees bring in tax bills, and they bring them in under a gag rule so that the Members have no opportunity to offer amendments to increase the appropriations for our own people, and yet on the same day other committees bring in bills requiring millions and billions in appropriations for foreign nations. The rule seems to be, foreigners preferred—Americans forgotten. The time has come to make a change. Let it again be, Americans preferred, but with justice and decency to all the world.

Universal Military Training

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 17, 1947

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

NATIONAL COUNCIL FOR
PREVENTION OF WAR,
Washington, D. C., July 16, 1947.

Hon. HARRY L. TOWE,
Chairman, Subcommittee of House Committee on Armed Services,
House Office Building,
Washington, D. C.

DEAR MR. TOWE: Reports in the press with respect to the intentions of your subcommittee in handling the requests of great national organizations for opportunity to testify against universal military training have been confusing.

One realizes that you and your committee are under tremendous pressure from the War Department to report out a bill before the end of this session, regardless of the fairness or unfairness of such action.

May I call your attention to the following list of national organizations which have asked for an opportunity to be heard, which apparently is not going to be granted:

Religious bodies: Presbyterian Church in the United States of America, the Methodist Church, Disciples of Christ Church, Evangelical and Reformed Church, American Unitarian Association, United Council of Church Women, Brethren Service Committee, Society of Friends.

Educational associations: National Educational Association, American Association of University Professors, American Council on Education, Commission on Christian Higher Education.

Farm organizations: National Farmers Union, National Grange.

Labor groups: Brotherhood of Railroad Trainmen, International Association of Machinists, Workers Defense League.

Other national organizations: National Council Against Conscription; National Council for Prevention of War, Women's International League for Peace and Freedom, National Association for Advancement of Colored People.

Representative WALTER G. ANDREWS, chairman of your committee, was quoted in the Buffalo Evening News of July 12 as follows:

"Representative WALTER G. ANDREWS, Republican, of Buffalo, today refuted charges by the National Council for Prevention of War that he had ignored requests of organizations and individuals who asked to testify on the universal military training bill.

"Chairman of the House Armed Services Committee, which today concluded hearings, Mr. ANDREWS declared that all requests made by leaders of national organizations would be honored by the subcommittee on training, which he said will continue hearings on the bill.

"Committee policy, he said, is to hear from the larger and more prominent organizations, no matter which side they represent."

It seems to me that it is only decent that Chairman ANDREWS' pledge should be kept, even though it is reported that, voting in your subcommittee of which he is a member ex officio, he himself voted to close the hearings this week in direct violation of his pledge.

A brand new bill of 76 pages sponsored by you (H. R. 4121) is before your subcommittee It was printed only last Friday, July 11. Few Congressmen have seen it. Still fewer have given it proper study—and this holds even for members of your committee. One-third of the bill is devoted to punishments for its infraction. Its provisions for the treatment of conscientious objectors are entirely new and have not been circulated by you to the religious press nor to the historic peace churches. Other aspects of the bill into which I will not go here will require careful study throughout the country before the bill should be "frozen" beyond possibility of amendment in committee.

For these reasons it is earnestly to be hoped that your subcommittee will continue the hearings now until all of the national organizations listed have been heard, together with such prominent and well informed individuals as your committee may invite.

Much has been made by the War Department of Gallup polls. The superficiality of Gallup polls purporting to show a majority of the American people as supporting military training is plainly revealed by the great national strength of the informed opposition that is represented by this list of opposing organizations. When the wording of a Gallup poll is changed, or an alternative offered, an apparent majority fades into an insignificant minority.

These great organizations are convinced, as you will find when you consult them, that universal military training will regiment our youth, indoctrinate them with a totalitarian outlook, and take us on the road to a completely militarized state, upsetting our educational system and our whole national economy with tremendous moral and financial loss. They believe that national disaster threatens us, not, as the militarists believe, if we fail to adopt military training, but if we do. Consequently, orderly resumption of hearings next winter is the only tolerable procedure in a democracy like ours. If you act in haste, the country will "repent at leisure."

Respectfully yours,

FREDERICK J. LIBBY,
Executive Secretary.

United States Military Strength

EXTENSION OF REMARKS
OF
HON. DEWEY SHORT
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 17, 1947

Mr. SHORT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Hanson W. Baldwin, from today's New York Times:

UNITED STATES WEAKNESS DECRIED—POTENTIALLY NATION'S MILITARY STRENGTH IS SAID TO EXCEED ANY OTHER COUNTRY'S

(By Hanson W. Baldwin)

WASHINGTON, July 16.—Recent continued emphasis on the weakness of United States military strength is doing no service to our cause abroad.

Statements by Gen. Dwight D. Eisenhower, former Justice Owen J. Roberts, and numerous Army and Navy leaders, stressing the elements of our weakness without emphasizing sufficiently our factors of strength, have somewhat distorted the actual picture and have created in some minds an illusion of United States military weakness.

The statements, of course, have been intended for domestic consumption as part of a drive to secure the passage of universal military training and to impress Congress with the need for more funds for the armed services. But unfortunately they are transmitted abroad and, because of the official source of these statements, they are bound to make some international impression in the current battle for the minds of men.

INIMICAL IMPRESSION

That impression can be only bad and inimical to the best interests of the United States. For a little people, living in the shadow of fear and menaced by the specter of communism, will not be comforted or persuaded by statements exposing the weakness of their only possible savior. Frankness is an American birthright and it is the best possible basis for effective propaganda, but today, when we are struggling with Russia in the psychological and ideological conflict by which our system stands or falls, frankness should be complete; the good should temper the bad.

We are certainly not "weak," absolutely or relatively, in either actual or potential military strength, this correspondent feels certain after a Nation-wide tour. We have elements of weakness, but we also have great elements of strength. Potentially, we are still—by virtue of our industry, our sea power, our air power—the greatest military power in the world, far superior to Russia.

Actually, our Army is much smaller in size than Russia's, but it is better equipped. The Russians have virtually no navy, and ours is bigger than all the rest of the world's navies put together. Our air force—though smaller in numbers of planes in operation—is probably well superior in quality to the Russian air forces. Today we possess the atomic bomb, and today we have the ability to use the seas for our own purposes and to deny, if necessary, that use to Russians. More than 1,500,000 men under arms and more than $10,000,000,000 for a defense budget do not represent "weakness" in any country on earth.

PRIORITIES SYSTEM URGED

We should do well, then, to stress some of the factors of our strength, while frankly recognizing our deficiencies. As Americans, we generally tend to emphasize the unimportant at the expense of the important. We are spending profusely on defense, but we need to spend more on some items and less on others; we need, and must have, a system of defense priorities unless real and serious weaknesses in our defense structure are to develop. To name only two items, the air services, now the first line of military force, should have more operating planes and more funds, and industrial mobilization planning must have greater emphasis.

We must, in other words, maintain a posture of military strength. But, at the same time, we must remember that the principal factors in the world conflict of ideologies now raging are not military factors, but political, economic, and psychological ones. Our domestic actions and the statements made for home consumption will inevitably affect the international situation. We must never "sell the United States short."

Military Training

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 17, 1947

Mr. GWINN of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letters from the New York Times of July 16, 1947, and James Patrick McGovern, Washington, D. C.:

LEGISLATION NOW IS URGED, EVEN IF IT MEANS A SUMMER SESSION

To the EDITOR OF THE NEW YORK TIMES:

Some weeks ago a distinguished committee appointed by the President to make a study of problems arising from the atomic age published its report.

This committee was composed of eminent personages, most of whom are leaders in their respective fields. As for their political, economical, and social views, they represented all shades of opinion from extreme liberal to conservative. They were, of course, given access to confidential and secret files and were afforded every opportunity to study our problems from all angles. As a result of their studies, and despite their original divergencies of opinion, the recommendations they made were unanimous.

One of their most urgent recommendations was the immediate installation of a universal military-training program. What has been the reaction of our Congress and our people? Complete apathy. Some Congressmen thought it was too late in the season, others openly remained on the fence, and the public response was scattered and slight.

Are we as a Nation going to continue to bury our head in the sand rather than face unpleasant facts? Twice before we have been guilty of this and have been saved by a combination of good luck and allies able to cushion the initial shock. Next time we will only be saved by our own abilities and preparedness, and our time for preparation is limited.

Let us as citizens arouse ourselves and make Congress pass this legislation, summer session or not, for only by doing this will we be fulfilling our primary duty of insuring the safety of this Nation.

We don't want a historian of the distant future to dismiss the United States as a country which was powerful for a short time, but which was utterly destroyed because of the narrow self-interest and lack of vision of its people.

D. B. LAWRENCE, Jr.
BRONXVILLE, N. Y., *July 6, 1947.*

WASHINGTON, D. C., *July 16, 1947.*

Hon. OWEN J. ROBERTS,
Chairman, Citizens Emergency Committee for Universal Military Training, Chester Springs, Pa.

DEAR JUDGE ROBERTS: I am communicating with friends in the Congress in furtherance of the efforts of your good self and associates to have action taken at this session on the pending military training bills, and, if afforded an opportunity to do so, shall be pleased to become a member of your committee.

While in London in 1912 I listened to the debates in Parliament on the so-called military compulsion training bill, particularly that of February 20, 1912, in which latter the principal speakers were Lord Roberts, advocating the passage of the measure, and Lord Haldane, in opposition to the proposed act. As you know, the bill was defeated, and I shall always feel that had the vote been otherwise, there might not have been a First World War. In any event, the thought occurs to me that you may see your way clear to ask the Library of Congress to submit those debates for your consideration. In the present circumstances they should be enlightening.

With assurances of high esteem, I am,
Sincerely,
JAMES PATRICK MCGOVERN.

On Aid to Foreign Countries

EXTENSION OF REMARKS
OF
HON. WAT ARNOLD
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 17, 1947

Mr. ARNOLD. Mr. Speaker, the extreme importance of the issue of aid to foreign countries, otherwise known and referred to as the Truman plan and the Marshall plan, calls for the most serious consideration on the part of every citizen in this country, from those who have the responsibility of recommending and fostering our international policies, to the folks on the farms and in the towns and cities throughout the Nation.

An editorial in the Wall Street Journal of July 14 contains food for thought in this connection, and I wish to include it in my remarks, that others may have an opportunity to read it:

WHO'S LOONY?

The American form of government has lived more than a century and a half; with one exception the world's oldest continuous government.

In that period the people living under that form of government have developed a continent, become the strongest nation economically in the world, potentially the strongest militarily; and, while they constitute a small percentage of the world's population, they are being asked to support a great deal of the world.

It's just a little fantastic to suppose that blind luck can continue for a matter of two centuries and so we suggest that it is just possible that on the balance the American people may have acted wisely. Undoubtedly they have done stupid and foolish things but they must also have done things of an opposite nature.

We make this suggestion because we have just been reading and listening to people who seem to be proceeding on the theory that the American people are just dumb and stupid beyond all repair and that someone must take them gently but firmly by the hand, instruct them in their duties and try to have them perceive the error of their ways.

Here's a columnist. He feels it unnecessary to prove the dimwittedness of the people. He merely asserts it. This columnist quotes another columnist who asks plaintively: "How are we going to get them to see?"

What these columnists see so clearly but what they think is hidden from the American people is that a lot of money must be poured out of this country to other countries and they fear someone will raise questions.

It is interesting to see the record of some of these gentlemen who write columns and gather about Washington and New York luncheon tables to exchange mutual congratulations about the clarity of their own vision. Generally they said the United Nations meant a peaceful world, that the agreements set up at Bretton Woods insured international monetary stability, later that the British loan would accomplish the job and a good many thought that one who questioned the motives of Mr. Stalin was probably a "Red baiter."

There are a good many signs that the American people—dumb as they are—will not appropriate more money for gifts and loans until they have a satisfactory answer to the question, For what?

There is under way at Paris a meeting of the nations of western Europe. It was called in response to a suggestion of Secretary of State Marshall that Europe look to its own resources and plan to live on them before this country be asked for further aid.

If out of that meeting come any suggestions that raise reasonable hopes that the countries of Europe are eliminating commercial and currency practices which blight their economic life, which kill incentives, which lead to hoarding of gold and strong currencies, then there will be some hope that further aid will be helpful. Initially that can come from the International Bank; surely that institution can perform some small portion of the great good claimed for it. If its resources are not sufficient, there will be time enough for government action.

But if out of that Paris conference come merely some more schemes for state controls, we will venture the guess that the American people will not respond. Also last week at Paris was a conference dealing with cereal grains. It framed a resolution proposing strict government controls of all grains, that all dealings be registered with the government, that the government inspect all private records to see that distribution is kept in authorized channels; in other words, strict rationing and government control everywhere. If that is the sort of thing that international conferences are to produce, we believe and hope that the American people will not furnish one red cent.

Columnists to the contrary, the American people know very well that they have the opportunity to assume the leadership of the world. They know something else. It is not leadership merely to finance a journey along the socialistic paths they do not care to travel.

Modernize Our Presidential Election—V. The Allotment of Two Electoral Votes to Each State Regardless of Population

EXTENSION OF REMARKS
OF
HON. CLARENCE F. LEA
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 16, 1947

Mr. LEA. Mr. Speaker, under the census of 1940 the total population of the United States was 131,699,275. Ten of the large States had a population of 69,014,043, which means that the remaining 38 States had a population of 62,655,232, or 6,358,811 less than the total population of these 10 States. These 10 large States have 20 electoral votes allotted them by the Constitution regardless of population. The other 38 States have 76 electoral votes allotted them regardless of population.

This gives 56 electoral votes more to the 38 States having less than half of our population than is allotted to the 10 big States.

Under the present apportionment 531 electoral votes are allotted to the States. Of this number, 96, or 2 for each State, are allotted regardless of population. Therefore, the electoral votes allotted to

the States regardless of population constitute over 18 percent of the total electoral vote.

Such assignment of electoral votes has an important bearing upon our electoral problems so far as the Presidency is concerned.

It is interesting to note the effect of the 2-vote allotment to each State on the candidate as shown by the election returns in the election of 1944. Roosevelt carried 36 States, which gave him 72 of the 96 electoral votes that are assigned to the States regardless of the population. So he received exactly 75 of this class of electoral votes, while he had 53 percent of the total popular vote of the Nation, and 81 percent of its electoral vote.

Table IV illustrates how these votes were counted in the last Presidential election and how they would have been allotted under the proposed amendment. It will be understood, of course, that there would be no separate computation of this particular class of popular votes. This table merely shows what would have been the effect of these votes as credited under the present system and as they would have been under the proposed plan of election.

Had these votes been credited to the candidates in proportion to their popular votes, Roosevelt would have received 54.167 electoral votes and Dewey 40.801. Thus, under the proposed plan the majority of these electoral votes which would have gone to Roosevelt would have been 13.366 instead of 48. In other words, the difference resulting from the proposed plan of crediting votes would have been 34,634 electoral votes. They would have been assigned justly, in proportion to the popular vote instead of the present practice, which compels an arbitrary credit of the whole 2 electoral votes in each State to the candidates receiving the plurality vote.

This arbitrary allotment of these 34 electoral votes in the election of 1944 gave the beneficiary candidate a greater vote than a candidate could receive from any other State in the Union excepting New York and Pennsylvania. It was a greater vote than that of either Illinois, Massachusetts, Michigan, Texas, or California. That unearned vote more than equaled the combined vote of Massachusetts and New Jersey in the election of 1944.

The plan we advocate does not propose to take from any State, even from the smallest, the two electoral votes that are assigned to it by the Constitution. The granting of such votes was a strong influence in securing the unanimity of the States by which the Constitution was adopted.

A fair division of the large number of electoral votes awarded the States regardless of population, among the candidates in proportion to their popular votes, would greatly minimize any criticism that can now be directed against the present method of their allotment.

Assigning to one candidate the whole of two votes given the State, without reference to its population, carries something of the idea that a candidate is getting votes that do not belong to him. Give the candidate credit in proportion to his popular vote and it seems more like he has earned his part of such votes.

Of course, it is apparent that a candidate carrying a large number of small States is very materially benefited by the two votes allotted to each State regardless of population. The benefit of these two votes is greatly emphasized by the fact that the plurality candidate in each State gets the benefit of both of them.

Let us take a State with four electoral votes, two allotted in proportion to population, and two regardless of population. Suppose 150,000 votes were cast, of which the plurality candidate received 60,000, and 2 or more minority candidates received 90,000. Thus the candidate who received 40 percent of the popular vote would receive 100 percent of the electoral vote. Fifty percent of the vote he received, or two electoral votes, came to him regardless of the proportion of population or popular votes to justify the votes he received.

A distinct merit of the proposed amendment would be that it would discontinue the practice of allotting the two electoral votes to the plurality candidate alone, and do the just thing of dividing them proportionately between the candidates.

This would not only be just to the candidates, but to all the other States participating in the election.

This table shows what would have been the votes received by the two major candidates, on account of the two-vote assignment to each State, of electoral votes in the election of 1944.

TABLE IV.—*Two-vote allotment*

	Under present plan		Under proposed plan

Flood Control

EXTENSION OF REMARKS
OF
HON. OMAR BURLESON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 17, 1947

Mr. BURLESON. Mr. Speaker, I am constrained to comment upon the President's message to the Congress as of yesterday on the subject of flood control.

President Truman outlines a 10-year program with a $250,000,000 expenditure to control the floodwaters of the Mississippi River and its tributaries. There is no question as to the need and the advisability of such a long-range project. It is almost inconceivable to imagine the accomplishments which could be brought about in such a gigantic undertaking of soil and water conservation. Imagine what it could have meant to this country if the billions spent for war, and which are continuing to be spent as a result of war, could have been applied to such measures.

Certainly I am personally interested in seeing measures taken to control the floodwaters of the great Missisippi and Missouri Valley. However, flood control is a Nation-wide problem and should be all-inclusive. The President has alluded to the lower Mississippi carrying the flood water discharged from every tributary river basin from the Appalachian to the Rocky Mountains. Attention is invited to the fact that waters from the great rivers of Texas flow directly into the Gulf of Mexico and are not included in the geography mentioned by the President. My statements here are not in opposition to flood-control measures in the great Mississippi Valley, but I do think the program as outlined by the President should take into consideration the tremendous needs of the great Southwest, where problems of flood control are equally important to the entire Nation.

Civil Government for Former Jap Mandated Islands

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 17, 1947

Mr. ENGLE of California. Mr. Speaker, the other day this Congress enacted legislation to enable the President, on behalf of the United States, to accept trusteeship of the former Japanese mandated islands—the Marshalls, the Marianas, and the Carolines. The trusteeship agreement which we have agreed to follow in the administration of these islands was drafted by the United States Departments of State, War, and Navy. Neither the Congress nor any civilian agency of the Government except the then Army-Navy dominated State Department had a hand in the drafting of the trusteeship agreement.

It has been stated that the trust agreement makes ample provision for the political, economic, social, and educational development of the inhabitants of the islands. I would like to say right here and now that pious platitudes in a trusteeship agreement will not provide political, economic, social, and educational development for these island peoples. Those are goals which will be achieved through long years of patient and concentrated effort on the part of the people themselves and the persons who will be charged with responsibility for administering the trust. They are goals which are best achieved under enlightened and democratic practices. In my opinion, they can only be achieved under civilian administration along democratic, American lines. They are not goals which can best be achieved as mere incidents to the maintenance of naval establishments in the islands.

I am informed that upon acceptance of trusteeship by the United States a declaration will be issued ending American military government in the islands. But what then? The people of the islands have not been authorized to form a government for themselves. The Congress has not enacted legislation establishing a form of government in the islands. As a consequence, gentlemen, it looks as though the trust territory of the Pacific islands will have another so-called naval civil government.

Gentlemen, not long ago I had the good fortune to accompany the Secretary of the Interior on a Pacific island inspection tour. In the course of that trip we visited two United States possessions—Guam and American Samoa. They are beautiful, sun-drenched islands inhabited by some 40,000 loyal American nationals and by thousands of American civilians and servicemen.

During the course of our short visit I learned much about these bits of America in the Pacific. But, gentlemen, what I learned about the nature of the government which the greatest democracy on earth has imposed on the people of Guam and American Samoa is utterly and completely shocking. What I saw then and what I have since learned about these governments leaves me sick and disgusted. For half a century we—the United States of America, the champion of democracy— have ruled these island peoples under so-called naval civil governments in which the legislative, executive, and judicial powers of government are lodged in the person of a United States naval officer under appointment as governor by the President. Through the years of American sovereignty these governments have been as absolute and as undemocratic in many respects as were the governments of our recently defeated enemies.

The United States Navy Department is at present responsible for the administration of the Pacific islands and is governing the islands under a form of military government similar to those which we have imposed on our conquered enemies in Europe and Asia. Since early in the Pacific war the economic affairs of the islands have largely been in the hands of the U. S. Commercial Company, a subsidiary of the Reconstruction Finance Corporation. Little if anything is known as to the kind of job either the Navy or the U. S. Commercial Company have been doing in the islands.

The U. S. Commercial Company, which has administered the Pacific Ocean program of the Reconstruction Finance Corporation, has supplied the needs of the civilian populations of the Pacific islands and has provided the only outlet for the products of the islands during the years of American occupation. I am informed that the Navy is about to take over that program. It appears that in the process, practically all of the civilian personnel will be released and hereafter the program will be handled by naval personnel. Thus, gentlemen, the consolidation of naval control in the Pacific islands move another step nearer completion. When the U. S. Commercial Company has been eliminated from the economic phases of Pacific island affairs and when a naval governor for the trust territory of the Pacific islands, responsible to the Secretary of the Navy, has been appointed there will have come into existence another Guam and Samoa—another naval government of civilian populations in time of peace.

The native people of the Pacific islands, although small in number and widely scattered over hundreds of thousands of square miles of ocean in primitive communities, are entitled to a decent form of government and a fair share of the social and economic benefits which are universally associated with the United States. We owe them more than bare subsistence in poverty and hopelessness on an isolated island in a modern world. We owe them more in the way of government than a Guam-Samoa type of naval civil government. They enjoyed more than that under Germany—even under Japan—and now that they are our responsibility, not our victims, we must see that they are adequately provided for. I, for one, want to see the Congress of the United States enact organic legislation for these islands without delay. I want to see local self-government in the various island communities. I want to see civilian administration for the trust territory—and I want to see it before the end of the Eightieth Congress.

Flood Control

EXTENSION OF REMARKS
OF
HON. O. C. FISHER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 17, 1947

Mr. FISHER. Mr. Speaker, the President, in his message on yesterday relative to the need for vast expenditures for flood control in the Missouri and upper Mississippi Valleys, stated that the conservation of our natural resources and their wise use are essential to our very existence as a nation. He pointed out that during a 10-year period a total of more than a billion dollars in flood damage has been suffered in the Mississippi Basin.

I am certainly sympathetic with the need for continued control of those devastating floods. But while the President addressed his message to the flood damages in that one area, I am sure he did not mean the need for control of floods in other sections of the Nation is not of equal moment.

It happens that I come from a section that is frequently harassed by flash floods and overflows. Because of the seriousness of the resulting damages, many surveys have been made by the Army engineers. Many needed projects have been recommended in order to cope with the problems. Congress has authorized a number of dams and reservoirs, and other surveys and plans are in the making. In the district I represent, construction is now proceeding on the Horde's Creek flood control project and on the North Concho dam and reservoir. Because of a rather strict limitation on the budget this year, funds to continue the latter project may be exhausted early next year, at which time additional funds must be provided.

In addition, Mr. Speaker, surveys have long since been completed for a reclamation project on the Colorado River in Coke County, Tex., and it has been approved by the Reclamation Service. There is already authorization for flood control on Brady Creek, and the Army engineers have recommended a flood-control dam on the Colorado River and also on the San Saba River. Surveys are continuing on the Nueces River, on the Llano Rivers, the San Saba, the Guadaloupe, and Sulphur Creek that runs through the city of Lampasas, and others.

I mention these various projects merely for the purpose of illustrating the fact that while the Mississippi Basin situation is serious, damages are mounting in other areas of the Nation that are deserving of continued attention.

The Land Is Our Sustenance

EXTENSION OF REMARKS
OF
HON. WILLIAM G. STIGLER
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 17, 1947

Mr. STIGLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Hugh H. Bennett from the Washington Evening Star:

THE LAND IS OUR SUSTENANCE—EROSION HAS DAMAGED MORE THAN HALF OF OUR FARMLAND AND THREATENS WORLD'S FOOD SUPPLY

(By Hugh H. Bennett, Chief, Soil Conservation Service, U. S. Department of Agriculture)

Conservation of what remains of the world's still-shrinking acreage of food-producing land is one of the most pressing problems facing our own and other nations today.

Yet land waste through accelerated soil erosion is as old as civilization itself. It extends just as far as man has spread over the world with his herds and plows. Accelerated erosion means speeded-up or man-made erosion, as contrasted to the slow process of geologic erosion which, across the ages, has shaped the earth's surface.

We have reached a point where the loss of productive land anywhere on the globe affects the people and the nations of every other part of the globe; for every acre which goes out of production means, to some degree, that the pressure is increased on the remaining good acres. Soil conservation is the only known way to protect the productive land of the world.

Today there is left in the world, as well as I have been able to estimate it, only about 4,000,000,000 acres of immediately arable land. That land must feed more than 2,000,000,000 people, whose numbers are increasing at the rate of about 20,000,000 a year. The great bulk of our food comes from this land, as well as all of our wood, leather, wool, cotton, and various other vegetable fibers and oils. Nutritionists tell us it takes about 2½ acres of reasonably productive land, on the average, to provide each person with a minimum adequate diet. Some countries have less than that much now—some less than 1 acre per capita. Whole nations and civilizations in the past have perished because they misused their land.

UNITED STATES APPROACHES DANGER LINE

The United States is better off with respect to the amount of good land we have, because we had so much to start with and have been using it only a comparatively short time as the life of a nation goes. Even so, we have none too much left and have no reason to be complacent about our land security. Although there once were those who thought our supply of productive land was inexhaustible, we now know better. We know that we ourselves have come all too close to the danger line in using up our irreplaceable soil resource.

More than half of our farmland has been damaged by erosion—millions of acres of it ruined for further practical cultivation and other millions of acres almost as seriously affected. Soil-conservation surveys indicate that we have left only about 450,000,000 acres of good cropland in this country, and all but about 100,000,000 acres of this is subject to erosion. Moreover, some 80,000,000 acres of the 450,000,000 still needs clearing, drainage, irrigation, or other improvements to make it productive. Meanwhile, erosion likewise has been taking its toll from a vast acreage of our range and pasture lands.

Worse, we still are losing in the United States the equivalent of about 500,000 acres every year through soil erosion. That is despite the great progress we have made in our national soil-conservation thinking and action within less than 20 years. This removal of fertile topsoil from our fields and pastures has been costing us more than $1,000,000,000 a year. That is the estimated toll in such items as direct cost to farmers, contribution to the Nation's food bill, siltation of reservoirs and harbors, damage to highways and railways, and other charges. It does not include such other drains on the Nation as the development of rural slums, narrowed tax base, and reduced income and purchasing power.

Examples of how this price of soil erosion is paid by landowners, the public, and Government are found in every agricultural area of the country. To pick one at random close at hand: During the past century the Federal Government has spent more than $112,000,000 in the Chesapeake Bay for dredging and channel maintenance, and much dredging remains to be done. The material that has to be dredged at such great cost to keep trade channels open and business flowing once was productive soil back on the watersheds of Maryland, Virginia, and Pennsylvania. Erosion and resultant siltation likewise have contributed largely to the decline in Chesapeake Bay's oyster production from 13,000,000 bushels in 1880 to only about 3,000,000 bushels a year now.

SILT MAKES GHOST TOWNS

Various settlements in Maryland became ghost towns when ships no longer could reach their wharves. Joppa Town, Bladensburg, Port Tobacco—these and others fell victims to erosion-produced sediment that filled their navigation channels.

Our hope for the future security of the land which is our sustenance depends on our safeguarding it with the permanent, acre-by-acre conservation treatment and use which today is spreading so steadily over the country and also is being adopted by a number of other countries which are sending their agricultural technicians to the United States to study our methods of soil conservation.

Actually we are today in a race. The sides are already drawn. On the one side we are faced with a steadily increasing population. Year after year, even during the war, the number of people on earth has grown larger. No one can say with authority where, or when, the growth will level off. On the other side we can see our remaining area of productive land shrinking steadily before the onslaught of erosion.

These are the forces we must deal with. Regardless of what can or should be done about the matter of population, we can and must do something about erosion. No nation—or the world, for that matter—has too much fertile land. Neither the world nor any nation can afford to lose any more productive land. Too many nations have much too little now. In relation to world population, our total world ability to produce food has already arrived precariously close to the danger line. In some countries the danger line was crossed long before World War II.

There is no more land to waste.

Pertinent Observations Concerning Communism

EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 17, 1947

Mr. MASON. Mr. Speaker, communism in America is under attack at last. The so-called Dies committee—on which I served 6 years—did the spadework for the present Nation-wide attack upon communism. It was during the heyday of the Dies committee that evidence was secured, sorted, tabulated, and filed away. That evidence is now being used in an attack upon communism which has secured such a toehold in the United States. The Dies committee seized documents, records, membership lists, and other valuable evidence in connection with numerous subversive groups and individuals; compiled, sorted, and classified the same; and built up a card index catalog listing the names of approximately 1,000,000 people who are or have been members of one or more subversive organizations. This valuable work was done before war was declared, before these organizations went underground and either hid or destroyed their records. It is not generally known that after Pearl Harbor representatives from the FBI, Military Intelligence, Naval Intelligence, and Federal Secret Service searched the Dies committee files daily, obtaining evidence which led to prosecutions and convictions in hundreds of cases of subversive activities.

The present Nation-wide drive against communism is taking on the nature of a three-pronged drive: (1) Against Communists in Government positions; (2) against Communists in the labor movement; and (3) against Communists in our American schools. So today the much-maligned, ridiculed, and almost discredited Dies committee has at last been fully vindicated and its work is now being capitalized upon as the basis for an all-out drive against communism.

The Committee on Un-American Activities did not rate very high at first in the opinion of many so-called liberals. Its activities were known as "red-baiting." Today no real American wants to see the House Committee on Un-American Activities abolished. The tide has turned and is now running strong against the Communists within our gates. I am proud to have had a small part in laying the foundation for the present all-out drive against communism in America.

Mr. Speaker, historians of the future, in writing the history of 1947, are likely to refer to it as "the year we turned to the right." The American voter turned to the right last November. Congress responded immediately, and the White House followed several months later. Four substantial steps to the right were taken during March—all away from communism:

March 12: President Truman addressed a joint session of Congress urging action to stop further aggressions of Communist Russia against freedom-loving people anywhere, and recommended help for Greece and Turkey without delay.

March 21: Prodded by the persistent demands of Congressmen, the State Department at long last published the complete texts of the secret agreements made at Tehran, Yalta, and Potsdam. As a result, Americans learned additional facts about our appeasement program toward Russia from 1941 to the present time.

March 22: President Truman issued an Executive order for a "loyalty purge" of all Government employees, at long last acting upon recommendations repeatedly made by the House Committee on Un-American Activities over the past 8 years.

March 26: J. Edgar Hoover, of the FBI, was given clearance by the administration to speak his mind at a public hearing held by the House Committee on Un-American Activities. Hoover spoke in short, blunt, significant words. He said, "The Communist Party of the United States is a fifth column. Its goal is the overthrow of our Government."

One can easily see from these four steps that appeasement of Communist Russia has ceased to be our American policy, and that Communists are (we hope) finally to be driven off the Federal pay roll. What the future holds is yet uncertain, but a united America is striving prayerfully to avert war and protect our freedom.

Mr. Speaker, communism in order to function requires a dictator. Dictators

are fundamentally opposed to trade unions. As soon as a dictator comes to power he destroys trade unions, applies strict discipline to all labor, fixes wages and hours of work by government decree, and takes away the right to strike. He uses the military power of the government, the concentration camp, or the firing squad whenever necessary to get results. Labor has experienced all these things in Italy, in Germany, and in Russia.

If Stalin fastens his economic program with its compulsory labor requirements upon the greater part of Europe, American industry will find it difficult to meet the competition such cheap forced labor will provide. Such competition will result in a lowering of American wage and labor standards, and it will bring about a lower standard of living for the American people. Thoughtful leaders of American labor should realize this situation and guide themselves accordingly. Stalin's followers, found in the ranks of American labor, do not have the interests of the American workingman at heart. The best answer to communism and socialism in all their forms is the success of the American system of free enterprise.

David Dubinsky, president of the International Ladies' Garment Workers Union, and a vice president of the A. F. of L., has long been a leading foe to Communists in the American labor movement. Mr. Dubinsky says:

No organization in American life has been immune from Communist penetration. Obedient to centralized direction, Communists have bored within church bodies, educational institutions, women's clubs, scientific groups, and, believe it or not, businessmen's associations. But the labor unions have been their special target. Without control of the trade unions the Communists would be lost. The unions form their economic base. * * * For this reason the significance of Communist operations in trade unions can scarcely be exaggerated. Like termites, they bore into the house of labor, but are not an integral part of the structure because the spirit and aims of totalitarian communism are totally distinct from, and hostile to, the ideals and policies of trade unionism.

Mr. Speaker, Clare Booth Luce, in an article entitled "Communism Challenges Christianity," says in substance:

Communism is avowedly a materialistic philosophy that shuts out all spiritual concepts. The basic creed of all Communist leaders and teachers is that man is an animal without a soul. Every Communist leader from Marx to Lenin to Browder to Foster has fanatically proclaimed that man's nature is wholly materialistic, therefore the No. 1 enemy of communism is Christianity, because the teachings of Christ are in direct opposition to the teachings of communism. Communists deny the Christian concept of man as a child of God, a creature with a soul.

Clare Luce closes her excellent article with the timely warning that whenever Christian people adopt scientific materialism, which is the heart of communism, then freedom of the individual will be lost forever, and the world will perish in a totalitarian night.

I subscribe to the thoughts expressed by Clare Booth Luce in her article and desire to emphasize her warning.

Therefore, Mr. Speaker, it seems to me that patriotic Americans everywhere, regardless of nationality, race, creed, or political party, should unite in a Nationwide, all-out drive against communism in America. We must rid our fair land of this atheistic Red menace before we are destroyed by it.

Let's Not Forget the Trinity

EXTENSION OF REMARKS
OF
HON. WINGATE H. LUCAS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 17, 1947

Mr. LUCAS. Mr. Speaker, I heartily endorse the proposal of the President that this Nation inaugurate a broad program to harness the floods of the Missouri and Mississippi Rivers. Our Government, as a government, is duty bound to protect the lives and property of its citizens, and it is certainly false economy to save a dollar when that dollar, if properly expended, would preserve property of the value of many dollars. Spending to save is the safest spending.

But, Mr. Speaker, I cannot fail to point out to the Members of this House that President Truman has failed to note the ravages of other rivers within our boundaries. There is in Texas a stream which almost annually floods thousands of acres of our most fertile soil and wreaks hundreds of thousands of dollars in damage. I speak of the Trinity River. I respectfully urge the Members to broaden their views regarding flood control beyond the Missouri-Mississippi watershed and consider other streams, such as the Trinity, which should be brought under control.

Personal Income-Tax Reduction Bill Should Be Signed by the President

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 17, 1947

Mr. ANGELL. Mr. Speaker, both Houses of the Congress have now passed for the second time the much-needed war-tax-reduction bill. It received a very large majority vote in both Houses in which both political parties joined. The overburdened taxpayers throughout the Nation are entitled to a break by relieving them from some of these excessive war taxes now that the war has been over for 2 years.

Our experience following the World War I was that by reducing the taxes the Government received more tax dollars than before the reduction. This was due to the fact that it gave opportunity to capital dollars to receive proper returns on investments and capital was invested in productive enterprise, increasing jobs and buying capacity and as a result Federal tax receipts were increased although the rate was reduced.

The feeling is growing stronger throughout the Nation that unless the taxpayer is given some relief from the burden of war taxes he will not continue to support a program of sending American tax dollars to foreign countries to relieve the peoples of those nations. As a matter of fact we have sent overseas over $20,000,000,000 since the war ended and the program now under consideration will require several billion dollars additional each year. It is true we must make adequate payments on the national debt and this will be done from excess revenues received after this tax reduction bill becomes a law.

Mr. Speaker, I include in these remarks two editorials from the two metropolitan daily papers in Portland, Oreg., in my district, one a Republican paper and the other Democratic, both urging that this tax bill be signed by the President. The editorials are as follows:

[From the Portland Oregonian of July 12, 1947]

TAX REDUCTION DUE

President Truman's insistence on delaying Federal tax reduction until next year—a Presidential year—at which time he would present his own tax bill to Congress, is taking unfair advantage of taxpayers for political profit. Moreover, from where we sit, it doesn't even look like good politics for him.

The new tax-reduction bill, which would eliminate millions of low-wage earners and scale down payments of other earners from 30 percent in lower brackets to 10.5 percent in the highest bracket, is dated to go into effect January 1, next year. If the President's veto again is upheld, he will be in the position of asking Congress next year to do that which Congress voted twice to do this year, for a difference of 6 months in effective date. We think the voters, who also pay taxes and who are deserving of a reduction in burdensome war rates, will not be fooled.

[From the Oregon Daily Journal, Portland, Oreg., of July 11, 1947]

THE TAX-REDUCTION BILL

President Truman has announced that he again will veto the income-tax-reduction bill. This is the same bill that he vetoed June 16, except that its effective date is January 1, 1948, instead of July 1, 1947. There may be enough votes in the House to override the veto. What may happen in the Senate is problematical.

In his veto message the President said that the bill offers the wrong kind of tax reduction at the wrong time.

It may be that the Republican Congress is anticipating any possible suggestion for an income-tax reduction at a later date by a Democratic President.

There is Presidential politics in this thing on both sides. The issue should be determined on its merit. It will not be.

Tax reduction was promised by the Republicans. They twice have fulfilled their commitments in the Congress.

The President, who, too, has responsibilities concerning the economic structure, does not agree with the Congress.

By this second veto of the tax bill, the President will be in a difficult situation if he proposes tax reduction in his message to the Congress next January.

In the meantime, the taxpayers, small and large—and they are legion—are being made the cat's-paw of Presidential politics.

The Journal's opinion is that the President should sign the bill.

Bad Medicine

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 17, 1947

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks in the RECORD I wish to include therein an editorial which appeared in the New York Times of Thursday, July 17, entitled, "Bad Medicine," referring to the "Federal Employees Loyalty Act of 1947":

BAD MEDICINE

The House of Representatives has passed a thoroughly bad bill in the name of a thoroughly good cause. The cause, stated generally, is a wish to make certain that those who hold public office in a democratic government actually believe in the democratic method and do their best to make it work successfully. The present instrument for accomplishing this wholly desirable purpose is a bill bearing the title of the "Federal Employees Loyalty Act of 1947." It has been passed in the House by a vote of 319 to 61, with many of the most respected conservatives in that branch of Congress protesting against it, to their credit.

The bill would create a Loyalty Review Board, which would have power to rove anywhere and everywhere into the business of any and all other departments and agencies in Washington, looking, with the enforced aid of the FBI, for disloyal suspects. On discovering such a suspect it would notify the person under investigation in writing of its preliminary finding, together with a factual statement upon which such finding is based, concealing as far as possible the source or sources of the information. The accused, thus denied his rightful opportunity to confront his accuser, would have 15 days to reply. If he failed to satisfy his inquisitors—in such matters, for example, as whether there were reasonable grounds for believing that he had sympathetic association with any organization on a list to be arbitrarily designated by the Attorney General on his own personal say-so as totalitarian, Fascist, Communist, or subversive—the accused would be dismissed summarily from Government employment. There is no provision for appeal. There is no right of review from the decision of this roving and omnipotent board. The accused would be dropped, with the soul-searing finding—worse for many than a prison sentence—that he was disloyal to the Government of the United States.

This bill lacks all of the safeguards and protections embodied in President Truman's own recent proposal in the same field. It lacks all the elements of a decent respect for democratic rights and the standards of fair play. It is a bad bill. It should never have been passed by the House. It should be thrown out of the window by the Senate.

Charles Oscar Andrews

MEMORIAL ADDRESS
OF
HON. JOE HENDRICKS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 19, 1947

On the life, character, and public service of Hon. CHARLES OSCAR ANDREWS, late a Senator from the State of Florida

Mr. HENDRICKS. Mr. Speaker, we all mourn the death of Senator CHARLES O. ANDREWS. Whatever tribute I may pay him would be as much a tribute to a man and a citizen of the State of Florida as it would be to a United States Senator. I had the pleasure of knowing of Senator ANDREWS and knowing him personally long before he became United States Senator. Senator ANDREWS was a man highly respected in the State of Florida as one of our outstanding citizens and a friend of the people. He was loyal and kind to his personal friends and held their loyalty throughout the years that I knew him. He was a good father and a loving husband.

In the Halls of Congress, Senator ANDREWS voted his convictions without regard to the popularity of his position. He had a keen judicial mind, a sense of justice, an innate endowment of statesmanship. The people of Florida paid their highest tribute to Senator ANDREWS in life and he will live in the hearts of his friends.

Importation of Sugar

EXTENSION OF REMARKS
OF
HON. ALVIN F. WEICHEL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 8, 1947

Mr. WEICHEL. Mr. Speaker, I include the following communication received from William H. Emerine, Alvada, Ohio, and request the committee having jurisdiction investigate the matters set forth in the communication:

STAMSOGAR

A gigantic conspiracy intent on controlling all peoples of the earth by controlling the availability of these nine basic products:

1. Steel.
2. Tungsten carbide.
3. Aluminum.
4. Magnesium.
5. Sugar.
6. Oil.
7. Gas.
8. Alcohol.
9. Rubber.

Whereas in this day and age all mankind cannot for very long do without any or all of these basic products; and

Whereas it is now known that 23 powerfully rich men of earth are bent on gaining control of these basic products; and

Whereas those 23 men are determined to control the people of all earth by controlling these nine basic products; and

Whereas sugar affects all of us directly through our diet; and

Whereas sugar is necessary to our diet: Therefore, be it

Resolved, That we, the undersigned, wish you, ALVIN F. WEICHEL, to introduce a resolution in Congress to investigate as to why sufficient sugar is not being imported into the United States from sugar-producing countries and remove sugar from all rationing.

Charter Reform

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 17, 1947

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Barnet Nover from today's Washington Post:

CHARTER REFORM—IF THE UN IS TO FUNCTION
(By Barnet Nover)

The acutely critical situation in Greece underlines the wisdom of the move, now under way in Congress, to strengthen the United Nations by curbing the great power veto.

For some weeks the Security Council has had before it the report of the Balkan commission. That body, appointed last December, spent months looking into charges that Albania, Bulgaria, and Yugoslavia were supporting guerrilla warfare in northern Greece.

Evidence accumulated by the commission makes it clear that these charges were not unfounded. Russia and her Communist-dominated satellites in the Balkans are out to destroy the present Greek Government and set up in its place a regime that will do the Kremlin's bidding.

It was for the precise purpose of blocking such a development, which would leave the entire Middle East open to Soviet domination, that, at President Truman's request, Congress authorized large-scale aid to Greece and Turkey.

Democracies move slowly.

President Truman's appeal to Congress was made on March 12. Only now, more than 4 months later, has the Griswold mission arrived on the scene in Greece. Actually, Congress has yet to appropriate the Greek aid funds that were authorized.

In the meantime, the pressure on Greece from the Soviet north has not diminished. If anything, it has been stepped up considerably.

The success of the Soviet-supported guerrilla campaign in Greece would now serve a double purpose. It would not only round out Russia's sphere of influence in the Balkans by eliminating the only non-Communist government in the peninsula. It would also deal a tremendous blow to American prestige at a time when 16 European nations have banded together to carry out the Marshall plan.

It is an ominous circumstance that the increase in Soviet pressure on Greece is taking place at the very moment when the Security Council is considering the problem.

Russia and her Balkan satellites do not appear to be particularly concerned with what the Council may do. Should it reach a show-down on the question of carrying out the recommendations of the Balkan Commission, Russia can always block action by employing her veto.

In the meantime, the mere threat of a veto has been enough to prolong the Greek discussions in the Council and thus gain time for Russia's satellites along the Greek frontier to continue their dirty work.

A bipartisan group of Senators, headed by HOMER FERGUSON, Republican, of Michigan, and a group of House Members, headed by WALTER JUDD, Republican, of Minnesota, have introduced resolutions whose common purpose it is to bring about a revision of the United Nations Charter.

It must be recognized that, statesmanlike and absolutely necessary as this move is, it can have no immediate effect so far as the strengthening of the UN is concerned. At San Francisco, despite the vigorous objections of the Canadian and other delegations, the amendment of the Charter was made extremely difficult.

The Charter provides for two distinct but related methods of amendment. In the first place an amendment can go into effect if it is approved by a two-thirds vote of the General Assembly, followed by ratification by two-thirds of the members of the United Nations. The approving nations must include, however, all the permanent members of the Security Council. There is that veto again.

Amendment is also possible through a general conference of the United Nations. Again final approval requires the unanimous vote of the big five.

There is no reason to believe that Russia is in the least inclined to give up her veto power. She regards it as far more important than all the rest of the Charter since it enables her to block action which may be contrary to her interests and the interests of her satellites.

Russia's record as a UN member suggests, in fact, that her only interest in the new world organization lies in preserving the veto and the negative power it gives her.

Nonetheless, it is to be hoped that Congress will give its fullest possible approval to the Ferguson and Judd resolutions.

Such action would clearly demonstrate America's determination to make the UN a real instrument of peace. It would also combat the frequently made charge that the United States is as interested in retaining the veto provision in the Charter as is Russia.

Just a $1,000 Check?

EXTENSION OF REMARKS
OF
HON. ROBERT J. TWYMAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 17, 1947

Mr. TWYMAN. Mr. Speaker, under leave to extend my remarks, I submit an editorial from the Chicago Times of July 15, 1947:

This was sent to me by a constituent who feels very strongly about the Centralia Coal Co. disaster and the amount of the fines levied:

JUST A $1,000 CHECK?
(Guest editorial from St. Louis Star-Times)

Remembering the shock and indignation which came with the grim, dark deaths of 111 men in Centralia Mine No. 5 only last March, it is hard to believe that all echoes of the tragedy may be stilled by the scratching of a company executive's signature on a check for $1,000. Yet such is the narcotic effect of time that this anticlimax has become a too genuine possibility.

The Centralia Coal Co., owner of the Illinois death trap, was fined $500 on each of two counts by a judge in Nashville, Ill. The case against it was not contested.

Counsel said that "the company doesn't feel like entering a plea of guilty," but would like to dispose of the matter to avoid expensive litigation. And that was good enough for court and prosecutor. Other charges were dropped.

At the same time, Robert M. Medill, former director of the Illinois Department of Mines and Minerals, and his assistant, Robert Weir, asked for a change of venue. This probably will be granted since Judge R. W. Griffith said that "when you consider that 111 men lost their lives in this county and that people gathered in great numbers and saw the ambulances taking out the victims, I can conceive there might be prejudice against the persons responsible."

There certainly might be. And it might be justified.

Whatever the future may bring to these two men, it begins to seem highly improbable that there is any intention of calling for an accounting of his stewardship from anybody else involved. Neither the officers and managers of the mining company, nor Governor Green and his political henchmen who ignored a pathetic plea from the miners to save their lives and preferred, instead, to use mine safety inspectors as lug collectors, seem to have much cause for worry.

Even Congress now seems callously indifferent to the lessons of the disaster. Once again the men who go down into the earth must depend for protection on such safety clauses they have been able to write into their contracts.

Is the story of Centralia really to end in this sorry way? Is public indignation really so ephemeral?

Are those 111 graves to be forgotten, and is one to continue to regard mining as an inevitably hazardous occupation in which man must gamble each day for his life?

Will Government not even stretch the odds a little more in his favor?

Statement to the Joint Committee on the Economic Report by Mr. Marion B. Folsom

EXTENSION OF REMARKS
OF
HON. WILLIAM M. COLMER
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 17, 1947

Mr. COLMER. Mr. Speaker, today Mr. Marion B. Folsom, treasurer of the Eastman Kodak Co., and one of the most progressive and learned businessmen in the United States, appeared before the Joint Committee on the Economic Report, of which Senator TAFT, of Ohio, is chairman. Mr. Folsom appeared by invitation of that committee.

It was my privilege to be associated with Mr. Folsom for 3 years, during which time he served as director of the staff of the House Committee on Postwar Economic Policy and Planning.

I regard him as not only a progressive businessman, but a sound economist, and because of my high regard for him and knowledge of his ability, I submit herewith the statement which he made before the Taft committee today.

I think the congressional membership will find it most interesting and valuable reading. Mr. Folsom's statement follows:

I am Marion B. Folsom, treasurer of the Eastman Kodak Co. During the period from March 1944 through December 1946, I served as staff director of the House of Representatives' Special Committee on Postwar Economic Policy and Planning under the chairmanship of Congressman COLMER. Rather than give only my personal views on the problems which are being considered by your committee, it seemed to me that it would be more profitable to outline to you some of the recommendations on current and long-range economic problems which were made by the Colmer committee in its final report, issued in December 1946. While the situation has changed in some respects during the intervening 6 months, the basic problems are practically

the same and many of the recommendations of the committee are still pertinent.

This 18-man bipartisan committee issued a series of 11 reports, based upon extensive hearings and study, and many of its recommendations were carried out by Congress. The final report summarized its views on the then current economic problems and certain longer-range problems. All these reports received approval of the entire committee, there being no minority reports.

MACHINERY OF GOVERNMENT IN ITS EFFECT ON ECONOMIC POLICY

The committee called attention in its final report to the need for a standing committee to advise Congress on all aspects of economic policy, pointing out that the existing committee structure was deficient in this respect. It stated:

"Frankness requires the confession that most of the standing committees of both Houses are concerned with the special interests of that sector of the economy with which they are mainly charged and that it is with the greatest difficulty that the relation of these policies into a coherent program is achieved at the legislative level."

Your joint committee is in an ideal position to fill that need. It would seem to me that reports by your committee from time to time on major economic policies would serve as useful guides to the various committees of both Houses. They would also provide the background for the recommendations which the committee will make on the President's report.

The Colmer committee also pointed out the need of a better coordination of the executive departments and agencies as they affect the over-all economic policy of the Government. An attempt was made during the wartime to bring about this coordination through the Office of War Mobilization and Reconversion. While the experience of this Office was not entirely satisfactory, it did offer a valued example as to what could be accomplished if there were a proper staff organization within the executive departments to coordinate the activities of the departments and many independent agencies. The Council of Economic Advisers would fit logically into such a general staff organization, but the Council alone is not sufficient. The committee stated:

"The scale of peacetime operations of any modern government involves the necessity of bringing into line general fiscal policy, social objectives, foreign policy, and domestic politics. To accomplish this requires a governmental agency that coordinates not only the major departments but the large number of independent regulatory commissions and the many governmental corporations created by act of Congress.

"The committee, therefore, recommends to Congress the study through its appropriate committee structure of the legislative aspects of such policy formation in peacetime."

EMPLOYMENT AND UNEMPLOYMENT

The Colmer committee in its December report pointed out that, although employment was at unprecedented peacetime levels, production in several important industries was considerably below the rate to be expected from this high level of employment.

In many industries costs had increased appreciably since the end of the war because production per man-hour had not increased sufficiently to offset the increase in wage rates and material costs. The law productivity was due to a number of reasons, such as the high rate of labor turn-over, the large proportion of workers without adequate skill and training, the delays in the flow of material—partly caused by strikes.

Since the first of the year employment has increased still further and there has been an improvement in productivity in many industries. Labor turn-over has declined appreciably; the workers are becoming better trained, and there is a better flow of materials. Also the installation of new machinery and the improvement of methods are beginning to show results. These factors should continue to operate, and we may expect a further improvement in productivity. This, of course, is the most important factor in increasing the supply of goods and thus preventing further inflation.

It is probable, however, that the increase in productivity will not be as great as it was during the first few years after the First World War. For a period in the early twenties, output per man-hour increased almost three times the normal rate of about 3 percent per year. Figures are not available as to the increase in productivity we are now obtaining, but it is probably not in excess of the normal prewar rate. One factor which will probably prevent a marked increase in productivity, particularly over the long run, is the lack of incentives compared with the period after the last war. With the extremely high level of personal income taxes and the corporate income taxes being more than three times their level after the last war, the incentive to invest new capital in machinery and equipment is much less than it was. This is one important reason why great effort should be made to reduce Government expenditures and taxes. As the Colmer committee stated, the only way we can expect to continue to improve the standard of living of the people is through increase in productivity.

In the important construction industry, where there is the greatest need and also the greatest possibility of increase in productivity, only slight progress has been made.

The critical period for unemployment will probably be reached when deferred demands for many products have been met and exports decline. If before that time productivity has increased and costs and prices have been reduced, we may be able to avoid any serious unemployment. The Colmer committee pointed out that with the proper foresight and action by the Government, industry, and labor, the danger of a serious decline in business and farming should be minimized, but that we should be prepared to take care of any unemployment that will develop. They considered that the present unemployment compensation system is a sound and practical means of providing for the unemployed.

In one of its earlier reports the committee urged States to liberalize the unemployment benefits, and considerable progress has been made since then. Now many States provide benefits of over 20 weeks duration with maximum weekly benefits of $20 or more. A number of States, however, are still below these levels, and the committee recommended that those States which have not liberalized their benefits should do so; the reserve funds are sufficient to permit an increase in benefits. The committe also thought that the system should be extended to cover workers in small firms, the present system being limited in many States to employers of eight or more.

The committee recommended that action should be taken immediately to extend the coverage of the Federal old-age insurance plan to include groups now excluded, such as domestic servants, farm labor, employees of nonprofit organizations, Government, and self-employed groups—normally numbering 12,000,000 people. Many of these were covered during the war because they were in industry, but now that they have returned to the normal employment they will lose the benefit of their contributions, unless these occupations are brought under the system.

PUBLIC WORKS AND CONSTRUCTION

In its seventh report, the postwar committee made a number of recommendations regarding postwar public works and construction. I would suggest that your committee carefully consider these recommendations as they are as pertinent now as at the time they were made. The report was based upon a careful study of the problems involved after exhaustive hearings and after consultation with many experts in the field. The committee pointed out construction is too small a factor to be successfully used to stabilize the entire economy, but that concerted efforts should be made to stabilize the construction industry itself. It recommended that public construction be limited during this period of active private construction to projects of immediate necessity, but that at the same time plans and specifications be drawn up in advance of need by public agencies—Federal, State, and local—so that the public programs can be expanded as private ones slacken.

In the past, the record has not been very good in this respect, as public construction expenditures generally rise and fall with private expenditures. This is a field in which your committee could do effective work. Good progress has been made to date in the preparation of drawings and specifications and also in carrying out the program of withholding public works during this period of high activity in private construction. But this postponement has probably been due to high costs. There is considerable money available in the State and local governments for various projects. Some of these are absolutely necessary and probably can be postponed only for a short time. Deliberate effort, however, should be made by all Government agencies to hold back as much as possible of this construction so that they will be available to fill the gap in private construction when things fall off. The Colmer committee felt that additional money should be made available by the Federal Government for advances to the States and municipalities for the preparation of plans and specifications and also for the Federal Government projects already authorized by Congress.

The committee recommended that machinery should be set up to coordinate the construction policies of the various agencies of the Federal Government and, in turn, to coordinate these policies with those of the State and local governments and with private industry. The Council of Economic Advisers would seem to have the authority needed to set up the machinery, and the committee recommended steps to this end should be taken at once.

The committee in its final report expressed a serious concern over the implication of current high-construction costs. It pointed out that there was a danger in the industry pricing itself out of the market and that—

"If costs cannot be reduced substantially, the industry will be confined largely to producing only enough housing for the increase in families and will not reach the rehousing market. It is important that the industry improve its methods so that costs can be reduced with increased volume, to bring it into line with other industries."

FEDERAL BUDGET AND TAX POLICY

In its fourth report, issued in September 1944, the committee stated that the basis for the postwar Federal budget and tax policy should be a firm determination to hold Federal expenditures down to a minimum consistent with the proper functioning of the Government. It pointed out, however, that Federal expenditures after the war would be much higher than prewar years and stated in this report, that—

"It is not unlikely that in the first years after the war the total of Federal expenditures will approach $20,000,000,000 per annum."

The following statement is quoted from the final report of December 1946:

"The committee wishes to reiterate more strongly than ever the necessity of reducing expenditures substantially. It realizes that we cannot reach the $20,000,000,000 level

during the next fiscal year. It would, however, urge serious consideration to reducing expenditures for the fiscal year ending June 30, 1948, to $30,000,000,000, with further substantial reduction during the following year, but with the objective of a $20,000,000,000 budget at an early date.

"The committee feels that a budget of $30,000,000,000 is a realistic budget and that expenditures can be reduced to this level without interfering with national defense or other normal functions of the Government. At this level the cost to the Federal Government per family of four would be over $850 per year."

It was pointed out that with this reduction in Federal expenditures a substantial surplus could be created and also that reductions could be made in Federal taxes.

As to tax policy, the committee stated:

"Tax policy: Unless high levels of production and employment are maintained, the burden of necessary taxation may prove intolerable. Unless a tax program is adopted which will minimize the repressive effects of Federal taxation, this goal may not be reached. Thus, in addition to holding Federal expenditures down to a minimum consistent with the proper functioning of the Government, it is necessary to develop a Federal tax system which will raise the necessary revenue and still distribute the tax burden in a manner that will provide adequate incentives for venture capital, creative effort, and business growth, and also permit expansion in consumer demand.

"Partly as a result of the prewar trend and partly due to wartime necessities, the Federal tax system has placed steadily increasing burdens on risk-taking enterprise. On the one hand, it puts a premium on the avoidance of risk provided by the refuge from taxation through tax-exempt securities. On the other hand, it has imposed double taxation on income derived from business dividends and has placed excessive burdens on those businesses and individuals to whom we must look for a large share of the funds required for the expansion of employment opportunities. An adequate reduction in such tax burdens will be essential.

"Equal consideration must be given to a lightening of the tax loan on the lower-income groups which provide the great bulk of the demand for consumption goods on which employment so largely depends. Social considerations also require that Federal taxes shall not depress the living standards of those who are at a bare susbsistence level. Nevertheless, if expenditures are held down to reasonable levels, the committee believes it should be possible to reduce present income-tax burdens on all income groups. Such reductions should do much to stimulate venture capital as well as to provide substantial relief for the lower and middle income groups."

My personal opinion is that the greatest contribution the Government can make at this time toward the maintenance of the present high level of employment is the reduction of Government expenditures, so that both the debt and taxes can be reduced. It is inequitable to maintain these extremely high wartime taxes for the third year after the war—this being particularly true for those in the middle-income and fixed-income groups. But more important, if these high taxes remain frozen much longer in our economy, we run the risk of killing off the incentives which have been such an important factor in our progress over the years, and of placing too much dependence upon Government rather than private enterprise.

If viewed with the proper perspective, a budget of $35,000,000,000, representing over 20 percent of the national income and four times the prewar budget of 1939, would seem to be entirely too high. With Government expenditures at this level, governmental policy plays a much more important part in the economy of the country than heretofore. It is extremely difficult for governmental action in the economic field to be properly timed—due often to the political situation and to the delays caused by obtaining both the executive and legislative approval. There is thus a danger that larger governmental expenditures are apt to lead to wider swings in economic activity.

MONETARY AND FINANCIAL PROBLEMS

The committee in its final report called attention to the rapid rise which had occurred in consumer debt since the end of the war. The figure is now slightly above the peak reached in 1941. The committee did not take a definite position in regards to the continuation of the regulation of consumer credit on a permanent basis, but because of the effect which consumer installment credit might have upon swings in the business cycle, it felt that this was a matter which should be carefully studied by the appropriate congressional committee.

The committee also studied the credit and capital needs of small business. As a result of its studies, it concluded—

"That with the funds available in banks throughout the country, in both large and small centers, with the plans which have already been formulated by the banks to help smaller companies, the bank-credit situation for business concerns of all sizes can be considered satisfactory.

"With regard to equity capital, however, small and new business is probably in a less advantageous position than with regard to bank credit. The cost of issuing securities is considerable and the organized markets are not receptive to the issues of little-known firms.

"It has been maintained that this situation has been aggravated by the elaborate requirements of the Securities and Exchange Commission for the registration of securities. Some relaxation in favor of small business seems to be compatible with adequate safeguards."

The committee called attention to efforts already being made by businessmen and bankers to provide equity capital for small business.

As one means of offsetting the inflationary pressure which still exists, the committee thought that there should be a vigorous promotion of both the retention of Savings Bonds to maturity and purchase of additional bonds. It suggested that the Treasury should be allowed to defray expenses incurred by issuing agents in the operation of pay-roll deduction plan. It also suggested the possibility of changing the terms of the "E" bonds so that they would be more attractive; for example, the interest of 2.9 percent might be continued for an additional period on matured bonds and the bonds might be made negotiable for loan purposes.

FOREIGN ECONOMIC POLICY

In a report issued in May 1945, the committee pointed out that a substantial foreign trade and investment flow is an essential part of continued prosperity. It stated that—

"The enormous capacity of our country to produce, to consume, and to save must result in the postwar period in extensive exports, extensive imports, and extensive foreign investments."

The economic program recommended provided for the relaxation of barriers to international trade and international payments.

"The reduction of trade barriers would serve to attain a political as wel' as economic goal by substituting economic cooperation for economic warfare and thus would assist greatly in the establishment of a peaceful world order."

Since the end of the war extensive loans have been made to foreign countries. As the result of these loans and the reduction of balances previously accumulated, exports have been maintained at a very high level and considerably above the level of imports. Currently, exports are being made at $15,000,000,000 per year, and imports at the level of $6,000,000,000 per year. Obviously this situation cannot continue unless we expect to receive little in return for the loans. The country must be prepared to accept a larger volume of imports to pay the interest on the loans and to amortize the principal. Unfortunately, many of the loans have simply been used to maintain the economies of the individual countries and have brought about little increase in production. Eventually we should expect that production would increase and that these countries would be in a position to export more to United States.

Full advantage should be taken of the stock-piling program in obtaining certain strategic materials in repayment of loan.

In commenting on the situation which existed at the end of 1946, the committee outlined the difficulties we are facing in bringing about a healthy foreign trade. These comments still apply:

"It is obvious that serious obstacles are yet to be overcome if the system of unrestricted multilateral trade envisaged by the committee is to become a reality.

"Special barter arrangements on a bilateral basis are multiplying. Many of the countries of the western world and all the countries under the domination of Russia are using primarily state trading devices.

"In place of the completely multilateral system originally foreseen by the committee, we are now confronted with a strong possibility that the world may become divided into two great economic blocs with trade between the two conducted only under the most difficult conditions. Even within the western group of countries, moreover, opinion is by no means unanimous that a system of unrestricted, multilateral trade will be mutually advantageous for all countries.

"Under these conditions, an immediate removal of all barriers to trade is hardly to be expected. More than anything else, a serious postwar slump in the United States would impede the adoption of multilateral and relatively unrestricted trade. For this reason, the committee reiterates its statement in the sixth report that 'high levels of ouput and employment at home * * * are an essential requirement for an expanded world trade.'

"The difficulties which are now being faced serve to emphasize again the growing responsibility of the United States for directing the course of future world trade. If a division of the world into economic blocs is unavoidable, it is all the more important that trade within the western group of countries should be conducted along the multilateral lines recommended in the committee's sixth report. And more than any other country in this western group, the United States today is in a position to take the initiative in this endeavor. Unlike many other countries, our productive capacity is high and there is almost no possibility that we shall have difficulties with our balance of payments. In the future, the dollar will be used even more as an international currency than it has been used in the past. If we can achieve economic stability at home, and if we continue to advocate the international economic policies which have previously been recommended, there are good reasons to believe that a high and stable level of international trade can be achieved despite the political and economic uncertainties which confront us in a large part of the world."

ECONOMIC RECONSTRUCTION IN EUROPE

The most important factor in the development of a sound foreign economic policy is obviously economic reconstruction in Europe. As a result of a visit of seven members of the Postwar Committee to Europe in 1945, the committee issued a report in November of that year on the "Economic Reconstruction in Europe." A number of recommendations were made which have since become the policy of the Government. Reference will be made here only to one aspect of the problem, namely, the reconstruction of Germany which is probably the key to the whole problem.

The committee's report was probably the first authoritative statement of the probable break-down in Germany of the plans which were in operation and its forecasts have been generally borne out by events of the past 2 years. The following recommendations from both its 1945 report and its final report would still seem to apply. It is encouraging to note that these conclusions are now being generally accepted.

NOVEMBER 1945

"The committee is convinced that to strip Germany of the factories necessary for the ordinary industries of Germany would be to impose a burden of relief on the western powers, principally the United States, if widespread starvation and dangerous conditions to the public health are to be avoided in all Europe.

"The simplest analysis shows the dependence of the industries of all the other countries surrounding Germany upon German raw materials and German manufactures. To go beyond the limits of destroying the war-making power of Germany is to depress the whole standard of living of Europe and, through it, of world recovery. It follows, of course, that our own foreign trade with Europe would suffer in proportion."

DECEMBER 1946

"Given the present Rusian attitude, it becomes necessary to force the issue by integrating the western zones into as nearly a self-sufficient basis as possible, putting a complete stop to the agreed schedule of reparations for Russia until such time as Russia is prepared to live up to the basic agreement of unifying the economy of Germany.

"It is true that in the short run Germany's production is limited by the shortage of fuel more than by prospective reparations deliveries from the western zones. In the longer run, after the next 2 years, however, the limitation of Germany's ability to become self-sustaining will be affected by the application of a level of industry too low to support the greatly increased population of Germany in an impoverished territory.

"A small investment in raw materials and some basic machinery made available to the Germans, plus a stop on reparation payments and the building up of foreign exchange as rapidly as possible, seems to be the only method of cutting down the indefinite continuation of this large burden of feeding our ex-enemies that is now imposed on us. This means a productive loan now, or relief and chaos indefinitely.

"It further emphasizes the points made at length in the eighth report, and particularly in part 2, of the heavy dependence of other European states on German recovery. While at the time the committee's report was issued the position taken was regarded as extreme, it feels that the evidence of the stagnation of European recovery on a normal basis sufficiently bears out the elementary analysis already offered: Until Germany is able to pay for its own imports, world commerce suffers and those countries which have been heavily dependent upon German production will be retarded to a critical degree in their own recovery."

SHIPPING AND SHIPBUILDING

This industry is the particular concern of the Government because of our dependence upon it for national security in time of war. As a result of its study, the Colmer committee made the following recommendations regarding the postwar problems of the industry:

"(1) The maintenance of an enlarged merchant marine under our flag is essential for our national security.

"(2) Operating and construction subsidies should be paid, as needed, for merchant vessels the operation of which is considered essential in the interest of national security. The appropriations for such subsidies should be recognized as part of the cost of national defense.

"(3) For shipping not considered essential for national security, the comparative costs of rendering transportation service should be the determining factor. No subsidies should be provided to such shipping.

"(4) With the exception of a strategic reserve for defense purposes, vessels which cannot be sold either to American operators or to foreign countries should be scrapped. The expense of maintaining ships in sanctuary should likewise be considered a cost of national defense.

"(5) The maintenance of a shipbuilding industry in times of peace is considered to be in the interest of national security. Its utilization for the continued technical improvement of our merchant marine should be encouraged through the cooperation of the technical experts of the armed services, with subsidies to be paid to the extent necessary to maintain a needed nucleus of skill and capacity. The construction of types of vessels of which a deficiency still exists should be initiated as soon as possible."

POSTWAR AGRICULTURAL POLICIES

The report issued in August 1946, by the House Postwar Committee, made a number of recommendations in regards to the immediate and long-run postwar agricultural policies. This report was based upon numerous hearings at which leading authorities on agriculture appeared, and a thorough study by the committee aided by some of the best qualified students of the problems. As conditions in agriculture will play such an important part in maintaining the high level of productive employment in this country, I would call your attention especially to the recommendations contained in that report. One recommendation that might well fall within the province of your joint committee related to a study of the whole question of parity prices:

"The committee further recommends—especially in view of the obviously uneconomic price relationships represented by present parity levels for individual commodities—that a thorough reconsideration of parity concepts be made in two respects: The relative level of parity prices between one commodity and another, and the validity of the general level of all agricultural prices as defined in terms of the 1910–14 base. Study should be conducted and legislation prepared prior to the end of the Steagall period so that farmers will not be called upon to make their plans in the dark."

CONCLUSION

As a conclusion to its final report to Congress, the Postwar Committee made certain observations on the general economic problems which we face and the role which Government should play in meeting them. I would particularly commend these comments to your attention as they represent the judgment of this 18-man committee after a study extending over a period of almost 3 years.

"The national income is considerably above the peacetime level and only slightly below the wartime peak. There have been further additions since the end of the war to the large liquid savings in the hands of the public. Purchasing power is at an unprecedented level and could be exerted to push prices higher.

"It is thus necessary that moderation be shown by all groups in order to check the threat to a continued inflationary trend—by consumers in spending, by labor in wage demands, by business in pricing policies, by Government in its own spending, tax, and monetary policies.

"The greatest contribution to the solution of these problems can be made by an increase in productivity of all factors of production which would both reduce costs and increase supplies.

"At the present time there are many who feel that we are going to experience a business recession in the months to come. It must be granted that there is evidence both in the current levels of prices and of operations and in the form of historical analogy which seem to lend support to such fears. The committee, however, does not feel itself able to judge at the moment whether the present maladjustments are such as to presage a general business decline or whether readjustment in specific lines will occur as they have over the past year, one problem following another but without bringing about general retardation.

"Considering everything, the committee feels that there is no necessity for either a depression or recession. The country, as has been pointed out, has the greatest buying power and the greatest pent-up demand for consumer products in its history. Loose talk of depressions and business recession is unjustified and serves no good purpose. There is nothing wrong with the country that hard work and resultant production will not cure.

"The committee in its assignment was primarily concerned with economic problems of the immediate postwar period. It has, therefore, not studied those problems relating to the reduction of the wide swings in business activity we have experienced in the past. This is one of the most serious economic problems which the country faces in the future. It is particularly with this objective in mind that the committee recommends that a permanent over-all economic policy committee be set up in each House of Congress with adequate joint staff to conduct a long-range study of this subject or that the Joint Committee for the President's Economic Report be implemented to do this work. Such a committee should work in close cooperation with both the President's Council of Economic Advisers and the executive agency which the committee recommends replace the Office of War Mobilization and Reconversion. These studies should be directed primarily at the effect which Government policy has on these business swings.

"There are certain governmental activities which would have to be carried on even if we were perfectly free from economic depressions. Where practical, we should carry on these normal functions in a way which will help minimize cyclical variations. With the Federal debt and annual budgets at such high levels, the Government's fiscal policy will be a most important factor, and it is vital that a long-range program for the handling of the debt be formulated. Other necessary programs could be developed with the primary objective of cushioning the impact of economic stress or discouraging economic excesses. Such programs would include unemployment insurance, proper scheduling of public works, and the proper handling of social-security funds.

"Where should we draw the line? This committee feels that our experience to date

points to the conclusion that the Government cannot and should not take full responsibility for maintaining economic stability or full employment. Such a government could neither accomplish its purpose nor remain a democracy. We were able to mobilize our economy for war only by surrendering temporarily the basic democratic freedoms which we were fighting the war to preserve. We should not be misled by those who urge that we can equally well mobilize for full employment in peacetime. To do so would be to accept totalitarianism—which we fought to prevent having imposed upon us.

"Most of the world that has accepted socialist and even totalitarian controls has done so through the destruction of private capital during and between the two wars. Whatever the cause of their establishment, these systems have not produced a standard of living remotely approaching our own.

"In the past under the American competitive-enterprise system wages and the standard of living have steadily advanced over the years because of the increase in productivity. Hours of work have been gradually reduced and labor standards raised to the highest of any country in the world. The individual freedoms enjoyed by all groups of producers, both management and labor, and by the ordinary citizen in every walk of life have, in spite of defects under the system, unleashed the creative powers of human initiative and enterprise to accomplish these unparalleled results.

"Confidence in this free system, derived from its accomplishments and its prospects, is the basis for the committee's recommendations on economic policies. With the excellent record achieved in reaching the present high level of employment, with the backlog of demand for many products still unsatisfied, and with the unprecedented amount of liquid savings in the hands of the consuming public, the committee feels that we have the basic conditions for maintaining a high level of both production and employment. A start has been made toward this goal. The task ahead is to develop economic conditions which will encourage stability of productive employment at a high level."

Changing Times in the South

EXTENSION OF REMARKS
OF

HON. FRANK BUCHANAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 16, 1947

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following group of articles on industry, research, labor, and agriculture from Kiplinger magazine of July 1947:

CHANGING TIMES IN THE SOUTH

The South of mid-1947 presents a rapidly expanding economic opportunity to the Nation. In the great tier of States reaching from the Atlantic marshlands, across the Mississippi and on to the western plains, times are changing. Changing for the better. Everywhere, in southern industry, research, labor and agriculture, there is a significant stirring which makes for good in our whole economy.

Important among the developments that brought about this activity are: 1. Wartime industrial expansion and good wages (along with the flow of new capital). 2. The Supreme Court's recent decision on rail rates which should result in greater equality for shippers of southern-made goods. 3. The dethronement of cotton as king and a machine-made opportunity to make this sick commodity a strong one. 4. The tremendous upsurge in research, both agricultural and industrial.

Thus the South is emerging as a solid economic fact. For men in the North, East, West as well as the South—men with brains, capital and goods to sell, here is a vast market, a source of natural wealth, a reservoir of labor.

The South of mid-1947 is not the South described by Franklin Roosevelt a few years ago as the "Nation's No. 1 economic problem." The South can be called a grave social problem, but economic gains are being made despite the continued backwardness of southern politicians and violent racism.

Most intelligent southerners are convinced that greater economic strength will provide at least a partial solution to the problem of poor education, bad health and the conflict of races.

The South has much to do to lift its standard of living but, to its credit, more is being done now than ever before. It is an error to dismiss these 13 potentially rich States as a pattern of oppression and an area apart from North, East and West. It is good business to take sharp note of the fact that times are changing for the better in the South.

INDUSTRY—NORRIS, OF THE SOUTHERN RAILWAY

The Southern Railway System has long been a symbol of the South—an important index of the South's industrial condition.

And today, all along the Southern's 8,000 miles of track in 13 Southeastern States, there are signs of bustling activity. Some of these signs are:

In the last 2 years almost 700 new industries have established themselves; 175 existing plants have enlarged their facilities; more than 30 warehouses have been constructed for the assemblage and distribution of manufactured goods.

Fifteen big Defense Plant Corporation factories in the Southern's territory have been acquired by such here-to-stay concerns as Western Electric, Borg-Warner, Quaker Oats, International Harvester, Goodrich, and Reynolds Metals.

Construction has begun on three great new rayon and nylon plants, totaling an $80,000,000 investment, for the Celanese Corp. at Rock Hill, S. C., for du Pont at Chattanooga, and for American Enka near Morristown, Tenn.

What is happening along the Southern's tracks is only part of a general industrial expansion throughout the South. From 1939 to 1945 the South's food industry and related factories increased the value of their output almost $1,500,000,000. Textile and chemical production went up a billion dollars each; mineral production climbed one and one-half billion; iron and steel, three hundred million; and machinery, three hundred and fifty million. Last year construction awards hit the $2,000,000,000 mark for an unprecedented high.

One of the most important personalities behind all this new activity which has nurtured the Southern Railway and been nurtured by it, is Yankee-born Ernest Eden Norris, the Southern's president.

Under Norris' leadership, assisted by heavy wartime revenues which came as a gift from heaven, the Southern has been transformed from a poky line into an energetic and progressive enterprise. And while he has been making a go of his job, Norris has emerged as an articulate promoter of the South's new growth, and of the significance of that growth to the rest of the Nation.

Immediately after the war Norris' road sponsored a series of advertisements in national magazines and business publications.

One ad showed an old sun clock standing by a magnolia tree and across the fields in the distance a modern, streamlined factory. The caption, "Times have changed." Another ad, "New view of the Old South," pictured the latticed doors of a plantation house swung open to reveal a modern freight train loading before a large and obviously humming plant. "Nowhere else can you find such a happy blending of the old and the new," ran the copy over Norris' signature.

Throughout the ads spoke of mellow tradition and courteous people, charming homes, and quaint streets, while stressing the availability of friendly labor, raw materials, low-cost power, growing consumer markets, and a favorable manufacturing climate.

"Listen to the noonday whistles of busy factories," said the biggest of all Norris ads, "the clang of shovels in mines, the crash of pine trees in the forest. Listen! And in the background, always, you'll hear the hiss of steam, the roar of Diesels, the clicking of wheels, the thousand sounds of a mighty mass transportation system at work."

The system which the aggressive, hawk-eyed Norris heads is the third largest railroad east of the Mississippi River. Its lines are flung out over every State south of the Potomac and Ohio Rivers except West Virginia. The Southern's greatest track concentration is through the Piedmont region of North and South Carolina, Virginia, and Tennessee. But its long arms reach out to every important South Atlantic port—Norfolk, Charleston, Savannah, and Jacksonville. The road runs south to New Orleans and Mobile on the Gulf; westward it reaches the Ohio River at Cincinnati and the Mississippi at St. Louis and Memphis.

Norris has worked for the Southern for 45 years, been its president for the last 10. He was born 65 years ago in the little town of Hoopeston, Ill., on the eastern border of the State. Fresh from school, he landed a job as a telegrapher with Western Union, worked briefly with the Chicago & North Western Railway, then went with the Southern in Washington as a car-service agent. He pushed steadily up to the top.

In 1937, when Fairfax Harrison retired from the presidency of the railroad, Norris, then operating vice president, was the unanimous choice to take over. Harrison had come up to the presidency by way of the legal department. He was brilliant but eccentric, more scholar than railroad man. Harrison seldom toured the road he headed, subbornly opposed the installation of such modern comforts as air conditioning.

Norris' background, philosophy, and operating ways are in sharp contrast with those of his predecessor. He is fascinated by railroads and enthralled by the drama of Southern history. He shuns the comfortable surroundings of his Washington office and the paper work that goes with being in it. Norris prefers to shuttle around the countryside in his private car "ringing doorbells," and he has the reputation of spending more time on the road than any other big railway president.

On the road Norris often walks up through the forward cars to invite passengers back to have lunch or a chat in the company diner. Or, when inspecting yards, he'll swing down from his car to ask a workman by the side of the tracks to have a cup of coffee with him. Human, friendly, and hardworking, he has done much to shake the Southern out of its stuffy, history-cluttered ways.

The Southern Railway System has evolved through the merger and consolidation of more than 100 smaller lines, many of which

were built during the Civil War to help move Confederate troops and supplies. The core of the system was the Richmond and West Point Terminal Co., a loosely organized and inattentive parent to three north-south lines.

When the panic of 1892–93 sent the mismanaged Richmond system into bankruptcy, the directors asked Drexel, Morgan & Co. to reorganize its roads. After considerable persuasion, Morgan agreed and in 1894 the Virginia Legislature authorized the successor company to incorporate and adopt a new name. On July 1 of that year, with about 2,000 miles of line, the Southern Railway Co. opened for business.

The road hit a peak in 1926 with a net profit of $23,500,000, but by 1932 the depression had dropped its revenues more than 50 percent and the profit had given way to an $11,200,000 deficit. In this brief span the company's working capital plunged from $36,500,000 to less than five million.

Traffic rose after 1932 but in an effort to conserve its cash the Southern held back on outlays for badly needed maintenance and equipment. The result was that operating efficiency slumped to a dangerously low point. By 1938, a year after Norris had assumed the presidency, the Southern owed the Reconstruction Finance Corporation $31,400,000. Southern preferred stock had dropped from a 1937 high of $60.50 a share to $8.50, and the 6½ percent junior bonds were selling for only 28 cents on the dollar. Then came the war.

With its tracks sprawled throughout the Southeast and with Washington as its northernmost terminal, the Southern was in a good position to profit by the tremendous wartime increase in traffic. A great many of the country's military camps and a large share of its heavy munitions plants were located in the area which the Southern covered. Its gross revenues boomed from $89,000,000 in 1938 to $261,000,000 in 1944. The highest earnings in its history—$33,400,000—were recorded in 1942, when the Southern paid dividends again after a 10-year lapse.

Taxes and high operating costs, together with a falling off of passenger traffic, have sliced profits from the wartime high-water mark. The Southern made $22,000,000 in 1944 and $16,000,000 in 1945, but last year turned a profit of only nine million.

But today the road is probably in better financial and physical shape than it has ever been. Norris completely retired the RFC debt by May 1941, and has decreased the funded debt by almost $60,000,000. In addition, he has simplified the road's highly complicated corporate structure by dissolving subsidiaries and satisfying their mortgages. From 1940 to 1945 the Southern plowed back $62,000,000 into capital investments, laying down 214,000 tons of new rail and carrying out an extensive program of grade reduction and curve elimination.

Like most other United States railroads, the Southern has embarked on a far-reaching modernization program. The company is spending $16,500,000 to make its locomotives and rolling stock among the country's finest.

Although the Southern seems to be doing all right, Norris is perturbed over the economic future of the railways. He sometimes wonders about their survival.

"The railroad business," he says, "is like any other business. It goes bankrupt if it's forced to spend more than it earns. What the iron horse needs is more take-home hay. He is literally being starved, financially, because what he gets for what he does isn't enough to cover the cost of providing the service—to say nothing of improving it."

This feeling of anxiety, perhaps a professional requirement for railroad presidents, certainly is not dominant in Norris' thinking, which is conditioned principally these days by good omens.

The Southern's development department is working overtime selling southern plant sites to the Nation's industrialists. The engineering staff is being swamped with hundreds of applications from small as well as big business for industrial sidetracks along the line. There is a new song of the South: the exciting clatter of new and busy industry.

THE SOUTHERN RESEARCH INSTITUTE—INDUSTRIAL SCIENCE AND TECHNOLOGY, AGGRESSIVELY SUPPORTED BY BUSINESSMEN, IMPROVE FACTORY AND FARM

The rambling white-pillared mansion in Birmingham is almost too apt a symbol of what modern technology is doing to the economy of the South. A few years ago the old Cartwright home, on its 2 acres in Birmingham's Five Points section, was just a leftover from the mint-julep tradition. Today, as the temporary home of the Southern Research Institute, it is a nest of research laboratories.

Here, as in more than a dozen other laboratories scattered from Florida to Kentucky, the most exciting economic adventure in the South is going on: an organized attempt through scientific research to speed the diversification of southern industry and agriculture.

The Southern Research Institute is the creation of a group of southern industrialists led by hard-bitten Thomas W. Martin, chairman of the institute and president of the Alabama Power Co., who got the idea from Dr. George D. Palmer, of the University of Alabama's School of Chemistry. Martin recruited scores of other southern big shots and their money, organized the institute, and, as its chairman, keeps it ticking.

Martin devotes nearly all of his time and his unquestionably tough executive abilities to this absorbing interest of his old age. Under his benevolent domination the institute performs two main functions:

It carries out industrial and medical research of its own as a public benefit.

It contracts, for enough money to cover costs and operating expenses, to perform for private sponsors any research on any industrial problem involving scientific skill. Results are confidential and all patent and commercial rights go to the sponsor.

These functions really arose from a growing southern conviction of industrial destiny. Dr. Palmer convinced Martin long ago that southern firms without means to conduct independent research must have a medium for improving products and processes if the South were to compete with other areas as a full-grown industrial combatant.

Martin was able to convince other business leaders—and get their cash—by drumming on this idea and by citing two simple, shattering percentages:

Only 8.7 percent of United States manufactured wares (by value) are produced in the nine Southeastern States. Sixty-five percent are produced east of the Mississippi and north of the Ohio Rivers.

Only 2.9 percent of all patents are issued to men living in the Southeastern States. Seventy-eight and two-tenths percent are issued to men living east of the Mississippi and north of the Ohio.

These figures meant that while manufacturing developed in the South, many key processes would continue to be done in the East, since it was the East that invented or bought the methods.

This prospect, Martin's big argument, helped to organize the Southern Research Institute, which today has an advisory council of over 200 industrial and professional leaders. It has a working staff of 45 scientists and laboratory technicians, under the direction of Dr. Wilbur A. Lazier, formerly of the du Pont laboratories. An organic chemist who holds 69 patents in his own name, Lazier has a breadth of vision that embraces the long-run social and economic effects of technology in the South.

During the last 2 years—a short time for research to bear fruit—the institute has devised new products and new methods which already are brightening the future of manufacturing firms throughout the South. (Its staff can claim credit for 114 patents and 243 technical papers.) And among the 38 projects now in hand are some which might affect the economy of the entire region or even the country.

A project carried out for the Perfection Mattress and Spring Co., of Birmingham, is a good illustration of how a single firm was benefited. Like other makers of sleeping equipment, Perfection has long wanted a really fire-resistant mattress, not just one with fire-resistant covering.

The institute's textiles section came up with a three-quarter-inch insulating layer of fine-spun denier glass wool covered by fire-resistant ticking which did the job. This new mattress is not absolutely fireproof but lighted cigarettes or matches barely singe it.

The institute's work on cast-iron could mean whole new industries for the South. The iron ore of the region is abundant, cheap and good enough for foundry use, but its high phosphorus content dulls cutting blades, so that for modern high-speed machinery it has to be mixed with hard-to-get low phosphorus scrap.

Institute experiments to modify the microstructure of the iron ore so as to neutralize the dulling effect of phosphorus are in progress. The technicians have already found a way to increase machinability, but they don't know yet whether other properties have been affected in the process. No claims are made, but the work is going on.

The problem of cotton research shows why some southerners consider the institute the most promising development in a lifetime.

Cotton is basic to the South's economy. But the prosperity of cotton has been undermined by synthetics like rayon and by foreign competition. Meanwhile, less than one-third of 1 percent of gross cotton farm income goes for research, while the rayon industry puts 2 percent of its gross income into laboratory work.

The future of cotton depends mainly on better fabrics and lower prices. After exhaustive study of actual mill operations, the institute set a specialist to work on the slasher and shed-test operation. The objective is to improve yarn sizing, reduce lint-shedding, and thus get better cotton weaves. Success will have real dollar value for the cotton processors.

Other basic southern crops include peanuts and citrus fruits. The institute's food technologists have improved "spreadability" and stability of peanut butter. Research on concentrated orange juice has resulted in improvements in a southern sponsor's product. An outstanding achievement is a process to convert the active ingredient of natural spearmint oil from citrus fruit.

For a railroad company, the institute is making progress on the treatment of southern lumber to make waterproof and age-resistant cross ties. It hopes also to accelerate the seasoning of green timber, and has found new and profitable ways to utilize woodmill shavings.

As a public service of its own, the institute has underwritten a self-help housing plan by which poor rural families would be trained to build simple homes with their own labor and materials, for around $800. The institute is helping to work out designs of standardized concrete building blocks (cement is cheap in the South; sand comes from

the nearest river bed) which the farmer himself can mold and place.

When this project is completed the institute thinks an educational campaign may enable many southern families to house themselves decently for the first time in their lives.

For more ambitious homebuilders, the institute is working, at the request of the Southeastern Electric Exchange and another sponsor, on improvements of the heat pump, which heats and cools buildings by air. The aim is a more compact and efficient unit.

The fact that this project will have national application shows that there is nothing narrow in the emphasis on regional research. One of the institute's most ambitious programs is carried on in cooperation with Cornell's Memorial Hospital in New York City as part of a national cancer campaign. This is a study of the effect of various urethan compounds on white mice suffering from leukemia, or cancer of the blood. The institute's biochemical division injects urethan compounds containing radioactive carbon into the mice, and tries to determine how and why urethan affects the development of leukemia.

Other medical achievements of the institute include an ointment which speeds up the healing of burns, and local anesthetics that have proved, in tests on rabbits, more potent and less toxic than cocaine.

Much of the institute's accomplishment to date can be learned only by detailed inquiry; its officers are not anxious to raise exaggerated hopes. Merely getting the institute under way was hard enough; it meant bucking widespread complacency, and teaching the value of research to businessmen who had never considered it as a vital competitive aid.

But not all Southern businessmen were complacent. In fact, almost as soon as Martin's impatient spurring got the research project under way at the Alabama Research Institute in 1941, industrialists everywhere in the South wanted to take part. The field had to be widened greatly, and the name was changed in 1944.

Today more than 550 firms back the Institute, and its capital fund has grown to one and one-fourth million dollars. In a year or 2 the trustees hope to have two and one-half million, most of which will be used to buy equipment and erect a laboratory building occupying the entire block where the Cartwright house now stands.

The brilliant promise of the Southern Research Institute in Birmingham should not detract attention from the upsurge of interest in science and technology all over the South. Government war research gave a helpful impetus; it brought ideas, experts, and much valuable equipment into the region. Since the war additional work has been carried on by state, industrial, and educational groups.

The Institute's cotton experiments, for example, are only part of a pattern of investigation going forward in such groups as the Department of Agriculture's Southern Regional Research Laboratory in New Orleans, in the Philadelphia laboratories of the National Cotton Council, the Institute of Textile Technology at Charlottesville, Va., and in many land-grant colleges.

The Industrial Research Committee of Memphis carries on a continuing survey of economic and scientific possibilities in the Memphis region.

Already a great many economic advances have been made in these and other Southern research centers. During the years ahead there is hardly a Southern product, from Jimson weed to petroleum, which will not be exhaustively measured and analyzed by scientists.

The Southern Research Institute can reasonably claim that it gave one of the first really hard pushes to set this ball of economic progress rolling.

Kentucky and Arkansas—Symptoms of Progress

(Two examples of growing southern progressiveness are the improvement and expansion programs of Kentucky and Arkansas. Each is making an organized effort to make itself a better place to live in and for the rest of the Nation to do business in. Kentucky is attacking public welfare deficiencies as well as industrial and agricultural problems. Arkansas is concentrating on one big fault—its unbalanced economy. But both programs have had enough initial success for other States in all parts of the country to study and perhaps follow.)

KENTUCKY

In 1943, the citizens of Kentucky elected a Republican governor and a Democratic legislature, thus unknowingly forging the first link in a chain of progressive reform. The second link was the unique and aptly named Committee for Kentucky.

At that time industry was passing Kentucky by. Her farms were run down or were washing away. Two-thirds of the State's milk supply was not pasteurized. Schools ranked low by United States standards. The State constitution was antiquated and binding. Kentucky was simply not keeping pace, either economically or socially.

Most Kentuckians weren't aware of these deficiencies. But many did remember that in 1927, when one party captured the executive branch and another the legislative, a savage political fight stultified government. The legislature stripped the Governor of all powers except to appoint notaries, and State government came to a frustrated standstill. Nothing constructive was done.

Fearing a repetition of this mess, the Kentucky Merchants Association called a meeting of other State-wide organization to petition both Governor and legislature to cooperate for the State's sake. This meeting resulted in formation of the nonpartisan Committee for Kentucky, now composed of 76 organizations: farm, labor, civic and business groups, educators, women's clubs, and—a big departure—Negroes.

Electing as its president Harry W. Schacter, head of the Merchants Association and of the Kaufman-Straus department store in Louisville, the committee set experts to work diagnosing Kentucky's ills. Ten subjects were studied: Agriculture, education, health, the State constitution, welfare, housing, labor, industrial developments, taxation, and natural resources.

Reports on the first five have been published. One fact after another jarred Kentucky complacency:

Kentucky teachers got $1,014 a year (national average $1,599).

On at least half of Kentucky's farms the soil was run down.

The State's aged received only $11.59 a month.

Over 300 communities had no water supply.

Most county almshouses had no electricity, central heat, or running water.

Mental illness was a crime.

There was only 1 doctor per 2,300 people in rural areas.

Shocked by these facts, the legislature held an unprecedented special session in 1946 to hear the committee's proposals. Later the legislature raised teachers' pay, hiked appropriations for schools and old-age assistance, authorized five new tuberculosis hospitals, and permitted counties to issue bonds for building clinics, welfare, and recreation projects. Another sweeping program is ready for the 1948 legislature.

Perhaps the most significant thing about Kentucky's awakening is that Kentucky was awakened—and from within. Bitter resentment would have met any outsiders who exposed what the committee exposed.

But Kentuckians will manfully swallow their own medicine, as shown by the fact that local committees are already forcing economic and social reforms based on the reports, without waiting for the full fruits of the legislature's progressive deeds.

ARKANSAS

Arkansas has oil, natural gas, timber, coal, 94 percent of the United States bauxite (for making aluminum), the only diamonds, and some 35 commercial minerals. It has fine growing conditions for rice, cotton, corn, wheat, truck crops, poultry, and cattle. It has rich sources of hydro power.

Yet it also has the lowest per capita income of all States, excepting only Mississippi. The desire to do something about this paradox besides moan sparked what is known as the Arkansas plan—a program now beginning to pay off through the cooperation of businessmen and the State government.

This plan aims to balance the State's lopsided agricultural economy by encouraging the spread of industry, both native and imported. Before 1938, virtually all the State's natural products left it in raw-material form. Bauxite was leaving at a few dollars a ton and coming back as dollar-a-pound aluminum pots. Raw cotton at 9 cents a pound was returning as shirts at a dollar or more a pound.

Even partially processing the raw material before kissing it goodby, the Arkansas planners felt, would stimulate State prosperity. Results to date have borne them out. Manufacturing employment rose 23 percent from 1940 to 1946 with the establishment or expansion of 1,461 plants, 451 in 1946 alone.

The Arkansas formula has been simple. Energetic businessmen formed the Arkansas Economic Council—State Chamber of Commerce. The State later set up a resources and development commission. Working in close harness, both groups peddle the State's industrial potentialities.

They teach local communities how to take stock of their industrial assets, how to organize for action, and how to choose an industry. They barrage outside industries with promises of cooperation and statistics on farm, forest, and mineral products. They bring communities and interested out-of-State industries together by reporting on detailed physical requirements of specific companies.

Purely local enterprises get financial aid via a bank pool and small funded industrial development corporations. The result has been a spurt of small local shops; canning factories, quick-freeze lockers, leather shops for the Ozark tourist trade, poultry hatcheries, cement and cinder-block and pottery-clay industries.

Out of State industries, big and little, have poured in. A dehydrated sweetpotato industry was brought from Louisiana, a musselshell button industry from Iowa, a caracul industry from California. Among the bigger fry have been the Dixie Cup Co., the International Shoe Co., and Reynolds Metals.

The Arkansas plan has its difficulties. Some towns won't cooperate at all; they fear the influx of "a lot of foreigners who cause strikes and labor trouble." Other towns ask in highly competitive, low-wage industries, virtually hand them factories, and invite them to exploit labor.

But more and more communities are coming round to an idea reiterated both by chamber of commerce spokesmen and organized labor—that the State wants neither ghost factories nor short-term, low-wage industries; that it wants industries which will use

Arkansas materials and pay top wages and prices, so that Arkansas workers and farmers can be good customers.

THE QUIET WAR TO UNIONIZE THE SOUTH—ORGANIZED LABOR ABANDONS FLAMBOYANT POST-WAR MEMBERSHIP DRIVE FOR A LONG, HARD PULL

Just as the industrialization of the South is on the rise, so is the organization of southern industrial labor.

Today, throughout the 13 Southern States, squads of union organizers, business agents and union propagandists are widely deployed.

Their hunting ground, potentially productive but hard and slow to work, is a labor force of 7,000,000 industrial and service workers, many of them newly skilled as a result of the war. Only a bare third of the total force was organized when the CIO in March of last year announced its "Operation Dixie."

The flamboyantly advertised "Operation Dixie" had as its goal a million new members within a year. The AFL promptly inaugurated a similar drive with the same goal. But practical unionists knew that these figures were pipe dreams, obviously incapable of achievement. They knew that the southern drives would be tedious, expensive, and frustrating. This practical judgment was confirmed when organization soon fell far behind its goals.

The two big labor organizations together now claim fewer than 600,000 new southern cardholders, the CIO putting its gains at 200,000, the AFL "at well" over 300,000 new members. Each group sneers at the other's claims, and unbiased observers think each claim is inflated by thousands.

Despite these discouraging beginnings, both CIO and AFL are doggedly sticking things out. They really have no other choice. Lower wage rates in the South are a constant drag on wage rates in the rest of the country, a worrisome threat to the well-being of organized labor elsewhere. Moreover, the South is the last great citadel of the open shop, which the unions are convinced must be breached.

The unions are able to approach this citadel with some high-powered ammunition. They can hammer home at the southern worker the fact, documented by the Government's Bureau of Labor Statistics, that the South ranks last among major United States areas in straight-time average hourly earnings.

With regional wage positions listed in order, the BLS analysis comes out this way: Pacific, Middle Atlantic, Great Lakes, New England, Middle West, Border States, and, at the bottom, the Southwest, and then the Southeast.

This low-wage level in the South is accounted for, says the BLS, by "the predominance of agriculture and the relatively large supply of unskilled labor competing for jobs in comparatively few industries. Other important factors include a large population relative to employment opportunities, decentralization of industry, comparative lack of unionization, and limited degree of protective-labor legislation by the States."

Although southern wage scales are not uniformly below others, examples which illustrate the general pattern may be readily found. Earnings in the women's dress industry in the Middle Atlantic States have been as much as double those in the South. In cotton textile yarn mills—regarded as the bellwether of the southern industrial economy—wages in the South are 14.3 percent below those in New England.

The contrast is even more striking because wage rates in cotton textiles have risen sharply in the South during the war. In 1939 southern textile workers averaged around 38 cents an hour. In February of this year average hourly earnings were 89.8 cents. Still they're relatively low.

Although this North-South wage differential ought to be a potent argument, the unions are having tough sledding. Southern labor, often languorous and often illiterate, is generally either frightened, dubious, or just plain apathetic. Workers are not asking for union organization to correct wage inequities or other grievances; the unions are finding themselves saddled with a selling job.

This is an old, familiar story to the unions, which have been trying to organize southern workers for some 60 years. So the effort this time is a planned and careful one. The organizers are well-heeled.

When the CIO launched its drive it raised a kitty of one and a quarter million dollars. The Steel Workers and the Amalgamated Clothing Workers chipped in $200,000 each; the Textile Workers gave $125,000; and the Automobile and Electrical Workers each dug down for $100,000. Then last November, when the CIO convention resolved to go on with the campaign, contributions were increased. More money than ever is being spent now; CIO leaders say the outlay is far over $100,000 a month.

Chief CIO strategist in this campaign is a veteran of nearly 50 years in the labor movement—Van A. Bittner. Bittner is a short, bespectacled man with a deceptively mild manner and he has known Phil Murray since they were both young men in the coal fields.

Bittner's talents as an organizer have been strengthened by an old trade-unionist conviction: if you're going to organize, lay off politics and social theories and stick to organizing. When he took over the job he made that a stern injunction, told CIO political thinkers not to mix in.

Bittner's southern drive leaders didn't get going until about a year ago. It had taken them that long to find a permanent headquarters. They found space, finally, over Jimmy's Steak House at 79½ Poplar Street in overcrowded Atlanta. Then they went to work with 200 organizers drawn mostly from textiles, steel, and autos. The emphasis was on men with war records and southern origins. Of the 200 organizers, 120 are on the southern organizing-drive pay roll. The national CIO has provided about 20 more, and various internationals have sent in crack men to make up the total.

When the AFL decided to match the CIO's drive, it had a ready-made chairman for its Southern Policy Committee—a round-faced veteran named George Logan Googe. Googe, who also has offices in Atlanta, was born and bred in Georgia's Tattnall County, and got his start as a printer in Savannah.

His line is that the AFL is not running a counter campaign, but is just extending its normal operations in the South. This is not strictly true, although in the AFL the internationals and the locals tend to go their own independent way and are always actively organizing. The result is that Googe's operations as chairman are absorbed by local activities.

But the AFL is highly sensitive to competition from the CIO, and the number of people the AFL has working on its own campaign is a measure of its eagerness to win.

When the AFL first took up the CIO challenge, Googe had 36 organizers, city and State federations had 20, the internationals had about 350. Moreover, there were about 2,000 business agents in the field. By this spring Googe had 187 organizers on his own staff, which was later reduced to 125; city and State federations had 60 men; the internationals had 500.

This big edge in number of organizers is one reason why the AFL has been doing better than the CIO in the South. But there are other reasons, too.

The CIO has picked the toughest nuts to crack, and has tried to organize whole industries. But it is hard at this stage to win numerically magnificent victories in big industries. Most of the CIO's newcomers are in 14 major unions. The AFL gains, Googe says, are compounded of 1,200 new locals spread through about 80 craft unions.

The general picture faced by the union organizers shows four basic industries: coal (organized by John L. Lewis, now in the AFL); steel and fabricating, where the CIO is in control; lumber, scattered all over the South and embracing probably 500,000 workers; and textiles, with 590,000 workers.

The textile industry is the CIO's big target. It is the most unorganized mass-production industry in the South—about 80 percent nonunion. CIO leaders privately believe that unless they can crack this phalanx they will lose the South.

Both the big labor organizations are running into plenty of employer opposition—the CIO much more than its rival. Even the AFL, which parades its conservatism and boasts its freedom from Communist elements, has no picnic. In one southern town, when the carpenters were trying to organize a furniture factory, a newspaper provided an example of typical sympathy with the employer's point of view. The paper produced immediately before the employees' election a contribution from its editor, who wrote:

"Why join a union and pay a privilege toll in the initiation fee and monthly dues to keep some high-up union boss in an expensive apartment, provide him with a luxurious automobile, servants, traveling expenses all over the country, expensive liquor, champagne, and women?"

Some die-hard employer groups use semi-religious hate-sheets such as Sherman Patterson's Militant Truth and "Parson Jack" Johnston's the Trumpet. Both papers have been distributed among workers just before union elections, attacking CIO leaders as un-Christian Red foreigners.

The CIO says that although 19 organizers have been beaten, violence is light compared with that in some of the big northern drives a decade or so ago.

A prime instrument in the antiunion fight is, of course, racial bigotry. In the Carolinas the CIO Food, Tobacco, Agricultural and Allied Workers have been able to organize about 10,000 Negroes. This success has inflamed many a textile employer to subscribe to such appeals as: "You don't want to be in the same union with a bunch of niggers, do you?" The fact is that about 5 percent of southern textile workers are Negroes.

These obstacles, strangely enough, are looked on by organizers as no more than normal. Bittner says, "Organizing the South is essentially like organizing any other section. It's just a long, hard job all the way."

But the new campaign ran into a more stubborn obstacle—one that became the big hurdle in textiles particularly. Prosperity set in. The satisfied worker has been hard to sell on unionization.

Both economists and union spokesmen agree, however, that whatever the outcome of "Operation Dixie" and the parallel craft union campaign, the movement of unionism in the South is inexorable. It will go hand-in-hand with the growth of industry. And Bittner is sure that in time the South will be as highly industrialized as any other section of the country.

COTTON: SALVATION FOR AN OLD SINNER?—NEW MACHINERY IS REVOLUTIONIZING AN ANCIENT CROP AND GIVING IT AN ECONOMIC CHANCE AGAINST NEW ENEMIES

Cotton is moving. Geographically, it is moving onto the better land of the South and is looking westward. Competitively, it is breaking its shackle of hand labor and belatedly entering the age of mechanization. Its bid is to reduce production costs enough to hold its own with foreign cotton and with other fibers, especially paper and rayon.

The economic struggle will be long and the odds are stiff, and it may revolutionize southern rural life; but never was there a better time for cotton to move. Cotton now has one of its best chances in history to shake off the evils of one-crop economy, with which it has long plagued large areas of the South.

Like a delinquent tenant, cotton was sooner or later going to have to move. But the South was an easy-going landlady and had never set the date. Now it is more a matter of opportunity to improve than of being evicted, but there is an element of both in the change.

The reduction in cotton acreage, caused partly by higher yields in recent years, is sizable. Whereas cotton was grown on 46,000,000 acres in 1925, only 17,000,000 were used in 1945 and 23,000,000 will be cultivated this year.

There has also been a shift in labor. During the 15 years from 1930 to 1945, the number of tractors in the South increased by 352,000, while the number of farm operators fell off by 342,000.

The changes couldn't come to a needier industry. For many years American cotton has been a sickling, a back-sliding member of the world commodity market. And those who worked in its fields too often had no cotton to wear or sleep on.

The Government took surpluses of cotton off the sagging market, but for years those millions of bales stood in warehouses as painful proof that something was radically wrong.

The war removed the surplus by creating a military demand and quadrupled the price of cotton. Only recently the Government disposed of practically the last of an 18-year accumulation. That slate is clean. Cotton can start over.

But its fresh balance sheet starts with two huge entries on the bad side: a reduced world market and the new competition from substitute fibers.

Production of cotton abroad increased between 1920 and 1940 from 8,000,000 bales to 18,000,000, while American production fluctuated around the 13,000,000-bale mark (in 1945 it fell to 9,000,000). About half of the American crop is ordinarily sold abroad. But some of the South's best prewar customers became enemy countries and are not yet fully back in the market. Other countries lack the dollar exchange necessary to buy.

The Government has sent Germany and Japan sizable quantities of raw cotton, to be paid for in textiles and other exports, and it hopes to move 1,000,000 bales annually to each of them for a while. But dollar exchange elsewhere gets worse, posing a grave problem for cotton. At the same time, production of cotton abroad is rising, making more competition.

The threat from synthetics and other fibers comes from both home and abroad. The synthetics threaten not only in lower prices but also in superiority for many uses. Since 1940, when war started blacking out production abroad, American rayon production has nearly doubled. Last year it equaled one-sixth of all the cotton consumed in the United States. Rayon's big blow at cotton came during the war, when the synthetic took over one-sixth of the tire cord market, formerly cotton's largest single domestic outlet. The price of rayon has been cut so fast that it is now slightly under that of cotton.

Another million-bale competition come from paper, used for sugar, cement, and fertilizer bags, for towels, napkins, window shades, handkerchiefs, etc. Cotton is also fighting nylon, casein and many other industrial products.

As the price of cotton falls, it will gain an advantage on synthetics, but to hold that edge it must keep up with the research strides of the synthetics—which it is not doing. Even with the help of government laboratories, cotton is lagging behind the chemical industry.

On the good side of cotton's new books are dramatic developments in machinery which many think will cut costs enough to keep King Cotton on his throne. The best known of these is the mechanical picker finally developed to remove the bolls from the plants.

The success of this big machine is now proved, though this success is somewhat restricted in its application. The high cost of mechanical pickers, about $5,000, limits the number of farmers who can buy them, but bigger operators owning pickers can harvest other farmers' crops for them.

There is no doubt that cotton can be picked more cheaply by machines, though some bugs must be taken out of them before they do as clean a job as hand labor does. The International Harvester Co. is about ready to produce pickers at its new Memphis plant. Other types of pickers, called "strippers," are doing satisfactory work on some types of cotton.

Until recently, a major brake on the rapid spread of pickers was the fact that plenty of labor still had to be kept around for the tedious job of hoeing. It made little sense to have both a large labor force and a mechanical picker to save labor.

This fact stimulated Price McLemore, of Waugh, Ala., to invent the "Sizz Weeder," his name for a flame-throwing cultivator that burns out the weeds and forces the cotton farther up on the stalk of each plant. Besides eliminating hand hoeing, this makes it possible to keep the picker out of the dirt.

The combination of these two machines and the tractor (which is at least as important) is turning the trick. An experimental station figures that the cost of flame cultivation is 47 cents an acre, against $4 for hand hoeing. McLemore's own results are amazing. With machinery he can produce a bale of cotton and put it on the wagon with only 11 hours and 45 minutes of labor. The Alabama hand-labor average is 235 hours.

McLemore, a slender, talkative optimist, calculates the difference in costs at the rate of 40 cents an hour—$4.70 against $94 per bale for labor alone. Typically, he adds that most farm hands do not make 40 cents an hour. But they should, he says, and that's what he pays the men on his two plantations.

Several thousand flame cultivators are already being used in the South, many of them made in blacksmith shops while lawyers argue over patent rights.

Production is a bottleneck, but much more of a problem is what to do with the people machinery will displace. The specter is raised of the pickers and fire-spewing weeders driving hundreds of thousands of southerners off the land. But McLemore is one of those who fear no such thing, even though his own engineering principles have reduced his labor force from 200 people for 2,000 acres to about 4.

This appears to be shabby treatment for a lot of people, but Mr. McLemore sees it this way: About 90 percent of those displaced are women and children who would be better off in homes and schools than in the fields. They were in the fields because they had to work to supplement the family head's meager income. But the wages of the chief breadwinner will be raised by the use of the machinery. The whole standard of living will be higher.

That there is room for improvement is not doubted—the average southern farm laborer earns about $500 a year. Last year, McLemore's tractor driver earned $1,800 and his wife stayed home while the children attended school a full term.

Still, 196 of McLemores' people were displaced for each 2,000 acres. And at least the family heads had other jobs to find. Such displacement, many times multiplied, obviously would create serious problems.

Another phase of the revolution in southern agriculture is crop diversification, a fancy term for raising something besides cotton. For many years southern leaders have been crusading for more livestock and less cotton acreage, both as a way of building up the tired, eroding soil, and of reducing the risk that goes with growing any single crop.

This evangelism is slowly paying off. In Georgia, for instance, the share of farm income from livestock before 1941 had never been above $40,000,000 and the income from cotton had been as high as $362,000,000. In 1945, however, Georgia farmers took in only $72,000,000 from cotton, against $113,000,000 from livestock and its products. Diversification is making similar progress in Tennessee, Alabama, Arkansas, Louisiana, and other States.

Leaders like McLemore never tire of pointing to the strange fact that Birmingham imports milk from Wisconsin. The possibilities for growing the South's food in the South are great and the march of machinery will free more land for their development.

As cotton moves away from some of the marginal land of the South, leaving diversification to take its place, some of it will go West. Nothing like the big migration of the 1920's and earlier is expected, but there is already some shift. Although only a small part of the Nation's cotton crop is now grown in the West, production there has been increasing at a faster rate than that of the eastern areas. For instance, the shrewd firm of Anderson, Clayton & Co., world's largest cotton brokers, last year acquired control of 56,000 acres of California's rich San Joaquin Valley land, at least part of which will be used for cotton.

While the machines tend to increase the average size of southern cotton farms, diversification will help to make the remaining small farms more nearly self-sufficient, bracing them against the whims of a one-crop economy.

But the future is not rosy for everyone. Undoubtedly the high-cost producers, and even some on the margin, will be forced out. Some observers say that as many as 3,000,000 people will be pushed from southern agriculture by changes already foreseeable. Others are sure that these people will be soaked up naturally in the growing industrialization of the South and in consequently increased economic activity all along the line. They cite also that hundreds of thousands of poor southerners have moved to northern industrial jobs, relieving pressure already.

These claims may be debatable, but it is certain that only more efficient methods will save cotton and the people employed in it, however many they may be.

It is not the mechanization of cotton, nor its movement West, that is the chief peril—it will be the speed with which the change comes and the economic state of the Nation at the time that will determine the amount of human suffering, if any.

If the change comes too suddenly, the new machines will be cursed as steel demons. But in the long run they are bound to mean

better conditions for all regions. Moreover, any basic change in cotton has good chances of being a good change.

Let Us Be Faithful to Our Traditions

EXTENSION OF REMARKS
OF
HON. HAROLD KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 17, 1947

Mr. KNUTSON. Mr. Speaker, a veto of a tax bill by a President of the United States is a clear violation of section 8 of the Federal Constitution, which provides that "the Congress shall have power to lay and collect taxes, duties, imposts, and excises."

Only on one previous occasion, so far as I can ascertain, has a President of the United States seen fit to veto a tax bill. Aside from Presidents Roosevelt and Truman all Presidents have very carefully observed that constitutional injunction.

President Truman, like his New Deal predecessor, has seen fit to flaunt the plain intent of the Constitution of the United States, and in doing so has thrown the issue into the 1948 campaign, assuming the veto is not overridden by the Congress.

Mr. Speaker, less than 2 years ago President Truman signed a revenue bill that released American corporations from paying nearly six billions in taxes but he balks and gags at giving the individual 49,000,000 taxpayers $4,000,000,000 in relief.

Great Britain and Canada have each had two tax reductions since VJ-day but Mr. Truman evidently feels that the American taxpayer should continue to keep his nose on the grindstone so that he may have more money to send to other countries, and to spend at home.

It would seem that as between corporations and individuals Truman favors the former when it comes to collecting money from a tax-harassed people.

Not alone has Mr. Truman flaunted the Federal Constitution but he totally ignores the needs of our economy. Let him explain to our people why we should be further taxed to help nations that already have given tax relief to their people; let him explain why he favors corporations as against the individual; also why he is opposed to giving relief to our own people.

He might also explain why he is against increasing the home-take pay to the toiler in the form of tax reduction.

Mr. Truman has had much to say about the dangers of inflation, yet has repeatedly supported moves to increase wages, which are reflected in higher prices. He chooses to favor wage increases for our own people and in the same breath opposes tax reduction, which would give the worker more take-home pay, with no increase in prices.

Either Mr. Truman is badly muddled in his thinking or he is being badly advised by his advisers. Whatever it may be he has placed himself in an untenable position that will be reflected in the November 1948 outcome. He cannot escape from the consequences of his blind and stubborn folly.

At this point, Mr. Speaker, I desire to insert a telegram from the Committee for Constitutional Government which explains the constitutional aspects of Mr. Truman's invasion of the constitutional right of the Congress to lay and levy taxes. To me the points raised are unanswerable. Let Mr. Truman attempt to answer them if he can:

JULY 14, 1947.

To Members of Congress:

After centuries of struggle during which English liberty had been established by parliaments wresting the taxing power from the king the founding fathers wrote into our Constitution the wise provision that taxing power and tax policy should rest in the Congress and not in the Executive.

Now the representatives of the American people, in both Houses of Congress, have twice voted overwhelmingly to reduce income taxes. This reduction is essential to provide incentive and to permit the capital accumulation needed to finance new enterprises and to expand old ones, thus providing a broader base for taxes and greater assurance of continuing employment. More important a great constitutional question is at stake.

The President alone is the obstacle to the fulfillment of the people's will. Do you believe that the decision should rest, as provided for in the Constitution, with the people's representatives or with one man?

COMMITTEE FOR CONSTITUTIONAL GOVERNMENT, INC.

The Use of AAA Funds From 1937 to 1947

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 17, 1947

Mr. MURRAY of Wisconsin. Mr. Speaker, the following official table shows the expenditures under the AAA program:

The use of funds by the AAA from 1936 to 1947—Conservation materials and services for all agricultural conservation programs—Quantities and costs of materials obtained through Government purchasing arrangements and furnished farmers during each program year

Program year	Region	Triple superphosphate		Normal superphosphate		Mixed fertilizer and potash		Raw rock phosphate		Liming materials	
		Tons	Cost	Tons	Cost	Tons	Cost	Tons	Cost	Tons	Cost
1937	East Central	24,673	$783,141								
	Southern	408	13,068								
	Total	25,081	796,209								
1938	East Central	56,771	1,847,148							21,002	$46,891
	Northeast	7,962	303,301							17,076	57,361
	Southern	2,214	69,932								
	Total	66,947	2,220,381							38,078	104,252
1939	East Central	92,444	3,367,500							342,901	745,000
	Northeast	30,825	1,217,220							243,534	1,220,734
	North Central	617	23,398								
	Southern	10,767	383,564							95,756	239,474
	Western	4,119	145,944								
	Total	138,772	5,137,626							682,191	2,205,208
1940	East Central	112,159	4,037,724	71,418	$1,214,106					1,051,477	2,102,954
	Northeast	20,804	789,782	33,720	573,240					557,917	2,814,062
	North Central	15,219	578,322							1,346,345	2,799,584
	Southern	18,617	668,714	54,387	815,805					252,453	757,359
	Western	10,310	412,400							10,288	51,440
	Total	177,109	6,486,942	159,525	2,603,151					3,218,480	8,525,399
1941	East Central	60,334	2,292,709	218,481	3,482,816					1,661,584	3,605,899
	Northeast			151,529	2,518,809					694,911	3,457,138
	North Central	23,337	933,480	50,435	900,900					4,613,226	7,895,850
	Southern	22,632	865,091	82,173	1,238,612					263,560	795,831
	Western	8,164	244,707	20,125	346,792					24,542	76,285
	Total	114,467	4,335,987	522,743	8,487,929					7,257,823	15,831,003

The use of funds by the AAA from 1936 to 1947—Conservation materials and services for all agricultural conservation programs—Quantities and costs of materials obtained through Government purchasing arrangements and furnished farmers during each program year—Con.

Program year	Region	Triple superphosphate		Normal superphosphate		Mixed fertilizer and potash		Raw rock phosphate		Liming materials	
		Tons	Cost	Tons	Cost	Ton	Cost	Tons	Cost	Tons	Cost
1942	East Central	12,723	$440,520	[1] 286,310	$4,648,930					2,465,689	$5,288,000

[1] Includes basic slag converted by taking 50 percent of actual tonnage.
[2] Preliminary.
[3] Includes $184,548 for 7,098 tons of sulfur.
[4] These totals computed in my office.

Source: Conservation Materials and Services Section, Office of the Director, Field Service Branch, Production and Marketing Administration, U. S. Department of Agriculture, March 1947.

NOTE.—This report does not include materials purchased by farmers for cash and used under the programs

For the 10-year period from 1937 to 1947 about four billions of dollars was appropriated under the AAA. The above table shows the amounts used for certain soil improvements, including fertilizer and lime purchases. There were 73,013,970 tons of lime, valued at $186,591,213, purchased by Government funds. Government funds were used to purchase 7,040,510 tons of fertilizer costing $137,750,685. Many other activities were carried on in addition to the fertilizer program. This was especially true up until the war influence was reflected by an increase in farm prices.

There were less than 10 percent of the total funds used for soil improvement, including lime and fertilizer. During the past 4 years about 25 percent of the appropriation was expended for fertilizers, lime, terracing, seeds, borax application, and tree planting.

There are 350,000,000 acres of cropland in the United States, so one can easily see what a problem it is going to be to maintain the fertility of the soil. The total value of fertilizer used has been an average of 40 cents per acre of cultivated land in the United States, and 53 cents per acre for lime per acre of cultivated land in the United States.

The soils of the United States are less fertile than 1 year ago, less fertile than 10 years ago, less fertile, in fact, each year. This situation even applies to Wisconsin where millions of tons of feed are purchased each year.

The fertilizer and lime used under the AAA program should make the American producer more cognizant of the problem of soil fertility than he has been in the past.

The following from the subcommittee hearings show the AAA appropriations by years from 1937 to 1947:

Appropriations

1938	[1] $340,000,000
1939	[2] 345,000,000
1940	[3] 499,560,000
1941	[4] 438,556,740
1942	499,388,671
1943	450,000,000
1944	400,000,000
1945	302,500,000
1946	300,000,000
1947	[5] 271,746,000

[1] In addition, $160,000,000 reappropriated.
[2] Exclusive of $155,000,000 reappropriated.
[3] In addition, $70,000,000 reappropriated.
[4] Excludes $3,260 transferred to "United States official mail and messenger service, Post Office Department (general fund)," pursuant to the provisions of the Reorganization Act of 1939 and Reorganization Plan No. IV. In addition, unobligated balances estimated at $23,400,000. In addition, not to exceed $60,000,000 reappropriated.
[5] Together with $42,500,000 of unexpended balances of appropriations for 1944, 1945, and 1946 made by section 32 of the act approved August 24, 1935.

In total, this makes total appropriations of about $4,000,000,000.

Cause of Peace Needs Strong UN

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 17, 1947

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Minneapolis Sunday Tribune of July 13, 1947:

CAUSE OF PEACE NEEDS STRONG UN

The United Nations, which has just passed its second birthday, is not growing as it should. It has no teeth. The veto power in which its Russian nurse insists on swathing it prevents it from developing any strength. If Russia has its way the infant collective security system never will get enough body building food or exercise to amount to anything.

Russia expects to look out for itself by other means than UN. It is interested only in preventing UN from ever developing sufficient strength to look out for others. Above all Russia wants to prevent UN from ever being strong enough to prevent Russia from imposing its will on others.

This treatment of UN is intolerable to all who wish it to become the principal safeguard of everybody's peace. It is particularly intolerable to the United States which presided at UN's birth and has been its most indulgent and attentive nurse ever since.

The United States would like to work through UN whenever a blow has to be struck for peace, freedom or economic recovery, but Russia's systematic weakening of UN has disqualified it for such services. So when there was a crisis in Greece the United States could not work through UN as it would have preferred. Economic assistance cannot be given effectively to needy Europeans through UN as at present constituted.

This unfortunate state of affairs is aptly summarized by Congressman WALTER JUDD. We have only three choices with respect to UN, the Minnesota Representative points out:

"We can abandon it, as useless; we can continue to give lip service to it and use its machinery to handle marginal, fringe problems but by-pass it when some major situation demands attention, or we can strengthen it so it can preserve the peace as it was intended to do."

JUDD and 21 other Members of Congress have launched a nonpartisan campaign in Congress to have the United States take the lead trying to provide the United Nations with enforcement teeth. They want to revise the charter of UN so that no nation can keep the collective security machinery from becoming operative by abuse of the veto power.

They would like to have Russian help in strengthening UN. They insist on UN being strengthened even if Russia is opposed.

Already cautious people in Congress as well as in UN are warning against such action at this time. They fear it may lead to Russia's withdrawal.

Our answer to that warning is, "So what?"

Is it not better to have a collective security system with real power to preserve the peace adhered to by that large number of nations sincerely desirous of peace with freedom, even though Russia and its satellites are outside that system, than to have no system at all?

Those are the real choices in these fateful days when the world is determining whether there is to be another major war a decade or so hence or a long era of peace.

When Russia had to choose between cooperating with the non-Communist powers in the rebuilding of Europe's shattered economy and prosecuting the Communist revolution, it chose revolution. It made Czechoslovakia stay outside the reconstruction effort along with Russia's more obvious satellites Hungary, Bulgaria, Rumania, Yugoslavia, Poland, and Albania, despite Czechoslovakia's keen desire to participate.

We hope Russia will take a more enlightened attitude toward reconstruction of UN, but if it refuses to go along with the collective security effort it at least will be enlightening to know where Russia stands and who are the dependable friends of collective security.

Back the effort to strengthen UN without further delay.

Address by Hon. Owen Brewster at Seventeenth Congress, General Society of Mayflower Descendants

EXTENSION OF REMARKS

OF

HON. OWEN BREWSTER

OF MAINE

IN THE SENATE OF THE UNITED STATES

Friday, July 18 (legislative day of Wednesday July 16), 1947

Mr. BREWSTER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the junior Senator from Maine before the Seventeenth Congress of the General Society of Mayflower Descendants at Plymouth, Mass., on September 10, 1946.

There being no objections, the address was ordered to be printed in the RECORD, as follows:

Governor general and friends, this is a most delightful respite from campaigning, so far as I am concerned, as, during the past 6 weeks, in what are still rather strenuous days in Maine. Our constituentcy still requires that we come around and exhibit ourselves, even though they may have fully made up their minds they are going to vote for us, and they look us over very carefully, particularly our wives who accompany us on these tours.

I always remember the judge when he was impaneling the jury, and stated that if anyone in the rear of the room could not hear him, they could stand up and he would excuse them from service. He wondered why no one stood up.

If anyone doesn't hear me, I shall be glad to enlarge my voice. But along toward the close of the campaign, I heard Mrs. Brewster say to the Governor's wife, "I must have another cup of coffee tonight, because I must listen to those speeches all over again."

I come here with the refreshing impression that you at least have not heard this speech before, and, second, that there is nothing you can do about it anyway, as the votes are in the box.

I have that most delicious of freedoms for a politician—the capacity to speak his mind without fear of reprisal of any character. I have 6 long years ahead, according to the mandate of the people of Maine, and we never begin to worry about reelection until about the fifth year, and then we begin to behave ourselves.

I venture here with a little hesitation, because, well, though I have, for a long time, been a descendant of the Mayflower pilgrims, I had not affiliated myself, as some of your Maine associates may testify; I found that my most formidable political rival in all Maine was the head man in the Mayflower descendants, and I wasn't quite sure what kind of an initiation I would receive—although I finally got rid of him by appointing him to the supreme court of Maine while I was Governor. [Laughter.]

Meanwhile, my habits had been formed, and so it was just within the last year that I rather took myself out of the mongrel class of the Brewsters who had not affiliated, and I have been laboring with the lineage papers which my mother worked out very carefully before she left me. It has only been within recent years that the Library of Congress has been willing to vouch that the very handsome and very bewhiskered gentleman who adorns the walls of the President's room in the Capitol, as some of you may know, with the name of Brewster written under it, is really my ancestor. I confess also I am particularly happy when I get down in the rotunda of the Capitol, where some of you may have been, and observe the scene of the departure of the pilgrims—the only curious part of it being that, according to this authentic record in the rotunda of the Capitol, they did not sail on the Mayflower. By what curious thinking they adopted the name of the boat that turned back as the name of the boat in which the pilgrims came to Plymouth has always been beyond my comprehension. I don't know whether the rest of you have noted the error.

When I accepted this invitation to address you on the day following the Maine election, of course, it implied a certain measure of confidence in the constituency of Maine, as it certainly would have been most embarrassing if I should have been compelled to come down here as a defeated candidate. But, fortunately, the citizens of Maine have lived up to their traditions, along with Vermont, so that we may go forward now.

In 1936—in that unhappy period when we stood alone with a lantern hung aloft in the night, as you will remember—Mrs. Brewster and I took a trip to Mexico and arrived at the Embassy, where the good Josephus Daniels presided over its destinies. He invited us to a Thanksgiving dinner, although we didn't think we had very much to be thankful for—but a Republican is always too glad to get anything that is handed out in these days. When we arrived at the dinner, the Ambassador said, "Now, Governor," as he always calls me, "you needn't feel so badly up there in Maine. We're not going to give you to Canada; we're going to keep you for seed." [Laughter.]

And I have been happy to remind him in the days that have since transpired that the seed seems to be doing all right, as we have quite a lot of company now—I think in some 20 or 25 other States—and we have a lot more company in the Senate and House. How much more we are going to get this fall is another story which I won't labor on here today.

After this recent episode, I come to you with naturally more faith in the wisdom of the American people, and, particularly, in the people of Maine, and with renewed courage to go on in a fight for what we conceived to be the same fundamental principles that animated those whose memory we here revere; those who started out on that fateful voyage 300 or more years ago, which finally ended up here.

I always have before me the picture of my good old grandfather who according to the author of Saints and Strangers, used to bow his head each day through that dread and fearful winter, and thanked God that he was permitted the sack of abundance of the seas and of the treasures hidden in the sands, those things treasured being the raw clams on which he was compelled to subsist for some 2 or 3 months, as we understand.

But that was the spirit which, as we know, animated them, and when I see some of our friends in this country, in the midst of all the material marvels of the present day, in the midst of all this thing that is America, the productivity marvel of all the earth, pouring out the so-called good things of this life, with twice as much as any other people on earth are privileged to enjoy, and 4 to 10 times as much as most of them—as those of you who have been in the Middle East, in India, or in China in the recent decade can well testify—sitting down like a hound baying at the moon, and sitting on a burr as though we were the most forlorn of creatures, I am compelled to bow my head in shame and shudder at what would be thought by those who rest here on the hill if they could know the depths to which these descendants of America had descended.

To be sure, these are difficult times. But they have been difficult before. This is very far from being a period such as they knew in 1620, or a century and a half later when they declared their independence, and it is curious with what timeliness these things seem to come. I have been amazed at the cycle of every five generations. The English Revolution of the early 1600's launched the voyage of the *Mayflower*, which landed here upon Plymouth Rock, and yet has not achieved entirely its goal. The end of that voyage is not yet until the freedom to which they aspired has become the common property, not only of America but of all the peoples of the world. They saw far beyond the material horizon which all too often circumscribes our views.

The little band set forth and landed here and America was born in that *Mayflower* compact, representing the birth of the Nation of which we now so proudly boast; and in England, at the same time, the King's head was coming off, and then five generations later—a century and a half—came the American Revolution, the offshoot, perchance, of the French Revolution, when once again humanity was in ferment and there was born here this new Nation dedicated under God to the service of mankind, and now another century and a half has passed—five generations more have told their story. The comfortable Victorian days, in which some of us were born and bred have had their time. We thought we should go on in an ascending scale, with heaven just around the corner, not too far away to be achieved and not too near to be uncomfortable, and that we never again should know throes of world-wide strife, and now we have, within our day, twice experienced these world-wide conflicts that have challenged the very concepts upon which America was founded.

Let us have no illusions; the end is not yet; this is only the beginning. After the First World War, we thought that everything would now be well. We had demonstrated to the world our power—our material might beyond any dreamed of before. We took the enemy and came home confident that all would now be well, and yet, within another generation, the world was once again plunged into this strife.

I am reminded of the hired man up in Maine who didn't get along very well with the farmer's wife. She thought he was a

rather lazy lout, as hired men sometimes are, even in the State of Maine, and he thought she wasn't a very good provider because they didn't always have pie for breakfast. One evening, long before it was getting dark, he asked the farmer whether he could borrow the lantern to court the hired girl at the next farm. The farmer said, "Well, Jim, when I was a young fellow and went acourtin', I didn't take any lantern with me." Then Jim said, "And look what you got." [Laughter.]

After the last war, we didn't take any lantern with us. We just closed our eyes and came home and thought we could ignore events elsewhere in this world, and terrible it is to hear the discussion of the Third World War already reverberating about the council chambers in Paris. I am quite persuaded that it is far better that we should recognize this peril, rather than to drink the draught that quenched our thirst in 1920 and which led us to believe that the era of eternal peace was immediately at hand.

Getting through Harvard Law School some years ago, I went to Dean Thayer, and with the usual yearnings and anxiety of a young man, I told him I was very much concerned; I was worried that I would become simply a lawyer and cease to be a man. And he said to me very wisely, "As long as you are worried about it, you are all right." [Laughter.]

And that was a very profound truth. As long as this world is worried about the possibility of war we may, I think, continue more confidently, and we may, perhaps, take the measures essential to its preservation.

Now, this is nothing new. We pay tribute to these ancestors of ours; we extol their sturdy virtues, and all too often forget their application to the present time. It is the same problem that has always faced humanity—the lust for power, the avarice, the national jealousies, the national ambitions, the dictatorships, those who would ruthlessly achieve power at the expense of their fellowmen.

You remember the slow train of Mark Twain out in Arkansas, and as the traveler went along, he said the train was so slow that every time it came to a house it stopped, and when it came to a double house it stopped twice. Finally out in the middle of the prairie where they weren't any houses it stopped, and when the brakeman came he asked what the trouble was, and the brakeman said, "Well, there is a cow on the track."

They finally rumbled on, with moderate progress, and after three more hours in the middle of the prairie they stopped, and as the brakeman came through the traveler said, "Well, what is it this time, Jim? Is there another cow on the track?" And Jim said, "No, it's the same old cow." [Laughter.]

Well, now, it is the same old calf that challenged the love of freedom of the Pilgrim Fathers; that challenged the freedom-loving citizens of colonial days, where, at Bunker Hill, they fought for independence, and at Concord and Lexington, where the embattled farmers fired the shot heard around the world, the same urge to freedom that is animating men everywhere, and will continue so as long as life remains, and the only problem for you is whether we permit the encrustations of tradition to so trample us that we shall not be able, ourselves, to assert the freedom that is ours.

Revolution? Why should we be afraid of revolutions? We are the legitimate authors and descendants of the freedom of the first great revolution, when the Pilgrim Fathers struck forth, and probably most of us can trace also to the American Revolution in which our ancestors also were privileged to participate. The only thing we have to fear is that the world shall not understand.

A revolution is a thing about which we have no occasion to be concerned. It is in our blood. But let us be sure that the emblems of tyranny conceived under the guise of liberty shall not fasten their chains on us again. That is the subtle suggestion that we now find abroad throughout this world. It came a time ago in the guise of fascism that was going to solve all our economic and social ills. The poor, tottering democracies were not equal to the task of this new day, and so, in the interest of efficiency and progress, democracy must be done.

Hitler assembled his hosts and pooled his lightning bolts to strike while democracy slept, and finally this dull animal awoke, and Hitler and Hirohito learned, to their sorrow, the might potentials of this yen for freedom among men, and they, like their distinguished predecessors of the First World War, were doomed and are no more.

But still tyranny would fasten on its chains. The distinction between the dictatorship of Berlin and Moscow is impossible to define. Communism, likewise, would fasten on its plodding disciples the same chains. They make no pretense of freedom to which America has long subscribed. Stalin is as terrific an autocrat as any the world has ever seen.

They say they are doing it for the good not only of the Russians but of all mankind. We have no primary responsibility for the welfare of the Russian people. It is for them to work out their salvation in their own way, but when they come to sell this particular bill of goods to us here in America, we are at least entitled to look it over and to see of what stuff it is made, and whether or not, perchance, it is a Trojan horse. Now, you notice how I pronounce "horse."

Mr. Harold J. Lasky is in America today, I understand. Rather quietly he came last spring, and after sojourning for a time enjoying our hospitality and supplies, he confided in us that our economic system was hopelessly demoralized and that the more quickly it was scrapped, the better it would be for America and for the world.

Mr. Lasky is entitled to his opinion, as former chairman of the British Labor Party. I wish them well in their great experiment in modified socialism that seems to be less and less modified as they go along, as they are inevitably driven from one industry to another in the amalgamation of them in the Government control, and I have no further comment or criticism to make upon their course. They have a very great capacity to survive, to muddle through, and I surely wish them well. They are great allies, and they probably always will be our allies, so far as this century, at least, is concerned.

But, on the other hand, before we scrap our system, it seems to me it would be well for us at least to pause and consider before we adopt the complete totalitarianism of the Russian system which is producing about one-fourth of what we produce in America at the present time, and the inhabitants of Russia are enjoying somewhat less than one-fourth as a result of their dedication to war.

Now, we have a country of great resources, although other countries, Russia in particular, has resources equal to our own, and the British Empire as a whole has. We have done fairly well with this thing in the last century. Under our system of what we call free enterprise—they like to call it capitalism because that is sort of an accursed word—we have made America the productive marvel of all the earth.

Stalin and Churchill paid us tribute when they said that it was only the industrial mobilization and production of America that enabled them to win over the Axis Powers. And this is with no challenge of the fighting qualities of our allies. They were good fighting men, but they needed the modern mechanism of war—the planes, the tanks, and guns, and finally, the atom bomb, which alone was a tribute to our productive genius, as no other country faced with war could divert $2,000,000,000 worth of men and materials to that great experiment that might well have failed. That was a tribute not only to our scientists but to the productive energies of this America.

And so, with these resources, we feel that we have done rather well. We have recognized throughout, the cooperation of Divine Providence, as did the Pilgrim fathers. And yet, we have recognized that we, too, have responsibilities in blood, sweat, and tears.

There was a little New England town, where, in the neglect of the years, there had gradually grown up in its center, where formerly had been a lovely spot, a great growth of brambles. Finally, one of the old settlers, disgusted with the thing, devoted the spring to cleaning up the brambles and planting grass seeds and flowers. He labored through the warm days of June and July, and along in August, it was blossoming like the rose—and it looked very lovely there in the center of the town.

The parson came walking down one nice hot day while the other gentlemen was laboring, and he said, "Well, my good man, you and the Lord have certainly done a wonderful job of this patch of brambles."

The old fellow looked up at him through the sweat and said, "Parson, I wish you could have seen this when the Lord had it all alone." [Laughter.]

We wish that all the world could have seen this America when the only ones who had it were the Indians and the Lord. We think we have done quite a job. We are happy to welcome Mr. Laski and all his kind and all the Russians who will choose to come bearing gifts and bearing friendship, and we would like to show them what we have done. We are in glad competition to see whether or not there is a better way to run this world and run this particular part of it that is in our charge.

But until some other country has demontrated a better way of life, will it not be well for America to pause and consider before scrapping all the lessons of 10 generations of our ancestors in favor of what is still nothing more than experiment, however noble it may be in purpose. [Applause.] And that, I think, is a lesson that we here in America must inculcate in these days to come. Sometimes we get discouraged. That is a very dangerous thing. That is, in my judgment, the chief weapon of the devil in putting us to sleep. We get discouraged, we say we are so few in number.

Lord Bryce in his very keen study of the American commonwealth a half century ago, pointed out that the great peril in America was what he termed, "mob fatalism"—that we would become a great nation of more than 100,000,000 people scattered all over this vast continent and that gradually the individual would become convinced that he was too insignificant to count.

Why should I bother? What am I among 100,000,000 people? What does it matter what I think or what I do? And so, I shall take my ease and enjoy myself and get what I can of the world's goods, and why should I concern myself about my neighbor? Then the Mayflower compact would be destroyed and Plymouth Rock would be shattered to the extent that that decadent idea would become dominant in this America of ours.

We may seem very few here today—this little group—but think how few were they when they landed on this rock and the vicissitudes which they were compelled to endure.

Our recent "debunker" contends that really the saints were very few. It seemed the Elder William Brewster was the only fellow who really amounted to something. The author pretty well destroyed all the rest of them to his own satisfaction. [Laughter.]

But we do not need to worry about those gentlemen, nor about the strangers of whom he spoke. We may remember what Calvin Coolidge said, you know, when they started this debunking of George Washington. Someone came to the White House and asked Mr. Coolidge about George Washington, and Cal just wheeled around, looked out, and said, "Well, the Monument still stands." [Laughter.]

Plymouth Rock still stands, and with it all it stands for, even though in the left wing seances of the present, there is very great concern that the wave of the future of which they so fondly sing seems to be shattered upon this Plymouth Rock of ancient moralities for which America is increasingly beginning to yearn. And so my faith is great, and let us not be concerned about our number.

When I get a little discouraged, when Maine and Vermont were all alone, we consoled ourselves with this thought: Abe Lincoln called a meeting at his office in Springfield, as he relates, to consider the salvation of the Union which seemed to be threatened with disunity and dissension, and he records in his diary that the meeting was attended by his law partner and the office cat. That, was the total number apparently concerned with the salvation of the Union in 1858, and yet, 2 years later, he set cut upon his great task.

"Where two or three are gathered together in My Name, there am I in the midst of them."

It only remains for us, individually, to bear our part. There is no vicarious atonement. It is with the individual that humanity be saved, and we, as the descendants and the disciples of this great tradition, have upon us a great obligation. "Noblesse oblige." He who is greatly privileged is obligated greatly now to serve.

As we go back to our several communities, let us continue to carry this torch, right here at this great shrine that we still treasure, and in all the memories of this historic spot, conscious of the fact that your destiny and the destiny of this country of ours is fulfill within our control, and that if we fulfill our part in our communities, there is no power under heaven that can divert our course.

Henry Van Dyke wrote an epic poem of the voyage of Henry Hudson, on its tercentenary, some years ago, and he told the story in epic verse of those great voyages of Henry Hudson, and how, after getting up the Hudson River, he set forth on that great quest of those centuries to find the passage to the Indies

And so he found Hudson Bay, and up there, his mutinous crew set him adrift and went back to the gutters of London from which he had rescued them. They set him adrift in a little boat with his helmsman named John King, and his son, 12 years old. The last seen of Henry Hudson was as he disappeared across the horizon, still constant in his quest.

And so I see that *Mayflower* voyage of ours that set out so many centuries ago still keeping constant on the course toward freedom for all mankind which was the vision and inspiration of those great ancestors of ours.

And so we too are privileged, if we will, to keep the faith and to give the command to the Captain of our ship of state to continue constant on the course no matter what may be the perils to the right or to the left, until we shall finally loose our anchor in that port for which the *Mayflower* voyage was destined so many centuries ago.

And I want to conclude with what seemed to me the symbolic language of Henry Van Dyke in this little poem, as we, too, give command to our Captain to continue on his course.

"The world is round and God is everywhere,
And while our shallop floats we still can steer
So point her up, John King, nor'west by north,
We'll keep the honor of a certain aim.
Amid the peril of uncertain ways,
And sail ahead, and leave the rest to God."

[Applause.]

Coordination of Agricultural Conservation Agencies

EXTENSION OF REMARKS
OF
HON. TOM STEWART
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Friday, July 18 (legislative day of Wednesday, July 16), 1947

Mr. STEWART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement regarding coordination of agricultural conservation agencies and programs, by Edward A. O'Neal, president of the American Farm Bureau Federation.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

"I am delighted that bills providing for coordination of agricultural conservation agencies and programs have been introduced in both the Senate and House," Edward A. O'Neal, president of the American Farm Bureau Federation, said in a statement issued here today. The bills to which he referred are H. R. 4150 by Representative HAROLD COOLEY, North Carolina, Democrat; H. R. 4151, by Representative WILLIAM HILL, Colorado, Republican, and S. 1621, which was introduced jointly in the Senate July 12 by Senator CLYDE REED, Kansas, Republican, and Senator TOM STEWART, Tennessee, Democrat.

"Representatives of the American Farm Bureau Federation were ever glad to collaborate with these Senators and Congressmen in the preparation of this legislation," Mr. O'Neal declared. "These bills embody objectives and recommendations advocated by our organization for many years. The overwhelming majority of farmers in every section of the Nation are in favor of the basic principles embodied in these bills. I sincerely hope that every Member of the Senate and House will give them careful study and support their enactment.

"Such legislation is long overdue. For many years farmers have become increasingly concerned over the duplication, overlapping, and conflicts in agricultural agencies, with so many field organizations reaching out from Washington to the individual farmers, advising them how to carry on their farming operations. This results in needless expense, confusion, and frequently conflicting advice to farmers," he explained.

"It is significant that both the Senate and House Appropriations Committee urged coordination of agricultural agencies and programs in the reports submitted by these committees on the agricultural appropriation bill. Both committees reviewed the activities and operations of these programs thoroughly before making these recommendations. The enactment of the proposed legislation would carry out to a large extent the recommendations of the House and Senate Appropriations Committees for coordination."

The president of the Nation's largest farm organization explained that the proposed Coordination Act of 1947 would save millions of dollars yearly by eliminating duplication, overlapping, and conflicts, both of personnel and activities, among various agencies engaged in agricultural and water conservation, which, as now being carried on by several different agencies, is causing great confusion among farmers. By decentralizing administration of the programs and giving more responsibility to State and county levels, as the bill provides, programs could be handled more efficiently and could be better adapted to the needs in the various localities.

"This legislation does not kill or eliminate any needed service to farmers," he continued. "On the contrary, it will make possible greater results in conservation among the masses of farmers."

"The Agricultural Coordination Act of 1947 will, in the Farm Bureau's opinion, make possible much more rapid progress in restoring and conserving soil and water resources throughout the Nation," Mr. O'Neal declared. "We want to see developed a program that will reach the rank and file of farmers everywhere and one that will meet the varying conditions and needs in different areas. One of the best features of this legislation is that it will extend conservation programs to the masses of farmers, instead of only to a selected few reached in the past by the Soil Conservation Service. Despite the fact that the Soil Conservation Service has been in existence since 1935 and has spent a total of more than $273,000,000 in its conservation operations, it actually has only helped a few hundred thousand farmers develop conservation plans and, in many instances, these plans have been carried out only partially," he asserted.

Oil Fuel Consumption for Electric Power Generation and Replacement Possibilities From Hydroelectric Developments

EXTENSION OF REMARKS
OF
HON. RICHARD J. WELCH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 18, 1947

Mr. WELCH. Mr. Speaker, within the past 48 hours newspapers have carried the story that because of the serious shortage of oil, naval orders have been isued to reduce the speed in the operation of our ships. That is a temporary shortage. Far more critical is the probable permanent depletion of our domestic oil supply.

A barrel of oil taken from the ground and used is gone forever. According to the best available information, as I have said before on the floor of the House, there are an estimated 20,000,000,000 barrels of oil in our visible national oil reserve. That oil is being used at the rate of 1,750,000,000 barrels a year. Many million barrels are wasted in the generation of electric power in areas where hydroelectric power could be developed as an incidental to irrigation and conservation of otherwise excellent farming areas.

I sincerely trust that every Member of the House will take heed of what I am about to say and remember the imperative importance of conserving every possible barrel of our oil supplies.

In 1946 the United States consumption of oil fuel for the production of electrical energy in public utility power plants, both publicly and privately owned, amounted to approximately 36,000,000 barrels of oil. Of this amount, 11,693,000 barrels of oil were consumed in the 11 far Western States where the hydroelectric potentialities are still far from being completely developed. Approximately 89

percent of this oil consumption was in California alone, but even so, 1,300,000 barrels of oil were consumed in the other Western States. This annual, and increasing, use of oil for electric generation in the West could largely be saved because in this part of the country we have vast and as yet far from completely developed hydroelectric resources.

The oil used in these 11 States produced 4,200,000,000 of kilowatt-hours of energy. At the same time our great hydroelectric developments, public and private, including the large output of Hoover, Grand Coulee, Bonneville, and Shasta hydroelectric power plants, produced 35,200,000,000 of kilowatt-hours. While percentage wise, the production of energy from oil-fired power plants is only 11.9 percent of the hydroelectric output, the important fact is that this amount of 12,000,000 barrels of oil per year could be saved for more useful purposes by further development of our hydroelectric resources.

The power producing industry as a whole has not wastefully been using the oil. Every kilowatt-hour that could be has been generated with existing generating hydro capacities. Yet this is not enough, so we are obliged to dip into the oil reserve which could be used so much more advantageously for other purposes.

In the Northwest we generated 181,000,000 kilowatt-hours from oil-fired power plants in 1946, while at the same time the hydro output was approximately 14,188,000,000 kilowatt-hours. The ultimate potential hydroelectric resources in the Columbia Basin is estimated to be over 60,000,000,000 kilowatt-hours a year. Even with the vigorously growing load of the Northwest, once we catch up with the demand, we will practically eliminate the use of oil for electric generation in that area. California in 1946 used approximately 12,650,000,000 kilowatt-hours generated in hydroelectric plants and also generated over 3,680,000,000 kilowatt-hours in oil-fired plants. A further considerable amount of energy was also produced by gas-fired plants. California needs that energy and needs it badly because it is still growing like a lusty boy. Today it is barely able to supply its load demand by putting in service all its reserve fuel plants even though some of them are very inefficient.

Until 1943 Arizona had to depend quite largely upon steam plants for its electric energy. In that year, Parker power plant came into operation and from then on has produced about three quarters of a billion of kilowatt-hours annually. But this is still not enough since last year 86,650,000 kilowatt-hours of energy was produced from oil. The area is still so short of energy that a train mounted steam-power plant, built for war purposes, has been pressed into service.

In California undeveloped hydroelectric resources are capable of producing over 20,000,000,000 of kilowatt-hours in an average year. Some of this may not be financially feasible but much of it will be. In the lower Colorado River within transmission distance of southern California, Arizona, Nevada, and even into New Mexico, there is a further potential development amounting to over 10,000,000,000 kilowatt-hours per year. One plant alone, the proposed Bridge Canyon plant which is above Hoover Dam and Lake Mead, is estimated capable of producing about 4,750,000,000 kilowatt-hours a year.

In these areas, particularly California and Arizona where the greatest amount of oil has been used, there is also a very considerable amount of electric energy produced by gas. But that supply of fuel is dwindling so fast that it must be saved for the homes and industrial plants where gas is most valuable and necessary. For some years the electric central stations in this area have been forced to turn off their gas burners and substitute oil as the winter months brought increased consumption in the domestic homes. Most recently a new pipe line has been extended from Texas to California to supplement this dwindling gas supply. But even so, the transportation of this gas is a costly matter and again, although Texas has immense quantities of gas, it will not last indefinitely, even though its use is limited to homes and necessary gas consuming industries. The growing scarcity of oil and the need for its conservation is well illustrated by the fact that fuel oil at Los Angeles is now $1.80 a barrel, whereas earlier this year it was $1.45 and several years ago it was much less.

It is no longer a question as to whether we can afford to spend the vast sums of money necessary to develop our potential hydro resources. We cannot afford not to develop our hydroelectric resource if we are to save our oil fuel which can be utilized to so much better advantage elsewhere. In developing these hydro resources, it is to be noted that power generation is actually a byproduct. The water itself in the West is the most precious commodity and its use for irrigation and potable purposes is by far of prior importance. So in developing and conserving these water resources by the building of reservoirs, we practically get a gift of the electric generation as the benefits from irrigation far exceed the total cost. Yet, paradoxical as it may seem, the electric generation will produce the actual cash to pay the cost of its development and much of the whole water development in addition.

	1946			
	Consumption of oil in public-utility fuel-fired power plants (barrels)	Generation in oil-fired power plants (kilowatt-hours)	Hydroelectric generation (kilowatt-hours)	Estimated annual energy from ultimate hydroelectric undeveloped resources (kilowatt-hours)
United States	36,316,000	14,081,848,000	78,405,973,000	
Western United States (11 States)	11,693,000	4,167,616,000	35,231,295,000	
Northwest (Washington, Oregon, Idaho)	515,900	181,802,000	14,188,058,000	60,000,000,000 (Columbia Basin).

Montana, Wyoming, Colorado, New Mexico, Utah, and Nevada.	552,700	218,053,000	----------	

Commission for Preparedness

EXTENSION OF REMARKS
OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 17, 1947

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks, I include an editorial, Commission for Preparedness, appearing in the June 4, 1947, issue of the Press-Telegram of Long Beach, Calif., expressing editorial favorable comment on a proposal made by Brig. Gen. James J. Meade, United States Marine Corps, retired. By reason of his many years of outstanding service in the United States Marine Corps, the views of General Meade, formerly of Boston—Charlestown—Mass., who rose from private to brigadier general, are worthy of deep consideration.

The editorial follows:

COMMISSION FOR PREPAREDNESS

David Lloyd George summed up the ineffectiveness of early British efforts in the war against Nazi Germany with his unforgettable phrase, "Too little and too late." The words are an accurate description of advance preparations for war by most democratic nations.

Once the American people are at war, they give themselves and all they have to their country. The same generally has been true of other democratic peoples. But they are apt to be careless about military preparedness until war comes, leaving all the advantage to militaristic nations, which arm themselves in advance and start war when they think the situation is favorable to them.

Men in the military and naval professions know the importance of preparedness but to obtain popular support for it, and the necessary appropriations from Congress, calls for greater skill in public relations than Army and Navy officers are apt to have. After all, they go to West Point and Annapolis to make themselves proficient in entirely different fields of activity.

Brig. Gen. James J. Meade, USMC, retired, in a talk prepared for delivery at a recent meeting of the Long Beach Rotary Club, suggests that a commission of 24 outstanding citizens chosen from all sections of the United States be established to meet in Washington at least once a year and give support to the budget requests of the armed forces.

Exclusively civilian personnel, the commission, composed of eminent Americans representing all parts of the country and

various vocational groups, would be powerful as advocate of preparedness before the bar of public opinion and before Congress in getting the necessary appropriations.

"I know just how difficult it is for chosen military leaders, all outstanding men in their work, to obtain the necessary funds to keep the Army, Navy, Marine Corps, and Air Forces strong in order to meet any emergency that might arise," General Meade wrote.

A commission of the character proposed by General Meade should be a potent factor for national preparedness and, therefore, for national safety.

Adequate Old-Age Pension Must Legislation

EXTENSION OF REMARKS
OF

HON. JOHN A. BLATNIK

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 18, 1947

Mr. BLATNIK. Mr. Speaker, I have always favored the adoption of an adequate old-age pension system for the benefit of the aged people of the United States. On coming to Congress I had hoped that legislation to provide such a pension system would be considered and enacted into law by the Eightieth Congress. My desire to advance the principle of old-age pensions prompted me to join with a number of my colleagues in sponsoring H. R. 16, which was introduced on January 3 by the gentleman from Oregon [Mr. ANGELL]. Now we find the session coming to a close without any action whatsoever being taken by Congress to provide economic security to our senior citizens, many of whom are in dire need.

In my opinion, Congress has failed in its Christian duty by refusing to act. The consideration and respect that a people give the aged reflects their level of civilization. As we are commanded in the fifth of the Ten Commandments, "Honor thy father and thy mother: that thy days may be long on the land that the Lord thy God giveth thee."

It was a practice of some primitive tribes of the past to kill their aged and infirm. While I am sure that every Member of the House is revolted by the thought of such barbaric practices, yet we cannot look with too much scorn upon the lowly savage. For the Congress is neglecting the fathers and mothers of America—allowing them to be buried in institutions, or condemning them to poverty by offering no more than a pittance in old-age assistance. Surely it is high time that the Members of the Congress—as the elected representatives of a Christian nation—to do something concrete to provide economic security for our old folks.

There is an ever-increasing need for a comprehensive program on the part of the Federal Government to give proper care to our senior citizens. The national average age is steadily increasing as the result of medical science, the drop in infant mortality, and higher standards of living. In 1850 only 13 percent of our total population was over 45 years of age. Today about 25 percent are over 45, and about 7 percent have reached the age of 65. It has been estimated that by 1980 there will be 60,000,000 Americans of 45 and over, 22,000,000 of them past the now generally accepted retirement age of 65.

It is one of the ironies of our time that we have made great advances in science which enables more people to survive middle age, but have failed to solve the problem presented by their survival. To discover an answer to this question is one of the great tasks of the twentieth century and the Christian duty of the citizens of our democracy.

America can solve its old-age problem by working constructively on two fronts. In the first place, we must adjust our thinking with respect to employment. We must repudiate the idea that a person is old at 65 years; employers must give up the conviction that old age necessarily means infirmity. Experiments conducted at Harvard University have found little decrease in quality or quantity of work after 45. Researchers also point out that any lessening of speed from advancing years is often counterbalanced by increasing skill and judgment.

During World War II, when manpower was at a premium, 700,000 men and women of retirement age returned to industry—55,000 of them gave up pensions to do so—and demonstrated their ability to do excellent work.

Let me remind the House that men and women in all walks of life have made great contributions when long past retirement age. For example, Ben Franklin became Ambassador to France at 78, and the late Justice Holmes served on the United States Supreme Court until he was nearly 90. The gentleman from Illinois [Mr. SABATH] has recently celebrated his eighty-second birthday, and still serves with great distinction as one of the outstanding liberal leaders of the House. Bernard M. Baruch is one of the Nation's top political leaders at 76; Dr. Albert Einstein is carrying on his scientific work at the age of 68; and Ireland's George Bernard Shaw is over 90 and remains one of the world's greatest writers. About 41 percent of the United States Senate is over 65 years.

If American employers would forget their hiring-age prejudices, millions of our senior citizens would be happy to give their services to society. Opportunity for employment would eliminate many of the fears and feelings of insecurity which now accompany one's declining years.

In the last analysis, however, the only logical solution to the old-age problem is Federal legislation to establish a comprehensive, uniform, and liberal old-age-pension system.

By a comprehensive pension system, I mean that every man and woman in America of 60 years of age should be eligible to receive a pension. Pensions should also be made available to all who cannot be employed because of disability.

The coverage of our present pension system is far from complete. Although nearly 47,000,000 people are covered by the present Social Security Act, less than 2,000,000 of our senior citizens are receiving old age and survivors insurance payments. An additional 2,000,000 persons are receiving old-age assistance, and 225,000 people receive pensions from the Civil Service and Railroad Retirement Act. Only a few thousand people receive pensions from private retirement systems.

In this connection, I would like to remind you that many people are today ineligible for old-age assistance because of property qualifications—such as the Minnesota Lien Law—which have been established by various States as a condition for assistance. Such property qualifications are grossly unfair—a form of cruel discrimination.

Conservatively speaking, the various pension systems taken together, governmental and private, have a coverage of no more than 50 percent of our people who have reached retirement age. I insist that one underlying principle of any sound pension system is that coverage should be made 100 percent.

A second basic consideration in the establishment of an equitable pension system is that pensions should be uniform. Under our present system, old age and survivors insurance payments range from $10 to $85 per month. Old-age assistance payments during 1946 varied from $14.98 per month average in Georgia, to $55.02 in the State of Washington. In the latter instance, the fault lies in the practice of having the Federal Government match State funds up to a certain sum, an arrangement which is most unfair. I maintain that the citizens in one State deserve the same treatment as those of any other State, and that pension payments should be uniform to all people in all States.

Finally, I insist that a sound pension system will provide payments which are liberal and adequate. By adequate I mean a sum sufficient to buy the necessities of life—food, clothing, shelter, and medical care. Surely those who have labored their entire lives for the welfare of society deserve enough to live decently when they reach the age of retirement.

In this respect the present Social Security System is far from adequate. The national average for old-age-assistance payments is only $35 per month; the average monthly payment in my State of Minnesota is $34.89. Such a miserly pittance means poverty and substandard living conditions for old folks who are dependent upon these payments alone. The recent inflationary rise in the cost of living—living costs have nearly doubled since 1941—has further reduced their living standards.

In my opinion, the minimum pension payment should be $100 per month, as provided for in H. R. 16. While $100 per month is hardly adequate, it would represent a great improvement over existing pension levels.

The time has come for the Congress to recognize that funds for honorable old-age pensions should be a part of our national budget. The public will support us in taking such action. A recent poll showed that 39,432 of those polled support additional old-age security legislation, with only 1,912 in the negative.

The fact that the public is so disposed is a tribute to the untiring efforts of Dr. Francis E. Townsend, who has done more than any man in America to advance the cause of social security for our senior citizens.

Congress has a sacred obligation to our old folks, and we must not let them down. We have already adopted legislation to help everybody else. Last year $4,000,000,000 in tax relief was given to big business. We have appropriated money during this session to protect cattle from hoof-and-mouth disease, to protect wild ducks, and to feed the Japanese and the Germans. If we can do this, surely we can afford funds to provide economic security to the fathers and mothers in America.

Let us not adjourn this Congress until we have passed legislation for old-age security. Let us accept our obligations and place such legislation on the must agenda for this session.

Reduction of Federal Income Taxes

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 18, 1947

Mr. GAVIN. Mr. Speaker, the Congress passed one tax bill which was vetoed by the President; the Congress passed a second tax bill which was also promptly vetoed by the President. I am of the opinion that his veto will be sustained in the other body and if we pass a third bill it would also receive the ax.

Now I want to point out to the Members of the House that one-third of our national income is eaten up by Federal, State, and local taxes. The average man works one day in three for the Government.

The tax bill passed by the Republican Congress would have reduced Federal income taxes more than $4,000,000,000. It would have cut taxes in the lower income brackets 30 percent. Certainly such a saving would be welcomed by those in the low income bracket.

All available estimates indicate that there will be enough money in the Treasury next year to reduce taxes, to balance the budget, and to pay several billion dollars on the national debt.

The President argued in vetoing the first tax bill that the money should be applied on the public debt. The question to be determined by his second veto is whether it is intended to reduce the national debt or whether we are building up this surplus for a backlog for European spending in 1948. Again I say, everything for global spending but not a dime for the American taxpayer who has all these years been carrying the load.

In view of the fact that the Democrats have built the debt up from $20,000,000,000 to $260,000,000,000 since 1933, and have gone about it so enthusiastically, this sudden alarm over the Nation's finances sounds a little strange.

Particularly does this argument ring hollow when we take into account the fact that the President insisted that his huge budget of $37,500,000,000 could not be cut without impairing vital services.

If our peacetime budget must remain at $37,500,000,000, there is little hope of tax relief for the American people. They must bow their necks and work for the Government. The little man will continue to pay out money that he needs for his family and himself.

The money that the taxpayer would have saved by this tax bill would have been used for new businesses and to expand old ones—if the veto is sustained it will go into the Treasury. It will go into the Federal Government to be dissipated by bureaucracy or world spending rather than into productive enterprise in this Nation to create jobs. The only organizations able to expand today under existing conditions are the big corporations, the ones with huge resources and reserves. The small businesses are out of luck.

Our existing tax structure is destructive of private enterprise. If continued long enough, it will drive all private business to the wall.

How can the President continue to reconcile his opposition to a tax cut now, with his support of the 1945 tax bill—and that a time when the country faced a $50,000,000,000 deficit, the administration put through a $9,000,000,000 tax reduction.

The President wants to see the continuation of heavy spending. His $37,500,000,000 budget indicated that clearly. He wants the Government to do the spending rather than the individual. The Republicans have cut the President's budget, but Mr. Truman has refused to cut taxes as a result. He sees the debt as a great bogey. The debt is huge and should be reduced. The President says he is for "the right kind of a tax reduction, at the right time." What is the right time? Perhaps it is next year when Mr. Truman is running for the Presidency.

We on this side of the House have been concerned over the debt for a long time, but this concern on the part of Mr. Truman for debt reduction is a comparatively new development.

Our side of the House and many on the other side want to cut expenditures, cut taxes, and to make an adequate payment on the debt, and it must be admitted that on cutting expenditures we have been fought vigorously every foot of the way. They argue that every cut has been a "phony cut," and it becomes evident that the administration wanted no cuts at all.

I cannot believe that the average person wants to continue to pay the present high taxes so the Government can continue to spend a lot of money. That is contrary to common sense. I cannot believe that the average American wants to continue to toss billions of the American taxpayer's money all over the world on what is now referred to as "operations rathole." It is a most appropriate name.

It appears that the administration is playing politics with taxes. There is no other valid excuse for the President's action in disapproving the revenue measure for a second time when both tax bills were passed overwhelmingly in both Houses.

The President indicated some time ago that he may agree to a cut in taxes in 1948. But it is clear that the reasons used to justify his veto this year on these two tax bills will be equally valid next year; in fact, more so. However, next year the argument on reducing the public debt will by then be discounted and the reason will be our European responsibilities to maintain world peace. And again Uncle Sam will pay through the nose.

It is discouraging to find the administration engaged in partisan politics. It destroys confidence. It causes controversy. It presents the spectacle of a divided Nation at a time when of all times we should be united. So get yourselves set either this fall or early in 1948 as Congress will then be asked for five or six billion dollars a year for 4 or 5 years for reconstruction, rehabilitation, and financing of European nations and all talk about debt reduction will be forgotten. Spend, spend—all over the world—but not a dime for the American taxpayer who has been carrying the load. Certainly the American taxpayer has a right to rebel against this administration's attitude.

I submit, however, that this situation is not the fault of this Republican Congress. It is the fault of an administration which is more concerned with politics than with the welfare of our own people, and this responsibility should be placed where it rightfully belongs.

Interest on Federal Reserve Notes

EXTENSION OF REMARKS
OF
HON. FREDERICK C. SMITH
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, July 18, 1947

Mr. SMITH of Ohio. Mr. Speaker, Dr. Walter E. Spahr, professor of economics, New York University, and executive vice president of Economists National Committee on Monetary Policy, in the June 19, 1947 issue of the Commercial and Financial Chronical calls attention to an action taken by the Board of Governors of the Federal Reserve System which appears to be of urgent and earnest concern to the Congress.

He notes that the Board in a release (Z–2040) of April 24, 1947, as published on page 518 of the May 1947 Federal Reserve Bulletin, stated it "had levied an interest charge on Federal Reserve notes in circulation, as a means of reducing by 90 percent the earnings of the Reserve Banks for the year 1947," amounting to approximately $60,000,000. Further, that this $60,000,000 was to be paid into the United States Treasury and that the first payment of about $15,269,000 was to be paid to the Treasury April 24.

In the above-mentioned release the Board says:

On the basis of present estimates, it is expected that net earnings of Federal Reserve banks for 1947, after payment of the statutory dividends to member banks, will aggregate more than $60,000,000. In view of these facts, and of the fact that at the end of 1946 the surplus of each Federal Reserve bank was equal to its subscribed capital, the Board has decided to invoke the authority, granted to it under section 16 of the Federal Reserve Act, to levy an interest charge on Federal Reserve notes issued by the Federal Reserve banks. The purpose of this interest charge is to pay into the Treasury approximately 90 percent of the net earnings of the Federal Reserve banks for 1947.

The Board then specifically refers to paragraph 4 of section 16 of the Federal Reserve Act for its authority in taking the action indicated. It states:

Paragraph 4 * * * provides that each Federal Reserve bank shall pay such rate of interest as may be established by the Board of Governors of the Federal Reserve System on the amount of its outstanding notes less the amount of gold certificates held by the Federal Reserve agent as collateral security. The Board has now decided to establish such rates of interest as will make it possible to transmit to the Treasury approximately 90 percent of the net earnings after dividends of each of the Federal Reserve banks for 1947.

The authority to levy an interest charge on Federal Reserve notes not covered by gold certificates has not been used previously, chiefly because of the existence, prior to 1933, of so-called franchise tax provisions of the law which had a similar effect; that is, of transferring excess earnings of the Reserve banks to the Treasury. Under these provisions, which were repealed in 1933, each Federal Reserve bank was required to pay a franchise tax to the Government equal to 90 percent of its net earnings after it had accumulated a surplus equal to its subscribed capital.

Dr. Spahr contends that the action taken by the Board of Governors of the Federal Reserve System is contrary to law, that there is no language in section 16 of the Federal Reserve Act which authorizes such action; further, that the Board has invaded the province of Congress.

It is my opinion that Dr. Spahr's observation is correct. It appears to me that the following language in section 16, 4 is so incisive as to permit of no other construction than that the Board of Governors of the Federal Reserve System is authorized to charge interest only on that portion of Federal Reserve notes issued in excess of those covered by gold certificates:

* * * pay such rate of interest as may be established by the Board of Governors of the Federal Reserve System on only that amount of such notes which equals the total amount of its outstanding Federal Reserve notes, less the amount of gold certificates held by the Federal Reserve agent as collateral security.

It would appear that the Board has violated the statute in at least two respects; in levying an interest charge on all of the Federal Reserve notes, and distributing the proceeds by paying them into the United States Treasury. I can find nothing in the Federal Reserve Act which authorizes the Board to perform such acts.

I regard this matter as being of serious import to the Congress, as well as to the Nation, and earnestly feel that it should receive immediate consideration.

Dr. Spahr raises another question which ought to be clarified, namely, what official at the Treasury becomes a party to this transaction by receiving the funds paid into the Treasury by the Reserve Board without legal authority?

To clarify this point, I have written the Secretary of the Treasury, the Honorable John W. Snyder, asking him to cite the statutory authority under which he received these funds.

Who the People Are From Whom This Congress Has Its Mandate

EXTENSION OF REMARKS
OF
HON. MARY T. NORTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, July 18, 1947

Mrs. NORTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Lowell Mellett from the Washington Evening Star:

WHO THE PEOPLE ARE FROM WHOM THIS CONGRESS HAS ITS MANDATE

(By Lowell Mellett)

The men in control of the present Congress say they have a mandate from the people. They say it over and over. Whatever they do, they justify by this mandate from the people. Now, as the first session of the Congress begins to wind itself up preparatory to adjourning on the 26th, it is becoming clear just who the people are that the majority leaders take their mandate from.

Very clear, it is that they are not all the people, but selected groups of people—not what we sometimes call the little people or the masses. The little people aren't the ones that have kept the majority leaders in there fighting with the President over an income-tax bill that would reduce their taxes $15 or so a year. It must be the people who would save $15,000 or so.

And the little people haven't been hollering their heads off in support of the budget slashing that will deprive them of many services heretofore rendered by the Government. Quite the contrary. They have hollered loud and long, in some instances, when they've discovered what the budget cuts mean—as in the case of the western farmers when the reclamation program was on the point of being wrecked. (The farmers' protest was partially successful, incidentally. It caused their own Congress Members to revolt against the leaders and obtain a restoration of some of the funds.)

ABLE TO DO MANY THINGS

In the time not used up by taxes and budget cutting, the Congress has been able to do a good many things for the people from whom it really takes its mandate.

The real-estate people, for example. Rent control has been pretty well abolished and all attempts at legislation to improve the general housing situation put on ice.

The railroad people seem about to get what they want, which is legislation excusing them from the operations of the antitrust laws.

The electric power people will be free from Federal control, to a large extent, if the Senate follows the lead of the House.

The gas and oil people, ditto.

And the people who hire other people, in any large numbers, will be free from the unions—if the Hartley-Taft bill works. Of course, if we have many situations like that in coal mining, where John L. Lewis and the operators appear to recognize no mandate from anybody, it will be a different story.

NOT BEING CARRIED OUT

But people who object to being lynched and people who object to paying a poll tax for the privilege of voting are not getting much satisfaction. If they gave this Congress a mandate, it is not being carried out. Republican House leaders toyed for a time with the idea of passing antilynching and antipoll tax laws, but, as they said, it was just to put some of their southern Democratic colleagues on the spot. The idea hasn't advanced very far.

People who fear their wages may drop, or whose wages already have dropped below 60 cents an hour, don't find Congress recognizing any mandate to raise the statutory minimum wage. The same is true of people who ask for an antidiscrimination or fair employment practices law.

Then there are the people who would like to have their children decently educated and the people who would like to have access to better medical care. Congress has listened to them and given them sympathetic assurances. But Congress cannot do everything at once. First things come first. And Congress has made evident what it regards as first things:

Real estate, railroads, power, gas, oil, big incomes.

These, so far as Congress is concerned, appear to be the people.

Anoka, Minn., Centennial, 1847–1947

EXTENSION OF REMARKS
OF
HON. GEORGE MacKINNON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 18, 1947

Mr. MACKINNON. Mr. Speaker, it is not every day that a city celebrates its hundredth anniversary, but the delightful city of Anoka, which lies in the congressional district that I have the honor to represent, is today celebrating the centennial anniversary of its founding.

Since the continuance of the session of Congress makes it impossible for me to accept the kind invitation that Anoka has extended me to attend their celebration, under leave to extend my remarks I include a short history of some of the outstanding events in the hundred-year-old history of this community which now exceeds 8,000 population.

HISTORY OF ANOKA

"Anoka" is a Dakota Indian word meaning "on both sides" and was applied to the present city and county of Anoka because of the significant fact that the original plat of the village of Anoka was laid out on both sides of the mouth of the Rum River at its confluence with the Mississippi.

Anoka is the county seat of Anoka County situated 18 miles north of Minneapolis. It lies in that peninsula of land between the Mississippi and St. Croix Rivers that was successively under the flags of France, England, and the American Colonies. Next it was part of the Northwest Territory, and Wisconsin conducted a strenuous, but unsuccessful,

fight in Congress to have this area included within its boundaries when the State of Wisconsin was created. This Mississippi-St. Croix peninsula is the only portion of the original Northwest Territory that was added to any portion of the original Louisiana Territory to form a State. In this particular, this area is unique in the United States.

THE FIRST WHITE MEN

The first white men known to have visited the land included in the present State of Minnesota were two French traders, Medart des Groselliers—pronounced Gro-zay-yay'—and his brother-in-law, Pierre Radisson. Whether these two men ever set foot in Anoka County is not certain, but at all events they were very near it. In 1659 they journeyed from Quebec to La Pointe—now Bayfield—on the south shore of Lake Superior, afterward visiting the Huron villages between the Black and Chippewa Rivers in what is now Wisconsin. They then made their way to the Sioux villages in what is now Kanabec County, Minn., where they spent the winter.

THE RUM RIVER

Following the treaty of Paris between the French and English in 1763 the Northwest was opened to English explorers and traders. Capt. Jonathan Carver, a native of Connecticut, who had been in the provincial army, started on an exploring tour to the upper Mississippi. With respect to his excursions above St. Anthonys Falls, Carver says:

It might, however, perhaps, be necessary to observe that in a little tour I made about the falls, after traveling 14 miles, by the side of the Mississippi, I came to a river nearly 20 yards wide, which ran from the northeast, called Rum River.

Carver undoubtedly translated the Chippeway name into its English equivalent. It can hardly have been "called Rum River" by the Indians, as Carver states that no one but himself and Hennepin had ever explored the Mississippi as far north as the mouth of the St. Francis River. The Chippeway name for the river is usually written Isko de Wabo and means liquor; broth; or any beverage. However, Carver's name has persistently stuck to the stream, notwithstanding some determined efforts to change it.

THE BATTLE OF RUM RIVER

In the spring of 1839 some 800 Chippeways assembled at Fort Snelling. Believing that they were to receive their annuities at that point, the men had brought their wives and children with them. Finding that the annuities were not forthcoming, they made preparations to return home. Meanwhile the Sioux living in the vicinity of the fort visited the Chippeway camp and were hospitably received and participated in the feasting going on. July 1 the two tribes smoked the peace pipe, and the Chippeways began their homeward journey, some ascending the Mississippi River and some going by way of the St. Croix. Among the Chippeways were two young men whose father had been murdered by some Sioux near the fort the previous year, and they took advantage of the opportunity to visit and weep over their father's grave. The thoughts of their murdered parent kindled a desire for vengeance, and on the night of July 1 they placed themselves in ambush on a trail which led past Lake Harriet. Early the next morning they shot and scalped a Sioux known as Badger. The friends of the victim soon heard of the occurrence and brought the body home wrapped in a blanket. Yeetkadootah, a relative of the dead man, removed the ornaments from the corpse, kissed it, and said he would die for it. His appeals for revenge roused the war spirit, and in a very short time he found himself at the head of a party eager for the fray, each member of which bound himself to take no captive, but to kill all whom his weapons might reach. The warriors followed the trail of one of the Chippeway bands up the Mississippi River on the east side to Rum River, which they reached on the 3d day of July. The Chippeways were not expecting any trouble. They probably had not even heard of the murder, which had been committed after their departure from the fort. Their camp was pitched northwest of Round Lake on ground occupied by the farm upon which Andrew J. Smith lived many years.

Here, within sight of a mound which told of the people who had lived beside the beautiful lake centuries before occurred one of the bloodiest battles that marks the long feud between the Sioux and Chippeway tribes. The fight took place before sunrise on the 4th of July, and the appearance of the ground when first seen by white men would seem to indicate that the Chippeways were surprised in their sleep, and that many of them were butchered where they lay. Those who were able to grasp their weapons made a desperate resistance, but succumbed to overwhelming numbers. Yeetkadootah galloped on horseback to a wounded Chippeway and dismounted to take his scalp, but the injured warrior summoned all his remaining strength and succeeded in shooting the Sioux leader through the neck.

THE FIRST HOUSE

Early residents of Anoka remember a log house which stood on the east side of Rum River near its mouth. Only a few years ago several cellars were still visible near the spot where it stood. This was the first house built in Anoka county. It was built in the fall of 1844 for an Indian trading post, by direction of William Aitkin, who had been for many years a trader of the upper Mississippi and who at that time had his headquarters at Sandy Lake. The building was constructed by a French trader named Joseph Belanger, assisted by George Cournoyer, Pierre Crevier, Joseph Burnet, and Maxime Maxwell. The men cut the logs on the point between the two rivers and carried them on their shoulders to the place where the house was to be built. The house was divided by a partition, one room being designed for a living room and the other to be used as a store room for the goods. In October Mr. Aitkin came to inspect the new post, left his clerk, Mr. Crebassa in charge of the stock of goods, which had been procured from H. H. Sibley's trading post at Mendota.

TRADERS AND PROSPECTORS

The first lumbering done on Rum River was in the winter of 1848–49. The work was done by Daniel Stanchfield, with Sumner W. Farnham as foreman of one of his two crews. The logs were cut on Stanchfield Brook to the amount of 2,200,000 feet, and driven down to the mill at St. Anthony. Mr. Stanchfield found the ruins of the old camp where the soldiers had cut logs for the construction of Fort Snelling in 1821, and located one of his own camps within a hundred feet of it.

EARLY SETTLEMENT

A trading post was opened at the mouth of the Rum River within the present limits of the city of Anoka in 1846. One of the employees brought his family to the post the next year, thus beginning the settlement of the village. In 1847 a post was opened about 2 miles above the mouth of Rum River on Big Island. One of the employees there also had a family. The village of Anoka grew rapidly and in 1855 numbered nearly 300 inhabitants.

In 1849 an energetic young man named George W. Branch found his way to Rum River, coming thither from New Brunswick. He and another man explored Rum River to its source, poling a boat up the river to Mille Lacs. The next year he returned to New Brunswick and induced his brother-in-law, Horace W. Taylor, to come to Minnesota. Taylor made a claim and built a house on the west side of Rum River north of the present railroad tracks on what was afterward known as the McCann farm, upon a part of which the driving park is now located. This was in July, 1850. When the land was surveyed, Mr. Taylor found himself on a school section and moved to a point directly across Rum River where he continued to reside until the time of his death in 1893. Taylor located at this point which was the fording place of the old Red River trail, thinking that a town would grow up there. The State insane asylum is now situated on the old Taylor homestead.

THE FIRST COLONY

In the spring of 1850 the first colony to locate within the present limits of Anoka County made their homes in what is now the town of Ramsey. The colony consisted of Daniel Harthorn, John, Emerson, and Penuel Shumway, Penuel Shumway, Sr., and Cornelius Pitman, with their families and Nathan Shumway and Eber Harthorn. The two last named being single men, made the first trip to spy out the land, and Nathan Shumway erected a log house at E ½ NE ¼ section 35.

THE FIRST STORE

As early as August 1853, Edward P. Shaw began to deal in merchandise in a small way at his father's house, the Orin Rice house, in Anoka, among his sales being some nails for J. C. Varney's house. This was the first store in Anoka.

COUNTY ORGANIZATION

One of the early acts of the first Territorial legislature, which convened in 1849, was the organization of eight counties, viz: Ramsey, Benton, Washington, Itasca, Wabasha, Wahnata, Mahkahto,

and Pembina. Rum River was the dividing line between Ramsey and Benton Counties. The Territory now embraced in Anoka County was partly in each. In 1856 Sherburne County was detached from Benton, and that portion of Territory lying east of Sherburne County and west of Rum River was also detached and became a part of Ramsey County. By an act of the Territorial Assembly passed May 23, 1857, so much of Ramsey County as is embraced within the following described limits, was organized into a separate county to be called Anoka County. The seat of justice was fixed at Anoka.

On the same day an act was passed creating the county of Manomin. This county was identical with the present town of Fridley.

BEGINNING OF THE CIVIL WAR

Immediately after his inauguration President Lincoln called a conference of the governors of loyal States to consult upon the measures to be taken for the preservation of the Union, and when the news of the firing upon Fort Sumter was received Governor Ramsey was in Washington. The President decided to issue a call for 75,000 troops. Governor Ramsey immediately offered a regiment of Minnesota men, which was promptly accepted, and he telegraphed to Lt. Gov. Ignatius Donnelley and also Ex-Gov. Willis A. Gorman the substance of his offer. Gorman, who was a Mexican War veteran, was in Anoka attending the session of the district court which was being held in the Shuler Building. When the telegram reached St. Anthony it was placed in the hands of a messenger who carried it on horseback with all speed to Anoka. A recess of the court was taken, Gorman addressed the assembled people, and called for volunteers. Aaron Greenwald was the first to record his name, and in all probability he was the first man in America to volunteer for the defense of the Union under the President's call. James W. Groat and five others were enrolled at the same time. Josiah R. King and others signed a similar paper agreeing to enlist at a meeting in St. Paul on the evening of the same day.

EARLY EDUCATION

The first school in Anoka County was a private school taught by Miss Julia Woodman (Mrs. Hamm) during the winter of 1853–54. It was kept in the old company boarding house, which stood on Van Buren Street just east of Second Avenue. This building was afterward moved out on Main Street and was for years in use as a barn in the rear of Charles Church's residence. It should not be confused with the new company boarding house, which was built somewhat later and stood on the present site of the Anoka National Bank. The present school is one of the most modern in the State and is under the direction of Mr. Bye, an outstanding educator.

CITY OF ANOKA

Two unsuccessful attempts were made to incorporate the city of Anoka. The first act authorizing incorporation was passed by the legislature in 1858, but the charter was rejected by popular vote. A charter authorized by act of March 5, 1859, met with a like fate, and it was not until March 2, 1878, that the city was set off from the township of the same name. At the present time the city is free of debt and has a low tax rate. Its mayor is the enterprising R. B. Ehlen, who is an outstanding leader in the civic life of his city and State.

POST OFFICE

The first post office in Anoka County was established at Itaska in May 1852. But Itaska dwindled after the bill to move the capital failed while Anoka grew. It was inconvenient to get mail at Itaska. During the fall of 1853 Mr. Larned used to get mail at St. Anthony and bring it up in his hat. Some time that winter, 1853–54, a post office was established at Anoka and George W. Branch was named as the first postmaster.

RELIGIOUS GROUPS

Early religious life in Anoka County followed the prevailing pattern of the regions from which the settlers came. Nearly all the pioneers were of Christian background and tradition, and, as a consequence, cabin homes were scarcely ready for habitation before small groups of people of common or similar denominations arranged to gather from time to time for prayer and worship. Groups of Protestant persuasion met in the earliest 1850's in Ramsey Township and Anoka village. About the same time mass was being said occasionally in cabins at Centerville. The pioneers of the Manomin area, for the most part, attended worship in St. Paul and Minneapolis.

As the settlements spread, groups of worshipers became more numerous. It was not long before formal organizations were perfected. A Methodist Episcopal class was organized at Anoka as early as December 10, 1854, and this was later followed by a church organization. The First Congregational Church of Anoka was organized in 1855. The Church of St. Stephen (Roman Catholic) of Anoka, the First Baptist of Anoka, the Methodist Episcopal Church of Bethel, and the Church of St. Genevieve (Roman Catholic) of Centerville were organized in 1856, and at the same time the Quakers started their meeting at Bethel. In 1858 Trinity Episcopal Church of Anoka, and Trinity Episcopal Church of Manomin (Fridley) was organized. Other churches followed in the 1860's, and before long the influx of Scandinavians and Germans brought about the establishment of Lutheran churches.

NEWSPAPERS

Anoka County has three newspapers, all weeklies. The Anoka County Union and the Anoka Herald are published at Anoka, while Columbia Heights is the home of the Columbia Heights Record.

The Anoka County Union was established August 31, 1865, as the Anoka Union. On August 5, 1866, the name of Granville S. Pease appeared as one of the publishers, and in June Mr. Pease became sole proprietor. His son, T. G. J. Pease is the present publisher and owner, and Arch G. Pease, the grandson of the original editor, who has just returned from a distinguished war record, is the present editor. The continuity of the ownership of the Anoka County Union by the Pease family for 81 years has established a record among Minnesota newspapers.

The title of the Anoka Herald has varied. Starting as a weekly newspaper on September 7, 1867, the publication was changed to a weekly farm journal called the Minnesota Farmer. On June 6, 1867, it became a weekly newspaper again and since January 3, 1885, has been known as the Anoka Herald. In 1904 Roe G. Chase became the sole publisher and editor and continued the high standard previously set by Alvah Eastman and A. A. and I. A. Caswell. When Roe G. Chase passed away his wife continued as editor and has proved herself an outstanding and courageous newspaper woman.

EARLY TRANSPORTATION

One of the Red River trails passed through Anoka County, following the course of the Mississippi River. Over it traveled the Red River carts, usually drawn by oxen, loaded with furs and other products of the wilderness, and bound for St. Paul, where they were reloaded with supplies for the settlements on the Red River near the Canadian border.

AGRICULTURE, LUMBERING, AND OTHER INDUSTRIES

Anoka County agriculture had its beginning in the early 1840's in the Centerville area, where a few settlers who came from the St. Paul settlement started to raise vegetables for their family tables. A small farm was opened by a trader at Anoka as early as 1848. Farming began on a more extensive scale in 1850. The first crops were corn, potatoes, and small grains. Agriculture in the early days was closely interlocked with the lumbering industry. Settlers opening farms left their families in their little clearings and worked in the woods and on the log drives in the winter and spring. In the fall they cut railroad ties and cordwood. The lumber camps also provided a market for produce and for wild hay cut from the marshes.

At the present time Anoka is the home of the Federal Cartridge Corp., makers of small arms ammunition, whose employees were so helpful in starting the Twin City Ordnance plant at New Brighton during World War II. This plant was one of the arsenals of democracy and had one of the finest records of production of any makers of ammunition during the war period. Anoka is also the home of the John R. Kovar Manufacturing Co., makers of farm equipment. It has its stores, lumber yards; the Northern Wood Products Co., now making furniture including dressers and lawn chairs; the Adams Manufacturing Co. making chair frames; the T. C. M. P. A. which is making the best powdered milk in Minnesota; a municipal swimming beach, 12 churches; a 9-hole golf course with fairways and greens second to none in the State; a volunteer fire department, and an excellent police department.

THE HALLOWEEN CAPITAL OF THE WORLD

In 1923 the Anoka merchants joined together in a move to stop Halloween pranks. They suggested a big Halloween party for the children, with free candy,

popcorn, apples, and so forth, and entertainment. The idea rapidly took shape, and in October 1923 Anoka's first Halloween celebation was held. That celebration has been held every year since, with the exception of 2 years during the war when it was canceled. However, last year the celebration blossomed forth bigger than ever, as it was the silver anniversary of Halloween in Anoka, the Halloween capital of the world. The Anoka Halloween idea has been copied by cities and towns throughout the Nation, and the results are the same. Pranks are at a minimum, and everyone has a whale of a good time. Anoka is nationally known for its Halloween celebrations.

WITH THE COLORS

The contribution of Anoka and Anoka County has been outstanding in all wars. A fine history of the participation of Anoka County in World War I was prepared and published under the title, "With the Colors—Anoka County," by Roe Chase, in 1919.

In the summer of 1946 the community did honor to its Gold Star Mothers of World War II at a large banquet which was addressed by former Gov. Harold E. Stassen, who had just returned after a distinguished record in the Pacific, where he served as aide to Admiral Halsey.

CONCLUSION

At the end of its first hundred years Anoka can look forward with confidence to an excellent future, as it has the people and resources to continue its march in the vanguard of successful Minnesota cities.

A Solution to the Slum Clearance Problem Without the Use of Federal Aid

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 17, 1947

Mr. GWINN of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Jos. H. Deckman, chairman, special housing committee, National Home and Property Owners Foundation:

A SOLUTION TO THE SLUM CLEARANCE PROBLEM WITHOUT THE USE OF FEDERAL AID

Any solution to the problem of slum clearance should only be confronted after consideration of the basic fact that old houses do not cause slums. Slovenly housekeeping and buildings not kept in proper repair are the real causes of slums.

With these facts in mind, the problem of slum clearance is reduced largely to the proposition of promulgating and enforcing proper building codes and sanitary laws at the local municipal level.

With the enforcement of sound housing codes and sanitary laws in the various cities of the country, slums should rapidly disappear and at no cost to the general taxpayer.

No responsible person will defend the owner of rental property who does not keep his property in repair or does not equip it with minimum plumbing and heating facilities. Public opinion, therefore, dictates that housing codes are essential to define minimum standard housing and make it illegal to rent substandard dwelling accommodations. By this method good used housing at low rents will be provided for the low-income groups, and this much-publicized problem will be cured.

As in the case with the irresponsible property owner, no one can conscientiously defend the tenant who lives in squalor of his own making. Again public opinion is heavily in favor of sanitary laws which would bring about good housekeeping wherever a public nuisance is maintained.

If the enforcement of housing codes and sanitary laws do not completely solve the whole problem of slum clearance in any given city area, the final phase of the solution can take the form of local redevelopment agencies.

These agencies in each city would be granted the power of eminent domain for the purpose of redeveloping slums and blighted areas. No action, however, would be taken by any agency without the housing code and sanitary laws being fully enforced for a sufficient time. Coupled with this, public approval must be given to any redevelopment plan after adequate public hearings have been held.

Redevelopment would then be carried out under the plans approved by the citizens and the municipal officials by the use of private enterprise purchasing the land and constructing all buildings. The only exception would take place where public parks, buildings, or some other public use is approved.

The mechanics of the clearance of slums through a redevelopment agency in brief would simply mean that a municipality would create the agency through regular legal means. The agency would then be financed by the municipality providing funds for planning and land preparation. The cleared land would then be sold or leased to private enterprise under competitive bids for the use as provided for in the publicly approved redevelopment plan. If any write down in the land takes place at the time of sale due to planning low-rent housing, then this initial loss would be made up over a period of years from the increased taxes accruing from the proper use of the former slum or blighted area.

It is to be noted that the solution to slum clearance is based on a complete local-level procedure. This is the case because it is quite obvious that slums are a local problem and must be solved at the local level if our economy is to remain healthy.

By no stretch of the imagination can a true American conceive that it is the obligation of the Federal Government to take the money paid by all the taxpayers and spend it to rectify the mistakes of the specific owners and taxpayers in a comparatively few large cities where slums exist.

In like manner it is not the obligation of the Federal Government to house any of the citizens of the Nation except military personnel.

Public Housing draws its greatest support from the statements made by its advocates that it clears slums and houses the lower-income groups in new low-rent housing. From the reams of propaganda emanating from public-housing sources, one is led to believe that the Federal Government, through some magic means, is able to build low-rent housing more economically than private enterprise. Because of the general impression implied that public housing is the economical way to house the needy and clear slums, pressure is continually exerted on Congress to authorize more and more Government housing.

The myth of public housing is soon exploded when one goes slightly below the surface and analyzes its cost and general operations. The first shadow is cast over the beautiful picture of clearing slums and housing the needy by the Federal Government when the enormous cost to the taxpayer in subsidies and tax exemptions is exposed.

Public housing enjoys not only local tax exemptions on real estate, but also is given annual subsidies amounting to interest and amortization charges for each low-rent housing project. It is these stupendous subsidies which are required to provide low rents and only a small segment of the tenants in public housing enjoy low rents for comparable accommodations to private enterprise.

Tax exemptions are the greatest evil of the Federal public housing scheme as the final result of continual pyramiding real-estate tax exemptions is financial collapse of the free-enterprise system and the change of our Government from a republic to some form of state socialism.

It has often been stated by the public housers that they propose to house the lower third of the population in Government-owned and operated housing. This means that the Federal Government will become the Nation's greatest single landlord and will have for its tenants one-third of the country's voters. The serious political implications from such an arrangement is only equalled by the adverse effect on the economic structure of the Nation.

If the lower third of the population should ever become housed in tax-free subsidized housing, then the middle third could not bear the burden and would also have to be housed by the same method. This would mean the collapse of our economy as private ownership of real property is the foundation of the free-enterprise system and is the source for the bulk of our tax revenues.

It takes very little imagination to foresee that the eating away of the foundation of the tax structure by increasing the quantity of tax-exempt Federal property would reach a point where the free American economy would be toppled into the abyss of state socialism.

Those who campaign for complete Government ownership of property, to be intellectually honest, should also tell their followers that, when their purpose is finally accomplished not only housing, but all other work will be done by slave labor. The only exception will be the small percentage of ruling class at the top who will never stand for election and will virtually own the country.

Anyone who thinks the public-housing theory through readily arrives at the conclusion that it is economically impossible to house the lower third or any appreciable number of the Nation's citizens in public housing without wrecking the American way of life and the American form of Democracy.

Likewise, it is quite evident that it is a physical impossibility to house the low-income groups in new public houses if the plan is carried to its final conclusion. Enough new houses cannot be built in any one year to do the whole job and consequently much secondhand public housing would have to be used to house large segments of the low-income groups. As the years roll by, all public housing will deteriorate like private housing and its replacement will be a subsidy piled on top of a subsidy.

Today public housing, which has already been constructed is in need of repairs and much of the cost was not calculated when the original rents were set. Public-housing rents have already been raised to meet some of the increased operation and maintenance costs, yet private rents are frozen by law.

A complete study of public housing from the economic view-point brings one to the conclusion that the public housers are only using slums and the needy as political foils to gain their purpose of throwing America into State socialism by the means of a wholesale program of Government ownership of the home.

Europe Can Send Us Working Farmers

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 17, 1947

Mr. CASE of South Dakota. Mr. Speaker, under permission heretofore given, I place in the RECORD this thought-provoking editorial from the Saturday Evening Post of July 19, 1947:

EUROPE CAN SEND US WORKING FARMERS

(By William G. Downs, Jr.)

In a recent issue of Country Gentleman, William M. Shelton, of Buckner, Va., calls attention to the increasing labor shortage on farms of this country and the sad plight of thousands of European farmers. Mr. Shelton suggests that a large number of these unfortunates could be brought to this country, for their and our salvation. From my own experience with both aspects of this problem, I can very strongly second his pertinent suggestion.

I have been back from active duty in the European theater a bare 5 months. I had 2½ years of active service there, much of it in close contact with the common people of a number of countries. As a practicing farmer myself, I naturally paid particular attention to the farmers of these countries, their problems, methods, and techniques.

The plight of the farmer is essentially the same throughout Europe, and makes a sad, dismal picture. Labor is scarce, due to war losses, displaced persons, and prisoners of war. What labor there is is lethargic and dull, because of the apparent hopelessness of the outlook. At the same time, there is an ever-increasing population anxious to be fed by the farms. This puts very great pressure on the farmers to produce more and ever more foodstuffs, which were never adequate for the Continent's needs. Yet government controls the distribution; prices are rigidly fixed at a level that does not encourage a maximum of effort. No farm implements are to be had, and none are in sight. The tools in use are antiquated, patched, and repaired like the one-hoss shay. No commercial fertilizer is to be had for farms that have been overworked and underfertilized for years. This is not enough seed, and the quality of the small supply is poor.

It is not uncommon to see an old single-bottom plow with a moldboard hand-hammered out of sheet metal, pulled by a milch cow and one, two or three women and children. Leaves are gathered and hauled long distances by small handcarts for feed. Such conditions exist nearly equally in France, Germany, Belgium, Holland, Czechoslovakia, Austria and Hungary. Yet in each of these countries, even after years of industrialization, the population is essentially of rural origin and its roots go back for centuries into farm lands.

The European farmer—I have in mind more especially the German one, for reasons I shall state later—is normally a hard and intelligent worker, willing, cooperative and tractable, when he is fed and when he can see any hope ahead. He has been accustomed all his life to long hours, hard work and small pay. He has had to make the poorest of make-shifts do the job. He makes the most desirable kind of helper, under direction.

In all of Europe, I talked to virtually no one from any walk of life—and those I talked to numbered thousands—who did not passionately desire to come to the United States. My driver for many months—a wizard with all kinds of machinery, and with a farm background—told me repeatedly that if I could only get him over here, he would work for me for years, just for his living. Since my return, God knows I wish I had him here. Long hours, arduous duties, all kinds of weather, prisoner-of-war food, never fazed him.

Contrast this with what I have found since my return to my own farm. I have 315 acres, about 200 of which is cultivable. My chief crops are beef cattle and hogs, which means that a lot of feed and hay must be raised, a lot of fence built and kept in repair, much machinery operated and cared for. I am 50 years of age, and not nearly so husky as I was 10 or 20 years ago. All the money that my wife, my father and I have is invested in this place. It is apparent that my 76-year-old father, a retired professional man, and I cannot do the necessary work. Nor can we begin to afford to pay the wages which the scanty available labor, supported by governmental edicts, demands. We could pay a reasonable sum and give our labor a good, comfortable, modern and cheerful home, which would be heaven for the vast majority of Europeans, especially Germans.

Any farmer who has attempted to procure labor in this country recently can tell you what the situation is here. First, few unemployed men are willing to work on farms at all. They want to be near the bright lights, juke boxes and gin mills. If they will consider coming to the farm at all, they want 80-cents-an-hour minimum wage with time and a half for all over 45 hours. If hired under these conditions, they still take no real interest in their work, and are careless with their employer's tools, implements, stock and feed. There are undoubtedly exceptions to this rule, but in my own experience and that of my neighbors, the exceptions are rare. Were such labor more efficient and easily available, present wages would soon wipe out the farmer's meager profit.

What are the possibilities of meeting these two needs by bringing willing European workers to America's labor-starved farms? An inquiry at the Department of State elicits the information that skilled agriculturists may be admitted on first-preference quota visas, but is our need for skilled agriculturists? I think not, unless by that is meant willing, hard-working farm laborers who want to work for a decent living and a fair hope for the future. From my own knowledge of Government interpretations, I am quite sure that this is not what is meant.

Thousands of competent workers can be found in any country in Europe which you may prefer. A movement to import such workers will inevitably bring opposition. Organized labor will object on the ground that it is bringing cheap labor into competition with high-standard American labor. Any farmer who has tried to get satisfactory labor at a price that he can pay can answer that one. Some of the veterans' organizations and professional patriots will object, because of supposed danger to American institutions from European ideologies. This is pure tommyrot. American institutions have been largely erected by Europeans who have fled from intolerable conditions over there, and these are more intolerable today than at any other time in history.

I said previously that my own preference would be for German labor. This is the result of careful and objective thought, with no special love for the Germans. My reasons are that the German of today who wants to come here and work, is thoroughly tractable. He has had his belly full of political and economic isms. Now he wants it full of food. He will be everlastingly grateful for an opportunity. His living standards of cleanliness, neatness, and sanitation nearly approach our own. He will be more than willing to put Germany behind him forever.

Where could he learn democracy and adapt himself to it better than on an American farm? He would be not greatly different from those millions of Germans who came over from the Rhineland, the Main Valley, Baden, and Bavaria in the last century, and whose families are today among our finest farmers and best citizens in Pennsylvania and in the Middle West and on the western plains.

Many French farmers would fit our needs as well as many Germans. So would many Belgians and Czechs and Hungarians and those of other European origins. From the recent observations of Mr. Herbert Hoover and other competent observers, it looks very much as though we Americans would have to play a major role in feeding and supporting Europe for many years to come. Some of the cost of this aid can be borne by getting European help and cooperation at the point where it is most greatly needed—right here on our farms.

We have brought many scientists and technicians from Germany to assist in fields in which we already lead the world—physics and chemistry. Is there any reason why we cannot bring more humble Europeans to help us till our soil? Is there any reason why we should import scientists to help us prepare for war, when we can't at the same time bring in farmers to help us feed a hungry world?

Flood Control

EXTENSION OF REMARKS
OF
HON. WESLEY A. D'EWART
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 18, 1947

Mr. D'EWART. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following, a radio address made by me recently:

Greetings, Montana friends. The recent floods in the Mississippi Valley will go down in history as one of the worst disasters ever to strike the Middle West. It is appropriate and timely to examine the cause of the floods and the steps we can take to prevent a recurrence of the disaster.

This is not, and should not be, a political or partisan matter. It is too big and too vital for such considerations.

Yet no sooner had the floods begun than Drew Pearson, Mrs. Eleanor Roosevelt, various left-wing Washington correspondents, and others with just as little experience in the West, began to advocate a Missouri Valley Authority as a cure-all for the trouble. Some even went so far as to say that passage of an MVA act a year or two ago would have prevented the floods. This is foolish on the face of it, but the widespread publication of such statements makes necessary a calm appraisal of the problem.

The Missouri Basin is about one-sixth of the United States and includes all or part of 10 States. Flood control is only one of the problems which affect the welfare of this great basin. Irrigation, power development, silt control, recreation, wildlife management, and other beneficial uses of the water must be considered.

We must have dams and reservoirs on the Missouri River and its tributaries which will help in flood control, and also will provide for irrigating dry lands in the upper valley and produce the electric power we need for industrial development.

All of this requires a great deal of study and planning by experts in the various fields. The local people and the States have a right to participate in the program. It cannot be done in 1 or 2 years no matter who does it.

For many years the Corps of Engineers of the United States Army has been devoting its efforts to flood control and navigation on

our great rivers. The Engineers have built up a vast store of knowledge and experience which cannot be duplicated. The Bureau of Reclamation has been doing similar work on irrigation and other beneficial uses of water. Other agencies of the Government have become expert in the related problems of soil conservation, reseeding denuded areas, and silt control and wildlife management. The people of the West and their State agencies have acquired a vast experience in the actual practical application of conservation on the land and soil resources of their country.

Working together, using the knowledge and experience gained in many years of hard work, the people of the West and these agencies of Government have created the Pick-Sloan plan for development of the Missouri River.

One hundred and five reservoirs are planned to harness the Missouri and its tributaries. The Army engineers will be responsible for 12 large storage projects on the main river, including the great Garrison and Fort Randall dams in the Dakotas. The Bureau of Reclamation is to do the work on 93 smaller dams and reservoirs on the tributaries. Montana projects in the plan include the Tiber Dam the Lower Marias irrigation project near Big Sandy, Yellowtail and Boysen Dams, south of Hardin, the Medicine Lake Reservoir north of Culbertson, and the Canyon Ferry near Helena.

These reservoirs will provide storage of approximately 85,000,000 acre-feet of water for flood control, irrigation, navigation, hydroelectric power, municipal water supplies, recreation, and other uses.

Not only the great river itself, but all of the soil and mineral resources of the basin will be developed in connection with the Pick-Sloan plan.

The Pick-Sloan plan is a reality. It has been approved and authorized by Congress and the late President Roosevelt. Congress has appropriated millions of dollars for studies and initial construction work that are now under way. The Army engineers are working at Garrison. In Montana, surveys are almost completed on the Tiber Dam and are well along on other projects. Contracts have been let at Boysen on the Big Horn River. The work is going ahead just as rapidly as men, materials, and equipment are available. The very best talents of experienced Government and local agencies are at work.

Why, then, do we read statements asserting that the recent flood damages prove the Pick-Sloan plan to be inadequate? A careful appraisal of the facts proves that such charges are without foundation. The floods were worse in the Mississippi and its tributaries above Cairo, Ill. Very heavy and prolonged rainfall in the immediate area were primarily responsible for the floods. This is an area where the Army engineers have not completed their flood-control work. Farther down the river, where work is more nearly complete, the levees, cut-offs and spillways prevented heavy damage. The floods prove nothing about the Pick-Sloan plan except the great need for its fulfillment.

Why should we scrap the work we have done in exchange for a Missouri Valley Authority? Why waste the studies and experience of our most competent engineers so that some new people can start afresh? For that is what the MVA people want to do. They ask for 2 years in which an MVA board would create a plan for the basin. Experience shows that it would take 5 years or more to develop such a plan. Actually, adoption of the MVA program would only delay the basin-wide development on which we are now engaged. These people are deliberately sabotaging the Pick-Sloan plan—the comprehensive plan for river and resources development—the work that we need so vitally in the West.

The answer must be that these people are interested not as much in the development of our resources as they are in changing our system of Government.

The Pick-Sloan plan provides for the full cooperation of the people, municipalities, States, and Federal agencies. The broad outline of the plan is complete. Work has started and is proceeding as fast as men, materials, and supplies are available. The final achievement will be one of the greatest developments in all history.

We must not be misled by those who are more interested in a change in our social and political philosophy—more interested in authoritarian control—than they are in the prompt and orderly development of our basin and its resources.

The lesson to be learned from the recent terrible floods is not that we should abandon our carefully worked-out plans for the Missouri River. The lesson is that we must press the plans to completion with all of our energy so that this river and all the resources of the Missouri Basin will become a blessing to the Nation.

Thank you.

The Constitution Lives

EXTENSION OF REMARKS
OF
HON. FRED L. CRAWFORD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 1, 1947

Mr. CRAWFORD. Mr. Speaker, because of the interest in the recently enacted Labor Management Relations Act of 1947 I submit my observations and comments on this legislation.

THE CONSTITUTION LIVES

If the Government of the United States verged on one-man rule during the era of the man Roosevelt, it is a long distance from such a danger now. Constitutional processes are still living instruments of government in the United States. This is fully demonstrated by the method in which the Labor-Management Relations Act of 1947 has become the law of the land.

The citizens of this country spoke in no uncertain terms at the ballot boxes last November. Their voice was reflected in the so-called Taft-Hartley bill, officially the Labor-Management Relations Act of 1947"; the first fundamental change since 1935 in the law governing labor relations. This law is the result of months of study on the part of the Congress, followed by extended debate in both Houses.

GAMBLED AND LOST?

Many persons believe President Truman gambled and lost when he sent his veto message to Congress. To have signed the bill would have severed his political ties with labor. Yet his veto was unmercifully overridden in both branches of the legislature, indicating representatives of the people do not cringe when the Chief Executive cracks the whip. Will this inability of the Chief's stalwarts to round for him sufficient support cause labor to cast about for a new leader in the Democratic Party? Many believe it will. Perhaps the President gambled and lost.

DECLARATION OF POLICY

The new labor law—Public Law 101—available at my office on request, declares:

Industrial strife which interferes with the normal flow of commerce and with the full production of articles and commodities for commerce, can be avoided or substantially minimized if employers, employees, and labor organizations each recognize under law one another's legitimate rights in their relations with each other, and above all recognize under law that neither party has any right in its relations with any other to engage in acts or practices which jeopardize the public health, safety, or interest.

It is the purpose and policy of this act, in order to promote the full flow of commerce, to prescribe the legitimate rights of both employees and employers in their relations affecting commerce, to provide orderly and peaceful procedures for preventing the interference by either with the legitimate rights of the other, to protect the rights of individual employees in their relations with labor organizations whose activities affect commerce, to define and proscribe practices on the part of labor and management which affect commerce and are inimical to the general welfare, and to protect the rights of the public in connection with labor disputes affecting commerce.

BOARD ENLARGED

The National Labor Relations Board is enlarged from three to five members, appointed by the President with the advice and consent of the Senate, and a general counsel who shall handle the administrative work now carried on by the Board. The salary of the Board members and its counsel is increased to $12,000 per year.

Many of the sections of the act become effective immediately. They include creation of a new statutory Federal mediation service to replace the present Conciliation Service in the Department of Labor; emergency machinery for handling national-paralysis disputes or strikes which imperil the national health or safety; stability of unions; regulation of welfare funds and check-off; banning of strikes by Government workers; appointment of a joint congressional committee to study labor-management relations and to observe the workings of the new law.

Sections which do not become effective for 60 days include those applying to the NLRB, the general counsel, unfair labor practices by employees, outlawing the closed shop, regulating the union shop, requiring registration of data by unions, depriving unions with Communist officers of their rights under the law and forbidding foremen a recognition by law.

WORKERS' BILL OF RIGHTS

Clearly and specifically the law gives every worker:

The right to know how much money his union has, how much it pays its officers, and how much of the union's money the officers use for their expenses.

The right to vote by secret ballot in free and fair elections for his own choice of union officers.

The right to know what he is striking about before he is called out on strike, and to vote by secret ballot in a free and

fair election on whether to strike or not after he has been told what his employer has offered him.

The right to join with his fellow workers to select as their bargaining agent the union that they want, not the union that is forced upon them.

The right to vote by secret ballot in a fair and free election on whether his employer and a union can make him join the union to keep his job.

The right to keep on working and getting his pay in spite of sympathy strikes, jurisdictional disputes, illegal boycotts, and other disputes that do not involve him and his union or his employer.

The right to have a fair hearing, before an impartial board, without cost to himself, whenever he believes that any employer or any union is depriving him of these rights.

The right to express his opinion concerning union policies, union officers, and candidates for union office, and to make and file charges against his employer, the union, or union officers, without suffering any penalty or discrimination.

Those labor leaders who now defy the law and recommend its violation to the rank and file union members are serving no good purpose. Some day an aroused public opinion can speak even more emphatically than heretofore.

Flood Control

EXTENSION OF REMARKS
OF
HON. THRUSTON B. MORTON
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Friday, July 18, 1947

Mr. MORTON. Mr. Speaker, I have studied with great interest the message from the President delivered to the Congress on Wednesday, dealing in general with the problem of the development of our great river systems and in particular with flood control. I certainly am in full agreement with the President's statement that a comprehensive program for flood control in the entire Mississippi River Basin is essential. There must be an orderly program of appropriations for the prosecution of the necessary work.

We all recognize a definite relationship between public works and the condition of the national economy. When employment is at a very high level and there is a shortage of raw materials, public works have to be limited as much as practical. In times of unemployment public works should be stimulated so as to support the economy of the country. Yet in each and every year a considerable amount of flood-control work must be done if we are ever to achieve safety from floods for the inhabitants of the valleys of the Mississippi Basin. In the President's budget which was sent to the Congress for the new fiscal year there was included $650,000 for construction work on the authorized flood wall for Louisville, Ky., the principal city in my district. At present cost levels the completed Louisville flood wall project will amount to approximately $18,000,000. To date there has been appropriated less than $2,000,000. I tried to find out just how the figure of $650,000 was reached out of a total of $175,000,000 in the appropriation for flood-control work. Apparently, the United States Army engineers were given a formula which they were obliged to follow. This formula was not based on need, but on many other factors, and it resulted in the figure of $650,000 for the Louisville flood wall. If Louisville were to suffer a flood today similar to that in 1937, the financial loss in my district would be in excess of $100,000,000. In spite of that staggering threat, the request for funds from the Bureau of the Budget for the fiscal year ending June 30, 1948, amounted to only 3 percent of the estimated costs of flood protection.

I am sure that the message from the President will be favorably received by the Congress, especially those Members who come from the Mississippi River Basin, which includes most of the territory lying between the Appalachian and the Rocky Mountains, and I hope that the Department of Engineers of the United States Army can in the future be given sufficient latitude in the allocation of funds to permit a realistic solution to the whole problem of flood control.

I should like at this time to pay tribute to my distinguished colleague from Michigan, the Honorable ALBERT J. ENGEL. He has a sympathetic and understanding knowledge of our problems in Louisville, and he gave us a very fair and courteous hearing before his committee when this matter was under discussion. I know of no man better qualified to activate the President's suggestion that the Congress undertake a program which will provide for the substantial completion of flood-control projects necessary for the protection of the lives and property of so many Americans.

Single Department of National Security

EXTENSION OF REMARKS
OF
HON. LESLIE C. ARENDS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 18, 1947

Mr. ARENDS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted by the American Legion at its National Convention held in San Francisco on October 4, 1946, and an editorial on the subject from the Evening Star, Washington, D. C., for Monday, June 30, 1947:

[Resolution adopted by the American Legion at its national convention held in San Francisco on October 4, 1946]

Resolution 816

SINGLE DEPARTMENT OF NATIONAL SECURITY

Whereas the American Legion at its twenty-seventh annual national convention established its policy on unification as follows:

"We endorse the principle of a unified command of our armed forces with Army, Navy, and Air Forces on an equal level."

Whereas Congress recognizing the need for unification of the armed forces has voted to reorganize its Committee on Military and Naval Affairs to accomplish unity of action; and

Whereas closer coordination between branches of the armed services is essential to adequate preparedness and economy of supply: Now, therefore, be it

Resolved, That the Congress is requested to enact appropriate legislation to establish a single Department for National Security with provision for the Army, Navy, and Air Forces on an equal level therein.

[From the Washington Evening Star, of June 30, 1947]

AMERICAN LEGION URGES UNIFICATION NOW—LEGION ASKS CONGRESS TO PUT SERVICES UNDER SINGLE DEPARTMENT

The American Legion urged Congress today to establish a single Department of National Defense "with provisions for the Army, Navy, and Air Forces on an equal level therein."

The Legion's views were presented to the House Expenditures Committee by John Dwight Sullivan, of New York, and Arthur F. Duffy, Jamaica, N. Y. The committee is holding hearings on legislation proposing unification of the armed forces.

The two Legion representatives presented the conclusions of the veterans' organization as follows:

1. In the opinion of the Legion the time for action is now.

WAIT HELD UNNECESSARY

2. While the opinions of our military and naval leaders are to be considered with respect and while it is desirable that they resolve their differences as far as possible, it is neither necessary nor advisable that we wait until they are in complete agreement on details before this necessary action is taken.

3. No branch of the armed services "has any vested interest in the national security and that the sole question to be determined is as to the manner in which the national security can best be preserved."

4. The end to be attained is the centralization of civilian authority and control under the President.

More Truman Inflation

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 18, 1947

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Bristol (Pa.) Courier of July 16, 1947:

MORE TRUMAN INFLATION

President Truman has kicked about high prices ever since he has been in office. Yet he is responsible for more skyrocketing of prices than any other one man in American history.

His term of office has been a parade of different varieties of inflation.

We are having the boom. The bust is on its way. Unhappily, the boom we have been having has no more real substance than a swelling soap bubble—which it greatly resembles.

The various inflationary steps which President Truman has taken are much too numerous to list in full.

First and foremost was his decision, two summers ago, to back up labor bosses in their

demand for large wage increases immediately after the war ended.

These wage boosts were not economically sound. Production was declining, total production and per man production. The President was warned that the wage increases he was urging were inflationary, that they were bound to push prices up.

But he supported the labor chieftains in insisting on them. He ordered OPA not to let prices rise. He might as well have told his bureaucrats to stop the ocean's tide from coming in. OPA couldn't hold back the price bulges and wrecked itself and the Democratic chances for last year in trying.

The President had been sold on a theory in economics. The theory sounded good, but was cockeyed. It put the cart before the horse.

Because mass production, increasing the amount of output per worker, therefore also permits him to be paid higher wages, the President thought it would be all right to give the workers the higher wages first, and tell production to catch up.

This didn't work. The American people had to pay the cost of the experiment in their grocery bills and other articles which they had to buy. Prices soared. Inflation took another spurt.

Every financial program which President Truman has laid down has been highly inflationary. There are really three of these. When the war ended, 2 years ago, drastic revision of Government spending was in order. The President had it in his power to balance the budget then. He could and should have stopped all war-spending at once, and pulled the costs of Government down well inside the revenues.

He didn't do so. He "let things coast." He did cancel a number of long-term appropriations—but this was merely routine. They were items which had been lined up on the basis of the war running 2 or 3 years longer. His economies were entirely in the field of distant-future spending. The day-to-day extravagance of the New Deal wasn't touched.

, This was an inflationary decision. Still more obviously inflationary were the two annual budgets he has submitted since then, calling for much the highest peace-time budgets and taxes the country has ever seen—10 times what used to be normal, 4 or 5 times the biggest prewar Roosevelt budgets.

Recent weeks have seen two new varieties of Truman inflation. One has to do with the so-called "Marshall program" on calling upon the American people to underwrite the cost of a score or so European governments in rebuilding war damage—and getting ready for a Third World War with Russia!

This is inflationary for a very simple reason. This country doesn't really have either the cash or the credit to finance this gigantic undertaking—which is beginning to have the earmarks of a new, super-duper WPA project.

Our Nation already is in debt, one way and another, for considerably more than the total value of all the assets and resources owned by the American people. And, as we have begun to realize, we are tax-poor—we can't really afford to support our own Government in the style to which it has become accustomed to live, let alone finance a couple of dozen improvident governments in Europe and elsewhere.

The single word, "inflation," tells the whole answer to the inevitable question about the Marshall-Truman doctrines: "Where's the money coming from?"

Still another piece of inflation, which will have a large effect upon price levels, and which again traces directly to the White House, is the new labor contract jammed through by John L. Lewis on behalf of the Nation's coal miners.

This is inflationary because the cost of the wage increases and other concessions to the miners is being tacked directly on the price of coal. That means that coal itself will be considerably higher. It means also that everything which uses coal—especially the basic commodity of steel—will also rise in price.

This new contract, which probably will be copied by other union groups as rapidly as they are able to do so, is the inevitable consequence of President Truman's opposition to the Taft-Hartley Labor Act, and his intemperate remarks about it while the fight was on.

He in effect told labor that he would back them up in any attack on the new law—either a head-on attack, or an attempt to by-pass it. The Lewis coal contract is an open effort to get around the restrictions which Congress attempted to write, after a mandate from the American people, on such labor agreements.

Here again there is a cockeyed theory of economics in the background—a piece of idiocy which is part and parcel of the Keynes' theory of an expanding economy which is rapidly wrecking the British Empire.

The theory is something like this: That the spread between original cost and final sales price can be widened indefinitely, if the central government is made strong enough to compel people to buy at the higher prices and stop their complaining about the cost of living.

Take coal. In the ground, it is worth nothing, or next door to it. Its cost is the total of the wages paid to dig it, plus a relatively small royalty to the owners, plus the overhead of management and management's investements, plus transportation.

The new theory of economics is that any conceivable amount of profit can be saddled on top of these costs. In the present instance, it is labor rather than management which wants to extract a much larger profit at the expense of the ultimate consumer.

Now, if coal were an essential commodity with no competition, perhaps there might be something in the theory; but coal has many competitions—water power, electricity, oil, gas, etc.

In a free economy, the top selling price for coal, roughly speaking, is the price which meets these various types of competition.

The big coal strike 20 years ago, which also was the work of John L. Lewis, was the worst disaster which ever hit the coal industry. Why? Because it opened the door to the competitors of coal.

Oil burners first became common at that time. Their somewhat higher costs were compensated for by the fact that oil was believed to be in steady supply. That was the time when the pressure began for the National Government to start building huge power plants. Again, why? So that electricity might be available when strikes interrupted the supply of coal. At that time, also, people first began to take a serious interest in heating with gas and electricity.

The coal industry has never regained the place in American economy, or any measure of the prosperity, which it had enjoyed prior to that disastrous strike. John L. Lewis has grieved openly and eloquently many times for the plight of coal miners—and no one who has had contacts with the industry is going to deny that it is a hard and dangerous way to earn a living.

But Lewis has never been frank enough to admit that his stubborn strike 20 years ago crippled the industry in a fashion from which it has never recuperated.

Likewise with his present contract. At the moment he is on top of the world. He is the envy of all other labor bosses, and his contract is something they hope to use as a model.

But this contract may prove the deathblow to the coal industry.

If he can tack $1.20 a day onto mine wages this time, he can tack $2.40 next year, and $10, $20, or $50 any time in the future. The sky is the limit, once the laws of business economics are abandoned.

This is more than a "bulge"—it's a breakthrough. The drift toward coal substitutes will be accelerated as never before. The picture of continual interruptions in supply and constantly rising prices can have no other effect.

There is only one institution which could head off that threat of competition which will eventually put coal mining virtually out of business—and that would be a labor dictatorship at Washington, powerful enough to tell the American people that they had to go on buying coal, whether they could afford it or not.

The costs of this experiment in screwball economics is going to be carried by those who are not immediately able to move over to other fuels and heating devices, and therefore will have to keep on buying coal at the higher prices—for the time being.

And that makes it another chapter in Truman inflation.

Unification of Armed Services

EXTENSION OF REMARKS

OF

HON. J. FRANK WILSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 18, 1947

Mr. WILSON of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by George Fielding Eliot, from the New York Post of July 10, 1947:

UNIFIED INTELLIGENCE MAKES A LOT OF SENSE, GETS A LOT OF SNIPING

(By George Fielding Eliot)

"The United States should never again have to go hat in hand, begging any foreign government for eyes with which to see."

These are startling words. They are words worth thinking about.

They were spoken by Lieut. Gen. Hoyt S. Vandenberg, then Director of Central Intelligence, in testifying before the Armed Services Committee of the Senate with regard to the service unification bill.

This bill provides, among many other matters, for a centralized American Intelligence Service—the first in our history.

General Vandenberg was referring to the fact that for many months, at the beginning of the late war, we had to depend on the British intelligence system because we had none of our own. "This trust" added the general, "was generally well placed. * * * But we should not again find ourselves confronted with the necessity of developing our plans and policies on the basis of intelligence collected, compiled, and interpreted by a foreign government. We should be able to do these things for ourselves."

This would seem to make sense—a lot of sense. Yet the proposals for a central intelligence agency are being sniped at in Washington, and some of the sniping is getting into the public prints.

For example, it is being charged that Central Intelligence wants to do away with the intelligence services of the Army and Navy. Nothing could be further from the truth. What is desired is that information collected by military and naval attachés, and by such other means as are available to the War and Navy Departments, should be made available to Central Intelligence to be "put into the

hopper" with all the other information received from other departments having foreign reporting staffs and from all other sources. The net result, after careful sifting and cross checking, becomes national intelligence.

It's true that some of the special agents of Army Intelligence are going out of the picture, but this is with the express approval of the Secretary of War in order to avoid duplication of effort. In this process some toes have been stepped on, some little empires have been swept away. Hence, some of the sniping.

Again we are told that the agents of the FBI in Latin America are getting the ax, and being replaced by amateurs from Central Intelligence. The fact is that FBI doesn't have enough money to take care of its vital work right here in the United States of America, and has no desire to spend any part of its budget on foreign intelligence, work which is the proper job of Central Intelligence.

As for the steps Central Intelligence is taking to replace these Army and FBI activities, would you expect these to be published for the information of all interested parties? They are effective steps, I am told, by a man who knows and whose word and ability command my confidence. My information stops right there, and it ought to.

One little item that has been noised abroad I am able to say is a downright falsehood. That is the pretty tale to the effect that one of our ambassadors has threatened to resign because he was compelled to have a Central Intelligence man attached to his embassy without any authority over the man's activities. This has been thoroughly checked on the highest level of authority. It just isn't true. But it shows the sort of thing that gets around when small-time personal empires are threatened with destruction.

We need a central intelligence service desperately in this atomic age. A difference of a few hours in getting information, a difference of a few words in its accuracy, may in the future make the difference between life and death for this Nation. And right now we can never discharge the heavy responsibilities laid upon us unless we have eyes with which to see the facts—and to see clearly. We cannot depend on the separate, uncoordinated intelligence efforts of the various departments. We had that before; the result was Pearl Harbor.

Central Intelligence is not designed to make policy any more than eyes are designed to think; but sound policy cannot be made without facts on which to base it, any more than a blind man can find his way through a trackless jungle.

Modernize Our Presidential Election—VI. The Election of the President by a Nation-Wide Popular Vote Regardless of State Lines Is Impractical and Undesirable

EXTENSION OF REMARKS
OF
HON. CLARENCE F. LEA
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 18, 1947

Mr. LEA. Mr. Speaker, as to State elections, the general policy of our country is to elect our officials by popular vote. The voters meet at the ballot box on equal terms. All votes cast are counted. The candidate receiving the highest vote—the plurality candidate—is elected.

With knowledge of this situation, we may naturally ask, "Why not elect the President in the same way?" This suggestion is plausible, but not practical. The answer is rather obvious. Such a change would eliminate from the Constitution two very important provisions, each intended for the protection of the States.

One provision so eliminated would be that which assigns two electoral votes to each State, regardless of its population. The other provision which would be eliminated is that which assures each State electoral votes in proportion to its population, not in proportion to the number of its voters.

An amendment to the Constitution providing for the direct election of the President regardless of State lines would result in a change of power in the control and operation of the Government; it would be almost revolutionary. It would vastly concentrate power in the States of greatest population, with a corresponding decline in the strength of every other State.

If the election of 1944 had been conducted under a system of Nation-wide voting regardless of State lines, among other things we would have had the following results: 31 of the 48 States would have had their relative strength in electing the President decreased; 17 would have had their relative strength increased.

Each of our 10 largest States has 15 or more electoral votes. They have 6,000,000 more than half of the total population of all the States. Nine of these large States would have had their relative strength in electing the President greatly increased. All of the 9, except 1, would have had their voting strength enlarged by more than 24 percent. One of the 9 would have had its strength enlarged over 19 percent, and 1 would have lost strength by more than 44 percent.

Of the 12 States having from 10 to 14 electoral votes, inclusive, 4 would have had their voting strength enlarged by an average of more than 23 percent. The other 8 of these States would have lost a substantial part of their voting strength.

The 13 States that would have gained as above stated have 272 electoral votes and have much over one-half the population of the United States.

There are 26 States having 9 or less electoral votes that constitute a majority of the States. This group of States has 145 electoral votes, or 27 percent of the total of 531 electoral votes of the Nation.

Of the 145 electoral votes allotted to these 26 States, 52 of them, or more than one-third, are due to the two votes assigned to each State regardless of population.

The Nation-wide election by popular vote would deprive them of those 52 votes, or 35 percent of their present voting strength.

Taking away 2 electoral votes from the very small States would deprive each of them of a large percentage of their present influence in electing the President. A State with 4 electoral votes would lose one-half of its votes; a State with 6 electoral votes would lose one-third of them; a State with 8 electoral votes would lose 25 percent of its present voting strength.

I have prepared table V which illustrates the relative strength of the States under the present plan of electing the President, on the basis of the figures of the 1944 election.

The first column of figures represents the present relative strength of each State on a percentage basis in electing the President.

The second column represents what would have been its relative strength if the two electoral votes awarded to each State regardless of population had been omitted from the count. As an examination of the table will show, outstanding differences are due to the decreased relative strength of all the small States due to omitting these two electoral votes; to the disparity of voting populations as between the different States and also within the same States at different elections.

This illustration is made not because we propose the omission of those two votes for each State, but rather because we cannot understand the operation of our electoral vote system without knowing how it affects the small States.

The third column represents the relative strength of each State under a Nation-wide system of popular votes, regardless of State lines. As I have indicated, such a system of election would do away with the allotment of two electoral votes to each State regardless of population. It would also withdraw from the State the right to participate in the election of a President in proportion to its population.

In other words, assurance is now given the State of its relative strength according to its population, and regardless of the number of its voters. Under such a change the State would have no definite assurance of strength. Its relative strength would be measured solely by the number of its votes as compared to the total vote of the Nation at each particular election.

The fourth column of figures indicates the States which would gain relative strength under a system of a Nation-wide election regardless of State lines.

The fifth column represents the States which would lose relative strength by such a plan of election and the percentage of their loss as contrasted with their present relative strength, as indicated in column 1.

In other words, table V shows the relative strength of the States under the present system in column 1. In column 2, it shows the relative strength of each if the two electoral votes were omitted. In column 3, it shows the relative strength under a Nation-wide popular vote, under which plan the two electoral votes now due each State are omitted; the provision which definitely assures a State of its relative security is omitted; and the relation between the States would be controlled solely on the basis of the relative popular votes cast by each at a given election.

The average loss per State of the 31 States losing under such a plan of election would be more than 45 percent of their present relative strength.

The average gain per State of the 17 States gaining by such a method of election would be more than 27 percent.

The total population of the States gaining by such a change is much greater than that of the States which would lose in their voting strength.

It is apparent as a practical matter that in view of the decreased influence that many States would suffer, particularly the small States, by a Nation-wide election, regardless of State lines, that the approval of a sufficient number of States could never be secured to adopt such an amendment.

More substantial reasons are that it is unnecessary and impracticable to make such a revolutionary change in the relative rights of the States to participate in such an election and in the affairs of the Federal Government.

TABLE V.—*Relative strength of States by percentages in electing President*

	Under present plan	If two electoral votes omitted from each State	Under Nation-wide popular vote		
			Relative strength	Gain	Loss
Alabama	2.071	2.068	0.509	------	75.423

Tax-Reduction Bill

EXTENSION OF REMARKS
OF
HON. RALPH E. CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 18, 1947

Mr. CHURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Daily News of July 15, 1947:

AS WE SEE IT—NOT ENOUGH VOTES

The Senate passed the tax-reduction bill with a January 1, 1948, date substituted for July 1, 1947. The vote was 60 to 32, just short of two-thirds.

This makes it highly improbable that President Truman's expected veto can be surmounted. Tax reduction, if any, will probably wait until next year's session.

This is regrettable for a variety of reasons. The chief one is that the tax cut is a sound measure and ought to have been adopted.

We also regret the damage to a wholesome constitutional tradition, which has hitherto recognized Congress as chiefly responsible for the Nation's tax policies, just as it recognizes the Executive as chiefly responsible for foreign affairs.

Franklin Roosevelt was the first President to veto a tax bill in all American history, and Congress overrode that veto. President Truman's veto of the tax-cut bill a few weeks ago was the first in American history to be sustained.

He was, of course, within the letter of the Constitution in vetoing the bill. But the primacy of Congress in taxation was the fruit of a historic struggle between Parliaments and Executives, and we may have reason to regret the weakening of the precedent by this example.

New American Initiative

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 18, 1947

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington News of July 17, 1947:

NEW AMERICAN INITIATIVE

The realistic new policy toward Germany, the Marshall plan for European recovery, the projected peace settlement with Japan, and the expected end of fruitless Korean negotiations with Russia form the pattern for a sound, consistent American position in world affairs.

The Wedemeyer mission to China offers promise of a constructive substitute for our policy of drift there.

By taking the initiative in these several fields, we are recognizing that the living men in the Kremlin are a greater threat to world peace and stability than the ghosts of Hitler, Goebbels, and Goering.

The program for revival of Germany as a peaceful but productive nation is a belated acceptance of the facts of European economic life. Germany is the industrial heart of Europe. Rehabilitation must begin there. A sound German economy is even more vital to success of the Marshall plan than American financial aid.

Two years have been wasted as we dallied with the stupidities of the Morgenthau plan. But having scrapped Mr. Morgenthau's scheme to turn Germany's "Pittsburgh" into a farming community, perhaps now we can avoid similar blunders in Japan and south Korea.

Russia apparently is not going to have the veto power in the Japanese settlement, which is a substantial gain. The other nations should have no great difficulty in reaching agreement.

The stalemate in Korea suggests that we shall have to go it alone there, as we are in Germany.

The situation in China is largely of our own making. It grew from President Roosevelt's policy of treating Chinese Communists as honest reformers, and from misplaced faith in Russian agreements. Consequently most of Manchuria and half of Korea are in Soviet or Chinese Communist hands. There's nothing we can do about it now. The present question is, How much of China itself can be salvaged from Red revolution and civil war?

European Reconstruction

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 18, 1947

Mr. BOGGS of Louisiana. Mr. Speaker, under leave to extend my remarks in the Record, I include the following editorial from the New Orleans Item and an article by Joseph and Stewart Alsop:

[From the New Orleans Item]

UNITY IS A "MUST"

Great and small, all 16 European nations now participating in the Paris conference should realize that they are engaged in a mission too serious to be sacrificed to frivolous objections and trifling disputes.

A Molotov plan is to be Russia's counter to the Marshall plan. Whatever its provisions, it can't match the latter in resources, sincerity, or basic power for good. The United States has the productive capacity, the food, the factories, the know-how, and the financial ability to make its proffer of assistance meaningful, whereas, on the record, the only nation Russia is bent on helping is Russia. Her satellites within the eastern bloc know that Russia has drained her neighbors to her own benefit. The United States, on the other hand, has been giving—wastefully and foolishly at times, it may be, but giving.

However, the eastern orbit has one thing the western group lacks. It has a realistic and ruthless purpose, under Russia's central direction and command. Ostensibly concerned over the invasion of small nations' sovereignty by United States assistance, Russia allows her satellites no sovereignty whatever, either economic or political. Russia speaks and they obey, with no nonsense about self-determinism.

The West has everything else. It can therefore make resources, know-how, productive energy, and good will outweigh Russia's unity-or-else domination by maintaining a voluntary solidarity in the Paris council. So let there be no more serving notice by small countries that they will not let the large powers do any dictating. Cooperation implies a willingness to forego certain prerogatives of individualism. Without such a sacrifice in small things, big results can't be achieved. The quaint idea entertained by some small powers that their part of the cooperation will be solely to receive while that of others will be to give might as well be rectified first as last.

Either the solid substance of complete economic recovery and unified strength is worth more than the shadow of sovereignty's empty trappings or it isn't. If it is, well and good. Let there be a more realistic appraisal of the relative worth of petty dignities as against the ultimate good of continental Europe and its peoples.

For all practical purposes Europe is now divided into a totalitarian eastern bloc and a democratic western bloc. The eastern bloc,

under Moscow direction, will stick together and operate as a unit. The western bloc, to be effective, must also achieve unity—voluntarily.

MATTER OF FACT—THE ANSWER IS "YES"

(By Joseph and Stewart Alsop)

A great national debate, of the deepest historic significance, is clearly looming ahead as to whether Secretary of State George C. Marshall's words at Harvard are to be backed by American money and American goods. The debate will be heated, and with November 1948 on the horizon, it is sure to have intense political overtones. The central question of the debate will certainly be: "Can we afford it?" It is worth pointing out that, at least as far as money is concerned, the answer is quite evidently "Yes."

This answer is founded on unofficial but reliable estimates. The figures on which these estimates are based are simple enough.

The total Government income for the last fiscal year, ending June 30, was something over $43,000,000,000. Last January President Truman submitted to Congress an estimated budget for the present year of over $37,000,000,000. The Congress is now hard at work trying to reduce this sum. Even if not a penny is cut, the estimated outgo would still be nearly $6,000,000,000 below last year's income. If Congress pares off as much as three billions, the difference between last year's income and this year's outgo will then be almost $9,000,000,000.

The level of employment and of business activity (contrary to the gloomy crystal ball gazing of the economists) is now higher than it was during the last fiscal year. The highest estimate thus far made of the total cost during any 1 year of the Marshall program is $6,000,000,000. Thus, assuming that the Government's slice of the national income during the present fiscal year is as high as it has been during the year just ended, it is obvious that there will be more than enough surplus in the Government "kitty" to finance America's part in the plan.

Two very large strings must of course be firmly attached to that statement.

The first is the qualification that the United States must suffer no economic depression, nor even a fairly mild recession, during the coming year. For even a moderate drop in the present great level of national income would knock all estimates galley-west. But here, curiously enough, in the view of reliable economic forecasters, something like the opposite of the all-too-familiar vicious circle will tend to come into operation. If the Marshall proposal had not been made, the enormous volume of American exports would have begun to fall off sharply in the next few weeks or months. The European countries which are now running out of dollars would have been forced, regardless of consequences, to hoard their last few million against a sudden emergency. The resulting plunge in the American export level would have made inevitable at the very least a distinctly painful recession.

However, with the European response to the Marshall proposal getting under way, the European leaders will certainly be inclined to take a chance.

Faced with desperate internal economic situations, they will undoubtedly gamble that the American Congress will choose to back Marshall up. Thus the American level of exports will hold up, while the Europeans scrape the bottoms of their dollar barrels. And this in turn enormously reduces the likelihood of a serious recession in the near future, and makes it probable that the United States will have the money available to play its part in the Marshall proposal. Thus is the happy circle neatly completed.

The second string which must be tied to any expectation of a large surplus for financing European reconstruction is, of course, taxes. The President has announced his intention of vetoing the tax-cut bill now going through the congressional mill. But it is very far from certain that his veto will be upheld. The tax-cut measure, if passed over the veto, will, of course, cut into the estimated velvet in next year's budgetary kitty. Even with a tax cut, however, since it would not begin to operate until January 1, there is a fair chance that the Government could finance the Marshall program without going to the money lenders.

What all this adds up to is that, in terms of dollars and cents, this country can well afford the effort which must be made to put dying Europe back on its feet. No sensible estimate, of course, can be made entirely in dollars and cents. Money has meaning only in terms of the things it can buy. Yet despite inflation, despite high taxes, despite the housing mess, the plain fact is that this country is living better in terms of things to buy than it or any other country has ever lived before. And no informed person believes that this happy state of affairs will long continue if Europe is allowed to descend into a political and economic chaos which will profit only the Soviets.

Finally, of course, there is politics. As the Presidential year approaches, the temptation will be enormous for both sides to use for political advances what will surely be the paramount issue of the times. Yet politics and all, this country has always squeaked through in the pinches. When Secretary Marshall made his speech at Harvard he was taking a calculated risk that it would do so again.

Legislative Program of Congress

EXTENSION OF REMARKS

OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Friday, July 18 (legislative day of Wednesday, July 16), 1947

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address entitled "Legislative Program of Congress," which I delivered on Saturday, July 12, 1947, over the Mutual Network.

There being no objection, the adress was ordered to be printed in the RECORD, as follows:

It is a great privilege and honor for me to appear in the place of Fiorello LaGuardia, truly one of the great liberal leaders of this country today. I share the hopes of the host which loves him that he will have a speedy recovery.

We are now far enough from the end of the war to see what the reactionary group, dominating the Congress and in cooperation with the powerful and privileged elements in the country, has done to our people. When the war ended, the hours of the workers were reduced. That meant the workers' take-home pay, at the end of the week was cut down. Meanwhile, those who had goods to sell demanded that the Government relax controls and forced up prices. The workers then were caught in the crush between falling wages and rising prices. The special interests demanded that the Government stay hands off, that it adopt no policy with respect to wages or prices which would protect the people. Meanwhile, big business in America took advantage of the carry-forward—carry-back tax law, which entitled them to draw back from the United States Treasury some of the excess profits they paid in during the war, if they had current losses, and determined to break the labor unions. Hence they refused to cooperate with fact-finding boards appointed by the President to determine whether they were able to pay higher wage rates to the workers of the country. They even refused settlements recommended by the President, himself. They forced strikes upon the working people of the Nation. This was a part of their design to prejudice the people against the workers and to lay the ground work for anti-labor legislation which would make it possible for big business to cheapen the labor of the Nation's workers. Finally, these business magnates raised prices so as to make the American public pay what wage increase they finally granted.

Meanwhile, those in the Congress, who were thinking more of profits for the few, already making the highest profits they had ever made, rather than the welfare of the people, abolished all price control. And prices shot up to new heights, while the housewife's budget steadily shrank.

In November, the American people did what they did after the last war. They turned the Democrats out of power in Congress and put the Republicans in power. Yet the vote was exceedingly light, indicating that the liberals and the workers of the country had got discouraged and did not see much hope of stemming another postwar reactionary tide.

Now, what have the Republicans done? Of course, one of the first things they did was to put through Congress a proposed constitutional amendment, limiting the number of years any President could serve, and taking away from the people the power to elect a President as many times as they wanted to do so. This was simply an after-death attack upon Franklin D. Roosevelt by those who could not defeat him in his lifetime. This Republican Congress has finally, for all practical purposes, destroyed the last protection the people had under Government controls—their ceiling on rents. The new rent bill practically assures flat increases of 15 percent and will lead to elimination of all rent controls whatever in a short time This is a direct blow at the veterans, for example, who are fortunate enough to occupy houses and apartments. The next blow they have struck is at the hopes of veterans who thought they might be able to build homes. For this Congress has now eliminated the control over material allocation, so all commercial building now competes for building materials with the veteran trying to build a home for himself and his family.

It was natural that this Republican dominated Congress would make its principal attack upon labor. The Taft-Hartley bill is the result. This bill should be called a bill to cheapen American labor. Its design was to crush the organized labor movement of the Nation and to make the workers of the country again the prey of the exploiter. The bill totally ignored the fact that in 1946, corporate profits in the country increased $3,000,000,000, while, in the same period, salaries and wages fell $5,000,000,000. These men who were determined to make labor powerless to defend itself and the American standard of living were callous to the knowledge that real wages of the American worker had been falling since January, 1945. This bill even attempted to strike down the right of the workers of America to unite effectively in politics. It tried to destroy their ability even to inform their members of the records of public men and to write editorials in their own newspapers about political matters.

Meanwhile, the same dominant majority is now trying to thrust through the Congress, over the President's veto also, the so-called tax cut. This bill, like the other legislation in general, which they have passed is for the

benefit of the privileged few and gives hardly anything to the masses of the people. For example, it would reduce the taxes on a married man with two children, earning $2,500 a year, namely about half of the families of the Nation, only $19, 36 cents a week, but for a married man with two children, earning $100,000 a year, it would give a tax saving of $12,000. It is wrong to raise the level of luxury to the fortunate family before you raise the level of living to the unfortunate family.

Moreover, we all know that, in the time of high income, we should be cutting down the great debt which we had to build up during the war. We have got to pay it sometime. When can we expect to be better able than now? Further, this tax bill, if the Republicans can pass it over the President's veto, is, as a practical matter, going to mean the defeat of the Marshall Plan and shatter any hope of our saving Europe from collapse and chaos. That will not only tend toward totalitarianism and war, but, if we lose the foreign markets we have today, which are due principally to American loans and credits abroad, it will make the difference between prosperity and depression, full employment and mass unemployment in the Nation. What can it profit even the rich to get a tax reduction, the inevitable effect of which will be to produce more chaos in the world and reduce eventually the businessman's income and the worker's wage here at home?

But legislation which would provide homes so badly needed to the people of the country, which would give increased allowances and compensation to the veterans, which would add to old-age pensions, which would make possible decent health care for the Nation's people, which would raise the level of public education for America's children—yes, legislation which would further develop our natural resources, raise the minimum wage of the underpaid workers, give women for equal work equal pay with men, make available funds for adequate research in such killers as heart disease and cancer, and the like—languishes, little noticed, either in congression committees or on the calendars of the Congress.

Our foreign relations since the war have grown steadily worse, and I must say that many of the powerful and selfish interests of this country have done what they could to make them worse instead of better. We still have our isolationists, and, though they appear in one disguise or another, they have worked day and night, with every means at their disposal, to break up the unity of the Big Three which won the war to divide our one world into fighting fragments, to undermine and sabotage the United Nations and every effort to save the world from economic and political chaos, a new fascism, and war.

Not so long ago pressure from the privileged forced the President to weaken our Trade Agreements Act. While an international conference to lower tariff barriers and increase the volume of world trade was in progress at Geneva, initiated by us, the Congress passed the so-called wool bill to raise tariffs and impose quotas on wool coming into the United States. Now many of the spokesmen of the large financial interests of the country are telling us that we must reduce taxes and that we cannot afford to help Europe to get on its feet again. They are saying it is time for us to stop squandering our substance upon foreign people. Congress has yet given no assurance that it will support General Marshall even if Europe presents an acceptable plan of helping itself while asking help from us. On the contrary, many influential Members of Congress have said it was unthinkable for us to commit ourselves to any large or comprehensive plan of further foreign aid.

Foolish people urge us to start another war, not realizing that civilization cannot stand another war and that such a war will mean the utter collapse of what we call the capitalistic system in every nation in the world, including the United States. What we see, therefore, is a nation in the grip of a sentiment very similar to the one which followed the last war. We see a group in power which is the spokesman, not for the whole people but for the privileged few; a group which fails to understand what real democracy means in the United States and in the world; a group which cannot or will not see that the welfare of the masses of the people is the only key to the Nation's prosperity and security; and that America's role in the world is to lend its great God-given strength to the struggle of all other peoples striving to reach the kind of democracy we enjoy here.

The hope of America and the world is not less democracy but more. The people now have it in their power to have both prosperity and peace here and in the world if they will but demand it. With the immense resources at our disposal, with the techniques of modern science at our command, with the great genius of America to serve us, the people of America can have decent jobs, decent homes, decent schools, decent health care, and the private-enterprise system can flower beyond the dream of man, if the American people will but determine they are going to reach these goals and work together to achieve them. And we can do away with the burden of armament and the curse and threat of war, if we will stand with our full strength in the councils of nations and of men for that kind of democracy throughout the world and against any who threaten it or the peoples' peace.

I have faith in the people. I believe the people are just waking up here and throughout the earth to their responsibilities and their opportunities. The common man is on the march. He is determined to go forward, not backward. He not only believes there is a happy valley ahead; he will not stop until he reaches it.

Benefits of Missing Persons Act Should Be Extended to Filipino Veterans—Editorials in the Washington Post and the Evening Star Urge It—House Approved Bill; Only Senate Action Needed

---

EXTENSION OF REMARKS
OF
HON. JOHN PHILLIPS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 18, 1947

Mr. PHILLIPS of California. Mr. Speaker, under leave to extend my remarks in the RECORD I am including editorials of the Washington Post and the Evening Star, both urging the approval by Congress of the bill, H. R. 3191, extending the benefits of the Missing Persons Act to Filipino soldiers who were with our Army in the Philippines during the last war.

The House passed the bill on June 19; the Senate Committee on Armed Services reported it favorably on July 16; and it is now in the Senate calendar, with favorable action expected momentarily.

The bill should become law. It should be done in this session of Congress. It provides for the payment of back pay of Filipino soldiers that goes back to 1941.

Filipino economist and lawyer, Vicente Villamin, and his Filipino associates have been urging the passage of this bill. They emphasize its urgency and its simple justice. There is no question about the validity of the payment. There is no new appropriation required. But if the bill is not passed, the Filipinos will have to wait another year. They have waited too long already. As Mr. Villamin said, "The same number of Americans in the same circumstances would not have the admirable patience that the Filipino unpaid soldiers have exhibited all this time." So let us do them justice by approving the present bill before adjournment.

President Truman sent to Congress recently a bill giving Filipino veterans more benefits under our veterans' legislation. The bill will be taken up next year for lack of time this year.

With the enactment of that bill, it is expected that the whole Filipino veterans' question will be solved once and for all. It is hoped that Mr. Villamin will give his views and suggestions for the purpose of improving the bill on behalf of the Filipino veterans. What Congress wants is information given in simple and effective form. He could give it.

The editorials follow:

[From the Washington Post of July 18, 1947]

FILIPINO PRISONERS

Before it adjourns we hope the Senate will take a few moments of its time to pass the bill extending benefits of the Missing Persons Act to members of the Philippine Army. The purpose of the bill is to authorize the War Department to resume back-pay settlements to Filipino soldiers for the period after they were taken prisoner by the Japanese in 1942. There is no question as to the legal obligation involved. The Philippine Army was part of the armed forces of the United States at the time of the Bataan surrender, and approximately 55,000 Filipino soldiers became prisoners of war. Some 2,500 back-pay claims had already been honored when the First Recession Act was passed by Congress early in 1946. In an effort to avoid giving Filipinos other veterans' benefits, Congress inadvertently tightened that act so as to nullify further expenditures for legitimate back-pay claims. The new legislation requires no additional appropriation. The War Department has ample funds among those already voted. All that is needed is congressional assent. We believe, therefore, that the Senate should without delay second the approval that already has been given by the House. This is a painless way to end the ill-feeling toward the United States that has been festering because of last year's slight.

[From the Washington Evening Star of July 18, 1947]

OUR GOOD FAITH AT STAKE

A bill is pending in the Senate Armed Services Committee which should be reported out and passed before adjournment as a matter of good faith. So far as known there is no opposition to it. It is in danger, in the closing days of Congress, because it has been given no place on the leadership's legislative priority list.

During the war we followed the practice as a Nation of continuing the pay and allowances of men in the armed services who were, in line of duty, absent from their regular posts—such as prisoners of war. Filipino soldiers were included as Americans in this category. Many of those who stood with our forces on Bataan were captured, sent to prison camps, and some of them never came

back. The War Department adjudicated and met claims for arrears in pay (the Filipino private on Bataan drew $9 a month) of some 1,400 living Filipinos and about as many who were dead.

But in enacting the law which severed our ties with the Philippine Commonwealth and recognized the independence of the new Republic, restrictions were written into the statute barring further claims (with some exceptions) of Filipino veterans. The restrictions were interpreted as applying to the missing persons and that interpretation stopped the work, then in progress, of completing payments under the missing-persons law. The House corrected this mistake, for certainly it was a mistake, by passing unanimously and without debate the same bill which is now pending in the Senate Armed Services Committee, under which valid claims, under the missing-persons law, would be paid. But unless action is taken soon, the bill will perish from inaction.

The results would be unfortunate. The members of the Philippine Army were entitled to the same treatment as American soldiers, in respect of pay due them while missing. This was recognized by Congress, approved by the War Department. The present corrective legislation is recommended by the War Department. It is merely to meet a just obligation. The money involved is not nearly so important as the principle and if the principle is repudiated by inaction we shall unnecessarily raise, in the minds of the Filipinos involved, a question of good faith on the part of this country. It would require a minimum of effort by the Senate to dispose of this bit of unfinished business, with credit to ourselves.

Soviets Say "No"

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 18, 1947

Mr. BOGGS of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from Catholic Action of the South:

SOVIETS SAY "NO"

Refusal of Soviet Russia to participate in the plan for the economic recovery of Europe is one of the most discouraging incidents of the postwar period, first, because of the apparent revelation and confirmation of Soviet attitude of opposition to an economic recovery, in keeping with Communistic policies of dissatisfaction and turmoil, and secondly, because of the division that may result among the nations of the world.

The latter fact is a most dangerous situation for the peace of the world. This, coupled with constant talk of another war, casts a pall of gloom over the world. The picture of the nations divided into antagonistic camps inevitably evokes the threat of war between the opposing groups.

The Soviet attitude in refusing to cooperate, when almost all other nations are agreed on this, and her willingness to allow demoralization and economic chaos to continue, must inevitably arouse bitter condemnation of the Soviets from the Christian and humanitarian standpoint. But adding to this the many incidents constantly revealed of communistic activities, infiltration and violence in one part of Europe after another, one can feel only concern and anxiety at what appears to be a well-set policy.

Well-meant efforts of our own leaders and those of other nations and patient negotiations seem to be of little avail. Our own Secretary of State Marshall seems to have reached the point of exasperation.

In the vision of Fatima, Our Blessed Mother referred to the conversion of Russia. We believe that a mighty appeal of prayer, particularly the rosary, for the Blessed Virgin's intercession, is in order right now, that peace may be preserved, and that we be spared the wrath of another war.

Loyalty Bill

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 18, 1947

Mr. HOLIFIELD. Mr. Speaker, the Rees bill recently passed by the House has caused great concern. Under leave to extend my remarks, I include in the Appendix the remarks of George E. Reedy, of Station WOL, as follows:

The No. 1 subject of conversation in Washington today is the question of loyalty among employees in the Federal Government. It has been touched off by a report of the House Civil Service Committee that nearly 1,000 subversives have been dropped.

The firings took place during the 9-month period from July 1946 to the end of last March. They were confined to six agencies and, significantly enough, the largest number were in the War Department.

The report, as it appears in the headlines, is stunning. Even though the number involved is a tiny percentage of Civil Service, it is a shock to be told that many have worked themselves into the Government.

Yet the situation raises perplexing and disturbing questions to those who want to protect our American Government and also protect our liberties. It is not the sort of thing that can be forgotten in a few days.

It is impossible to read the report without asking one paramount question—a question to which there is no answer. It is: Just what is meant by subversion? Just what were the acts of disloyalty, for which these employees were fired?

In many instances the firings were described as cases involving communism. But there is no clear statement as to how the communism was involved. Were the employees party members? Were they fellow travelers? Or did they just have some Communist friends?

The public is entitled to know the answers. The milkman in Omaha, Nebr., should be told just why these people, whose salaries he paid, were dropped. All he can read in the headlines is that the Government got rid of some Reds and Pinks.

The second question that leaps to the forefront is why the agencies have suddenly decided to fire 1,000 subversives. It is obvious to anyone familiar with the present Washington scene that practically all these cases involved charges of communism.

There has been a Communist Party in the United States since the early 1920's. It is only recently that they have wormed their way into the Government. Or, is it only recently that the Government has decided to get rid of them?

No matter how that question is answered, the response is bound to be embarrassing to the administration that ordered the firings. Either Federal safeguards against subversion have been dropped, carelessly, or they have been dropped deliberately.

It is definitely a time for sober thought on the whole subject. We are faced with the grave danger of running to extremes. We can be too soft with Communists in protecting our civil liberties, or we can run wild and fire everybody in sight who has a few thoughts.

Sober thought can be brought about only by exposing all the facts to public view. Only then can we work out a firm and reasoned policy, which will truly protect our Nation from the Communists and from any other type of subversion.

Reduction of Income Taxes

EXTENSION OF REMARKS
OF
HON. HORACE SEELY-BROWN, JR.
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Friday, July 18, 1947

Mr. SEELY-BROWN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Times-Herald of July 18, 1947:

WHEN WILL THE TIME BE RIGHT, HARRY?

"The right kind of tax reduction, at the right time, is an objective to which I am deeply committed." (Harry S. Truman, June 16, 1947.)

President Truman, who on June 16 vetoed Congress' first effort to give us taxpayers some relief, is expected to take another shot at Santa Claus today. Over the yelps of 302 of our Representatives and 60 Senators, who for the second time voted to slice income taxes by $4,000,000,000 annually, Mr. Truman has announced that he will swing his veto again.

Such free-and-easy vetoing is, of course, a President's legal right, though there is some muttering that that particular constitutional power ought to be whittled down in the near future.

But our feeling right now is that our Presidents, when they use their current power to override the decision of the people's representatives, ought at least to give the citizenry a courteous and convincing explanation of how come.

Referring you to the Truman quotation at the head of this column, tossed at Congress in the first veto message, we submit that Mr. Truman has been courteous enough, but has been more mysterious than convincing.

Talking like a wise father to his nice but dumb kids, he merely told Congress and us Americans that papa knew best; this just wasn't the right time to lower any taxes—period. And to this day, as far as we know, neither Mr. Truman nor any of his mouthpieces has told anybody when we citizens can expect a bit of tax reduction, if ever.

We hope that Mr. Truman proposes to be more talkative about this question in the near future, although at his press conference yesterday he indicated that his veto message would be exceedingly short. If there are any good reasons why taxes can't be cut we think the American people can be trusted with the secret.

There are rumors, for instance, that some of the boys have quietly been figuring out the eventual cost of the Marshall plan for feeding and clothing Europe indefinitely.

TAX-CUT MYSTERIES?

This job will cost a lot of money, and if we take it on we'll probably get our taxes raised instead of reduced. But we think Mr. Truman ought to tell us if that's his main veto reason.

There are other theories, of course, which Mr. Truman might discuss in detail. Some of our gloomier administration characters

hint that we may be having a war any day, and shou'd hold on to our wartime tax rates, even though Great Britain and Canada have reduced theirs.

If, as may happen, the President simply chooses not to chirp about when that "right time" for tax reduction is going to arrive, some people might even begin to suspect that the "right time" may prove to be 1948—a Presidential year.

Just to clear up this political fog, and to give us taxpayers a little bit of hope, Mr. Truman ought to give us either a definite tax-reduction date or a good, full explanation, now.

National Science Foundation

EXTENSION OF REMARKS
OF
HON. RALPH E. CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 18, 1947

Mr. CHURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Daily Tribune of July 18, 1947:

TRAINING SCIENTISTS OR SUPPORTING BUMS?

Influenced by an assertion that Russia is trying to train 100,000 scientists, the House has passed a bill to put the Federal Government into the promotion and support of scientific research and training. The Senate has already passed a similar bill and a conference will adjust the differences.

The National Science Foundation is not going to go very far toward meeting any Russian challenge, assuming, as is unlikely, that the present academic system of the country is not more than capable of outdoing the Russians. The scientific leaders of the next generation are already on the college campuses and the only discernible menace to continued American leadership in the field is the activities of the conscription fanatics, who would draft these students or their younger classmates and send them across the world to be killed in some war cooked up by the Washington meddlers.

So far as the National Science Foundation is concerned, it is far more likely in the long run to produce 100,000 academic bums than it is to produce 100,000 scientists.

The House bill provides for a foundation of 24 eminent members, with a paid Director and various divisions concerned with different branches of science. The Foundation would develop a national policy of research and education. It would support research, and activity which people who have studied the bill suspect may be used to let the Government claim title to any important patents developed in the future. It would grant scholarships and fellowships, exchange information with other countries, and correlate the Federal program with that already being carried on by the educational institutions and commercial laboratories of the country.

It can be expected that initially the members of the Foundation will perform their duties conscientiously, as efficiently as the magnitude of the task will permit, and with little, if any, regard for politics. It can be expected with equal certainty that within a fairly short time the politicians will move in and science will flit out the window. A national program of scientific research and training of scientists can't be run like a rivers and harbors bill, and that is exactly how it will be run in due time.

If the Government buys the University of Chicago a new cyclotron, some cow college with a professor of electronics, who prepared himself for his career by repairing radios, will get after its Congressmen to get it a cyclotron. If scholarships are to be distributed, every Senator and Congressman will be on the alert to see that his State or district gets at least its share, regardless of the ability of the candidates or the competence of the institutions in that area to train scientists. That isn't going to put the United States anywhere in the field of science, but it is going to cost the Government and the taxpayers more and more every year.

Congressmen were influenced by stories of Russian programs in voting for this measure. The best argument against it, as a matter of fact, would be the experience of Russian science under the Government control, toward which the National Science Foundation is a step. In Russia, science is inextricably entangled with Communist politics. Scientists who dispute the theories of the political favorites are likely to find themselves carrying on their research with a pick and shovel in some Siberian labor camp.

The biologists have to adjust their discoveries to bolster Marxian economics. Directors of research institutions are expected to conduct their affairs to provide a maximum of material for Stalin's propaganda agencies. We have a few such phonies in this country, it is true, but nothing like the number we shall have once the politicians get into the control of the Science Foundation.

Statement by Jackson J. Holtz, Department Commander, Jewish War Veterans of the United States, Boston, Mass.

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 18, 1947

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Jackson J. Holtz, department commander, Jewish War Veterans of the United States, Boston, Mass., on the occasion of the first anniversary of the Jewish War Veterans March on Washington, in reference to their stand on Palestine:

DEPARTMENT OF
MASSACHUSETTS,
JEWISH WAR VETERANS
OF THE UNITED STATES,
Boston, Mass., July 16, 1947.

CONGRESSMAN THOMAS J. LANE,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN: Attached please find a copy of a statement by Jackson J. Holtz, department commander of Massachusetts, Jewish War Veterans of the United States, released to the press yesterday on the occasion of the first anniversary of the Jewish War Veterans March on Washington, which occurred July 15, 1946, in reference to our stand on Palestine.

Our stand has not changed, but has become strengthened. I am sure that you will be interested, as you have been in the past.

Sincerely yours,

OSCAR J. TOYE,
Northeast Division Chief Marshal, July 1946 Washington Demonstration.

STATEMENT BY JACKSON J. HOLTZ, DEPARTMENT COMMANDER

One year ago today, thousands of Jewish War Veterans, representing posts throughout the country, converged on our Nation's Capital to protest British policy in Palestine and to urge our Government to use its good offices to secure immediate admission of 100,000 immigrants to Palestine.

One year later the Jewish War Veterans reaffirms its plea to the conscience of the world. Circumstances have become more unbearable, and the plight of the displaced persons makes more urgent the request, even as it has publicly been urged by the President of the United States.

Has the world become so callous as to let another year go by without sending the hapless peoples of the displaced-person camps to their promised land? We refuse to believe that the leaders of our Nation, great land that it is, can sit by content with mere resolutions and expressions of sentiment in the face of flagrant violations of moral ethics.

We refuse to believe that the world conscience will tolerate the collective punishments being inflicted on Palestinian Jews by their former ally, Great Britain.

On this day, therefore, we once again reaffirm our position. As Americans of the Jewish faith, having served our country in time and having sacrificed thousands of comrades in action, of need, we ask justice for our less fortunate brethren overseas.

As a matter of national honor the United States of America must stand by the promises for a Jewish national homeland made by every President of the United States from Wilson to date, the specific platforms urged by both major political parties, Congress after Congress, and solemn treaties to which this country was a signatory.

As veterans we must recognize the valiant fighting service of our Palestinian allies with its volunteer army fighting on the side of the democracies.

Poland: The Dreyfus Case of a Nation

EXTENSION OF REMARKS
OF
HON. CHARLES R. CLASON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 18, 1947

Mr. CLASON. Mr. Speaker, through the activities of the officers and members of the Polish American Congress, Inc., western Massachusetts branch, information concerning Poland and its people is brought to the attention of thousands of American citizens every Sunday. On July 13 the speaker on their Justice for Poland program was the noted news analyst, lecturer, and magazine writer, Mr. William Henry Chamberlin, who spent many years in Europe as a foreign correspondent for the Christian Science Monitor. The title of his talk was, "Poland: The Dreyfus Case of a Nation."

I believe that the members of Congress will be interested in his address which once again forcibly portrays the cruel treatment accorded to a great nation and a brave people following the success of the Allied Nations, of which Poland was an outstanding and heroic member.

The address follows:

POLAND: THE DREYFUS CASE OF A NATION

(Broadcast by William Henry Chamberlin)

Poland was the first nation which took up arms against Nazi Germany. The Polish people did not stop fighting when German and Soviet forces, then acting in close cooperation, overran their country. The Polish

underground was one of the best organized and most effective in Europe. Hundreds of thousands of Poles fought for the United Nations cause on the western front, on land, on sea, and in the air.

Poland, as much as any nation, deserved an honest application of the Atlantic Charter principles to which America, Russia, and Britain all solemnly subscribed and which read as follows:

"Their countries seek no aggrandizement, territorial or other.

"They desire to see no territorial changes that do not accord with the freely expressed wishes of the peoples concerned.

"They respect the right of all peoples to choose the form of government under which they will live; and they wish to see sovereign rights and self-government restored to those who have been forcibly deprived of them."

Unfortunately these high principles have been crudely and flagrantly violated in the case of Poland. More than 40 percent of the territory of prewar Poland, including such historic Polish cities as Lvov and Wilno, has been annexed to Russia without any semblance of free plebiscite. And Poland is under the power of a made-in-Moscow government in which key posts are held by Moscow-trained Communist agents of Stalin. It was pledged at Yalta and Potsdam that the Polish people could hold free unfettered elections. But the only election which has been held in Poland since the war, last January, was pronounced a fraudulent farce by practically all the foreign observers who witnessed it. To Poland victory over Nazi Germany brought not liberation but subjugation to another totalitarian tyranny. Poland was one of the first and most glaring illustrations of the Soviet method of conquering peoples outside Russia's frontiers by a mixture of force and fraud, a method which President Truman has called dangerous to United States security.

One of the reasons why the American people acquiesced in the injustice which was inflicted on Poland, a gallant fighting ally, is that Poland was made the victim of an extraordinary campaign of misrepresentation of downright falsehoods and misleading half-truths. The case of Captain Dreyfus, the innocent French Jew who was unjustly condemned, has become a synonym for organized slander. The campaign against Poland might well be called the Dreyfus case of a nation. Facts were grossly distorted. Untruths were imprinted on the public mind through frequent repetition.

The motives of this campaign were mixed. Communist propaganda was active. There were considerations of supposed wartime expediency. General American unfamiliarity with east European history and politics made it easier to create a false picture. It is typical of the kind of biased information the American public was receiving about Poland during the war that a leading monthly selected as the author of the only two articles which it published about Poland an extreme and avowed Communist sympathizer, and refused to grant space for the presentation of a contrasted point of view. I shall now set down eight of the most familiar misstatements that were circulated about Poland during the war, and the reasons why each of these misstatements is a falsehood.

1. It was said that the Curzon Line was a fair impartial settlement of Poland's eastern border. But the Supreme Allied Council, when it proposed this delimitation on December 8, 1919, was thinking of a temporary demarcation line, not of a permanent frontier. This is proved by the Council's statement: "Rights which Poland may claim to territories situated to the east of this line are expressly reserved." The Soviet Government, in 1920, admitted that the Curzon Line was extremely unfavorable to Poland and renounced any claim to Polish territory east of this line on several occasions. It had no more legal or moral right to seize eastern Poland than it would have to seize Alaska, which once belonged to Russia.

2. It was said that the majority of the people living in the land east of the Curzon Line are Russians. Actually about one percent of these people are Russians. There were ethnic minorities in eastern Poland, as there are in Russia and in most countries of eastern Europe. But, in the absence of a free plebiscite, there is no reason to assume that these ethnic groups, Ukrainians, Byelorussians, Jews, apart from a few Communists, would have preferred Soviet rule to Polish.

3. It was said that Poland unjustly took the territory which the Soviet Union claimed up to the Curzon line during the Soviet-Polish War of 1920. But when that war ended Poland obtained a less favorable boundary in the east than the line which the Polish Armies held when the war began, in April, a line which the Soviet Government was willing to accept as a basis of peace negotiations.

4. It was said that Poland before the war was a feudal country where titled aristocrats exploited and oppressed the peasants and owned most of the land. But Polish law recognized no titles of nobility, and over 80 percent of the farm land was in holdings of 125 acres and less.

5. It was said that the Polish Government-in-exile was an unrepresented group of landlords, aristocrats, and Fascists. As a matter of fact, there was not even one landlord or aristocrat in this Government. After the death of General Sikorski in an airplane accident the Prime Minister of this Government was Stanislaw Mikolajczyk, leader of the Peasant Party. The last Prime Minister was Tomasz Arciszewski, veteran Polish Socialist and leader in the underground struggle against the Germans until he was flown out to England. To call such men reactionaries is sheer nonsense or deliberate falsification.

6. It is said that all Russia wants in Poland and in the many other countries it has occupied in Europe is what America wants in this hemisphere, namely, friendly neighbors. This is an insult to the good-neighbor policy, to historical truth, and to common sense. Even before our good-neighbor policy went into effect there were no blots on our record in Latin America comparable with the Soviet action in imposing made-in-Moscow governments on countries which were occupied by the Red Army. Never in American history have we committed an atrocity comparable with that of the Soviet Union in dragging from their homes and deporting to slave labor under most brutal conditions over a million people from eastern Poland, of whom hundreds of thousands perished from overwork and starvation.

7. It is said that because Soviet troops drove the Germans out of Poland Russia had the right to annex as much Polish territory as it may want. By this curious line of reasoning America and Britain would be entitled to seize large parts of France and Italy. The war was a common enterprise. If the Red Army, with the help of Polish underground units, drove the Germans out of Poland, American, British, and Canadian lend-lease aid certainly helped to drive the Germans out of Russia.

8. It is suggested that because Poland's record in political democracy, social progress, and treatment of ethnic minorities before the war is open to criticism Poland has no right to exist as an independent state. This is a completely illogical position. For, if Polish standards of political and civil liberty were not those of the United States, Sweden or Switzerland, they were far above those of the Soviet Union, if one takes such reasonable bases of comparison as the numbers of people executed or imprisoned for political reasons in the two countries.

A good example of this contrast is provided by the fate of the polish Jewish Socialist leaders, Henryk Ehrlich and Viktor Alter. In so-called reactionary Poland these men, who made no secret of their radical social, and economic views, could sit in parliament and go abroad to attend Socialist congresses. It was the Soviet Government that put them to death after a secret trial, on the fantastic charge that they were spreading Nazi propaganda. Many Ukrainian nationalist leaders also lost their lives at the hands of the Soviet political police.

Imperfections of internal administration which Poland shared with other east European countries furnish no excuse for destroying the independence of a country that was the first to fight Hitler, especially when one finds these imperfections on a far larger scale in Russia.

It is time to make an end of this Dreyfus case of a nation. It is time to recognize that the reasons which were advanced for consenting to Poland's territorial mutilation and loss of liberty were based on falsehood and slander, much of it originating in Communist sources.

The abandonment of Poland's cause by America and Britain at Yalta was dishonorable, in the light of Poland's war record and the professed ideals for which the war was being fought. It was also a grave political blunder, and for two reasons. Poland is the key to eastern Europe. By subjugating Polish manpower and the manpower of other east European countries and regions with a total population of more than 100,000,000 the Soviet Union has gained an advantage in its struggle to conquer and communize all Europe.

Moreover, Germany is the heart of Europe. The reduction of Poland to the status of a Soviet vassal state makes it easier for Russia to apply overwhelming armed pressure on the eastern frontier of Germany. In order to achieve something like a fair balance between east and west in Europe anti-Communists should be as free to influence the political life of Poland as Communists are to influence the political life of France.

It may be that future generations, if not the present generation of Americans and Britons will pay dearly for the weakness, folly, and cynicism of the Yalta agreement. Recently President Truman struck a hopeful new note when he said, "Totalitarian regimes imposed on free people by direct or indirect aggression undermine the foundation of international peace and hence the security of the United States." Poland, under its present Moscow-sponsored rulers, is a glaring example of this kind of regime. The United States should make every effort to restore the freedom of Poland as an indispensable cornerstone of the freedom and prosperity of Europe.

Opportunity for Public Service

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, July 18, 1947

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Rear Adm. F. E. M. Whiting, United States Navy, retired, newly elected president of Licensed Beverage Industries, Inc.:

It is too early for one who is just coming into such a responsible position in this industry to do more than make clear his own convictions, as to the importance of the undertaking, and the opportunities which it offers to perform a national public service.

In the first place, I am convinced that the progressive, far-seeing men of this industry, who established LBI for the purpose of obtaining better public understanding and support are realistically sincere in their desire to do whatever is possible to accomplish that objective. I expect to undertake, and I am convinced that the leaders of this industry want me to undertake, a constructive program of action and information inside and outside the business that will enlist public support. In our efforts to bring about greater public knowledge and understanding of the licensed beverage industries, attention will be given to deeds as well as to words.

AN AFFIRMATIVE CONTRIBUTION

Secondly, I am equally convinced that the licensed beverage industries have made and are making an affirmative contribution to our Nation, to its people, and to its economy. In saying this I am fully aware of the social implications associated with the industries' products. Let me emphasize my belief that it is the abuse of the product and not its use that has clouded the vision of many well-meaning but misguided people. There is a real place for the products of this industry in the social customs and usages of this Nation. The many benefits of the use of this industry's products in moderation have not been fully understood nor brought home to the American people.

The broad objectives that Licensed Beverage Industries, Inc., endorses are as follows:

(a) To expose and combat the false ideas that result in prohibition.

(b) To encourage sane liquor laws, their proper administration and complete observance.

(c) To foster the moderate use of licensed beverages.

SERVING THE PUBLIC WELFARE

The legal sale of alcoholic beverages has a rightful place in our way of life. The industry and its products, despite some of the problems which have received wide and occasionally sensational attention, are entitled to the same intelligent and unemotional judgments at the hands of the people as are given to other industries and other businesses.

There is no doubt in my mind about how most of the people of this country feel about this industry. They expressed themselves most forcefully in favor of a licensed industry in bringing about the repeal of prohibition. Under a system of sane liquor laws, completely observed, properly administered and effectively enforced, the public welfare is best served.

THE PACIFIST AND THE PROHIBITIONIST

The misguided advocates of prohibition can also be understood. As a group, they resemble most closely the pacifists of a generation or so ago who would have us scrap our preparedness programs. As an officer who has served through two World Wars, I am well acquainted with the arguments of the pacifists. There is an alarmingly close parallel between the arguments of the pacifist and the prohibitionist. If the ideas of the pacifists were followed, the United States would be in grave danger from the international gangsters, who, make no mistake about it, would be ready to take over if they could. If the prohibitionists' ideas were followed, we would return the United States to the local or national gangsters, who operated with such devastating effects during all of the prohibition years.

Because of the opportunity for service to the country, I have a great deal of enthusiasm for the job I begin today. Because of its high importance I approach it also with humility. The convictions I have tried to make clear have been strengthened in the past several weeks by observations of the many informed citizens to whom I have talked and who have given serious thought to this industry and its problems.

In the accomplishment of our objectives we will need the organized and vigilant support of everyone in this industry, including producers, distributors and the 165,000 retailers in this country, as well as the cooperation of liquor administrators, enforcement officials and the public. It will take considerable hard work, but I firmly believe that in the course of time, we, in LBI, can accomplish this mission.

F. E. M. WHITING.

JUNE 23, 1947.

Hope at Last

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 18, 1947

Mr. MASON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from Chicago Tribune of July 16, 1947:

HOPE AT LAST

Sponsored by Republican leaders, including Speaker MARTIN, a resolution authorizing the appointment of a committee to investigate foreign loans and gifts was introduced in the House in Washington yesterday. Under the proposal, a committee of 19 Members will be instructed to find out how much the United States can afford to send to Europe without material harm to our own economy.

The resolution will have the support of most of the Republican leaders and its adoption seems assured. As Mr. MARTIN put it, the Republicans in the House have come to the conclusion that they cannot rely upon the statements of European need and American capacity to fill it which come from Presidential advisers.

This is the most hopeful news that the American people have received in many months. The Republican majorities in Congress long ago refused to follow the New Deal leadership in domestic affairs, but in foreign affairs, the ascendancy of the New Deal has thus far remained unbroken. Mr. Truman, like Mr. Roosevelt before him, has gone unchecked. Now Mr. MARTIN promises that in this field, too, the Republicans intend to assert themselves.

It is high time they did. For many years the Republicans in Congress have been urged by us and others to spare themselves the ignominy of accepting the New Deal foreign policy in all its wickedness and folly. The advice was largely ignored. In consequence, the Republicans, with some exceptions, contributed to misleading the country on the worth of the worthless UN; made no clear issue of the ruinous and brutal Morgenthau plan; registered no protest against the absurdity of reposing faith in Russia's willingness to cooperate. On the contrary, the Republicans in Congress, under renegade leadership, seemed to take a perverse pride in supporting the bipartisan foreign policy concocted by the generals in the State Department and the Wall Streeters in the Cabinet.

Mr. MARTIN's announcement may foreshadow the end of this discreditable chapter. Much will depend, of course, upon the caliber of the men he appoints to the committee of inquiry. We may hope that among those chosen will not be such whited sepulchers as Chairman EATON of the Foreign Relations Committee or any other man who has been a party to every folly committed in the name of American foreign policy in the last dozen years.

The appointment of the committee will serve as a warning to the Europeans now meeting in Paris to temper their demands on us. It also will warn the State Department to present accurate facts and figures.

If the right kind of committee is appointed, the State Department isn't likely to get away with any more of its characteristic falsehoods. The propagandists of the Department succeeded in persuading the American people that UNRRA would solve Europe's problems. Then it was UN. Then it was the international bank. More recently it was the Greek-Turkish loan. At last the Republican Members of the House of Representatives appear to have learned the score.

Foot-and-Mouth Research

EXTENSION OF REMARKS
OF
HON. ERNEST K. BRAMBLETT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 18, 1947

Mr. BRAMBLETT. Mr. Speaker, failure of the Federal Government to adopt a constructive plan of research in the campaign against the foot-and-mouth disease of cattle is one of the most menacing features to the campaign now being waged against the disease in Mexico jointly by the United States and the Mexican Government.

Despite two tragic and costly epidemics of the disease in this country some years ago, there has been no research or study of the underlying causes of the disease, or methods of cure. As a result, the disease has broken out in Mexico in epidemic form, and presents a very grave menace to cattle across the border in this country. American cattlemen are seriously concerned about the ability of those waging war on the disease to keep it on the other side of the border.

This epidemic in Mexico comes at a serious time. It is costing this Nation millions of dollars in our efforts to help the Mexican Government eradicate it so that our beef supply will not be curtailed or wiped out. Especially is this important in view of our efforts to supply food to many nations of the world, and still retain normal supply for our own use.

Millions of healthy cattle are backed up against the border in northern Mexico and some effort must be devised to process those cattle, many of which were purchased by the United States before quarantine went on. Plans are being studied for the killing and canning of healthy cattle held in Mexico by our quarantine, to be sold overseas. Unless some plan of disposing of the good beef is devised soon, serious consequences will develop for cattlemen. We are vitally concerned with this issue because there is no guarantee that cattle now awaiting disposition across the border may not

find some illicit way into the United States. Our Government should help find the means for processing that beef, and markets sufficient to absorb it.

In the infested areas of Mexico now thousands of cattle are being slaughtered and buried in trenches at a cost of millions to us and to Mexico. Infection has been traced to imported cattle. Brazil has waged a sincere campaign of research in an effort to find some means of combatting the disease. We should have participated in that research program and we might have been able to save ourselves some of the money now being used in an effort to fight the disease.

When the present campaign is brought under control I believe we will find it a source of economy to appropriate moderate sums for research in connection with other nations, and probably prevent spending fabulous sums periodically in an effort to curb the disease. My trip through the ravaged cattle areas of Mexico convinces me we will be fortunate if we can stop the disease before it has crossed the border. To do it we will have to spend large sums for the payment and killing of millions of diseased cattle.

It is my intention to recomend to the Congress an annual appropriation to participate with Brazil and other nations in a comprehensive program of research until the answer to this devastating disease is found. This current epidemic proves once again it will be money well invested.

Lecture by Francis P. Miller

EXTENSION OF REMARKS
OF

HON. BROOKS HAYS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 8, 1947

Mr. HAYS. Mr. Speaker, under leave to extend my remarks, I include the following lecture given by Francis P. Miller, formerly colonel, GAS, at the United States Military Academy, West Point, N. Y., on April 28, 1947. It is a splendid statement by an outstanding American:

One of the many reasons why I am very pleased to be here is that it gives me an opportunity to pay a tribute to some of the recent graduates of this academy with whom I was associated or who served under me in the European theater during the year following the end of operations. These men were distinguished by intelligence, technical competence, sensitivity to their country's honor, and capacity for indignation at conduct which dishonored their country. I am sure that the academy will continue to send officers of this type into the Army during the years to come.

I have been asked to speak about military government in occupied areas. The only military government with which I am familiar is the Military Government of Germany from June 1945 to June 1946, but no doubt some of the things I say will be applicable to other occupied areas as well as to Germany.

It is, of course, too soon to make a final appraisal of our Military Government policy in Germany or of the execution of that policy. Much good work has been done, notably in supplying the German people in the United States zone with a framework of institutions by the use of which they may be able to learn something about the meaning of democratic society. The Germans are so essentially undemocratic in their outlook that it will take them a very long time to begin to understand what democracy is and how it works. They cannot be reeducated by anybody but themselves. But we have at any rate supplied them with the necessary procedures for political reeducation. It will be interesting to see whether they are able or willing to use them.

However, the good work accomplished has been hampered by a number of costly mistakes, three of which I shall mention:

1. For almost 2 years after the end of operations there were two headquarters in Germany instead of one—the theater headquarters and the military government headquarters. The result was duplication of staff, overlapping of function, waste of manpower, and a vast amount of unnecessary administrative confusion. In many instances the chain of command was none too clear, and nothing is more conducive to chaos than that. At long last this situation has been remedied by the recent merger of the two headquarters.

2. The point system of redeployment was handled so mechanically and unimaginatively that most of the officers who had been carefully trained for military government assignments and who had been sent to Europe early in order to be on hand when needed were ordered home in 1945 before they had really got started on their jobs. The result was that many important military government posts were filled by wholly untrained officers

3. Military government did not learn the lessons of the operational phase of the war regarding Intelligence, and neglected to organize a proper Intelligence Service for the collection of the political, economic, and social information necessary for the civil government of Germany. Trained staffs were allowed to disintegrate with the consequent loss of irreplaceable experience which these staffs had acquired the hard way. The result was that military government not only did not receive sufficient information about conditions in the United States Zone, but was for the most part uninformed about conditions in the Russian Zone and in the territories to the east.

Instead, however, of spending this hour in discussing occupation policy or the technical aspects of military government, it occurred to me that I could perhaps help you most if I said some of the things that in retrospect and in the light of experience I wish someone had said to me before I was assigned to duty with military government.

The first thing I should like to say is that every officer on occupation duty automatically assumes a new role, a role which has heretofore been associated more with diplomats and the State Department than with military men and the War Department.

Every officer now on duty in Europe or Japan represents the United States abroad. He cannot escape being a representative of America however much at times he might like to. Now representation is something more than complying with Army regulations. On occupation service the character of an officer, the moral factor, ceases to be a private concern of the individual and becomes a matter of national interest to this country. What we are as men, what we show ourselves to be in an occupied area, speaks so loud that Europeans and Asiatics can't hear what our Government in Washington says democracy is like.

As an officer assigned to military government you will represent the United States of America to the people of an occupied area. What is the U. S. A.? It is not just a Constitution, though we pride ourselves on having the most perfect Constitution that the mind of man has yet devised. Nor is the U. S. A. merely the place where the best machines in the world are made, though we know that to be a fact.

Well, what then is the U. S. A.? The U. S. A. is a particular kind of government and a particular way of life. Our way of life has its roots deep in the past. The soil out of which it has grown includes among its essential ingredients the traditions of ancient Greece, expressed for example in Pericles' oration over the Athenian dead, and the traditions of the Christian community as narrated in the New Testament. How many of you know the oration of Pericles? How many of you have learned by heart the Sermon on the Mount? Out of these ingredients was compounded another—our Federal bill of rights. (I almost said "our Virginia bill of rights," and if I had, it would not have been mere provincialism, because Virginia played a decisive role in the preparation and adoption of the first 10 amendments to the Constitution.)

This is the soil out of which our institutions and our way of life have grown. The American way of life is not, of course, the way of life of all the people who live in this country. At times it appears that only a minority understand it, or believe passionately in it. But even so, it supplies the soul for our body politic. It is our most precious possession as a Nation, and it is destined to spread over the entire world. As a representative of the United States abroad an officer is obligated to try to understand the meaning of this way of life and to reflect it in his own personal conduct. That means being a Christian gentleman.

What is "a Christian gentleman"? It is essential for you and me to understand and put meaning into this phrase, since the very concept of a gentleman seems to be disappearing from the contemporary scene. A Christian gentleman is the end product of the American way of life. A gentleman is known by his instincts, his feelings, his tastes, his manners, his attitudes—and these traits cannot be acquired overnight. They can only be acquired by long and often painful training, cultivation, and self-discipline. The result of such training is a person sensitive to the interests of others, characterized by a spirit of fair play and decency, clean in mind and body—with a vein of iron in his character. That is a Christian gentleman.

Congress cannot make you gentlemen. I mention this because of an incident that occurred in Berlin while I was there. Some officers had been rebuked for a bit of particularly obscene vulgarity in a mess. The next day one of them was heard to remark: "He said we weren't gentlemen, but we are. Congress made us so." Congress can do a lot for you, but it can't do that.

It is the inner mind and spirit of a man that makes him a gentleman; what he believes about the nature and destiny of man; what he believes about his country and its place in the family of nations; and, most of all, what he believes about the purpose of creation and the ultimate nature of things.

The officers corps must be composed of such gentlemen if the United States is to be adequately represented abroad. It is your responsibility to make the concept of a Christian gentleman the distinctive mark of the officers corps and its most cherished tradition. The Nation will be indebted to you if you do.

Now to turn to the officer and his relations with others.

First and most important of all, there is the officer in relation to his men. The American boy is the best raw material in the world for military purposes. But there is a strain of the bum and the hooligan in him, too, and this makes the maintenance of proper discipline at times very difficult, par-

ticularly under the trying conditions of occupation service.

At the same time the GI will respond to an officer who is concerned for his welfare. By "concern for welfare" I do not mean going into a soldiers' club and throwing your arm around a GI for publicity purposes, as has sometimes been done. The GI is intelligent enough to see through such posing, and discipline is never improved by officers pretending to be "good fellows" with their men.

By "concern for soldiers' welfare" I mean genuine concern for the simple essentials—concern for the enlisted men's mess, for their billets, and for their recreation. The officer who cares more about how his men are eating than about how he eats, who cares more about how his men are billeted than about his own billet—such an officer will seldom have any serious difficulty with the problem of morale or even the problem of discipline, provided, of course, he is at the same time scrupulously fair and absolutely firm in matters that require disciplinary action.

You have heard reports about GI resentment of the so-called caste system. An effort was made to give the impression that this resentment had been created by the agitation of Communists and other subversive elements. The facts are that the Communists did not artificially fabricate or stimulate GI resentment against a caste system. Unfortunately situations did occasionally exist which justified such resentment, and it is true that the Communists were quick to move in and take full advantage of these situations. But the situations existed prior to Communist exploitation, and they existed wherever selfish and greedy officers were so preoccupied with looking after themselves that they paid insufficient attention to the welfare of their men.

There are of course other factors that contribute towards the creation of situations which the GI describes as caste. Some officers acquire over a period years a false sense of loyalty to the Officers Corps. Instead of being loyal to its highest traditions (and consequently critical of everything that dishonors those traditions) their false loyalty expresses itself in the attitude that the Officers Corps can do no wrong. This attitude breeds an intellectual crookedness and moral dishonesty in handling the just and reasonable complaints of soldiers and junior officers which contributes directly to the feeling among the men that there is a caste. The unconscious acquisition of this attitude as you grow older will be one of your greatest temptations. Resist it.

If you are assigned to military government in Germany your relations with the Germans will preoccupy you from the moment you report for duty. Their plight will naturally move you to pity. Be on your guard lest your pity permit the sentiments of the conquered to conquer you. To illustrate what I mean I will tell you a story. In August 1945 shortly after I arrived in Berlin I looked up one of my old German friends who was a well-known public figure and who was reputed to have worked with the plotters of July 20, 1944. It seemed to me nothing but ordinary human decency that I should look him up Our conversation began by my asking about the fate of mutual acquaintances, but we had not been talking more than 20 minutes when he abruptly said, "Colonel, what are you Americans going to do about the fate of Christian civilization?" Somewhat dazed by the dimensions of his question I replied, "Well, Doctor, I don't find much evidence of Christian civilization anywhere these days, but obviously we must all do the very best we can to save what is left.". "Oh," said he, "you misunderstand me; you Americans have a moral responsibility for destroying Christian civilization; after all, you armed the Russians, didn't you?" And this German had the effrontery to say that to me 3 months after the capture of Berlin. Not a word about what the Germans had done to western Europe. The Americans were to blame for all. That is the kind of poison—sometimes in far more subtle forms—to which you will be subjected as soon as you arrive in Germany.

You must constantly remind yourself who the Germans are and what they have done to the world. Remember that for 200 years the Germans have been turning more and more to the east, deserting western Europe and betraying their cultural heritage which since the ninth century has been the same as ours. Hitler's totalitarian methods and his secret police were essentially oriental ways of doing things—not occidental. Now that this final German rebellion against Europe and against Christian culture has been crushed, the Germans who survive wish to drag us down with them into the abyss. Never forget that many Germans (behind their facade of honeyed friendliness) hate us more than they hate any other people in the world because it is we Americans who, twice in one generation, have thwarted their schemes for world conquest.

With very few exceptions, Germans cannot be trusted. Given certain conditions they would gladly ally themselves with the Russians against us. Immunize yourselves to their fawning and cringing. Be meticulously courteous and fair, but always distant and cool in your relations with them. It may be several generations before they become dependable members of the western community again.

I don't know how many of you will receive assignments that will bring you in contact with the Russians. Perhaps very few. Be that as it may, I am sure that by now you all realize that our relations with Russia constitute our No. 1 problem.

Do not make the mistake of underrating the Russians. They are potentially one of the most formidable forces the world has ever seen. Why? Not primarily because of resources. Not primarily because of numbers. Primarily because the Russians are believers. The party members and top officials (civilian and military alike) believe profoundly in the Marxist doctrine and in the form of government and social institutions which they have erected on the basis of that doctrine.

Over a year ago a Russian general with whom we did business in Berlin sent for one of our officers who could converse fluently in Russian. Stalin had just made one of his major policy statements, and it appeared that this Russian general had been instructed to underline to his American colleagues some of the things that had been said. When the American officer entered the door, the Russian general said to him, "Colonel, have you read Karl Marx?" "Yes," replied the American. "Then," said the Russian, "you know what is going to happen in the world." Then you know what is going to happen in the world." Think of the assurance, of the self-confidence, of the arrogance in that sentence. After that the Russian general proceeded to expound the Marxist theory of history for the space of 2 or 3 hours—not without numerous skeptical interpolations from the American colonel.

This incident gave me profound food for thought. I wondered how many officers there were in the American Army who might, under certain circumstances, send for a Russian officer. I wondered whether I had the stuff under comparable circumstances to send for a Russian officer, and when he came in to ask him, "Colonel, have you ever read the American Bill of Rights or the New Testament?" He would reply, "I never heard of these documents," and I would say, "Then go, and find copies, and read them, and they will tell you what we believe about the purposes behind this world, and what we believe about man and his destiny on this planet, and what we believe about the way man is supposed to live—a way of life that someday will spread over the whole world, including the USSR." Did I believe in my way of life enough to say that to a Russian officer? Did I? I found it rather humiliating to have a Russian teach me such a lesson.

But it is a lesson we all need to learn, for the fact is that there can be no real cooperation between the Russians and ourselves. Cooperation, if it means anything, means a joint operation in the interest of a common end. But the ends that we seek are different. Our philosophy of life cannot be reconciled with theirs. In Russia party members believe that man is made for the state. In America the great tradition we have inherited affirms that the state is made for man. Between those two views no compromise is possible or desirable.

The best we can hope for in our present relations with the Russians is the maintenance of an equilibrium of power such as General Marshall is trying brilliantly to establish (the maintenance of an equilibrium through the United Nations and by unilateral action when necessary), trusting that with the passage of time Russia may lose some of her crusading zeal for a world Communist state. But meanwhile we must be prepared for anything.

In the course of occupation duty, some of you may have the good fortune to be thrown with the British or the French. Never forget that they are our closest and most valued friends and neighbors. They are fellow members of our common North Atlantic society which is the present trustee of Greek, Roman, and Christian culture. Their customs and institutions grew out of the same soil as ours. Behind the facade of superficial differences their basic interests are the same as ours. If you have the opportunity, get to know French and British officers. Cultivate their acquaintance, and create as much good will as you can among them for this country. We have needed their help before. Some day we may need it again.

And now I would like to make some random comments on odds and ends.

Something needs to be done about the officers' mess in our Army. It represents an unused—sometimes a misused—asset of great potential value. It can be a most effective means of maintaining morale and setting proper standards of conduct. It would be possible to organize an American mess so that, in addition to eating and drinking, officers who desired to do so might find a quiet place to read or write or play games or even converse with a friend. Good conversation is an art in itself. It is an art from the practice of which many of our messes would greatly benefit. The service itself would also benefit if officers learned to combine with their normal mess life intelligent conversation regarding their military duties and problems. Perhaps some day some of you may be mess officers and have a chance to do something about this.

Avoid the black market as if it were the black plague.

Watch your drink—especially with the Russians. I speak from experience.

And I cannot end without saying a word on behalf of intelligence. In modern war, intelligence is essential to successful operations. When we began the Second World War we had very few trained intelligence officers, and the organization of our intelligence was unequal to the demands made upon it. Consequently, in the early days of the European theater we naturally had to lean heavily on the British. By the end of the war, in some phases of intelligence we were as good as the British—here and there we were even better. But as soon as the war was over we—characteristically—proceeded to forget much of what had been learned. We dissipated

trained personnel and squandered our experience. It is still assumed by the high command that any good officer is good enough for an intelligence assignment, even though he may never have had any previous intelligence experience. This is not so. Intelligence requires special aptitudes and long training. I trust that some of the ablest cadets here will try for intelligence assignments and will continue to be interested in intelligence as long as they are in the Army.

The position of our intelligence in this war was very much like the position of our field artillery in the First World War. In 1917 our field artillery was far behind the field artillery of England and France. Realizing this deficiency, some of our ablest officers became artillery conscious, and by the Second World War the performance of American artillery surpassed that of every other nation. The same transformation is needed for our intelligence. Become intelligence conscious.

In conclusion. What is your highest loyalty? Not to the Officer Corps, devoted as you are to it. Not even to the Army under whose authority you serve and whose orders you obey. Your highest loyalty as an officer is to what the United States stands for as a Nation and to the way of life in which we as Americans believe. That loyalty must infuse and inspire all your other loyalties and transform you into the kind of officer your country requires.

The sap of our American Tree of Liberty is faith. There have been signs recently of blight on the tree, and some of its fruit is sour and rotten. That is evidence that the sap is not rising as it should. What is the extent of your faith? Do you really believe in America and in its way of life? If you do, we need have no fear for the future. The sap will rise again, the blight will disappear, and the fruit will become sound and sweet. And if in the years ahead it should ever happen that the storm returns and the tempest once more rages, the tree will not crash before the blast. It will stand, because of your faith.

These are some of the things that I wish someone had told me before I was assigned to duty with the Military Government.

Article by Herman A. Lowe

EXTENSION OF REMARKS
OF

HON. THOMAS L. OWENS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 18, 1947

Mr. OWENS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Herman A. Lowe:

TODAY—HOW UNIONS LOBBY; WHITNEY TELLS ALL; FOOD FOR CONGRESSMEN; PUBLICITY FUND SOUGHT, TRAINMEN BALKING

(By Herman A. Lowe)

WASHINGTON, July 16.—How a labor union goes about the job of lobbying in Washington and what it spends are generally considered union secrets. However, a peek behind the scenes has just been given by handsome, whitemaned, old A. F. Whitney, president of the Brotherhood of Railroad Trainmen.

Whitney is a blunt fellow with a low boiling point. This bluntness has led him to rip aside a portion of the blue denim curtain with which labor normally conceals such operations.

Whitney's bluntness, you will recall, achieved Nation-wide headlines in May 1946. That was when he announced he would spend the whole $47,000,000 in the union treasury to beat Mr. Truman for reelection, after the President had smashed the railroad strike. It made the country mad and had other unions explaining apologetically that Whitney was no mouthpiece of theirs.

Subsequently the trainmen boss cooled off and shaved his purge kitty to a mere $2,500,000. Still later the whole thing petered out. This time Whitney has come to a boil in an intraunion row with two trustees of the union funds who are balking at his proposed extracurricular lobbying expenses over and above what it costs the trainmen to support its five registered lobbyists—more politely known as legislative representatives.

Whitney has carried his case, in a circular letter, to the delegates to the union's last convention, letting down his hair and listing some of the brotherhood's lobbying enterprises. He explains that he was out to block what later became the Taft-Hartley Act and did not care what it cost. He apparently spent about $25,000 over and above routine lobbying activities, but is irate because he wanted to go much higher and was blocked.

Some of the items are interesting:

On March 12 last, Whitney spent $246.50 to feed 41 Republican Members of Congress at the Mayflower Hotel. The following evening he took another $199.70 bite out of the expense account to provide victuals and refreshments for 35 Democrats.

"Most of our guests," Whitney explains in his letter, "were serving their first term in Congress and they were delighted to have an opportunity to be informed upon the brotherhood's program, and its attitude toward the labor bills pending in Congress. This action was a forward step of great value in our public relations program."

Not content with feeding the inner man, Whitney also provided the Congressmen with $17 worth of Brotherhood of Railway Trainmen pencils, and later distributed $62 worth of pictures taken at the dinners.

Another step in the campaign was hiring Walter J. Munro, former conciliator with the United States Department of Labor as a public relations representative. For 3 months from March 1 to May 31, Munro was paid a total of $3,170 in salary and expenses. Adding to Brother Whitney's wrath, because it is still unpaid, is another $137.95.

The union chief notifies the ex-convention delegates that trustees E. C. Bassett and B. J. Baumberger "objected to reimbursing Walter Munro, our public-relations representative in Washington, for the cost of dining Members of Congress, press representatives, and other influential persons connected with labor legislation. As early as January 6, 1947, I recognized that we would have to spend some money for this purpose.

"Since the time of our national legislative representative (registered lobbyist Harry See) was largely consumed at his office, he delegated Munro to make contacts for him, and under every rule of reason and decency, Munro should be reimbursed for money spent in dining these Representatives." Harry See's bill for entertaining Congressmen and others" appears to have been paid.

Whitney also listed salary and expenses for a law firm of Miller and Hornbeck. He explains this "has reference to contacts made by Hornbeck with influential Republicans in the Congress, urging them to proceed cautiously in the matter of adverse labor legislation."

Whitney also wants to create a Public Affairs Research Institute. It would be financed by the Brotherhood of Railway Trainmen and anybody else who cares to kick in. Whitney originally figured it should cost $100,000 a year and wanted his union to carry it alone until such time as others should see the light and contribute.

"Its objectives," explains Whitney to the brothers, "would be to provide essential data on matters about which policy is to be made and to high-light the real policy issues and alternatives involved in the maze of political jockeying by serving friendly Members of Congress, participating labor unions, progressive religious and other groups with basic background memoranda on pending legislation affecting labor."

After talking it over with Philip Murray, CIO president, Whitney shaved the initial budget to $40,000, but the recalcitrant brothers Bassett and Baumberger once more said "thumbs down." This was embarrassing for Whitney who had already hired Dewey Anderson, former top Government economist, to head the institute. So Whitney took Anderson over on the brotherhood pay roll at $1,000 per month and gave him half a dozen assistants to work with.

Whitney also retained Charles Kramer. He explains in his letter: "Kramer was highly recommended by Senators HARLEY M. KILGORE and CLAUDE PEPPER, and I was advised through other sources that he was a capable writer and research specialist. His services were terminated due to trustee Bassett's vehement protests."

Whitney is now conducting a mail ballot among the union delegates, seeking approval for his Washington program, including the expenditure of $40,000 for the research institute.

Representative THOMAS L. OWENS (Republican of Illinois) has wondered aloud in the CONGRESSIONAL RECORD why Whitney should spend $25,000 or more "in lobbying against legislation (Taft-Hartley bill) which specifically excludes any and all persons who are subject to the Railway Labor Act." The letter does not throw any light on this point.

OWENS also points out that Whitney's itemized expense lists refer to specific instances of lobbying by persons not registered with Congress in accordance with the Lobby Registration Act. He thinks it is time for the proper Government authorities to look into such matters.

National Security Act of 1947

EXTENSION OF REMARKS
OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 18, 1947

Mr. SIKES. Mr. Speaker, I call attention to strong support advanced for the armed forces unification bill by the executive committee of the Army Ordnance Association in a recent meeting. The action of the committee follows:

MEETING OF THE EXECUTIVE COMMITTEE, ARMY ORDNANCE ASSOCIATION, MARCH 12, 1947

NATIONAL SECURITY ACT OF 1947

The president proposed the consideration by the committee of a draft of a proposed bill now before the Congress of the United States, entitled "National Security Act of 1947." There was unanimity of viewpoint by members of the committee that the proposed bill contains many desirable provisions, notably those in respect of the formation and functions of (a) War Council, (b) Joint Chiefs of Staff, (c) Joint Staff, (d) Munitions Board, (e) Research and Development Board, (f) National Security Council, (g) Central Intelligence Agency, and (h) National Security Resources Board.

The national need for these planning agencies and for the integration of military policy with foreign policy is urgent. The autonomy of the respective armed services—Army, Navy, and Air Force—is not infringed upon. Accordingly, the committee recorded unani-

mous approval of the provisions of the proposed bill. It also unanimously agreed to transmit its views on this subject to the presidents of all posts of the association with the request that the governing bodies and members of posts study the subject and report their concurrence to the committee at the earliest practicable date.

Lecture by Mr. Antoine Gazda

EXTENSION OF REMARKS
OF

HON. THEODORE FRANCIS GREEN

OF RHODE ISLAND

IN THE SENATE OF THE UNITED STATES

Friday, July 18 (legislative day of Wednesday, July 16), 1947

Mr. GREEN. Mr. President, during the war the State of Rhode Island made an outstanding record of production. One of the great contributors to its success was Mr. Antoine Gazda, a native of Austria although now a citizen of Rhode Island. He was a flyer in World War I, well known for his armament and aviation inventions. He revolutionized aviation when he brought out the first jet-propelled helicopter 3 years ago.

On April 22 of this year he delivered a lecture before the American Society of Civil Engineers and the Rhode Island Society of Professional Engineers. I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the lecture was ordered to be printed in the RECORD, as follows:

Mr. President, gentlemen, it certainly is a great honor for me to be with you tonight, and I was happy to be able to accept Mr. Blais' kind invitation to address this distinguished gathering.

Not being much of a speaker, and my Austrian mother tongue still struggling with my English, I felt a little uncomfortable when Mr. Blais asked me to address you. As a matter of fact, I felt like the Duke of Wellington before the Battle of Waterloo, when he was asked what his chances were and what he thought about his generals; he answered, "When the enemy is as afraid of my generals as I am, then I shall win the battle." And he did.

Another problem for me was the subject on which to speak to you.

Being in New England, the cradle of the great American industry, and having myself been connected for a life-time with patents and industry, I decided to talk to you about New England industry, particularly in Rhode Island, where I settled in 1940 to organize a new branch of industry.

You may be interested to know why I chose Rhode Island.

I came to this State in 1940, although this was not my first visit to America. As a matter of fact, I had been here eight times before, each time fascinated anew by the tremendous and exciting strides in ideas and production methods made by America's justly famous engineering talent. I was already very familiar with American mass production—especially in the automotive and aviation industries, in which I had many friends, having previously visited their plants from the east to the west coast.

When I flew to the United States in May 1940, a few weeks before the collapse of France, I carried with me all the manufacturing drawings of the 20-mm. Swiss Oerlikon cannon. This new weapon had by then been recognized by the British as the right answer to the dive-bomber, against which they were now engaged in a life-struggle, and it was my intention to organize the production of this cannon in the United States for the British Admiralty. After my arrival in 1940 I traveled all over the States, renewing my friendship with industrialists, Wall Street bankers and Government officials, and trying to interest them in the manufacture of this weapon, or parts of it, for the British.

To my astonishment, I discovered, during this visit, that this big, highly industrialized country—America—famous for its mass production, as a peace-loving Nation had the smallest defense industry, in proportion to its size and resources, that I had ever come across. In fact, for its gun models it was almost entirely dependent upon foreign designs and licenses. Switzerland, the oldest democracy in the world, is also well-known as a peace-loving nation, though a small one, but I found that in America there was not one armament factory organized and equipped in a manner to compare with our Swiss-Oerlikon Works. There were practically no machine tools to be had for immediate use for armament work. There was only a minimum percentage of toolmakers and skilled workers for armament work. This situation, of course, was not favorable for my program. However, I was not discouraged by all these setbacks, and proceeded with my plan, as I wanted to fulfill the promise I had given to the British Admiralty when I warned them of the collapse of France—that I would insure delivery of Oerlikon cannons from America. When the unbelievable happened, and France did fall, the Swiss Oerlikon Works were, of course, no longer able to deliver to England, and my purpose was to hasten production here of the 20-mm. Oerlikon AA cannon which the British fleet now needed so urgently.

I had heard about New England's machine-tool and textile-machinery industries. Also Governor William Vanderbilt of Rhode Island had heard of my presence in this country and of my plans. He sent Mr. William Allen, chairman of the industrial commission of the State of Rhode Island, to New York to invite me for a visit to Providence. This visit soon convinced me of the skill of New England's labor and its adaptability to my plans. A large proportion of the plants and shops in Rhode Island were at that time idle, and my idea was that these would form an excellent basis for the American production of Oerlikon cannons. I made headquarters with the Rhode Island Industrial Commission, who furnished me with a desk in its offices, and I immediately went to work, with the assistance of the secretary of the commission, Mr. Clifton N. Lovenberg, and Mr. Cockrell, consulting engineer of the commission, to locate production capacity for this cannon in Rhode Island.

Before I left Switzerland, the Swiss Oerlikon Works had shipped a 20-millimeter Oerlikon antiaircraft cannon, as a prototype to the United States. Unfortunately, this cannon never reached the United States, as it was captured on the boat in Bordeaux by the Germans when they overran France. Nevertheless, I was able to arrange with the British Admiralty to bring another Oerlikon cannon to the United States by destroyer, and when this cannon reached New York I shipped it immediately to Providence. As soon as the Oerlikon arrived here, I contacted Gen. Herbert R. Dean, then in charge of the Rhode Island National Guard, and asked for his assistance. General Dean gave me his full cooperation, and placed at my disposal the State Armory in Cranston, where this Oerlikon cannon was exhibited, under heavy guard, so that interested manufacturers might be able to compare our drawings with the actual parts.

I invited Rhode Island manufacturers to view the cannon and drawings, and discussed their possibilities of manufacturing parts for this cannon. When I realized the favorable potentialities existing in Rhode Island, I instructed one of our Swiss Oerlikon engineers, Mr. Lameraner, whom I had left in London, to come to Providence to assist me in establishing the subcontracting organization for producing this gun in Rhode Island.

I am happy to say that here in Rhode Island I received a great deal of eager and active cooperation in my plans. However, among other obstacles—which I found particularly in Washington—I had to overcome resistance from Rhode Island sources which had no sympathy with Britain's war, ignoring the possibility of this country's being involved, and showing little appreciation of the danger the world was facing in those days. I also had opposition from sources which did not care to see competition in Rhode Island labor market.

Finally, it was in this little State of Rhode Island that I had the privilege of transforming idle workshops and textile-machinery plants, in the shortest time, into important participants in the foundation of what was to become a gigantic United States armament industry. In spite of the lull existing in those days, it was the traditional fame of New England's industry that brought me to this progressive State of Rhode Island 7 years ago.

When Gov. J. HOWARD MCGRATH took office, he asked a friend of mine to arrange a meeting with me. When I met the young Governor, he complimented me on what I was doing to improve the economic status of the State, and for the Allied war effort, and urged me to call on him directly in any matters in which he could be of assistance. From that time onward he was my keenest supporter in all I did for the Allied war effort.

With its traditional industrial spirit, Rhode Island proved equal to the task when, 18 months before Pearl Harbor, I started there mass production of the now-famous 20-millimeter Oerlikon antiaircraft cannon for the British Admiralty

Soon came the terrifying news of the fall of France—which I had foretold, which everyone had refused to believe, and which was the reason that brought me to America this time. The Nazi occupation of France made it impossible for Switzerland to continue deliveries to England, and the British Government immediately sent me a hurry-up call to investigate the possibilities of speediest delivery of Oerlikon cannons from America. The British had by now learned by tragic experience of the danger of air power. They had seen the terror of the dive-bombers, which had devastated Poland and Belgium, and which had sent many of their own ships to the bottom of the sea. No longer did the British ridicule the danger from the air to ships, as they did in 1936, when I developed this Oerlikon cannon model and proposed it as the only defense against the coming dive-bomber.

You will be interested to hear that it had taken me almost 3 years to convince the British Admiralty of the necessity of this new antiaircraft defense. During the years 1937, 1938, and 1939, I had to fight against many skeptical ordnance experts to get this powerful cannon introduced into British Admiralty service. Most of these experts felt that the mighty battleships and destroyers of the Royal Navy could easily cope with any threat from the air, and that they had nothing to fear. Some even relied on their mighty 16-inch cannons. My records of those years show that it took me 238 meetings with the Admiralty officials, during 380 days' stay in England, to accomplish the introduction of this defense which they came to need so desperately.

In my efforts to convince the British Admiralty of their need of this new armament

against the coming dive-bomber, I was fortunate in having the support of Lord Louis Mountbatten—then a commander in the Royal Navy—who was one of the first to recognize the significance of this powerful new defense, and who gave me his unceasing assistance and encouragement. It was he who arranged so many of my important meetings and who accompanied me on my visits to influential officials. Indeed, it was largely due to Lord Louis Mountbatten's foresight and persistence that the British Admiralty finally accepted the Oerlikon cannon as antiaircraft defense. He even came to America at the beginning of 1941, and, on the basis of his own battle experiences as commander of destroyer flotillas, convinced the United States Navy of the fact that the Oerlikon cannon was the best defense against the Axis dive-bomber. Throughout those difficult years of struggle, I was indeed grateful to have Lord Louis' support. I am happy to say that during that time there developed between us a real friendship, of which Lord Louis gave ample proof during a temporary period which was for me personally a dark and critical one. Only a few months ago we met again, in happier circumstances, in Switzerland, when now Admiral Viscount Mountbatten of Burma had to interrupt his skiing holiday to obey the order he had just received to assume the difficult task of being the last Viceroy of India.

When America entered the war, little Rhody was ready for Uncle Sam, and was able to shift its Oerlikon cannon production for the British Admiralty to the United States Navy. The Oerlikon cannon was immediately adopted as America's best defense against dive-bombers and Kamikazes. Everything afloat in the Allied navies—from the humblest fisherman's boat to the mighty *Queen Elizabeth* (which carried 80 Oerlikons)—had to be equipped with 20-millimeter Oerlikon AA cannons. My Rhode Island organization, the American Oerlikon Gazda Corp., whose mass production was by then in full swing, also had to help to tool up the General Motors and the United States Navy Hudson plants, as well as numerous subcontractors for the speediest manufacture of Oerlikon cannons for the United States Navy.

Now it may be revealed that over 460,000 men and women were employed in making this 20-millimeter, rapid-firing, antiaircraft cannon in the United States during the war, and on this Oerlikon program alone the United States Government spent over $2,800,000,000. Rhode Island itself produced $187,000,000 worth of Oerlikon cannons.

These figures show, not only how vital to the war effort this Oerlikon cannon proved to be, but also what an important contribution to that effort was made by Rhode Island industry.

I believe I am not wrong in saying that some of the gentlemen here tonight have contributed a significant share to the production of this cannon in Rhode Island.

As industry is so obviously dependent on invention, and as many new industrial ideas first saw the light in New England, I should like to say a little about inventions.

Everyone realizes that it is to American inventive genius that the prosperity of this great country is so largely due; the names of some of great American inventors—Edison, Steinmetz, the Wright brothers, Henry Ford, and others—are a proof of this. The American mode of living, economically and socially, is and always will be influenced by the achievements of inventors and scientists; indeed, the course of the whole world's progress will depend upon the achievements of such men. Unfortunately, those responsible for guiding the world's destiny do not always recognize this. For example, when the San Francisco Conference tried to shape the postwar world—a world of peace—they came to the anachronistic conclusion that the key to a peace guaranty would be a strong air force. In so doing they neglected to take the scientists into account, and it was not long afterward that they were shocked into realization of the power of the scientists. The atomic bomb was released, demonstrating a force whose significance had been entirely disregarded by the United Nations representatives at San Francisco, and on which the nations of the world have still been unable to agree. A new problem has been posed, and its solution will unquestionably be a major factor in the shaping of the world's future, whether for peace or for war.

We know that inventions contribute to progress, and lead to the creation of new employment opportunities, but for an inventor to be successful, those three great characteristics—intelligence, courage, and determination are indispensable, as from idea to production is a long and thorny path, and not every inventor has lived to see his brain child materialize.

As an inventor first of all looks for protection of his invention by a patent, it may be of interest to recall how the early American inventor was protected.

It was under President George Washington that Congress passed an act, in 1790, for the granting of patents to inventors. The Secretary of State in those days was authorized by the President to perform this office, and it is known that, during the George Washington administration, Thomas Jefferson, in his capacity as Secretary of State, personally examined and granted many of the petitions for patents. At that time petitions for patents were accompanied by a model of the invention, and not merely by a drawing and a description, as is the case today.

So it was in the year 1790 that the American inventor was first protected by a United States patent. With the granting of patents, American inventive genius was encouraged. The year 1790, so important for the American inventor, was also important for the industrialization of America, in which New England has played such a noteworthy part. It was in that year that Samuel Slater started to run his first spinning machine in the Slater Mill in Pawtucket, and by so doing he laid the foundation for the now gigantic American textile industry in this smallest State of the Union.

Only 4 years later Jefferson issued a patent for the cotton gin, the machine for separating the seeds from raw cotton, which, in the truest sense of the word, revolutionized the United States.

American industry is still in search of new ideas for production, and before the end of the war, as recently stated by the Commissioner of Patents, industry checked over two and one-half million inventions, patented since 1790.

Some of these inventions, so ingeniously, painstakingly, and precisely contrived, have been fated to lie dormant for a long time, to be hailed as something new and startling when rediscovered years later. Our old patent for the zipper, for instance, granted in 1893, remained practically unknown to the general public until comparatively recently, and the same is true of many ideas which have contributed to the smooth running of American life and industry.

The helicopters, jets, rockets, and other sensational developments, which have revolutionized their spheres in the twentieth century, were invented long, long ago.

Rockets were successfully used by the ancient Chinese thousands of years ago. Jet propulsion, a sensation in the field of modern aviation, was invented by the Alexandrian philosopher, Hero, in the pre-Christian era, and was again demonstrated, in the seventeenth century, by the English mathematician, Sir Isaac Newton.

The helicopter was invented by the great Italian artist and inventor, Leonardo da Vinci, who designed and even built a model of a helicopter 400 years ago. That versatile genius was responsible for originating more devices than he could launch in his lifetime, and which we now take for granted as part of our everyday existence.

It's the same old story—there's nothing new under the sun, but a new application of an old idea will awaken people to the value of that idea.

Two or three years ago I was thrilled to learn that there was to be an auction in New York of 20,000 early American patent models, and for a number of reasons I was keenly interested. In the first place, having myself trod the thorny path of the inventor for over 30 years, I thought I could appreciate what a story of enthusiasm, hope, and often bitter disappointment those records could tell. Secondly, I saw in those models contributions of that American inventive genius to which the prosperity of this great country owes so much.

Having a profound admiration for these models, I tried to obtain some of them. My interest was intensified when I learned that the models to be auctioned included some from early inventors of New England, and particularly Rhode Island. Therefore, I was anxious to bring them back, if possible, where they belonged—that is to say, to the State of Rhode Island. Fortunately I was able to secure 35 of these early patent models, all of them invented by Rhode Islanders. Eight of these models, apart from their historical value, are of particular industrial interest to the State of Rhode Island, being closely identified with the great American textile industry, the cradle of which is Rhode Island. I brought these models to Rhode Island, repaired them, put them into working order, and awaited a suitable occasion for presenting them to their native State. I found such an occasion when, on December 13, 1944, the United States Alien Property Custodian exhibited alien patents in the Providence Public Library. At that time I had the honor of presenting to the State of Rhode Island these 35 historical models of early Rhode Island inventors, and they were graciously accepted by Gov. J. Howard McGrath. They were placed on permanent exhibit, as an incentive to present and future Rhode Island inventors to contribute further to the progress of New England industry.

As I said a little while ago, almost all inventions have to suffer obscurity for a time and experience a rebirth before their value is recognized. I am certain, however, that this will not discourage inventors from continuing to strive for improvements in American industry, and especially for progress in New England. No amount of discouragement or disappointment—material or spiritual—can quench the spark when an inventor has faith and inner conviction in his idea—when he feels that he has something to offer which, in one way or another, will prove to be an advance in our civilization. Indeed, with the all-round acceleration which we, in our generation, have witnessed—especially in the last decade—inventors of today can surely hope that their aspirations will be reached much sooner than those of their predecessors. Whilst the pioneer spirit of New England is necessarily tempered with wise caution, there is today a keener desire than ever, on the part of industry, to find new, forward-looking ideas. It is the men of vision who always have and always will form the real backbone of any nation's progress, and when that vision is supported by specialized training and the keen business sense for which New England is famous, satisfying rewards may be confidently expected.

The end of the war found New England eager to induce new, out-of-State industries to replace the mushroom growth of heavy war industries, and in Rhode Island the industrial commission made tremendous efforts to bring such industries to us here.

Such plants, however, although the location on the waterfront and waterways may

look attractive for transportation and export, do not appear to me as suitable for New England. This region has no steel mills, nor coal mines, nor any of the basic requirements necessary to support a mass production program in competition with other, more favorably endowed regions.

I do see New England's successful future guaranteed by its traditional specialization in quality and skill, as proved so well in precision tooling, textile machinery, jewelry, and similar industries. Adhering to this principle, New England industry will solve the difficult problem of successful competition with other industrial States in the Union.

Thank you.

What About Immigration?

EXTENSION OF REMARKS
OF

HON. ELMER THOMAS

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Friday, July 18 (legislative day of Wednesday, July 16), 1947

Mr. THOMAS of Oklahoma. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter headed "What About Immigration?" written by Merwin K. Hart, president of the National Economic Council, Inc.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

WHAT ABOUT IMMIGRATION?

Should America let down the bars to a large fresh wave of immigrants—regardless of what they are?

Is our country under a moral duty to give refuge to hordes of refugees uprooted by the war? Would it be in the interest of our people? Would it be in the interest of the future well-being of the world?

These questions have been raised by the Stratton bill, designed to modify our present immigration policy by admitting 400,000 quota immigrants.

First, let us ask:

Why is the United States?

What is the purpose for which our Republic was founded, and for which it has been maintained? As the French would put it—what is its raison d'etre?

Underlying the thinking of those who believe we are under a moral obligation to give refuge to all the world's oppressed, is a certain assumption as to how this question should be answered. More often than not it is a hidden assumption—of which even the advocates of mass immigration may be unaware. But it is always present. This hidden assumption is: (1) That the primary purpose for which the United States exists is to serve as the world's refuge and asylum; (2) that if there are secondary reasons for the founding and maintenance of our Republic, they cannot give rise to duties which would be higher than the duty of providing this refuge and asylum.

At first sight this may seem exaggerated. But a closer examination will reveal it is simply accurate. The notion that America is under a moral duty to receive the world's unfortunate, regardless of practical effects, rests squarely on the proposition that America exists primarily for their sake, and not for the sake of the people who already live here. Upon no other ground can it be pressed upon us as a moral issue. Yet who can doubt that the propaganda disseminated in support of mass immigration has been skillfully addressed to the conscience of the American people?

But does our country exist to provide a haven for the world's disinherited? Must all other interests be subordinated to that purpose?

Those who understand the origins, history and purpose of the American Republic must answer, "No."

Our Constitution begins with the words:

"We the people of the United States, in order to form a more perfect union, establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity, do ordain and establish this Constitution for the United States of America."

The men and women who fashioned our Republic knew they were doing a new thing in the history of mankind. How new it was is not even today fully understood by millions who share in its benefits. For this Republic of delegated, defined, and limited powers flowing from the people, was designed to be the instrument of a new kind of human society. It was set up by free men to be the instrument of their convenience in mutual association, for the maintenance of justice, tranquillity, defense, and well-being. Above all it was to make safe the blessings of hard won liberty—"to ourselves and our Posterity."

The founding fathers knew—although some of their successors have forgotten—that no political charter or instrument could automatically guarantee the success and continuation of the new American Society. They knew that it could only be maintained by a citizenry that understood the principles of its construction and was passionately devoted to those principles. The American Society would grow and become strong, they knew, so long as it ordered its life by them. It would sicken and die if, at some future time, exchanging its distinctive principles of freedom for other schemes of government, it stepped out of the American culture and adopted another. As Benjamin Franklin said, when asked what kind of government the Convention had set up—"A republic—if we can keep it."

The writings of Jefferson, Madison, and Washington are replete with reiteration of hope for success of the experiment. In the words of Washington's Farewell Address, "With slight shades of difference, you have the same religion, manners, habits, and political principles."

Our founding fathers were convinced, and history supports their insight, that the growth of the American society would furnish to the world its greatest bulwark of liberty and deterrent to despotism. Therefore, to them, the supreme service one could render to human freedom was to maintain unimpaired both the soul and body of the American society. Can we, the heirs of their agony and triumph, survey the tragic world of our times and not realize that only the sound core of the American society stands as the last stronghold of human liberty? And that to weaken it is not service, but disservice to all mankind?

Now we come back to our question: Why is the United States?

The United States exists for the purpose of maintaining a society of freemen. And in our day its continued existence and strength furnish the only reasonable hope that humanity may escape a new dark age of slavery.

Those who love freedom, then find that the highest obligation is not to admit to our borders millions who may or may not share our devotion to freedom. They find their supreme moral duty to be the maintenance of the society which is freedom's only hope.

So the matter of immigration now appears in a different light. It is not a mere passing gesture of good will, devoid of consequence. It is a matter of sheer self-preservation for the American society, which differs from all other societies in the world, to be certain that large human elements offered it for assimilation are really assimilable. This is not, in the crisis which now grips the world, a matter of mere convenience or preference. It is not a matter of exhibiting a petty, parochial temper. It is a matter of life or death.

Already the infection of ideologies that would corrupt our American character and disintegrate our society has found fertile breeding-ground among us. If the admission of a half-million or more immigrants from Europe now will strengthen the American society, then we ought to let them in. If, on the other hand, it is likely to add to the internal pressure against the principles upon which the life of America is staked, then we ought resolutely to keep them out.

The key to the problem, then, is recognition that the American society is different from all other human societies, and that in the very differences lies the explanation of its settlement, growth, progress and promise. Whatever will strengthen that society we should do. If there is doubt whether admission of these large numbers now will strengthen or weaken us, we ought not to admit them. We cannot afford to gamble with the future of the "world's last, best hope."

Professional "one-worlders" who are in the American society but not of it, go blithely about ridiculing "narrow nationalism." They lump all "nationalisms" together, as if American nationalism were not essentially different from the nationalism of some petty principality or artificially articulated Balkan state. If they do not know the nature of the American society, they are dangerous, ignorant men. If they do know, or have known, their shallow slogans are an appalling retreat from reality, from solid historical fact, which is no less dangerous.

"The knowledge of our own history is our memory," said the great historian William Stubbs at Oxford University in 1871, "and so the recorded history of a nation is the memory of a nation. Woe to the country and people that forget it; an infant people has no history, as a child has a short and transient memory; the strong man and the strong nation feel the pulsation of the past in the life of the present; their memory is vital, long, and strong. Neglect of historical study and knowledge is to a nation what loss of memory is to a man—a sign of old age and decrepitude, or the effect of some terrible disease in an individual; it is in a nation a sign of lost independence in manners and ways of thought—a moral decrepitude waxed old and ready to vanish away."

The Stratton bill and all other bills designed to let down the bars and permit increased immigration should not be passed because:

1. Such relaxation is generally against the interests of the American society.

2. Deceit and fraud have been practiced in bringing in refugees in the past, and apparently huge numbers have entered the country unlawfully and have been permitted to remain.

3. Increased immigration would tend to increase unemployment and to make the housing problem worse. Before letting down any more bars we ought to ascertain the extent, the sources, the quality, and the effects of such unlawful immigration.

First, these measures are generally against the interests of the American society. Nobody disputes the fact that here and there among the refugees who have entered in recent years are some of outstanding ability and character who are able to make a genuine contribution toward our country's welfare. But, generally speaking, much of the recent immigration appears not to have been of this type. Much of it has been unassimilable into the American society. A continuation of this kind of immigration, certainly any increase of it, will obviously be against our vital interests.

Immigrants to the United States down to 1880 were mostly from northern and western Europe, and shortly after arrival they became well adapted to their new country. They had been attracted hither because they believed traditionally American institutions offered genuine freedom. They sought to copy our manner of life and living. They became genuine Americans.

After 1880 the trend in European immigration shifted emphatically to a great influx from southern and southeastern Europe. Commencing particularly in the first decade of the present century and through the second and into the third, immigrants were of a different type of mind and attitude toward the United States. Many came not to benefit from our institutions but to bring their own customs, ideas, and ideologies with them. The trend with them was, as a recent pamphlet entitled "Operation Immigration," published by Foundation for Freedom, Inc., said, "toward the alien concepts of force, intrigue, and class warfare."

Immigration down to about 1880 had benefited the United States, swelling the number of people who were glad to support the American society. But the general quality of immigration in the next three or four decades was different. This led the Congress to pass, first, the Immigration Act of 1921, and then that of 1924. The Immigration and Naturalization Service of the Department of Justice said that this latter act "represented the will of Congress to preserve the racial composition of the United States through the selection of immigrants from those countries whose traditions, languages, and political systems were akin to this country."

No further immigration legislation of importance has been enacted since 1924. The war, of course, slowed down immigration, as did indeed the depression of the early 1930's.

This country was set up by its founders as a Republic—a representative Government in which a clear separation of powers was made between legislative, executive, and judicial, and in which under the Federal Bill of Rights and the Bill of Rights of the 48 States, the rights of minorities were fully protected.

The past 15 years has seen an attempt to break away from our form of Government, tending in effect to merge the three powers, thus helping to bring about, as James Madison said, "the very definition of tyranny," and tending at the same time by aid of the interpretations of a Supreme Court that represented the party in power, to blur out, if not to blot out, the individual rights of minorities.

Without question one of the great factors contributing to this turning from Americanism to socialism was the character of our immigration over the past 30 or 40 years. It is true that some of the leaders in this internal revolt against the American society have been men and women whose ancestors have lived in the United States for generations. But most of them have been of this southern, southeastern European stock.

In World War II, on behalf of other peoples, this country gave 300,000 of her most precious lives, suffered nearly a million other casualties, used up a staggering proportion of her irreplaceable natural resources, and spent the bulk of her people's savings of wellnigh three centuries. We were able to do this because of the freedom made possible by American institutions. Slowly, our people are discovering that our sacrifices have not brought, either to us or to the rest of the world, the benefits that many expected. And if we now open the doors to mass immigration, we shall risk the loss of the American society itself.

Many Latin-American countries are cautious about admitting refugees. They are naturally considering their own vital interests. The United States is still the greatest country in the world, even after all her recent expenditures of men, natural resources and material savings. But if she relaxes her vigilance now and indiscriminately lets in other people, admitting hordes who have no understanding of our institutions or love for our principles, merely because they wish to come, then her greatness is doomed.

The prime consideration, therefore, is whether letting down the bars to further immigration is in the interest of our American society. It is not in that interest. Nor is it in the interests of other peoples of the world. If through letting down the bars we weaken ourselves much further we cannot maintain America as the bulwark of liberty. Nor could we in the future render assistance to other peoples in need. No surer way to continue the undermining of the American society could be devised than by admitting masses of aliens who connive or propagandize, openly or subtly, to change our form of Government. And to undermine the United States today is to strike a blow at the future of the civilized world.

Many who favor the Stratton bill speak of the 400,000 as though passage of this bill would limit additional immigrants to this number. Quite conveniently they seem to forget that each of these 400,000 can later bring in his spouse and minor children! Over a period of time this could amount to a very considerable number.

Moreover, in addition to the usual quota immigrants, under the law of 1924, there is the question of nonquota immigrants. In 1946, while about 29,000 quota immigrants were admitted, nonquota immigrants numbered 79,000.

If the Congress were to pass the Stratton bill, therefore, it would go a long way to destroy the wholesome effects of the law of 1924. Would that be in the interest of the American people?

Second, it cannot be successfully denied that misrepresentation, deceit, and fraud have been practiced in the past in permitting unlawful immigration. Nor can it be denied that the current demand for legislation is based on a vast amount of manufactured propaganda.

It is safe to assume that this propaganda is produced by, or at the instance of, people of the same kind of mind and thought as those who are likely to come in if the Stratton bill is passed. In the office of the National Economic Council is a bulky file of newspaper clippings, mostly from New York City, illustrating the incessant propaganda to promote the increase of immigration—particularly the immigration of refugees from Central and southeastern Europe. The number of committees to bring these refugees here seems almost endless.

Deceit has been practiced—and recently—in the bringing in of refugees. A good illustration is the 984 refugees unlawfully brought in by President Roosevelt during the early days of the war and interned in the so-called Fort Ontario refugee shelter at Oswego, N. Y. Since Mr. Roosevelt had no authority to do this, he merely informed the Congress of the fait accompli. It was asserted then that they would be returned to Europe after the war. But no sooner had they been settled in the Oswego camp than a propaganda drive began to urge that they be kept here. And nearly all of them were kept here.

A few weeks ago one Serge Rubinstein, an immigrant of a few years standing, was convicted of draft dodging. So great had been his influence and that of his friends that he won the help and support of many high officials. He had been a dinner guest at the White House. Yet Federal Judge John C. Knox, of New York, called him "an undesirable alien" whose record—if "half true"—shows "not a creditable thing he has done." Leslie Gould, financial editor of the New York Journal American said June 4, 1947, that "Rubinstein was allowed by the Roosevelt administration to enter this country 9 years ago on a questionable passport obtained in China, through his adoption at the age of 31 by a Portuguese family!"

From many parts of the United States for several years stories have multiplied of immigrants illegally entering the country in large numbers—particularly through Latin-American countries. One need not go so far as to accept the recent statement of the national commander of the American Legion that for every legal immigrant, there are at least 10 illegal immigrants. But if there has been only one illegal immigrant for each legal immigrant, then about half a million persons have illegally entered America during the past 10 years.

In any event, it is certain that refugees appear to be living in this country in far greater numbers than the official immigration figures suggest. In New York City they are a great factor in swelling the population of apartment houses, large and small. The same story comes from Chicago, Los Angeles, San Francisco, and from other cities. In recent years our Government bureaus have contained numerous officials sitting in key positions who have not been unfriendly to letting in these persons in veritable droves.

Third, mass immigration would tend to increase unemployment, and to make the housing problem worse.

Now the country is moving into the acute stage of the postwar readjustment. There is great uncertainty as to employment prospects. Obviously, until this is clarified, there should be no general and indiscriminate increase in our labor supply.

The housing problem is now so serious and the prospects of its solution so remote, that it should not be accentuated and enlarged. If the number of persons seeking living accommodations is suddenly and abnormally enlarged by an influx of mass immigration, our housing problem will become desperate.

Today our Nation is deeply involved in ideolcgical warfare. Certainly now there should be no increase in the number of immigrants, and especially when among them are bound to be numerous and important carriers of ideological germs designed further to infect the American Society.

According to William O'Dell Nowell, who testified before the House Committee on Un-American Activities February 6, 1947, the MVD (formerly known as the NKVD), the secret political police in the Soviet Union, systematically trains terrorists in an institute in Moscow. Nowell told of his experiences in the Soviet Union to which he had gone from Detroit to be educated in revolutionary tactics for use in the United States upon his return from Moscow. Certain ex-UNRRA employees have spoken in confidence of the existence of this institute and its systematic training of terrorists.

These terrorists, after being thoroughly educated in their nefarious work, are then dispatched to the Russian zone in occupied Germany, and through various channels they presently turned up in the displaced persons' camps in the American and British zones. The second step is for them to pass on, through connivance with private groups who ostensibly or actually are seeking to relieve the distress of displaced persons.

It is thus well-nigh certain that displaced persons admitted from Europe include some of these terrorists. It seems likely that as more displaced person are brought over here from Germany, Russia will see to it that freshly trained terrorists escape into Germany; and the process will go on.

Therefore, until this situation is thoroughly investigated, no more displaced persons should be permitted to enter the United States.

What has been said implies no lack of sympathy for those oppressed persons who have been the victims of either Nazi or Communist tyranny. We all should have the keenest sympathy, for example, for those

Poles who fought on our side throughout the recent war—more than 160,000 officers and men. They carried on during 6 years of conflict, during which Poland's allies—America and Britain—for expediency's sake and in order to appease Soviet Russia, sold Poland down the river.

Since most of these Poles are now in England, and since the Stratton bill covers only persons who now are in Germany, Austria, or Italy, the Stratton bill actually excludes them. Yet of all the Europeans who deserve well of the United States, these Polish soldiers head the list. They are young and courageous; they are experienced soldiers—and in the next 2 or 3 years we may need more experienced soldiers. They are devoted to freedom and would make excellent citizens of the United States. If the drive to permit mass immigration is really based on humanitarian grounds, why not so amend our immigration laws that none but these Polish ex-soldiers shall be admitted to this country now?

Some plan should be worked out whereby the so-called displaced persons in Germany, Austria, and Italy could go to Africa. Both Britain and France have huge, fertile territories there where such persons could settle and begin life anew. That is what certain displaced persons in England did three centuries ago, and they laid the foundation for the greatest country in the world. And there are still large areas where people who really desire freedom can establish for themselves a society of freemen. With all that the United States has done for Britain and France, and with all they will look to us to do for them in the future, it ought to be relatively simple for the United States to arrange for this in a brief time.

No country, no society, will long survive that cannot and does not protect itself against unwanted and undesirable infiltration by those who do not share its principles. The assertions of unlawful infiltration of the United States across our borders are in their aggregate too impressive to ignore.

Before the American Congress lowers the bars a single inch it should cause effective investigation to be made as to the extent of this infiltration; and whatever commission makes this investigation should be asked to recommend means for getting rid of those who have unlawfully entered the country and means for more effectively screening out undesirable applicants of whatever origin.

The American Society must be maintained. It will be, if the American people think this thing through—and demand it.

MERWIN K. HART,
President, National Economic Council, Inc.

Authority To Purchase GI Loans Should Be Restored to RFC

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Friday, July 11, 1947

Mr. KEFAUVER. Mr. Speaker, the termination of the authority of the RFC to purchase veterans loans which enabled veterans to purchase homes in many localities has so far given definite indications of disastrous results. In many localities there is no agency to purchase such loans and the veterans are being left out on a limb. In my district I have received notice that at least 200 and possibly many more veterans will be unable to buy a home because they cannot secure the 100 percent GI financing they so urgently need.

There are many other veterans in many other localities who cannot be served through their local banks or small lending agencies and who are unable to obtain the loan benefits provided by Congress in the GI bill of rights. By eliminating the RFC as a secondary market I believe we have done the veterans a great disservice. We have literally told them that we do not have enough faith in the integrity of these GI loans to make them eligible for purchase by the RFC.

Under the amendment I have offered, H. R. 4158, the RFC would be permitted to buy GI loans but only from the person who originally made the loan. There can be no shifting or bickering of paper back and forth. Also, by setting the $300,000,000 limit, the danger of a calamitous unloading on the Government would be avoided. The RFC under this amendment could only buy the loans at par. In other words, the original lenders could get back from the RFC the money that they themselves had loaned the GI. Those who sold the loans would then be allowed to service them, collect the interest, and so forth, for the RFC on the standard going rate, the lowest minimum rate available or allowable in the insurance practice, which is one-half of 1 percent.

This amendment simply gives authority to the RFC so that we can have a market to sell the loans in localities of this country where banks cannot afford to loan more money on account of small capital stock and must get rid of some of the loans in order to accommodate more veterans. It is a great injustice to a majority of our veterans. We must treat them all alike wherever they are located.

The point I want to stress is that the most needy GI borrowers will be the principal ones to suffer if this provision is not adopted. Unless there is some secondary line of credit where such 100 percent loans can be disposed of, the provisions of the GI bill are not going to be implemented and we are going to deny to the most needy individuals in the GI group the benefits that we have promised them.

I think the following letter sounds an additional note to the urgency of the present situation:

CHATTANOOGA, TENN., *July 8, 1947.*
Hon. ESTES KEFAUVER,
Member of Congress,
Washington, D. C.

DEAR MR. KEFAUVER: Recent curtailment of RFC functions has eliminated the RFC Mortgage Company as a secondary market for guaranteed loans to veterans. You will, of course, be stormed with telegrams urging the restoration of this market, from lending institutions and individuals who have an ax to grind. I believe that you would like to have an unbiased appraisal of the situation as it appears to an impartial, but interested, observer.

I have been in the mortgage and title business for more than 30 years and a loan guaranty officer of Veterans' Administration, in Tennessee, for more than 2 years but I am not now connected with either and I have no special interest.

Without the RFC market, the loan guaranty feature of the GI bill will serve the investors in mortgages better than it will serve veterans.

Before the RFC market was opened, a few months ago, life insurance companies and others imposed restrictions on lending which effected for them a lending plan, sound by conventional standards, and with Federal guaranty as a bonus. The guaranty was a safety feature added to a good conventional loan. Housing facilities were not increased. Veterans were not assisted.

After the RFC market was opened, life insurance companies began removing their restrictions and were definitely swinging back to the more liberal lending program which the GI bill sought to encourage. It is clear that the RFC market was the one instrument of pressure that would force the insurance companies into line.

Federalized savings and loan associations cooperated for veteran readjustment to a high degree, but those associations are limited. They ran out of money and could carry few GI loans. Many of them did qualify for the RFC market and were making GI loans for delivery to RFC, without profit, as a community service. Closing the RFC market takes those associations out of the GI lending field.

Commercial banks, State and National, did not dare to load up on long-term slow paper of the GI type without a definitely fixed automatic outlet for that paper in event of future need. After the RFC market was opened, many small banks all over the State began making a few GI home loans, in an effort to serve the needs of their communities, relying on the RFC market. Closing the RFC market takes those banks out of the GI lending field and, at once, leaves them holding the bag of loans on hand.

This same RFC secondary mortgage market certainly did solve a national problem in home finance in the early years of the Federal Housing Administration program. The mortgage loans accumulated in that operation were later sold at a premium rate that is said to have brought RFC a handsome profit.

I could go on for many pages but I think that is enough to suggest that the closing of the RFC market will seriously delay relief from an awful housing situation.

Very respectfully,

DANA MILLIGAN.

Oil and the Foreign Policy

EXTENSION OF REMARKS
OF
HON. ERNEST K. BRAMBLETT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 18, 1947

Mr. BRAMBLETT. Mr. Speaker, once again our foreign policy seems to be running contrary to our exports. It has not been too long ago for us to remember what happened to scrap iron we so readily sold overseas, and in what form it came back to us. Now it seems we are faced with a similar condition in regard to oil, and I would like to insert here newspaper articles appearing side by side in the same newspaper dealing with oil exports to Russia, and the widening breach between the East and West because of Soviet refusal to cooperate. The following articles are from the Los Angeles Times of July 12:

SOVIET WIDENING BREACH BETWEEN EAST AND WEST

WASHINGTON, July 11.—Secretary of State Marshall reportedly told the Senate Foreign Relations Committee today that Russia's

refusal to participate in the Paris rehabilitation conference has created a grave situation by widening the breach between eastern and western Europe.

He soberly warned committee members at a 90-minute secret session, it was said, that the United States must be prepared for any trial which may lie ahead. But he held out hope that Russia and her satellites may yet be induced to take part in the "Marshall plan" for European recovery.

WANTS PLAN SUPPPORTED

Marshall was said to have told the Senators that he wants the plan to go forward despite the Russian bloc's boycott. The Russian attitude, he was reported to have said, has injured but not crippled American efforts to help Europe help herself.

MARSHALL PLAN PARLEY TO OPEN WITH 16 NATIONS

PARIS, July 11—Sixteen nations of western Europe tomorrow will launch an attempt to rebuild their war-torn economy with the promise of United States aid. Soviet Russia and the states within her orbit will not participate.

Emphasizing the gravity of the split between east and west, Russia will be absent from a major conference involving the future of Europe for the first time since the end of World War II.

RUSSIAN SHIPS RESUME LOADING OIL AS TRUMAN EMBARGO ON EXPORT ENDS

With President Truman's oil-export embargo of June 29 lifted, Russian ships in Los Angeles-Long Beach Harbor yesterday resumed loading 248,000 barrels of oil.

The first to resume was the Liberty-type freighter *Suchan*, which has a license to take aboard 35,000 drums of oil. Alongside the *Suchan* at Victory Pier, Long Beach, was the freighter *Novorossiysk*, which will sail with a similar cargo.

The tanker *Maikop* was due to move up to an oil dock to fill her tanks, which already carry 26,500 barrels taken aboard before the embargo was put into effect.

Riding at anchor was the tanker *Taganrog*, with 70,000 barrels already loaded. It was not learned whether she would take any more oil aboard.

STEEL EXPORTS VIEWED AS OIL INDUSTRY PERIL

WASHINGTON, July 11.—Russell Brown, counsel for the Independent Petroleum Association, today expressed fear that continued exports of steel needed by the petroleum industry will result in a Midwest oil and gasoline shortage this winter.

He told a Senate Small Business Subcommittee that most of the steel being exported is for the use of American firms who have holdings overseas. The Senators are investigating the steel shortage.

Brown advocated that the steel, needed for drilling and transportation, be kept at home until the domestic industry is in a position to meet demand and build reserves.

RUSS GET OIL—LOS ANGELES PORT BUSY AS UNITED STATES ISSUES LICENSES

Oil for the lamps and machines of Siberia was being loaded aboard Russian ships here today, and port officials expected two other Soviet vessels to put in here for American petroleum products.

Despite reimposition of wartime embargoes on shipment of oil to nations other than Canada, the Russians have obtained special export licenses in Washington and are busily loading two vessels.

The Red freighter *Suchan* is taking aboard 35,000 drums of oil at Victory pier, Long Beach, and a similar cargo was destined for the holds of her sister ship, the *Novorossiysk*.

The Russian tanker *Maikop*, already carrying 26,500 barrels of oil, was due to move into an oil dock to take on more. The *Taganrog* is at anchor with 70,000 barrels aboard.

Due in Los Angeles harbor are two other Red ships, the tankers *Asterohn* and *Denetdsk*.

Mr. Speaker, Secretary Marshall sees a grave situation due to the widening breach between eastern and western Europe because of Russia's failure to cooperate. He warns that we must be prepared for any trial which may lie ahead.

In the same paper for the same day we read a statement by Russell Brown, counsel for the Independent Petroleum Association that continued exports of steel needed by the petroleum industry will result in a shortage of oil and gasoline for this country in the coming winter. We have been warned by our own Government experts from time to time that our oil supply is running low.

Despite the fact that Congress has reimposed wartime restrictions on the shipment of oil to all nations except Canada, Russia, playing the part of the obstructionist in the settlement of world chaos in economy, still is able to get from Washington special export licenses to export oil we may need at anytime to meet what Secretary Marshall warns us may be any trial which lie ahead because of Russia's refusal to cooperate.

As one Member of the Congress who may be expected to give an intelligent explanation, if such there be, to his constituents for this sort of foolhardy business, I would like to know, Mr. Speaker, who is responsible for this glaring inconsistency, and by what authority? To what depths of stupidity must bureaucrats in this Nation sink before they learn to quit playing with fire?

World Health Organization

EXTENSION OF REMARKS

OF

HON. DONALD L. JACKSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 18, 1947

Mr. JACKSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times:

FOR WORLD HEALTH

The general desirability of good health is about as noncontroversial a subject as one could mention. The techniques which promote health are as effective in Russia or Latin America as they are here. Consequently, it looked as though the World Health Organization, for which a constitution was drawn up in this city last July at a meeting attended by representatives of 61 nations, would go through without a hitch. All that was needed was ratification by 26 members of the United Nations. But now nearly a year has gone by and at last reports only 14 nations, 10 of them members of the United Nations, had ratified. The United States, in spite of a strong endorsement by Secretary Marshall, has not yet acted.

In the meantime the work that the Organization might do is illustrated by what its interim commission, with an 18-nation representation, is actually doing. In Greece it is engaged in a nonpartisan fight against malaria and tuberculosis; in China it is trying to control cholera, plague, tuberculosis, and a deadly tropical fever called kalaazar, and is training doctors, nurses, and technicians, testing drugs and assisting in public health administration; in Yugoslavia it is training personnel in plastic surgery; it has sent medical specialists into Austria and Hungary; it is awarding 200 scholarships in 13 countries.

These are samplings of what might be done in a really world-wide crusade against disease—beyond which would lie a positive drive for better general health. The tentative 1948 budget is $4,800,000, of which the United States would pay less than $2,000,000. One can't think of a better investment, even in these exacting times. There can be no determined opposition to our ratification, but there is real danger that the proposal will be lost in an end-of-session rush. This ought not to happen.

Synopsis and Analysis of Labor-Management Relations Act, 1947 (Taft-Hartley Act)

EXTENSION OF REMARKS

OF

HON. STEPHEN PACE

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 16, 1947

Mr. PACE. Mr. Speaker, it is apparent that there exists general confusion and misunderstanding with regard to the labor-management legislation recently enacted by the Congress, generally referred to as the Taft-Hartley Act. This confusion is understandable in the light of the unusual amount of propaganda published throughout the 6 months the legislation was under consideration; the numerous radio broadcasts on the subject, and the President's veto message.

Some employer groups and corporate interests seem to have the hope and idea that this law will weaken or even wreck labor organizations and the labor movement. It does no such thing.

On the other hand John L. Lewis has described the law as monstrous. Mr. Green of AFL has said it was a slave-labor bill, while Mr. Murray of CIO said it would destroy labor. It is none of these.

The truth is the law is very mild and reasonable as compared with what one group demanded and the other group feared. And in the hope it may be of some public service, to the people generally and particularly to employers and workers, I have undertaken and attach hereto a sample, and I hope accurate synopsis of this law; that is, I have reduced the long and technical language of each paragraph to a brief, simple statement, easily understood.

There should be no difficulty in understanding the intent and purpose of the law. It is stated in simple words in the first section. The purpose is to define the rights of both employers and employees, to provide orderly settlement of labor-management disputes, to protect employees in their relations with labor organizations, to prevent practices on the part of both labor and management

which endanger the general welfare of the Nation, and to protect the rights of the public.

Certainly these are desirable and worth-while objectives. But only time and experience under the law will answer how well and how fairly the provisions of the law carry out these objectives. It may be helpful to refer to some of the provisions of the law which undertake to carry out its purposes.

First, as to the individual worker in his dealing with his employer and his union. It will be seen the law seeks to protect the worker—

First. By safeguarding his right of self-organization, to form, join or assist labor organizations, to bargain collectively through his own representative, to engage in other activities for the purpose of collective bargaining or other mutual aid or protection, and also his right to refrain from any and all of such activities;

Second. By protecting him from unfair labor practices by his employer, his union or its agents;

Third. By prohibiting the union from charging him excessive or discriminatory fees or dues when required to join under a union-shop contract;

Fourth. By preventing his discharge because he filed charges or gave testimony against his employer;

Fifth. By prohibiting his employer from discriminating against him in regard to hire or terms or conditions of employment because he is or is not a member of a union;

Sixth. By compelling his employer to bargain with his chosen representative;

Seventh. By protecting him in freely expressing his own views and opinions;

Eighth. By prohibiting his union from having officers who are Communists;

Ninth. By protecting his right to choose or change his bargaining representative;

Tenth. By preserving his right to present grievances direct to his employer;

Eleventh. By authorizing him to petition the National Labor Relations Board;

Twelfth. By permitting him to vote by secret ballot in deciding (a) what labor organization will represent him, if any, and (b) whether a union shop will be put into effect;

Thirteenth. By requiring his written consent before the employer can deduct union dues from his pay check;

Fourteenth. By requiring his union to give him an itemized statement each year showing the salary and expense account of all its officers, an audit of all financial transactions of the union, its assets, liabilities and expenditures;

Fifteenth. By protecting him against any suit by his employer for breach of collective bargaining contract, by providing that such suits can be filed only against the union;

Sixteenth. By providing that neither he nor his property shall be liable on any judgment secured against his union;

Seventeenth. By promoting the peaceful settlement of labor-management disputes, without strikes, so he can stay on the job and get his pay regularly;

Eighteenth. By protecting and preserving his right to strike;

Nineteenth. By requiring the fair and honest administration of any trust fund or welfare fund set up for his benefit and the benefit of members of his family, and insuring that such funds are held in trust and are not expended for any other purpose; and

Twentieth. By prohibiting an employer from trying to dominate or interfere with the formation or administration of any labor organization.

Next, what does the law do to protect the right of the employer? It will be seen he is protected—

First. Against certain unfair-labor practices by the union of its agents;

Second. By not being required to pay for services not performed or not intended to be performed;

Third. By protecting him against secondary boycotts;

Fourth. By protecting him against jurisdictional strikes in flights between two unions when he is in no way at fault;

Fifth. By giving him the right to freely express his views and opinions;

Sixth. By requiring the union to give him 60 days' notice of its intention to terminate a binding collective-bargaining contract so as to have time to try to make a new contract before a strike;

Seventh. By requiring guards employed to protect his property to form their own independent union if they desire to organize;

Eighth. By protecting him from having to deal with a union which has officers who are Communists;

Ninth. By requiring the union, as well as himself, to bargain in good faith, without compelling either party "to agree to a proposal or to make a concession," and by requiring that they modify the Mediation and Conciliation Service if they are unable to reach an agreement;

Tenth. By authorizing the employer to sue the union for damages for the violation of a valid, voluntary, and binding contract concerning rates of pay, hours, and working conditions; and

Eleventh. By relieving him from retaining in his employ supervisors who are not loyal.

And what does the law do to try to protect the people and the country as a whole? The general welfare and the public interest should be served—

First. By making secondary boycotts illegal;

Second. By prohibiting jurisdictional strikes;

Third. By promoting the settlement of labor-management disputes by peaceful means and without stoppage, thus saving a great loss to the worker, the employer, and the Nation;

Fourth. By requiring both the employer and the union to bargain in good faith;

Fifth. By requiring both the employer and the union to live up to and carry out their contracts when they have been freely entered into;

Sixth. By requiring both the employer and the union to give 60 days' notice of desire to change or terminate a contract, and not to engage in a strike or lock-out during the period while they are trying to agree on a new contract;

Seventh. By denying benefits of the law to labor unions which have Communists as officers;

Eighth. By authorizing the National Labor Relations Board to prevent unfair labor practices by either employers or unions;

Ninth. By prohibiting strikes or lockouts for as long as 80 days when a Nation-wide or industry-wide strike is threatened and which will imperil the health of the people or endanger the safety of the Nation, so as to give the President an opportunity to bring about a peaceful settlement; and

Tenth. By authorizing a national labor-management panel, to be appointed by the President, consisting of six in the field of management and six in the field of labor, with the duty to study and advise on ways to avoid industrial controversies and of promoting settlements through mediation and voluntary adjustment.

The law does not stop strikes or the workers' right to strike. It sets up some regulations and conciliation services which should, with the cooperation of employers and labor unions, greatly reduce the need and number of strikes. It restricts the right to strike only in the following instances:

First. When a valid collective-bargaining contract is in effect the labor union must give the employer 60 days' written notice if it desires to terminate or modify such contract; there must be no strike during that 60-day period while the parties are trying to get together on a new contract. The penalty is the employer is not required to reemploy any worker who strikes during this 60-day period.

Second. When a Nation-wide or industry-wide strike is threatened and the President finds that such strike would imperil the national health or the safety of the Nation the right of the worker to strike may be restrained for not exceeding a total of 80 days, during which time the President undertakes to bring about a settlement of the dispute.

Third. When a strike is conducted to enforce a secondary boycott or in aid of a jurisdictional strike.

It will thus be seen that the only restrictions this law places on the worker's right to strike is, first, where the worker by striking during a period of 60 days would violate his own solemn contract with his employer; or, second, where by striking during a period of 80 days he would endanger the health of the people or imperil the safety of the Nation; or, third, in the case of jurisdictional strikes or secondary boycotts. It is for each person to determine whether he thinks these restraints justify the charge that it is a slave-labor law.

It will be seen that section 305 prohibits employees of the United States from striking against the Government. This was already the law, carried in numerous annual appropriation bills, and is reenacted in this act and made permanent legislation.

Neither does the law permit the unrestricted use of injunctions in labor disputes. Nowhere does it authorize an injunction by a private employer, and the only instances in which injunction is permitted, even by the Government, are in the following cases:

First. Where a union is engaging in a secondary boycott or a jurisdictional strike and it is necessary to stop the boycott or strike in order to prevent irreparable injury. Application for this kind of injunction is made by the National Labor Relations Board itself.

Second. If either an employer or labor organization is charged with committing any unfair labor practices the National Labor Relations Board shall promptly hear the complaint. If the one charged is found guilty the Board orders the discontinuance of such unfair labor practice, and if the order of the Board is not obeyed the Board may then apply to the circuit court of appeals for enforcement of its order or for appropriate temporary restraining order.

Third. Whenever the President finds that a threatened or actual strike or lock-out will imperil the national health or safety he may direct the Attorney General to apply to a United States district court to enjoin such strike or lockout or the continuing thereof. The injunction must be discharged at the end of 80 days if the dispute has not been settled by that time.

Fourth. The National Labor Relations Board is given power to apply for a temporary injunction to restrain the commission of unfair labor practices if the Board has found upon investigation that a complaint should issue and has actually issued a complaint charging the commission of an unfair labor practice.

It will thus be seen that the use of injunctions is permitted only upon application of the Government itself and only in cases where it becomes necessary to protect the public, the employer, or the union from irreparable injury. The employers and employees are all treated alike—the injunction may be sought against either. It remains for each person to decide for himself whether this limited use of the injunction under such circumstances justifies the charge that this law "takes us back to the days of "yellow dog" contracts and Government by injunction."

The law recognizes that collective-bargaining contracts entered into by employers and labor organizations should have the same dignity and binding effect as any other legal contracts between American citizens and that both parties should live up to such contracts. It also recognizes that the right of collective bargaining cannot be preserved unless the contracts resulting from such bargaining are protected and enforced. It, therefore, authorizes suits by either party for the violation of such contracts. Whoever is injured by illegal boycotts or jurisdictional disputes may sue and recover the damages sustained thereby.

This law prohibits the closed shop. This is already the law in a number of States. Many inquiries are made as to the difference between the closed shop and the union shop. Under closed-shop arrangement the employer can hire only union members, and the complaint has been that this permits the union and not the employer to select the employees. Under the union shop the employer selects his own workers, and then they must join the union within 30 days or lose their job.

Section 304 of the law seeks to prohibit all corporations and labor organizations from making contributions or expenditures in connection with Federal elections, primaries, political conventions, and so forth. This was not intended by the Congress to prohibit newspapers or the regular publications of employers and labor organizations from publishing freely and full news and views with regard to candidates and elections, and their approval or opposition to candidates. It is reported that the Attorney General is inclined to rule that this section would prohibit the publication of such news and views, and so forth. If such interpretation is correct, then this section would be a serious infringement of the right of free speech and free press, and the Congress should and probably will promptly modify this section accordingly.

It will be noted that several of the provisions of this law were requested by President Truman in his annual message to Congress on January 6, as follows:

First. The President stated:

We have lacked sufficient governmental machinery to aid labor and management in resolving differences.

The Mediation and Conciliation Service established in this new law should be of great help to employers and labor organizations in reaching agreements.

Second. The President stated:

The national labor policy based upon free collective bargaining as the process for determining wages and working conditions should be continued.

That policy is continued and preserved in this law.

Third. The President stated:

I urge your cooperation in the early enactment of legislation to prevent certain unjustifiable practices. First, are jurisdictional strikes—I consider them indefensible. Second, is the secondary boycott:

When used for certain purposes.

It will be observed that the Congress cooperated with the President by prohibiting both jurisdictional strikes and secondary boycotts.

Fourth. The President stated:

Collective-bargaining agreements, like other contracts, should be faithfully adhered to by both parties.

This law undertakes to require both the employer and the labor organization to fully and faithfully adhere to and carry out their agreements and contracts.

SYNOPSIS OF LABOR-MANAGEMENT RELATIONS ACT, 1947

DECLARATION OF POLICY

Section 1: Declares purpose of law to be (1) to provide orderly and peaceful procedures in settlement of labor-management disputes, (2) to protect the rights of individual employees in their relations with their union, and (3) to protect the rights of the public in connection with labor disputes.

AMENDMENTS TO NATIONAL LABOR RELATIONS ACT

Section 101: (1) Declares that commerce is obstructed and strikes are caused by refusal of employers to permit workers to organize and bargain collectively and by certain practices of labor organizations; and that it shall be the policy of the United States to reduce obstructions to commerce "by encouraging the practice and procedure of collective bargaining and by protecting the exercise by workers of full freedom of association, self-organization, and designation of representatives of their own choosing."

(2) Definition of certain words.

(3) Increases the National Labor Relations Board from 3 to 5 members, to be appointed by the President and confirmed by the Senate. Also provides for the appointment by the President of a general counsel of the Board, who shall have general supervision of all attorneys employed by the Board and shall have charge of all investigation of charges and prosecutions before the Board.

(4) Fixes salary of members of Board and general counsel.

(5) Provides where the Board shall have its offices.

(6) Authorizes the Board to issue rules and regulations for administering the law.

EMPLOYEES' RIGHTS PROTECTED

(7) Provides that "employees shall have the right of self-organization, to form, join or assist labor organizations, to bargain collectively through representatives of their own choosing, and to engage in other concerted activities for the purposes of collective bargaining or other mutual aid or protection, and shall also have the right to refrain from any and all of such activities" except that where a majority of employees have voted for a union shop then an employee can be required to join the union within 30 days.

UNFAIR LABOR PRACTICES

(8) Declares it to be an unfair labor practice for an employer—

(a) to interfere with, restrain, or coerce employees in the exercise of the rights guaranteed employees in section 7 (above);

(b) to dominate or interfere with the formation or administration of any labor organization or contribute financial or other support to it;

(c) to encourage or discourage membership in any labor organization by discrimination in regard to hire or tenure of employment or any term or condition of employment; provided employer may make an agreement with a labor organization to require as a condition of employment membership in such organization (union shop) if it is the representative of the employees and if at least a majority of the employees have voted to authorize such organization to make such an agreement.

(d) to discharge or otherwise discriminate against an employee because he has filed charges or given testimony against the employer; or to discriminate against a nonmember employee when membership is not available to him on same terms and conditions as to other members;

(e) to refuse to bargain collectively with the representatives of his employees.

Declares it to be an unfair labor practice for a labor organization or its agents (not as to employees)—

(a) to restrain or coerce employees in the exercise of the rights guaranteed in section 7 (above);

(b) to cause or attempt to cause an employer to discriminate against an employee;

(c) to refuse to bargain collectively with an employer;

(d) to engage in or induce the employees to strike or engage in a boycott, that is, to refuse to use, manufacture, transport, or handle any goods or articles, when the object is (1) to force an employer or self-employed person to join any labor or employer organization, or (2) to force any employer or other person to stop using, selling, handling, or transporting the product of any producer or manufacturer, or (3) to force another employer to recognize or bargain with a labor organization unless such organization has

been certified as the representative of the employees of such other employer or if another labor organization has been certified as the representative of such employees, or (4) to force an employer to assign employees of a particular labor organization or craft to particular work rather than employees of another organization or craft unless the employer is failing to conform to an order or certification of the Board;

(e) to require an employee, in order to join the union under a union-shop contract to pay a fee in an amount which the Board finds excessive or discriminatory; in making its finding the Board shall consider the practices and customs of the labor organization and the wages currently paid to employees in that industry;

(f) to cause or attempt to cause an employer to pay or agree to pay any money or thing of value for services which are not performed or not to be performed.

FREEDOM OF SPEECH

Declares that it shall not be an unfair labor practice (by employer, labor organization, or employee) to express any views, argument, or opinion, oral or written, provided they do not contain any threat of reprisal or force or promise of benefit;

DUTY TO BARGAIN FREELY

Declares it to be the duty of both the employer and the representative of the employees to bargain collectively in good faith, but provides that neither party is compelled to agree to a proposal or to make a concession; and that where a contract is in effect the party who wishes to terminate or modify such contract shall.

(a) give the other party 60 days written notice;

(b) offer to meet and confer for the negotiation of a new contract;

(c) notify the Mediation and Conciliation Services within 30 days after such notice of the existence of a dispute;

(d) continue such contract in effect, without resort to strike or lock-out, for a period of 60 days after giving such notice; any employee who engages in a strike during such 60-day period shall lose his status as an employee of the employer, unless reemployed.

REPRESENTATIVES AND ELECTIONS

9. (a) The representative selected by a majority of the employees in a unit shall be the exclusive representative of all employees in such unit for purposes of collective bargaining; provided any employee or group of employees has the right to present grievances to the employer and have them adjusted if the adjustment is not inconsistent with the terms of an existing contract or agreement and the bargaining representative is given an opportunity to be present.

(b) The Board shall decide in each case whether the unit for purposes of collective bargaining shall be the employer unit, craft unit, plant unit or subdivision thereof; but guards employed to protect the property of the employer or the safety of persons shall not be included in a bargaining unit with other employees but such guards shall be certified as an independent bargaining unit;

(c) The Board shall investigate every petition of an employee, group of employees or labor organization to be represented for collective bargaining, and also the petition of an employer to the effect that one or more individuals or labor organizations have presented to him a claim to be recognized as the representative. If the Board finds such a question of representation exists it shall direct an election by secret ballot. But no election shall be directed if a valid election was held in the bargaining unit in the preceding 12-month period.

(e) If a petition is filed with the Board by a labor oraganization alleging that 30 percent or more of the employees desire to establish a union shop, or if 30 percent of employees petition that they desire such authority to be rescinded, then the Board shall take a secret ballot of the employees and certify the result to the labor organization which represents the employees and to the employer; but such elections cannot be held oftener than one a year.

INFORMATION FOR EMPLOYEES

(f) Before the Board is authorized to hear and consider complaints and petitions of a labor organization, and before a labor oganization can serve as representative of employees or request a union shop election, it must file annually with the Secretary of Labor—

(1) A copy of its constitution and bylaws, and a report showing its name; address of its principal place of business; the names, titles, compensation and allowances of its three principal officers and of any of its officers or agents whose aggregate compensation and allowances for the preceding year exceeded $5,000 and the exact amount paid, the manner in which such officers and agents are elected, appointed or selected; the initiation fee new members are required to pay; the regular dues or fees required of members; and explanation of the procedure followed with respect to the qualification for or restrictions on membership, the election of officers and stewards, the calling of meetings, levying of assessments, imposition of fines, authorization for bargaining demands, ratification of contract terms, authorization for strikes and disbursement of union funds, audit of union financial transactions, participation of insurance or other benefit plans, the expulsion of members and the grounds therefor; its receipts of any kind and the sources of such receipts; its assets and liabilities at the end of the last fiscal year; the disbursements made during the last fiscal year and the purpose for which made.

(2) Furnish all of its members copies each year of such financial report.

COMMUNISTS

(h) Before the Board can consider a labor organization's right to represent employees, or its petition for a union shop, or its complaint as to unfair-labor practices, it must file with the Board, and annually thereafter, an affidavit by its officers and by its national or international officers that such officer is not a member of the Communist Party or affiliated with such party, and that he does not believe in, and is not a member of or supports any organization that believes in or teaches, the overthrow of the United States Government by force or by any illegal or unconstitutional methods.

PREVENTION OF UNFAIR LABOR PRACTICES

10. (a) The Board is empowered to prevent any person from engaging in any unfair labor practice.

(b) Whenever it is charged that a person has engaged in or is engaging in any unfair labor practice, the Board shall have such person served with a complaint, setting out the charge and notifying him to appear before the Board for a hearing. Such charge must be filed and complaint served within 6 months after unfair labor practice occurred. The person charged may file an answer and appear in person or by attorney.

(c) If the Board finds the person is guilty it shall issue an order requiring such person to cease and desist from such unfair labor practice. If the order is against an employer the Board may order reinstatement of employees.

(d) Board may modify or set aside its order unless the record has been filed in a court proceeding.

(e) The Board may petition the circuit court of appeals for the enforcement of its order and for appropriate temporary relief or restraining order. The rules of procedure by court are set forth.

(f) Any person aggrieved by a final order of the Board may obtain a review in the circuit court of appeals. Procedure set forth.

(g) The commencement of proceedings in court will not operate to stay the Board's order unless the court so orders.

(h) Jurisdiction of court in such cases is not limited by the Norris-LaGuardia Act.

(i) Court shall hear cases expeditiously, within 10 days if possible.

(j) As soon as Board issues original complaint it may petition district court for temporary relief or restraining order.

(k) The Board is empowered and directed to hear and determine jurisdictional disputes between labor organizations unless settled within 10 days.

11. For the purpose of its hearings and investigations, the Board shall have access to, for examination and the making of copies, any evidence of any person being investigated or proceeded against may also issue subpenas for the appearance of witnesses and production of evidence.

12. Any person who shall willfully resist, prevent, impede, or interfere with any member of the Board or any of its agents or agencies may be punished by fine of $5,000 or imprisonment for 1 year, or both.

RIGHT TO STRIKE

13. Nothing in this act, except as specifically provided herein, shall be construed so as to either interfere or impede or diminish in any way the right to strike or to affect the limitations or qualifications on that right.

SUPERVISORS

14. Supervisors may become and remain members of a labor organization, but no employer shall be compelled to treat with supervisors for collective bargaining.

STATE LAWS

State laws shall be respected as to membership in a labor organization as a condition of employment, that is, with regard to the closed shop and union shop.

CONCILIATION OF LABOR DISPUTES

Section 201: Declares it to be the policy of the United States "that sound and stable industrial peace and the advancement of the general welfare, health, and safety of the Nation and of the best interests of employers and employees can most satisfactorily be secured by the settlement of issues between employers and employees through the processes of conference and collective bargaining between employers and the representatives of their employees" and that such settlements "may be advanced by making available full and adequate governmental facilities for conciliation, mediation, and voluntary arbitration."

Section 202: Creates as an independent agency the Federal Mediation and Conciliation Service, under the direction of a Director to be appointed by the President and confirmed by the Senate.

Section 203: It shall be the duty of this Service to assist parties to labor disputes to settle such disputes through conciliation and mediation.

Section 204: In order to prevent or minimize interruptions growing out of labor disputes, employers and employees and their representatives shall—

(1) Exert every reasonable effort to make and maintain agreements concerning rates of pay, hours, and working conditions, including provision for adequate notice of any proposed change in the terms of such agreements;

(2) Whenever a dispute arises over the terms or application of an agreement and a conference is requested by a party thereto, arrange promptly for such a conference to

be held and endeavor in such conference to settle such dispute expeditiously;

(3) In case such dispute is not settled by conference, participate fully and promptly in such meetings as may be undertaken by the Mediation and Conciliation Service. The parties are not required to submit the dispute to arbitration.

Section 2025: Creates a National Labor-Management Panel, composed of 12 members appointed by the President, 6 of whom shall be selected from among persons outstanding in the field of management and 6 of whom shall be selected from among persons outstanding in the field of labor. It shall be the duty of the panel, at request of the Director, to advise in the avoidance of industrial controversies and the manner in which mediation and voluntary adjustment shall be administered, particularly with reference to controversies affecting the general welfare of the country.

NATIONAL EMERGENCIES

Section 206: Whenever in the opinion of the President a threatened or actual strike or lock-out affecting an entire industry or a substantial part thereof engaged in trade, commerce, transportation, transmission, or communication, or engaged in the production of goods for commerce, will, if permitted to occur or continue, imperil the national health or safety, he may appoint a board of inquiry to inquire into the issues involved in the dispute, and to make a written report to the President within such time as he shall prescribe. Such report shall include each party's statement of its position, but shall not contain any recommendations. It shall be made public.

Section 207: Such board of inquiry shall be composed of a chairman and such other members as the President shall determine. It may conduct such hearings as it may deem necessary.

Section 208: Upon receiving a report from a board of inquiry the President may direct the Attorney General to petition any United States district court having jurisdiction of the parties to enjoin such strike or lock-out or the continuing thereof, and if the court finds that such threatened or actual strike or lock-out, if permitted to occur or to continue, will imperil the national health or safety, it shall have jurisdiction to enjoin any such strike or lock-out, or the continuing thereof, and to make such other orders as may be appropriate.

Section 209: (a) Whenever a district court has issued such an order it shall be the duty of the parties to the dispute to make every effort to adjust and settle their differences, with the assistance of the Mediation Conciliation Service but neither party shall be under any duty to accept any proposal of settlement made by the Service.

(b) Also the President shall reconvene the Board of Inquiry. Unless the dispute has been settled at the end of 60 days the Board of Inquiry shall report to the President the current position of the parties and the efforts which have been made for settlement, and shall include a statement by each party of its position and of the employer's last offer of settlement. Such report shall be made public. Within the next 15 days the National Labor Relations Board shall take a secret ballot of the employees of each employer involved in the dispute on whether they wish to accept the final offer of settlement made by their employer, and shall certify the results to the Attorney General within 5 days.

Section 210: Upon the certification of the results of such ballot, or upon a settlement being reached, the Attorney General shall move the court to discharge the injunction, which motion shall be granted and the injunction discharged. The President shall then submit to the Congress a full report of the proceedings, together with his recommendations. The provisions of this title shall not be applicable to any matter which is subject to provisions of the Railway Labor Act.

SUITS BY AND AGAINST LABOR ORGANIZATIONS

Section 301: (a) Suits for violation of contracts between an employer and a labor organization, or between labor organizations, may be brought in any district court having jurisdiction of the parties.

(b) Labor organizations representing employees and employers shall be bound by the acts of their agents. Any such labor organization may sue or be sued as an entity and in behalf of the employees whom it represents. Any money judgment against a labor organization shall be enforceable only against the organization as an entity and against its assets, and shall not be enforceable against any individual member or his assets.

CHECK-OFF AND TRUST FUNDS

Section 302: It shall be unlawful for any employer to pay or deliver, or agree to pay or deliver, any money or other thing of value to any representative of any of his employees, and it shall likewise be unlawful for any such representative to receive or accept or to agree to receive or accept any money or other thing of value. Except this prohibition shall not apply to a representative for his compensation as an employee, or to judgments of courts or arbitrators, or the purchase of merchandise, or membership dues, or employee trust funds.

Provided, before any employer may deduct membership dues from the wages of an employee he must hold a written assignment from the employee, which assignment shall not be binding longer than 1 year or the termination date of the effective collective agreement; and

Provided further, with respect to trust funds, the same must be held by the labor organization or employees representative in trust for the purpose of paying, either from principal or income, or both, for the benefit of employees, their families and dependents, for medical or hospital care, pensions on retirement or death of employees, compensation for injuries or illness resulting from occupational activity, or insurance to provide any of the foregoing, or unemployment benefits, or life, disability, sickness or accident insurance; the basis on which such payments are to be made shall be specified in a written agreement with the employer, and employees and employers must be equally represented in the administration of such funds. An annual audit shall be made of the trust fund and made available to all interested persons.

BOYCOTTS

Section 303: It shall be unlawful for any labor organization to engage in, or to induce or encourage the employees of any employer to engage in, a strike or concerted refusal to use, manufacture, process, transport, or otherwise handle or work on any goods, articles, or commodities or to perform any service, when the sole purpose of such strike or boycott is to cause the commission of the unfair-labor practice defined in section 8 (b) (a) above. Whoever shall be injured by such boycott or jurisdictional dispute, may sue the labor organization therefor in United States district court and recover the damage sustained.

POLITICAL CONTRIBUTIONS

Section 304: It is unlawful for any national bank, or any corporation organized by authority of any law of Congress, to make a contribution or expenditure in connection with any election to any political office, or in connection with any primary election or political convention or caucus held to select candidates for any political office, or for any corporation or any labor organization to make a contribution or expenditure in connection with any election at which Presidential and Vice Presidential electors or a Senator or Representative in Congress are to be voted for, or in connection with any primary election or political convention or caucus held to select candidates for any of the foregoing offices, or for any candidate, political committee, or other person to accept or receive any contribution prohibited by this section.

GOVERNMENT EMPLOYEES

Section 305: It shall be unlawful for any individual employed by the United States or any agency thereof, including wholly owned Government corporations, to participate in any strike. Any individual employed by the United States or by any such agency who strikes shall be discharged immediately from his employment, and shall forfeit his civil-service status, if any, and shall not be eligible for reemployment for 3 years by the United States or any such agency.

LABOR-MANAGEMENT RELATIONS

Section 401: Establishes a joint congressional committee on labor-management relations, to be composed of seven Members of the Senate and seven Members of the House, to conduct a study and investigation of such relations, including:

(1) Means by which permanent friendly cooperation between employers and employees and stability of labor relations may be secured;

(2) Means by which employees may achieve greater productivity and higher wages, including plans for guaranteed annual wages, incentive profit-sharing, and bonus systems;

(3) The internal organization and administration of labor unions;

(4) The labor-relation policies and practices of employers;

(5) The desirability of employee welfare funds;

(6) The effects of industry-wide or regional bargaining;

(7) The administration of present laws relating to labor relations.

Forest Service Division of Wildlife Management

EXTENSION OF REMARKS

OF

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Saturday, July 19 (legislative day of Wednesday, July 16), 1947

Mr. ROBERTSON of Virginia. Mr. President, the sportsment of the Nation were disappointed that Congress did not see fit to include in the Department of Agriculture appropriation bill a budget estimate of $163,000 to continue the Forest Service's Division of Wildlife Management. That small group of scientists administers the wildlife resources of 170,000,000 acres of national forests, a great natural resource, and the finest free recreational opportunities that any nation provides for its people. I ask unanimous consent to have printed in the Appendix of the RECORD a news bulletin of July 17, issued by the Wildlife Management Institute, in which this and other wildlife matters are discussed.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

[Outdoor News Bulletin, issued biweekly by the Wildlife Management Institute, Washington, D. C., July 17, 1947]

WILDLIFE MANAGEMENT DIVISION OF FOREST SERVICE ABOLISHED

The deer, elk, moose, antelope, bear, and other wildlife on the national forests are orphans, it was learned today from the Wildlife Management Institute. In passing the agriculture appropriation bill, the Senate committee failed to restore the $163,000 budget for the Forest Service's Division of Wildlife Management, which was eliminated by the House, so this important custodial Division must be abolished.

Over 4,000,000 people hunt and fish in the national forests each year, and they with millions of others will be dismayed to learn that this perishable resource is considered so lightly by the Congress. An annual administrative cost of $163,000 is small, a penny-wise saving, when it is known that this tiny Division was supervising the wildlife resources on 170,000,000 acres of national forest land in 38 States, Alaska, and Puerto Rico. In fact, one-third of the country's big game and 70 percent of the big game in the 11 Western States is on national forests.

The record shows that in 1921, the first year for which reliable big game census figures are available, the estimated number of deer on national forests was 450,000. Ten years later, this had been increased to almost 900,000, and in 1946 had climbed to an all-time peak of 1,992,000. Similar management success reports could be given on the other big game species—but where to now?

FOREST AND SOIL-RESOURCES CONGRESS PROPOSED

A congress composed of delegates from each of the 48 States will be called by the President to draft and recommend a program for conserving the Nation's forest and soil resources, if Senate Joint Resolution 142 is enacted, the Wildlife Management Institute advised this week. The pending proposal, introduced by Senators TYDINGS, of Maryland, and HICKENLOOPER, of Iowa, specifies that the congress shall meet in September 1947 at a place designated by the President.

Delegates to the congress are to be appointed by the governors from men who are experienced and generally qualified in forest and soil conservation. They will not be paid, except for travel and subsistence.

The program recommended shall include its probable annual cost and must be transmitted to the President 30 days after adjournment of the meeting and as soon thereafter as possible to the Congress of the United States. The joint resolution was referred to the Senate Committee on Agriculture and Forestry.

STATES NEED SURPLUS FEDERAL (WAR) PROPERTIES

All of the States need and can make good use of certain of the surplus Federal (war) properties for wildlife purposes, I. T. Bode, president, International Association of Game, Fish, and Conservation Commissioners, and Livingston E. Osborne, director, Illinois Department of Conservation, testified in Washington last week. Hearings were held on the Wherry bill (S. 1155) and Burke bill (H. R. 4018), companion measures which provide for the transfer of surplus Federal properties to the States for wildlife purposes, and no opposition to the legislation was registered.

Clark Venable, field director of the Amateur Field Trial Clubs of America, who also represented the Outdoor Writers Association of America, stated, among other things, "the taxpayer bought these areas once to win a war—without this legislation—he must buy the land again, if he wants to use it for public enjoyment, and many of the properties are not suited for other than wildlife purposes."

Both bills are expected to be reported favorably by the committees, the Wildlife Management Institute advised, but more widespread public support would help.

ATTACK ON WEED PESTS RESUMED

Duck hunters, fishermen, and the boating public will be delighted to know that the Army Corps of Engineers has resumed operations to exterminate the water-caltrop scourge in the Potomac River Basin. This is more than a local problem, the Wildlife Management Institute said today, since this spiny-fruited Asiatic invader also is well established in the Hudson River system and, if given an opportunity, probably will spread elsewhere.

The Potomac River infestation has been under siege by the Army Engineers for several years and victory is nearly in slight. More than 20,000 acres of recreational waters have been cleared of the pest growth, but the campaign must be continued until the last plants are gone—else all the good work will be quickly undone.

It also is good news that a gigantic program soon will be under way in the South to eradicate completely the water-hyacinth nuisance from this country, the institute advised. Many years and much money will be required to complete the task, but it will be a profitable investment. Tremendous sums have been spent annually in temporary reductions of hyacinth growth to keep navigation channels open.

Both plants, water-caltrop and water-hyacinth, literally blanket the waters they invade and smother desirable native aquatics by excluding essential light from them. The dense foliage of the pest species is a favorite retreat for breeding mosquitoes, and wherever the plants have appeared in North American waters, duck hunting, fishing, pleasure boating, and swimming become things of the past.

There are other pest plants, native and exotic, that need to be weeded from lakes and marshes: the lotus lily or yockernut in the Mississippi Basin, giant cutgrass in the Southeast, reed or reed-cane over much of the country, and similarly the widespread cattails, though excellent for muskrats, are almost worthless in other respects. These and other local pest plants usually can be dealt with by local measures—either by mowing or through the use of new herbicide chemicals.

Eliminating obnoxious plants is one way of salvaging some of the residue of the Nation's badly depleted aquatic and marshland resources. Agriculture and industry, through drainage, pollution, and silting, have claimed a large share of the country's former waterfowl and fishing habitat and now weed invaders are threatening what is left. A continuing campaign to control pest plants will do much to restore and to perpetuate the sports of hunting, fishing, and boating for the constantly increasing recreation-seeking population.

CONTINENTAL WILDERNESS SYSTEM ADVOCATED

Meeting on an island in Rainy Lake in the heart of the continent, the council of the Wilderness Society recently launched a campaign to extend throughout North America a system of wilderness areas for permanent preservation, it was learned by the Wildlife Management Institute today.

The council, governing body for the society's membership in all the 48 States, in Canada, and in foreign countries, adopted plans for enlisting the cooperation of other conservation organizations, educational and scientific institutions, civic groups, and State, Provincial, Dominion, and Federal governmental agencies in preserving, before too late, representative remnants of the once extensive and greatly varied American wilderness.

Wilderness areas, it was pointed out, have unique scientific values and are of historical and educational importance but their outstanding value is in preserving for all Americans the choice they now have of finding recreation in the wilderness if they so wish. The influence of the wilderness was described by the council as essential to the survival of our American culture.

"Already it is too late to save a sample area of every type of primitive America," Aldo Leopold, noted wildlife authority, told the council. "Gone entirely are all large stretches of the primitive prairie," he said.

A State conservation commissioner of Wisconsin, Leopold, who is vice president of the Wilderness Society, declared that for about half of the types of primitive America all substantial remnants have already disappeared. He pointed out further that it will be most difficult to find areas of some other types. But there still is opportunity, he said, to preserve a wilderness system that will be of inestimable value to future generations, as well as to the present.

WILD TURKEY BEING RESTORED BY SOUND MANAGEMENT

Under its Federal-aid-in-wildlife-restoration program, the Texas Game Fish and Oyster Commission has trapped and restored native wild turkeys on areas of favorable range, the Wildlife Management Institute said today. The wild birds have been secured principally from refuges of the Fish and Wildlife Service in Mississippi, Alabama, New Mexico, and Texas, and they are doing nicely, according to W. C. Glazener, of the Texas commission.

The turkeys, trapped during the fall and winter months, are released on large, especially protected refuge tracts after the areas have been prepared with roosting sites, watering places, and feeding ranges. Each bird is tagged with a numbered leg band so as to check the effectiveness of the restocking program.

Landowners on whose lands the birds are released must assist in protecting the turkeys for a 5-year period and cooperate in the management program.

ABANDONED RICE FIELDS IDEAL FOR WATERFOWL

Abandoned rice fields along the southeastern coast not being used for agriculture should be acquired and developed by private and State agencies for waterfowl wintering and feeding grounds, according to James Silver, regional director, Fish and Wildlife Service, Atlanta. More waterfowl areas are needed to supplement the Federal refuge chain stretching from St. Marks in Florida to Pea Island in North Carolina, Mr. Silver says. All the Service refuges are being utilized to the utmost, and the States could plan to use Federal aid in wildlife restoration (Pittman-Robertson) funds to purchase additional lands for development.

Abandoned rice fields offer some of the best waterfowl development possibilities in the region, the Wildlife Management Institute agreed, because control of water levels is accomplished easily and the soils are exceptionally fertile. Extensive growths of favored waterfowl food plants could be produced on these tracts. Although some States may not use Pittman-Robertson funds to acquire and develop these natural waterfowl areas due to a lack of personnel trained to manage the area to their maximum capacities, others are planning to acquire and commence work on tracts as soon as the increased Federal aid funds are available.

EELGRASS TRANSPLANTING PROGRAM IS BEARING FRUIT

The eelgrass transplanting program sponsored by Ducks Unlimited, the Fish and Wildlife Service, Wildlife Management Institute, and several cooperating Atlantic Seaboard States, literally is bearing fruit, it was learned today. Recent spot checks

of several of the plantings show that the plants are making favorable growth and in some instances are found to be bearing fruit or seeds.

Eelgrass, one of the important foods of migratory waterfowl, principally brant and black ducks, was virtually exterminated along the entire eastern coast in the early 1930's by a blight, reportedly caused by labyrinthula, a microscopic organism that attacks the leaves of the plant. Why any plants survived still is questioned.

The initial survey for the cooperative transplanting program was made during March and April, and the plantings in Connecticut and Rhode Island were made in late April and early May. In Connecticut, the transplanting work was done under the direction of Arroll Lamson, State game management supervisor, with State department personnel. In Rhode Island, sporting clubs volunteered to do the transplanting and Charles Amann of the Narrangansett Salt Water Club, Arthur Clarke of the Jamestown Rod and Gun Club, and Harold Gibbs of the Warren Rod and Gun Club acted as club representatives and actually did much of the work.

The plantings this year were planned as a series of trial or demonstrational areas and many types of water and bottom conditions were planted to give the experiment a severe test. In Connecticut and Rhode Island approximately 600 settings of plants were transplanted from places having a remainder of hardy stock to areas rendered barren by the blight.

Reports from fish and game department technicians and local club members indicate that many of the plants are thriving. Some of the transplants are reported to have grown as much as 3 feet and many were found to be producing seed.

A recent report from Robert Johnson of the Massachusetts Conservation Department stated that "in one half-acre plot of eelgrass planted last year, American brant grazed the patch clean." These birds will be looking for more next year.

What Price Peace?

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 19, 1947

Mr. SMITH of Wisconsin. Mr. Speaker, I am including, as part of my remarks, a provocative article which appeared in Time magazine as of July 21. We may not be in agreement with it, but at least it is a challenging article.

WHAT PRICE PEACE?

Last week Senator STYLES BRIDGES, chairman of the Senate Appropriations Committee, went into a New Hampshire railroad station to buy a ticket to Washington. He got his ticket, and a lecture with it.

"I don't know what the hell you think about this Marshall plan," the station agent said, "but I don't understand it, and by God I don't think you understand it."

"I don't claim to understand all about it," Bridges said. "Why?"

"Well, I think we've done about enough for the rest of the world and Europe," the agent said. "I see where we've spent $20,000,000,000 on them since the war ended, and they're not a damned bit better off than when we started. It's about time we used our money to do things in this country."

What is the answer to the New Hampshire station agent—and to millions of Americans who are thinking along this line? They deserve a better answer than cracks about "isolation" and "penny pinching."

The United States spent $350,000,000,000—$350,000,000,000 is more than the incomes of all the American people in the years 1936 to 1940, inclusive, and more than all the receipts of the United States Government from the founding of the Republic up to the present—to keep Germany and Japan from dominating the world. The main reason it cost so much was that the United States did not start spending in earnest until the Germans had under their control nearly all of Europe and the Japanese had the most important parts of Asia. The United States brought victory in about the toughest possible market.

Now the leaders of another country—Russia—want to dominate the world. Is it certain that they do, or are some nervous Americans just imagining things? The evidence of Russia's intention is overwhelming. It is stronger than the evidence of German and Japanese intentions in 1937. Communist leaders subscribe to a philosophy that says the whole world must adopt their social and economic system, and "the international soviet shall be the human race." The Communist philosophy says further that good men should work like beavers to bring about this world victory of communism.

Stalin, who ought to know what Communists think, made, on February 9, 1946, his now famous election speech, a key to postwar Soviet policy. In it, he assessed the chances of peace: "Perhaps military catastrophes might be avoided if it were possible for raw materials and markets to be periodically redistributed among the various countries in accordance with their economic importance, by agreement and peaceable settlement. But that is impossible to do under present capitalist conditions of the development of world economy."

If peace depends on redistribution of raw materials, and if Stalin holds such redistribution to be impossible under capitalism, it follows that he thinks there will be no peace as long as there is capitalism.

When the head of a great country thinks that world peace is threatened by the very existence of another social system, he ought to try to do something about it. Stalin tries. He inspires and directs Communist parties in all non-Communist countries to weaken their social systems and, if possible, to destroy them. In a nutshell, the evidence that the Communists intend to dominate the world boils down to this: (1) The Communists say they do, and (2) they act as if they mean it.

THREE ROADS TO WAR

It can be taken as settled that the United States will go to war in an effort to stop any nation from dominating the world. In fact, twice in this century the United States has gone to war when it looked as if rival nations had become threats to the United States.

The Union of Soviet Socialist Republics is not yet as strong as that—so there is no present reason for the United States to go to war. But the Union of Soviet Socialist Republics might start to get that strong, just as Germany did between 1933 and 1941. Once that process started, the price of safety for the United States would go up every year—and it might get a lot higher than $350,000,000,000.

Here are three changes which would make a Russian-United States war likely, and hard for the United States to win:

1. If the United States, because of a long, deep depression or serious internal unrest, became so weakened that Russia would feel safe in being much more aggressive than she now is.

2. If the Communists got control of China and/or India. To become stronger than the United States, the Communists would have to hold China and/or India for quite a few years—perhaps as many as 30. The Japanese found that the slave labor of industrially undeveloped countries did not pay off much in the first year or two. But the Japanese did multiply the industrial production of Manchuria in a decade. If Moscow had 400,000,000 Chinese or Indians and their resources working for it for 30 years, the Communist power would probably become stronger than the United States.

3. If the Communists got control of Europe. In that event, the United States would not have 30 years to prepare for the catastrophe. The 500,000,000 non-Russian Europeans include thousands of scientists, millions of skilled workers, millions of trained soldiers. In a few years—say, 5—Russia plus Europe might be stronger than the United States. The Communists could not then be stopped from grabbing Asia, and safety for the United States could not be bought at any price.

A $15,000,000,000 PREMIUM

So the first requirement of United States policy is to keep Europe from going Communist. That is what the "Truman doctrine" and the "Marshall approach" are all about. One of the advantages the Communists have over the Democrats is that the Reds thrive when want, frustration, and disorder prevail, as they do now in Europe. One of the many advantages the Democrats have over the Reds is that Europeans, like other people, would rather not be hungry, frustrated, and disordered. The United States has the means to help Europe acquire food, hope, and stability.

How much will it cost to help Europe get to a point where it will not drift to chaos, and from there to communism? As of today, United States State Department experts figure about $15,000,000,000, spread over 7 years. That's a lot of money for an insurance premium, especially since nobody can guarantee that the insurance will pay off.

Of the $20,000,000,000 the United States has pumped out since the war, much was just plain wasted. The deal that looked best when it was made was the $375,000,000,000 loan to Britain. It did not help Britain much toward recovery, but it did supply food to stave off a British collapse (see Foreign News). Before the United States decides that the British loan was a waste, somebody will have to calculate how many billions the United States would have had to spend if Britain had collapsed. The figure would be much higher than $375,000,000,000.

NOT THE HARTFORD WAY

Judged by a hard, New Hampshire dollars-and-cents standard, the Truman Doctrine was far more dubious than the British loan. Truman said, in effect, that when a country threatened by communism got into really bad economic health, the United States would rush in and help it. If insurance were taken out only by the sickest people, insurance companies would not last very long. So the companies do not do business that way—at least, not the ones in Hartford.

Then Secretary Marshall came along with his Harvard speech. He did not have a plan, but he did have an idea. It was neither original nor complicated, but it was sound. Underneath it lay a line of Washington reasoning that went something like this:

"If we try helping each European nation separately, beginning with the worst risks, we will simply be pouring money down a row of rat holes, beginning with the deepest. Let the Europeans get together, figure out what they can do to help each other, and then tell us what Europe as a whole needs for recovery. If that looks like a reasonable amount, and if there is some sign that this expenditure will really get Europe on its feet, then let's go through with it."

A lot of "if" was loaded into that conclusion. European nations, for instance, will have to relax or abandon the tight net of restrictions on currency and commerce that now strangle trade between them. The French will have to put enough faith in the

Allied control of Germany to let the German steel industry work for Europe at a higher production level. This will be even more difficult for a Frenchman than for a citizen of New Hampshire to resign himself to seeing another $15,000,000,000 go out of the United States. But unless both France and New Hampshire face the facts, the "Marshall approach" will not work.

HOW IT LOOKS TO MOSCOW

How much chance has it, anyway? Nobody can say until the work now beginning in Paris (see International) comes to fruit next September. But the prospects are far from hopeless. Apparently, the Kremlin thinks the "Marshall approach" is a pretty good move—on the United States side of the board. Before Molotov in Paris turned down the invitation to participate, the argument in Moscow's Politburo may have gone like this:

(In favor of participation:) "The Paris meetings will result in requests for help so high that the United States Congress will throw up its hands. Then Europe, disillusioned and bitter, will turn to us. So let us play along with the Paris Conference, get the requests up as high as possible, and put the blame for failure on the United States."

(Against participation:) "Unattractive as this idea will be to Congress, it will realize that it has no alternative. Bevin and Bidault are strong enough to keep the requests within reason. If we get into this thing we will have to let the eastern European countries in; that means they will be trading freely with western Europe, and will be drawn out of our orbit. We must back away and try to save what we can—eastern Europe."

The present pulling and straining of the Soviet satelites, anxious to get into the only prospect that offers Europe hope, attests the wisdom of the latter argument—from a Soviet standpoint. Where will Poland find a market for her coal? How can the Russians pay Czechoslovakia for quality factory products? When Molotov at Paris broke Europe along the Stettin-Trieste line most of the best insurance risks, most of the countries with high labor productivity, were not on Molotov's side of the line. If central and western Europe begin to revive with United States' help, Molotov may well find the peoples of Russia's satelite countries increasingly restive.

THE LONELY MAN

The world, as well as the Kremlin's Politburo, wondered whether the United States Congress and people would back the Marshall approach. So far, Congress is showing both a healthy skepticism and an unhealthy cynicism. One United States Senator said privately last week that he was willing to see Europe get $5,000,000,000 to $6,000,000,000—but no more. If Europe's recovery could be bought for $5,000,000,000 instead of $15,000,000,000, that would be fine. On the other hand, if $5,000,000,000 gets Europe only a third of the way out of the pit, $5,000,000,000 would be a waste, and $15,000,000,000 might be a good investment.

JOHN TABER, chairman of the House Appropriations Committee, has held up the emergency aid to Greece for 2 months while he tries to pare down the $300,000,000 appropriation by roaring haggling questions at State Department witnesses. Even though piecemeal aid to Greece does not make much long-range sense, the crisis in that country is getting worse and JOHN TABER does not seem to have any ideas for coping with it. Last week the Greek Government arrested 4,000 Communists on charges of plotting to take over the country (see Foreign News). From Communist-run Albania, a new guerrilla drive over the Greek border began. Suppose either internal or external Communist pressure, or both, succeeded in overthrowing the Greek state. Does JOHN TABER have any estimate of what it would cost to dislodge a Communist government from Athens? Or any estimate of how much a Communist coup in Greece would increase the cost to the United States of saving Turkey or Italy or France from communism?

These questions face the Congress as well as the State Department. As usual, however, the Department carries the unpopular load of responsibility on its none-too-sturdy shoulders. As George Marshall faced doubting and irate Congressmen last week he might have reflected that he was not the first Secretary of State to be where he found himself. Henry Adams had noted:

"The Secretary of State has always stood as much alone as the historian. Required to look far ahead and round him, he measures forces unknown to party managers, and has found Congress more or less hostile ever since Congress first sat. The Secretary of State exists only to recognize the existence of a world which Congress would rather ignore; of obligations which Congress repudiates whenever it can; of bargains which Congress distrusts and tries to turn to its advantage or reject."

THREE TESTS

Nevertheless, the United States Congress and the United States people had nearly always come, however, reluctantly, to the point where they backed broad, essential foreign policy when both the need and the workability of a given program was clear. The need for United States action to stop Russia was plain enough; this summer's work at Paris would give the Congress and the people an idea of whether it was workable. To whatever Paris produced, the United States would apply certain tests. Among them:

(1) That the United States will be paying for rehabilitation, not for mere relief which would open up endless vistas of spending.

(2) That United States financial and technical experts will be able to examine how the money is spent so that the people who pay for it know it is not being frittered away.

(3) That the political result of the program is a lessening of the Communist threat.

THE ALTERNATIVE

Is it true that the United States has no alternative to spending more billions on Europe? It has just one. The United States could start dropping atomic bombs on Russia now, before the Russians can retaliate. It could, but there isn't one chance in 10,000,000 that it will. Sixteen centuries ago a great Christian (St. Ambrose) laid it down that Christians have no right to go to war "unless driven to it." There are enough people in the United States who feel the way Ambrose felt about it, so that the Russians need not stay awake nights.

For those Americans who do not agree with Ambrose, there is another—and a highly practical—reason for not jumping into a preventive war with Russia. At the end of that war, the world, the United States Treasury, the United States economy would be in such a mess that the postwar chaos might create more Communists than the atomic bombs had killed. The United States obviously, would always fight if it had to. The trick was to keep from having to.

The Marshall approach is one obvious way of trying to stave off a situation in which war would be inevitable. Another attempt is the Wedemeyer mission (see National Affairs) to find out how to help China and Korea stay out of the hands of the Communists. If that mission develops a "Wedemeyer approach" to Asia, it may cost the United States a few billions, too.

But both together will not look big compared to the United States bill for World War III; $350,000,000,000 plus. Peace between the United States and Russia is probable as long as the United States stays out in front. If Russia begins to catch up, the price of United States safety might go up at the rate of $15,000,000,000 a month.

Aid to Foreign Nations

EXTENSION OF REMARKS
OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 19, 1947

Mr. REED of New York. Mr. Speaker, there is no point beyond which our export trade cannot be still further expanded so long as our taxpayers will lend the people in foreign countries the money with which to buy our goods. The next step will be for our foreign debtors to say to our taxpayers as creditors: "If you expect to be paid you must lend us the money to pay you with. To save your investments you must restore our solvency by loaning to us until you are bankrupt."

Such an appeal is irresistible to our happy care-free spenders and lenders who wish to build a Utopia with American credit. Let us not forget that credit in any form represents debt in some other form.

Under leave to extend I am inserting a list of the few "small" loans and gifts which "Uncle Shylock" has recently made:

	In thousands of dollars
Albania: Through UNRRA	40,502
Argentina: Cultural and technical aid, bank credits	297
Austria: Supplies, bank credits, surplus property	63,000
Australia: Lend-lease and fixed war installations	54,894
Belgium: Loans, lend-lease, surplus property	494,000
Bolivia: Cultural and technical aid	245
Brazil: Bank credits, cultural and technical aid	70,680
Burma: Lend-lease	11,000
Canada: Alaska Highway	138,312
Chile: Bank credits, cultural and technical aid	42,195
China: Export-Import Bank credits, surplus property, lend-lease	1,482,793
Colombia: Bank credits, cultural and technical aid	859
Costa Rica: Inter-American Highway, cultural and technical aid	1,540
Cuba: Cultural and technical aid	190
Czechoslovakia: Export-Import Bank credits and surplus property	31,304
Denmark: Export-Import Bank credits and surplus property	40,000
Dominican Republic: Cultural and technical aid	75
Ecuador: Bank credits, cultural and technical aid	1,288
Egypt: War installations	11,800
El Salvador: Inter-American Highway, cultural and technical aid	327
Ethiopia: Export-Import Bank credits and surplus property	4,000
Finland: Export-Import Bank credits and surplus property	92,500
France: Export-Import Bank credits and surplus property	1,950,000
Germany: supplies	400,000

	In thousands of dollars
Great Britain: Loan, surplus property	4,400,000
Greece: Economic assistance, UNRRA, lend-lease, surplus property	790,000
Guatemala: Inter-American Highway, cultural and technical aid	627
Haiti: Cultural and technical aid	86
Honduras: Inter-American Highway, technical and cultural aid	418
Hungary: Surplus property	15,000
Iceland: Fixed war installations	65,000
India: Surplus property	50,000
Italy: Economic relief, Export-Import Bank loans, special considerations	528,000
Iran: Surplus property, lend-lease	30,000
Iraq: Educational aid	41
Japan: Supplies	267,000
Korea: Supplies, surplus property	62,000
Lebanon: Educational aid	90
Liberia: Civic improvements	20,200
Mexico: Bank credits, cultural and technical aid	87,574
Netherlands: Export-Import Bank credits, lend-lease, surplus property	277,384
New Zealand: Surplus property, war installations	5,707
Nicaragua: Inter-American Highway, cultural and technical aid	2,430
Norway: Export-Import Bank credits, lend-lease	56,500
Panama: Inter-American Highway, cultural and technical aid	47
Paraguay: Cultural and technical aid	38
Peru: Bank credits, cultural and technical aid, war installations	2,930
Philippines: War claims	695,000
Poland: Export-Import Bank credits, surplus property	90,000
Portugal: War facilities	(1)
Saudi Arabia: Export-Import Bank credits, surplus property	12,000
Spain: War installations	136
Soviet Union: Lend-lease	250,000
Syria: Educational aid	10
Turkey: Economic and military aid, Export-Import Bank credits	270,000
Uruguay: Surplus property, cultural and technical aid	733
Venezuela: Cultural and technical aid	144
Yemen: Surplus property	1,000
Yugoslavia: UNRRA aid	(1)

[1] Value undetermined.

Nations not receiving United States aid: Afghanistan, Bulgaria, Ireland, Luxemburg, Rumania, Siam, Sweden, Switzerland, Union of South Africa.

Revision of UN Charter Overdue

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 19, 1947

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Edgar Ansel Mowrer:

STORM OVER THE UN

There is no mystery about last week's congressional blow-up over the UN. It was overdue.

Congressional emotion has been building up during two long years. It broke out in a concerted demand that the American administration take the lead in reforming the UN structure so that it can do its job.

This job is not keeping the little countries in order. It is not providing a headquarters for international cooperation in matters of health, control of dangerous drugs, economics, finance, or education. There are plenty of other ways of doing this.

If millions of Americans decided to reverse the isolationist decision that followed World War I and become a charter member of the UN, it is in order that the UN so fortified should keep the peace of the world.

In the course of the first 2 years, as 10 Congressmen put it, "Experience increasingly indicates that the UN, in its present structure, is not fully adequate for this task."

Its inadequacy first showed itself in the matter of getting the Soviet troops out of Iran. The international organization had to be underlined by the power of the United States before it proved effective.

Since then, largely because of the veto power in the hands of the Soviet Union, it has proved inadequate in every disputed question.

Fully cognizant of this situation, the American administration has sedulously bypassed the UN in its discussion of really important matters.

Washington wants atomic control made subject to an autonomous body responsible only indirectly, if at all, to the UN Security Council.

Washington decided on unilateral American aid to Greece and Turkey with only a belated curtsy to the international organization at Lake Success.

In offering its aid in the economic rehabilitation of Europe, Washington ignored the UN Social and Economic Council.

More recently still, British Delegate Sir Alexander Cadogan informed his UN colleagues that if the international organization proved unable to prevent Yugoslavia, Bulgaria, and Albania from interfering in Greece, it had better pack up.

Congressional displeasure with the UN performance showed itself clearly in this debate over American aid to Greece and Turkey. Some 60 or 70 Senators and Representatives expressed their sympathy for the UN. A number stated flatly that if the UN in its present structure proved inadequate to keep world's peace, it ought to be remodeled.

This was a warning. But the American administration chose to ignore it. President Truman has, I imagine, nothing against a reform of the UN, but he is not sure that the people yet want it. American Delegate Austin at Lake Success feels, I think, that reform is probably necessary but premature.

But a number of Senators and Representatives prefer to follow the Federation of Atomic Scientists in the belief that now and not later is the time to stop the next war.

So as intelligent and patriotic American leaders, they have acted.

Senators FERGUSON, TOBEY, BALDWIN, FLANDERS, CAIN (Republicans); MCMAHON, BYRD, SPARKMAN, O'MAHONEY, and TAYLOR (Democrats), introduced a resolution asking that "action be taken to propose and adopt amendments that will strengthen the United Nations into an instrument to preserve world peace."

Representatives HALE, JUDD, MUNDT, MUHLENBERG, NIXON (Republicans); HAYS, KEFAUVER, MANSFIELD, RICHARDS, and BYRNE (Democrats) went further: They introduced a resolution asking the President immediately to take the initiative "for the purpose of making the United Nations capable of enacting, interpreting, and enforcing world law to prevent war."

Whereupon Senator TAYLOR, preferring the House to the Senate version, collected his colleagues, Senators CHAVEZ, PEPPER, MURRAY, JOHNSTON, and TOBEY, and introduced the House version as a second resolution in the Senate.

This is a warning that neither the President nor the other United Nations can ignore. It is a sign that the patience of the American people is growing short.

The next UN General Assembly in December may be decisive. Either at that meeting the present international Organization will prove itself able to get results or there will be a concerted drive to reform it.

The first step will be getting rid of the veto.

Potsdam Reserve

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 19, 1947

Mr. SMITH of Wisconsin. Mr. Speaker, it was high time that the administration moved to correct the intolerable situation in Europe created by the Potsdam agreement. It may be that the Presidential directive issued to General Clay, who is in command of our military government in the occupied zone, will have a salutary effect upon the whole European situation. As part of my remarks, I am including an editorial which appeared in the Evening Star of July 18:

CORRECTING POTSDAM

Although covering many other phases of occupation, the directive just issued to General Clay in Germany is chiefly significant for its economic meaning. At Potsdam 2 years ago, the United States joined Britain and Russia in adopting the principle that in organizing the German economy, "primary emphasis shall be given to the development of agriculture and peaceful domestic industries." Since then we have come to learn that this was a mistake harmful to the recovery of Europe. In effect, General Clay's instructions represent a formal American recognition of that fact, and they serve notice that all possible corrective measures are to be taken.

The new directive, superseding the one issued to General Eisenhower in May of 1945, sweeps away the idea of a more or less pastoralized Germany. As commander of the American zone, General Clay is instructed to carry out his responsibilities with this basic fact in mind: "An orderly and prosperous Europe requires the economic contributions of a stable and productive Germany as well as the necessary restraints to insure that Germany is not allowed to revive its destructive militarism." In other words, even as he promotes policies designed to keep the defeated Reich disarmed, he is to do everything he can to revitalize the country's industrial potential in order to benefit the continent as a whole, or at least the western half of it.

This is a far cry from the Potsdam principle placing "primary emphasis" on agriculture and peaceful domestic industries—a watered-down version of the so-called Morgenthau plan to reduce Germany to a nation of farmers. The reason the principle has been dropped is that it could not be practiced without hurting Europe as a whole. The German economy, its productive capacity, is an integral part of the continental economy, and it must be vigorous if European recovery is to be achieved. That is the key point in the directive to General Clay. His job in the Allied Control Council

is to seek the economic unification of the four zones. Short of that, given continued Russian aloofness, he is to make the most of the bizonal arrangements with the British and to try to persuade the French to merge their zone with ours and Britain's.

In view of the fact that they are taking a leading part in the Marshall proposal for European recovery, it seems reasonable to expect that the French will act favorably on this score. They have a natural and justified distrust of an industrially strong Germany, but if there are adequate guaranties against resurgent militarism, such a Germany need not be feared. It has rightly been described as the workshop of Europe. With something like the American-proposed pact to keep it disarmed, it can be made to hum again without endangering its neighbors. Until it does hum, until its resources are properly utilized, there can be no real economic come-back on the continent.

Only Outsiders Get Relief

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 19, 1947

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Bridgeport Telegram:

ONLY OUTSIDERS GET RELIEF

The Senate has again passed the GOP's revived income-tax-reduction measure by a vote of 60 to 32. The figures look good, but not good enough to meet the two-thirds majority needed to override another veto by High Tax Harry.

The bill was sent to its doom in the customary manner, with all hope for relief to the 45,000,000 American income-tax payers virtually gone. If two Republicans had not deserted their party to vote against the new Knutson bill, 45,000,000 Americans could have looked ahead to January 1 with confidence restored and with the knowledge that the back-breaking tax burden would be lifted a little.

The House is expected to override the veto with ease. Then it will go back to the Senate with High Tax Harry's veto and a message from him which will tell the 45,000,000 Americans they must carry the burden of his high-tax administration so that we (the same 45,000,000) can spend more money abroad.

Billions for European relief—perhaps twenty-five or thirty billions—but four billions for American relief. That is unthinkable, as High Tax Harry said before "at this time."

It doesn't look as though the Senate could muster the extra votes to override the expected veto, even though some of the more optimistic gentlemen, such as Senator GEORGE, the Georgia Democrat, and Senator MILLIKIN, the Colorado Republican, are still predicting a "fighting chance."

The only thing the people can look forward to in the matter of high-tax relief is a new bill, a "political" bill, some time in the next session, which meets in January 1948. It will be a political bill, because Mr. Truman, in an election year, will try the impossible trick of trying to convince the 45,000,000 he was for lower taxes all the time.

Nobody is going to be fooled by any economic nonsense in 1948. The need for relief from wartime taxation is now, not at some future date that is based upon political "timing." If the Senate cannot produce the votes to make the reduction effective on January 1, the people will be certain to register their judgment of the high-tax administration in the 1948 elections.

We feel that the people of this country want to stand behind Secretary Marshall in helping poor, starving but courageous European nations which are bucking the Soviet slavery system, but with forty-one billions in revenues coming to the administration it is obvious that by prudent management both forms of relief could be effected if the administration would curb its wild desire to spend for politics' sake.

Pass Antilynching Legislation

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 19, 1947

Mr. PRICE of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I herewith include a letter which I have received from the Honorable William Terry, mayor of the town of Lovejoy, Ill., in my congressional district.

Mr. Terry is one of the most able community officials it has ever been my privilege to know and to work with since I have been in public office. He speaks with deep feeling on the subject mentioned in his communication. The specific incident which he mentions may come entirely within State authority but I cannot let the matter pass without saying "amen" to Mayor Terry's remarks. There is one thing Congress can do and that is to enact antilynching legislation. I hope a sufficient number of Members will join with me in signing discharge petition No. 9 to force consideration of such legislation before adjournment of this session of Congress. Mayor Terry's letter follows:

LOVEJOY, ILL., *July 16, 1947.*

Hon. MELVIN PRICE,
Member of Congress,
Washington, D. C.

DEAR SIR: Please permit me to apologize for intruding upon your valuable time asking your consideration of this letter, but I feel that the issues involved are as important as any question now pressing upon your busy attention. Thousands of Negroes in our "Democratic" country are terribly shocked at the recent occurrences in the State of Georgia.

I take the liberty of writing you upon a subject which so vitally affects the honor of the Nation and the very character and integrity of our institutions that I trust you will think me justified in speaking very plainly about it. Very sadly I am now referring to what appears to be a deliberate massacre inflicted upon a number of helpless Negroes in a segregated prison stockade in Glynn County, Ga., July 11. Gleaming from the reluctant testimony of the witnesses before the coroner's jury, we have reason to believe that the killing of those Negro prisoners was not to any degree justifiable.

Silence and neglect on the part of Congress will merely result in compounding atrocities.

Outbreaks similar to the one above referred to convinces the Nation, as it has on many other occasions, that the time for action has come.

The local environment and prejudicial spirit of that part of our country echoes no voice of justice to our colored people.

The Negro's loyalty and patriotism to his country is unquestionable. The Negro says to his country, "Though you slay me, yet will I serve."

Sir, as time marches on, the reminiscences of the Negroes' devotion and loyalty to this country are focused in our national history. His blood offering is not for himself or for his race, but for his country. His blood flowed like a stream through our Nation's history from the Commons of Boston to Carrizal.

The Negro was with Washington in the dark days of Valley Forge. The black troops fought courageously with Jackson behind the fleecy breastworks at New Orleans. Two hundred thousand black boys in blue responded to the call of the immortal Lincoln for the preservation of the Union. The Negro was the positive cause of the Civil War and the negative cause of the United Nations with which we face the world today.

Sir, let us bear in mind that every high-minded American must be touched with a tinge of shame when he contemplates that his rallying cry for the liberation of humanity is made a delusion and a snare by these racial barbarities.

In the name of justice and humanity, may I appeal to you for the part you may take in bringing this hideous, un-American, and cowardly deed before Congress and the Department of Justice in the hope of bringing about such legislation that you may deem proper?

Trusting that divine providence will assist you and your colleague in this matter, I am,

Yours truly,

WILLIAM TERRY.

It's Simple Justice

EXTENSION OF REMARKS
OF
HON. AIME J. FORAND
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 19, 1947

Mr. FORAND. Mr. Speaker, in the Current Tax Payment Act of 1943 the Congress provided for relief from income taxes in the case of men and women dying in active service in the Armed Forces of the United States or of any other of the United Nations. Any Federal income tax for 1941 and later years outstanding at the time of the death of such individual was forgiven. However, the forgiveness of taxes applied only if the soldier, sailor, or marine had not paid his taxes before he died. Now this is a most unusual distinction to draw, Mr. Speaker, and I for one cannot explain why the conscientious serviceman who felt the duty to try to keep current in his income-tax payments should be denied the same tax treatment as the individual who decided to forget all about income taxes for the duration of the war.

It has been suggested that the enactment of the bill H. R. 479 will provide an unjustified exemption from taxation of unearned income of a deceased member of the Armed Forces. The obvious

answer to that, in my opinion, is that the Congress decided upon the policy of abatement of income taxes for deceased members of the Armed Forces in 1943, and there is no justification whatever in trying to distinguish between the families of soldiers who paid their taxes and the families of those who did not.

If the Internal Revenue Code is to provide benefits or special treatment for members of the Armed Forces or for veterans and their families, Mr. Speaker, then I for one am in favor of seeing that all service personnel and all veterans similarly situated receive the same treatment. I shall vote for H. R. 479.

Oil at Lake Charles, La.

EXTENSION OF REMARKS
OF
HON. HENRY D. LARCADE, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 19, 1947

Mr. LARCADE. Mr. Speaker, under authority to extend my remarks in the RECORD, I wish to include a copy of a news release from the New York Times of July 18, 1947, regarding the building of the largest solvent refined lubricating-oil refinery in the world at Lake Charles, La.

Mr. Speaker, Lake Charles is the principal city in my district, and during the war the Government established more than $200,000,000 of war plants to manufacture critical war matériel, two of the largest of which are the Cities Service Co. high-octane gasoline refinery and the Firestone Tire & Rubber Co. synthetic-rubber plant. In addition, other plants manufacturing other critical chemicals for the war effort were constructed at Lake Charles, and all of these plants made a magnificent contribution in the winning of the war.

Mr. Speaker, these industries were not located at Lake Charles, La., on account of the salubrious climate but for the reason that Lake Charles is located in the center of the petroleum-producing area of Louisiana, and due to our having established there one of the most modern and substantial ports in the Gulf area at Lake Charles on the Calcasieu River, inland 33 miles from the Gulf of Mexico.

The unique fact in the building of this fine port with its excellent and modern facilities is that the people of Calcasieu Parish and Lake Charles expended $7,750,000, contributed by local taxes, without 1 penny from the United States Government.

The establishment of the new refinery by the Cities Service Co. and the Continental Oil Co. at an estimated cost of between $20,000,000 and $30,000,000, will add greatly to the industrial development of the city of Lake Charles, which together with the established and operating industries there assure a steady and permanent growth of this fine city in my district, and I am proud to join Lake Charles in welcoming this new enterprise to Louisiana and my district.

The article carried in the New York Times is as follows:

COMPANY FORMED FOR REFINING OIL—CITCON CORP., OFFSHOOT OF CITIES SERVICE AND CONTINENTAL, TO BUILD HUGE PLANT

The Cities Service Co. and the Continental Oil Co. announced yesterday formation of the Citcon Corp., for the manufacture of solvent refined lubricating oils. The announcement said the new company, which will be 65 percent owned by Cities Service and 35 percent by Continental, will have the largest plant of its kind in the United States. Construction of the plant on a 162-acre tract near the refineries of both companies at Lake Charles, La., will begin in the fall. The plant will have a daily production capacity of 6,000 barrels of 95 VI oils and will house facilities for making various grades of bright stock, neutral oils, and fully refined crystalline waxes. More than 500 persons will be employed by Citcon.

W. Alton Jones, president of Cities Service, was elected chairman of the board of the new company, and Burl S. Watson, a vice president of Cities Service, president. Vice presidents are Harold Osborn, vice president of Continental, and A. P. Frame, vice president of Petroleum Advisers, Inc. Directors of the new company, including the foregoing, are H. L. O'Brien, L. D Mann, and G. L. Mateer, of Cities Service, and E. F. Battson, Serge B. Jurenev, and F. W. Mann, of Continental Oil. B. R. Johnstone and C. E. Weger were elected secretary and treasurer, respectively, and F. M. Simpson was appointed resident general manager.

Flying Saucers—American Dollars Flying Around

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 19, 1947

Mr. HORAN. Mr. Speaker, under leave to extend my own remarks in the RECORD, I am pleased to include my district news release for next week.

This interesting letter was composed by my secretary, Mr. William S. Royce, and I feel is a very satisfactory explanation of the "flying saucer" mystery.

HOT WEATHER WONDERINGS

Newspapers here devote considerable space to denying that weather in the Nation's Capital is any different from that found in any other city of eastern United States. There is, however, something about Washington in midsummer that makes one see mental flying saucers on numerous occasions.

For instance, one of the little daily dope sheets which is freely circulated about the capital announced last week that the United States Treasury would write off $8,000,000,000 worth of RFC loans as bad debt. That, to quote this informant, is the money which the Reconstruction Finance Corporation figures has gone down the rat-hole in recent years.

But we needn't worry about it, the authority assures us. Since loans to RFC were charged off the Government books as expenditures when made, any return that might have come on these loans would have been considered income. Since no balance sheet exists, they tell us, "this won't affect finances at all."

HOW MANY WORKERS?

The article called Our Illusory Labor Force, by L. C. Walker in American Affairs Quarterly, has stirred up the economists and great thinkers in the capital. Through a great deal of mathematics, Mr. Walker has asserted that the United States is apparently 10,000,000 workers short of enough to produce the 1929 standard of living under today's wage-hour-working conditions principles.

The boys who so freely predicted wholesale unemployment right after the war have been a little slow in replying to that one. The man who wants a new car, a new house, or almost anything else these days knows that, despite terrific production records, we are still a year or more short of supplying national demands.

When we are siphoning off a tremendous portion of our production into foreign relief and rehabilitation work, we are only complicating the problem. Perhaps we can blame the weather for the recent decision to allow exportation of bathtubs and plumbing fixtures because, the Commerce Department announced, the domestic demand has been filled. Wenatchee and Spokane home-builders disputed the point immediately, stating they still could not get enough plumbing for houses they are building.

WHERE IT GOES

Speaking of rehabilitation—now more commonly termed here "Operation Rathole"—summertime has brought disturbing waves of information about what has been happening to our generous loans abroad. The $3,750,000,000 loan to Great Britain, which was to be used to reestablish that country's national economy, is better than half used. But British economy, apparently, is in worse condition than ever before. We understood the money was to be spent primarily in this country, which would stimulate our foreign trade. Actually, the greater portion of it has been used not for industrial stabilization but for subsidization of the high-cost, backward practices which have so long strangled British trade. Now the United Kingdom has announced its intention to continue empire-preference and is negotiating a 4-year trade agreement with Russia.

All in all, since the war ended, we have exported nearly $20,000,000,000 to 60 different nations, nearly all of which are in worse condition today than at war's end. The net effect to us has been the draining off of that amount of American goods, shortages at home which would be almost negligible otherwise, and forcing domestic consumers to bid up the prices on what goods are left.

PRICES VERSUS CREDITS

Hot-weather economic discussions, unfortunately, are likely to be conducted without due regard for such simple facts as that, when there is only one side of beef on the market and two people want it, they will increase its market value by bidding against each other.

Last week former OPA chief Leon Henderson, again predicting his long-awaited depression, told Congress that the way to bring wages and prices in line would be to raise Government salaries and put five billion more dollars into the Export-Import Bank. These two actions, of course, would merely put that much more money into world circulation, competing with existing money for available goods. It would not in any way increase production, which is the only way to make more goods available.

All of which leads us to believe, as we mop our perspiring brow, that there is more than a psychological illusion to those "flying disk" stories. From here, they look like nothing other than American silver dollars chasing back and forth searching for something to buy.

VISITORS

From Spokane: Mrs. Margaret Dorrah, Mr. and Mrs. F. O. Arnold, Miss Minnie E. Brown,

Miss Cecilia Ring, Mr. John Gurr, S. J. (formerly Gonzaga University), Miss Alice Farrell. Others were Mr. and Mrs. L. A. Cagle, Opportunity; Mr. and Mrs. Charles Washburn and daughter, Patricia, Bridgeport; Mr. and Mrs. A. G. Button and Mabel Pateros; Bob Brayton, Omak; Mr. and Mrs. Carl Jensen and Mr. and Mrs. H. G. Polson, Waterville; and Maj. W. G. Turnbull, Wenatchee.

Unification—Fear of Military Domination

EXTENSION OF REMARKS
OF
HON. J. FRANK WILSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 19, 1947

Mr. WILSON of Texas. Mr. Speaker, every time the subject of reorganization of our armed forces comes before Congress it is opposed by some on the basis that it will pave the way to military control of our Government and to eventual overthrow by military dictatorship. This charge of militarism has been leveled at the pending unification bill, H. R. 4214, to which it does not apply at all. This suspicion of the military is traditional to the American people, although throughout the history of the United States there has never been any justification for it.

The framers of our Constitution, mindful of military tyranny abroad in the world at that time, provided adequate safeguard against military domination in their newly founded Government. In the first place they provided that the civilian head of the state, the President, would be Commander in Chief of the armed forces. Furthermore the executive departments which administered the armed forces are controlled by civilian secretaries. And most important, the constitutional clause limiting military appropriations to a period of 2 years absolutely retains ultimate control in the hands of the legislator, and consequently the people. This power of the purse string is in the last analysis the real guarantee against any military threat.

There is another safeguard against military domination, and that is the very character and nature of our professional soldiers and sailors. The nucleus of the American Officer Corps comes from West Point and Annapolis. Every Member of Congress is certainly conscious of the democratic method by which appointments to these great institutions are made. The graduates of the two academies represent a cross section of American intelligence, leadership, and ideals. They are in no way regimented or molded into militaristic form. They are a part of the national life. There is no caste system which separates them from the people whom they serve. Furthermore the officers who enter our armed forces direct from civilian life certainly represent a nonmilitary, unbiased viewpoint. And they represent in time of war a great majority.

Some of our greatest soldiers have become the most ardent of civilians once they have laid down their arms. Men like Washington, Andrew Jackson, Zachary Taylor, Lee, Grant, Stonewall Jackson, Pershing—surely these cannot be cited as menaces to the American system. Neither can such great citizens as Secretary of State Marshall, or General Eisenhower, or General MacArthur.

The charge of "militaristic" is often hurled at a man who happens to have spent some time in the service of defending his country. This charge as applied to an American soldier or sailor is pure jingoism. Certainly the 11,000,000 veterans of World War II did not become "militarized." Just what does "militarism" mean? Let use use the dictionary definition "predominance of the military class or prevalence of their ideals; the spirit which exalts military virtues and ideals." Now surely militarism as thus defined cannot be considered a serious threat to the United States. Of course, there are certain military matters which military men must know about and there are certain procedures and practices which military services must follow in order to be effective, but that does not mean that militarism itself is lurking behind every corner.

As a matter of fact it might be said that the average American citizen reflects a greater amount of militarism than our professional forces. Evidence of this might be found in the numerous uniform veterans' organizations, in the lodges and shrines and other temple organizations which parade and hold ceremonies exceedingly military in appearance. On the other hand, in time of peace the average soldier or sailor hastens to don civilian clothes when not on duty.

No; there is no justifiable fear of military domination under this unification bill. The safeguards written in the Constitution, the democratic background of our professional armed forces, and the long history of a civilian-controlled Federal Government conclusively convinced even the most cautious of us that the fear of military domination is a humbug. Of course, we must always be alert to guard our liberties, but we must not allow our vigilance to obscure and obstruct progress toward more effective national security, because without proper preparedness the United States may indeed find itself faced not with a threat but with the actuality of military domination—by some other country's military force.

The unification bill should not be used as a means to bring out an ignorant prejudice. Nor should the charge of militarism be allowed to obstruct prompt action on H. R. 4214. With that, Mr. Speaker, I recommend speedy passage of this unification legislation.

Farmers Should Have Their Former Homes

EXTENSION OF REMARKS
OF
HON. ALVIN F. WEICHEL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 19, 1947

Mr. WEICHEL. Mr. Speaker, I want to say that in the sale of surplus property, former owners have been given preference in the purchase of ships and other property, but farmers have not been given such first right to get back home-farm lands. Thousands of farmers were forced to give up home farms for the use of war plants.

Now these lands are being sold as surplus property.

Mr. Speaker, the former owners of such lands should have the first right to purchase these home-farms from the Government.

I have introduced the following bill:

A bill to provide that former owners of farms and agricultural lands shall have the first right to purchase their former lands now being sold through War Assets Administration

Whereas the Government in prosecuting the war effort took by condemnation and otherwise large areas of farm and agricultural lands throughout the United States; and

Whereas these lands were used in agriculture and were the homes of farms and other persons for many years; and

Whereas such lands being declared surplus: Therefore

Be it enacted, etc., That the Government in the sale of surplus lands shall give the former owner of such farm and agricultural lands, the first right, opportunity, and privilege to purchase any such lands heretofore taken by condemnation or otherwise and used in the war effort and now or in the future declared surplus.

From Illusions to Realities in Foreign Policy

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 19, 1947

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by William Henry Chamberlin from Human Events:

FROM ILLUSIONS TO REALITIES IN FOREIGN POLICY

(By William Henry Chamberlin)

The longer I stayed in Europe, during an extended visit last year, the more I became convinced of the desirability of a thorough investigation of the Roosevelt administration's political conduct of the late war. For, in country after country, I found that American military victory had been followed by American political frustration. And the course of postwar events increasingly exposes as disastrous illusion every main assumption on which this foreign policy was based.
